THE OFFICIAL GAZETTE OF THE United States Patent Office.

Vol. 342—No. 1. TUESDAY, JANUARY 5, 1926. Price—$5 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscription, $5.00 per annum; single numbers, 10 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Interference Notices.

U. S. Patent Office, *Washington, Dec. 5, 1925.*

Continental Candy Company, its assigns or legal representatives, take notice.

An interference has been declared by this Office between the application of Hawley & Hoops, of 271 Mulberry Street, New York, N. Y., for registration of a trade-mark and trade-mark registered June 15, 1918, No. 92,571, to Novelty Candy Company, of 346 Claremont Avenue, Jersey City, N. J. The assignment records of this Office show that said trade-mark was assigned to Continental Candy Company, of 37 Wall Street, New York, N. Y., and because of prima facie evidence in the record to the effect that Continental Candy Company is no longer in business, notice is hereby given that unless said Continental Candy Company, its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the Official Gazette for three consecutive weeks.

WM. A. KINNAN, *Acting Commissioner.*

U. S. Patent Office, *Washington, Dec. 8, 1925.*

Hudson Condensed Milk Co., Inc., its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of The United Dairy Company Inc., Barnesville, Ohio, for registration of a trade-mark and trade-mark registered February 23, 1915, No. 102,799, to Hudson Condensed Milk Co., Inc., 81 Fulton Street, New York, N. Y., and a notice of such declaration sent by registered mail to said Hudson Condensed Milk Co., Inc., at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said Hudson Condensed Milk Co., Inc., shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the Official Gazette for three consecutive weeks.

WM. A. KINNAN, *Acting Commissioner.*

Notice of Cancellation.

U. S. Patent Office, *Washington, Dec. 11, 1925.*

Son Brothers & Co., their assigns or legal representatives, take notice:

A cancellation proceeding having been instituted by this Office upon the application of The Yale and Towne Mfg. Co., 9 East Fortieth Street, New York, N. Y., to effect the cancellation of the trade-mark registration of Son Brothers & Co., doing business at 2124 Broadway, San Francisco, Calif., and in Meriden, Conn., under the name of Yale Cutlery Co., No. 58,930, dated December 25, 1906, and the notice of such proceeding sent by registered mail to the said Son Brothers & Co. at the said addresses having been returned by the post office as undeliverable, notice is hereby given that unless said Son Brothers & Co., their assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the Official Gazette for three consecutive weeks.

WM. A. KINNAN, *Acting Commissioner.*

ADJUDICATED PATENTS.

(C. C. A. Del.) The Johnson patent, No. 946,442, relating to talking machine with amplifying horn inclosed in cabinet with doors to regulate sound, claim 19 *Held* invalid for anticipation. *Victor Talking Machine Co.* v. *Brunswick-Balke-Collender Co.*, 8 F. (2d) 41.

(C. C. A. N. Y.) The Cushman patent, No. 962,946, for nozzle, *Held* invalid. *Hayes Pump & Planter Co.* v. *Friend Mfg. Co.*, 8 F. (2d) 33.

(D. C. N. J.) The Oscanyan patent, No. 1,321,940, for baseball board, claims 11, 12, 21, 23, and 24 *Held* valid and infringed. *Star Ball Player Co.* v. *Baseball Display Co.*, 8 F. (2d) 46.

(C. C. A. Del.) The Browning patent, No. 1,402,738, relating to talking machine with horn inclosed in cabinet with doors to regulate sound, claim 1 *Held* invalid for abandonment. *Victor Talking Machine Co.* v. *Brunswick-Balke-Collender Co.*, 8 F. (2d) 41.

DECISIONS IN PATENT AND TRADE-MARK CASES.

Commissioner's Decisions.

EX PARTE DURE.

Decided August 24, 1925.

1. APPLICATIONS—OATH—FOREIGN NOTARY—CERTIFICATE OF DIPLOMATIC OR CONSULAR OFFICER.

Where the authority of the foreign notary who administered an application oath is not proved by a direct certification of a consular or diplomatic officer of the United States, but his authority is certified to by a foreign judicial officer, there following a series of certificates as to the genuineness of the signatures, the last of which is the certificate of a United States consul, *Held* that the certificates furnish sufficient proof of the authority of the notary and should be accepted as a compliance with the requirement of the statute. (*Ex parte Rose*, 1912 C. D. 194, overruled).

2. SAME—SAME—SAME—SAME—INTERMEDIATE CERTIFICATES IN FOREIGN LANGUAGE.

Where the intermediate certificates follow a fixed form, they need not be in the English language.

3. SAME—SAME—SAME—SAME—SAME.

Where the intermediate certificates are in an unusual form and in a foreign language, it is advisable for the applicant to furnish a translation.

ON PETITION.

EXHAUST MANIFOLDS OF MULTICYLINDER INTERNAL-COMBUSTION ENGINES.

Messrs. Cruse & Mann for the petitioner.

ROBERTSON, *Commissioner:*

Applicant petitions from the Examiner's requirement for a new oath.

The oath was held defective on the ground that the authority of the notary had not been proved by a direct certification of a consular or diplomatic officer of the United States; but his authority was certified to by a German judicial officer, there following a series of certificates as to the genuineness of signatures, the last of which is the certificate of a United States consul. The Examiner relied upon *Ex parte Rose*, 180 O. G. 322, 1912 C. D. 194, and section 4892 of the Revised Statutes in support of his requirement. Section 4892, Revised Statutes, requires that the authority of the notary shall be proved by a diplomatic or consular officer of the United States, but it does not provide the form in which such proof shall be given.

[1] While the Examiner's action was in accordance with the ruling in *Ex parte Rose*, supra, it is thought that the certificates in this case furnish sufficient proof of the authority of the notary and should be accepted as a compliance with the requirement of the statute. It may be noted that certificates such as those in the present case have, for several years past, been accepted by this office in many instances.

The ruling in *Ex parte Rose*, supra, is overruled.

[2, 3] Objection has also been made to the intermediate certifications on the ground that they are not in the English language. It is customary in all countries to make such certificates of authority in the language of the certifying officials, and no reason is seen for requiring a departure from that practice in certifying to the authority of the official before whom an oath to a patent application is executed. Rule 30 provides that the patent specification and oath must be in the English language; but this does not necessarily mean that the certifications of the authority must be in the English language. It would, of course, be convenient to have such certifications in the English language or accompanied by a translation thereof; but as these certifications usually follow a fixed form the Examiners as a rule have no difficulty in reading or translating them. Where, however, an unusual form is used, it is advisable for the applicant to furnish a translation.

The petition is granted.

THE CRACKER JACK CO. *v.* ASPEGREN & CO., INC.

Decided August 21, 1925.

1. TRADE-MARKS—OPPOSITION—NO ANSWER TO AMENDED NOTICE—EQUITY RULE 30.

If no answer is filed to an amended notice of opposition, which alleges that applicant's mark is the essential and material part of opposer's name, the Office might be justified in granting the opposition on the ground of applicant's admission of the allegations in the amendment. (Equity rule 30.)

2. SAME—SAME—INCORPORATION—PROOF OF.

Incorporation is sufficiently proven by the answer of a witness to a question which passed without objection, where the answer indicates that incorporation was effected at a certain date.

3. SAME—SAME—SAME.

Where articles of incorporation over the seal and signature of the secretary of state of one of the States of the Union were filed in this Office by opposer prior to the filing of the notice of opposition, *Held* that registration would have to be refused under the act of 1905 if applicant's mark was the essential and material part of opposer's name and if application for registration was made after incorporation by opposer, even if the opposition were dismissed.

4. SAME—NAME OF CORPORATION—APPLICATION FILED AFTER INCORPORATION BY OPPOSER.

A mark can not be registered if at the time the application is filed it is the name of a corporation other than the applicant even if applicant used the mark prior to the date of incorporation of the corporation.

5. SAME—DESCRIPTIVE PROPERTIES—POP-CORN CONFECTION AND LARD SUBSTITUTE.

A pop-corn confection is so different from lard substitutes for shortening and frying mediums that the commodities can not be called goods of the same descriptive qualities.

6. SAME—SAME—ACT OF 1920.

The name of a corporation may be registered under the act of 1920 if the registrant's goods are not of the same descriptive properties as those of the corporation.

APPEAL from Examiner of Interferences.

Opposition No. 5,596 to registration of trade-mark of Aspegren & Co. for lard substitutes; ap-

plication filed November 13, 1923, Serial No. 188,262, published June 10, 1924.

Messrs. Fisher, Towle, Clapp & Soans for The Cracker Jack Co.

Messrs. Munn & Co. for Aspegren & Co., Inc.

FENNING, *Assistant Commissioner:*

The Cracker Jack Co. appeals from the action of Examiner of Interferences dismissing its notice of opposition filed against the application of Aspegren & Co. to register "Cracker Jack" as a trade-mark for lard substitutes for shortening and frying mediums.

By amendment, after answer was filed, a paragraph was put in the notice of opposition alleging that applicant's mark was the essential and material part of opposer's name, and consequently applicant was inhibited from registering its trade name under section 5 of the act of 1905.

[1, 2, 3] No answer to the amended notice of opposition has been filed, so that we might be justified in granting the opposition on the grounds of applicant's admission of the allegations in the amendment. (Equity rule 30.) The assistant secretary of opposer, however, testifies:

Q. 4. When was The Cracker Jack Co. incorporated?
A. December, 1921, I think.
Q. 5. And you have been assistant secretary of The Cracker Jack Co. ever since its incorporation in December, 1921?
A. Yes, sir.

Question 40 indicates that the incorporation was effected in December, 1921. These questions were passed without objection and under those circumstances are sufficient proof of the incorporation of the Cracker Jack Co. Moreover, on May 28, 1924, prior to the filing of the notice of opposition, the Cracker Jack Co. filed in this Office a certified copy of its articles of incorporation over the seal and signature of the secretary of state of Illinois. If the opposition were dismissed, we would have to refuse registration in view of this certificate on file. In view of these facts I have no hesitancy in holding that the opposition should be sustained on the ground that applicant's mark is the name of a corporation and inhibited from registration by the statute.

[4] Applicant urges that it has used the mark since prior to opposers' date of incorporation, and consequently that its mark should be registered. The statute, however, has no such restriction, but is clear that a mark can not be registered if at the time the application is filed it is the name of a corporation. The provision in section 5 of the act with respect to the name, emblem, flag, etc., of institutions, organizations, and clubs—namely, that such marks may not be registered if adopted since their use by the club, etc.—clearly shows that Congress knew how to use language to protect prior users of the mark. Since Congress has not adopted appropriate language to afford registration of marks adopted and then later made the names of corporations, we must assume that no such provision was intended.

[5, 6] Opposer claims use of "Cracker Jack" as a trade-mark merely on a pop-corn confection. This clearly is so different from the goods on which applicant uses its mark that the goods can not be called of the same descriptive properties. Applicant, therefore, is free to register its mark under the act of 1920. *Certain-teed Products Corp.* v. *Clark*, 337 O. G. 476.

The opposition is sustained. The Examiner of Interferences is reversed.

FRANKLIN KNITTING MILLS, INC., v. HENRY SONNEBORN & CO., INC.

Decided November 3, 1925.

1. TRADE-MARKS—OPPOSITION—REOPENING OF CASE.
In opposition proceedings a case may be reopened after the opposition has been finally sustained if an obvious error has been committed.

2. SAME—SAME—PETITION TO REOPEN—BILL OF REVIEW.
Where the time for appeal has gone by after the opposition has been sustained, a petition to reopen the case is in effect a bill of review in equity.

3. SAME—SAME—SAME.
Where applicant rested satisfied with a judgment sustaining the opposition until its attention was called to a decision of the Patent Office which it alleges is a reversal of the holding in a decision the Examiner had relied upon in denying a motion to dismiss the opposition, *Held* that the alleged change in decision on the part of the Office would not justify reopening the case. (*John Simmons Company* v. *Grier Brothers Company*, 258 U. S. 82, cited.)

4. SAME—DECEPTIVE SIMILARITY—"FASHIONBILT" AND "FASHIONKNIT."
Applicant's mark "Fashionbilt" is too near opposer's mark "Fashionknit" to stand side by side with it in trade without causing improper confusion.

ON PETITION.

Opposition No. 5,522 to registration of trade-mark of Henry Sonneborn & Co., Inc., for men's and boys' clothing. Application filed December 12, 1923, Serial No. 189,589, published April 22, 1924.

Mr. Harold R. Lhoice for Franklin Knitting Mills, Inc.

Mr. Edward R. Walton, jr., for Henry Sonneborn & Co., Inc.

FENNING, *Assistant Commissioner:*

Henry Sonneborn and Company, Inc., petitions the Commissioner to use his supervisory authority to overrule the Examiner of Interferences, who denied a petition to reopen the case, vacate the judgment, and extend time to answer an opposition brought by the Franklin Knitting Mills, Inc., against an application of Henry Sonneborn and Company, Inc., to register as a trade-mark for men's and boys' overcoats, outer coats, raincoats, suits, and pants the word "Fashionbilt." Opposer's trade-mark, applied to substantially the same goods, consists of the word "Fashionknit," registered in 1913, No. 92,061, in 1914, No. 95,419, and in 1923, No. 165,300.

The opposition was instituted in May, 1924. In June of that year applicant moved to dismiss on the ground that the two marks did not so nearly resemble each other as to be likely to cause confusion and deception. The Examiner denied the motion on the authority of the *Franklin Knitting Mills, Inc.*, v. *The Sal Ruf Co.*, 146 MS. D. 13, in which an opposition brought by the present opposer against "Fashion Court" was sustained. Although applicant was given time to file an answer, he omitted to do so, and when an order to show cause why final judgment should not be given was issued no response was made. Consequently the opposition was finally sustained in April, 1925, limit of appeal being set for May 12, 1925; but no appeal was taken. On June 23, 1925, the petition here under consideration was filed. The petition was referred to the Examiner of Interferences, who, after hearing, denied it on July 29.

[1, 2] On August 18 petition to the Commissioner was filed. As petitioner points out, a case may be reopened when an obvious error has been committed. The time for appeal having gone by, the present petition is in effect a bill of review in equity, and petitioner attempts to justify its right to have the case reopened and tried not because it has newly-discovered evidence and not for fraud in procuring the decree, but for error apparent in the record or, possibly, new matter arising since the decree.

[3] Petitioner points out that at the time the decision sustaining the opposition was rendered it was in financial difficulties, but that nevertheless it carefully considered the question of filing an answer and further contesting the matter, but because of advice given it by counsel it determined not to further prosecute the case. Petitioner rested satisfied with the judgment and the election it had made until its attention was called in the public press to a decision of the Patent Office in *Franklin Knitting Mills, Inc.*, v. *Kassman and Kessner, Inc.*, 146 MS. D. 433, in which it was held that "Fashion Club" was not sufficiently similar to opposer's mark "Fashionknit" to be likely to cause confusion. Petitioner in effect alleges that this holding is a reversal of the holding in the Sal Ruf case, supra, and that this therefore demonstrates an error of law apparent upon the face of the decision on the motion to dismiss or that it constitutes new matter justifying a review. In *John Simmons Company* v. *Grier Brothers Company*, 258 U. S. 82, the Supreme Court has sufficiently disposed of this by saying:

> • • • A change in the authoritative rule of law, resulting from a decision by this Court announced subsequent to the former decree, neither demonstrates an "error of law apparent" upon the face of that decree nor constitutes new matter *in pais* justifying a review.

Clearly this alleged change in decision on the part of the Office would not justify opening the present case.

[4] Moreover it is far from certain that the Examiner of Interferences made an error in dismissing the motion to dismiss the opposition. The opposer's mark "Fashionknit" has been under consideration several times by the Office. It is clear from a consideration of the various cases decided involving it that applicant's mark "Fashionbilt" is too near to opposer's mark "Fashionknit" to stand side by side with it in trade without causing improper confusion. For instance in *Franklin Knitting Mills, Inc.*, v. *Merchants Textile Syndicate*, 151 MS. D. 43, we sustained an opposition against the registration of "Fashiontex." In *Franklin Knitting Mills, Inc.*, v. *Rotary Hosiery Shops, Inc.*, 146 MS. D. 112, we sustained an opposition against the registration of "Fashion Kraft." The decisions with respect to these marks are based on facts more nearly analogous to the facts here present than in the cases of *Kassman and Kessner, Inc.*, 146 MS. D. 431 and 433, in which oppositions were not sustained against "Fashion Park" and "Fashion Club."

I am satisfied that no such obvious error appears in the action of the Examiner dismissing the motion to dismiss the opposition or in refusing to grant applicant's present petition as will justify our using our unusual supervisory authority to reopen the case.

The petition is denied.

Opposer in its brief alleges that the final decree in the original opposition was entered substantially by consent and in response to an agreement by applicant not to further prosecute its case and to discontinue the use of the mark when it had used up the stock of labels on hand. There is nothing in the record to indicate this state of facts, and I have not taken it into consideration in deciding the case.

PATENT SUITS.

ADVERSE DECISIONS IN INTERFERENCE.

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,515,276, G. R. Rich, Tappets, decided December 15, 1925, count 1.

Pat. 1,483,177, J. H. Hunt and J. T. Fitzsimmons, Suction burner, decided December 16, 1925, count 22.

Pat. 1,438,347, R. A. Weagant, Receiving apparatus for radiosignals, decided December 12, 1925, counts 1 to 5, inclusive.

Final decisions in interferences have been rendered against the following trade-marks:

T. M. 31,096, Dried fruits, J. W. Teasdale & Co., St. Louis, Mo. Registered January 4, 1898. Decided November 13, 1925.

T. M. 76,878, Macaroni, spaghetti, vermicelli, noodles, and like alimentary foodstuff, Birmingham Macaroni Co., Birmingham, Ala. Registered February 22, 1910. Decided November 13, 1925.

T. M. 77,933, Cream cheeses, F. B. Lyon Cuba, N. Y. Registered May 17, 1910. Decided November 13, 1925.

T. M. 88,958, Macaroni, vermicelli, and spaghetti, San Antonio Macaroni Factory, San Antonio, Tex. Registered October 29, 1912. Decided November 13, 1925.

T. M. 70,163, Coffee and chicory, Importers Coffee Co., Ltd., New Orleans, La. Registered August 4, 1908. Decided November 2, 1925.

TRADE-MARKS

OFFICIAL GAZETTE, JANUARY 5, 1926.

[VOL. 342. No. 1.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Ser. No. 137,552. (CLASS 44. DENTAL, MEDICAL, AND SURGICAL APPLIANCES.) SORBO RUBBER-SPONGE PRODUCTS LTD., Woking, England. Filed Sept. 23, 1920.

Sorbo

Particular description of goods.—Flesh Gloves, Massage Pads, Crutch Pads, and Truss Pads, All Made of Rubber Sponge.

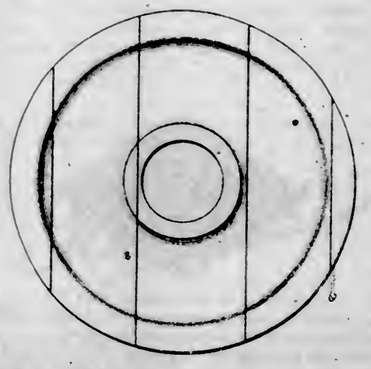
Claims use since Dec. 6, 1918.

Ser. No. 184,512. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) PEDRO and ANTONIO GARCIA MIRA, Espinardo, Murcia, Spain. Filed Aug. 15, 1923.

Particular description of goods.—Red Pepper.

Claims use since June 19, 1902.

Ser. No. 185,517. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) KARL GAMMEL, Cleveland, Ohio. Filed Sept. 8, 1923.



Cream of Apples

No claim is made to the word "Apples" except in association with the other features of the mark.

Particular description of goods.—Fruit Preserves.

Claims use since Aug. 10, 1923.

Ser. No. 191,766. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) GENERAL ELECTRIC COMPANY, Schenectady, N. Y. Filed Feb. 4, 1924.

No claim is made to the representation of the goods apart from the mark shown. The trade-mark consists of a symbol or device composed of arbitrarily-placed

parallel lines on the material forming the rider of the article, which lines are relatively narrow and relatively widely spaced.

Particular description of goods.—Nonmetallic Gear Wheels and Gear-Wheel Blanks.

Claims use since September, 1923.

Ser. No. 199,669. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE BERRY GROWERS PACKING CO., Gresham, Oreg. Filed July 7, 1924.

MULTUM

Particular description of goods.—Canned Berries.

Claims use since Sept. 21, 1923.

Ser. No. 200,495. (CLASS 28. JEWELRY AND PRECIOUS METAL WARE.) L. HELLER & SON, INC., New York, N. Y. Filed July 25, 1924.

Trade-mark consists of single metal bead of oval shape applied or affixed to the goods directly by placing the same upon the thread upon which the goods are strung, at or near the end of the string.

Particular description of goods.—Strings of Pearls and Reproductions of Pearls or Imitations Thereof.

Claims use since July 18, 1924.

Ser. No. 200,602. (CLASS 13. HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES.) AUDUBON WIRE CLOTH COMPANY, Audubon, N. J. Filed July 28, 1924.

AUDUBON

The representation of a section of wire cloth as fabric shown, also the word "Audubon," are hereby disclaimed apart from the other features of the mark.

Particular description of goods.—Wire Cloth of Steel (Galvanized and Tinned), Brass, Copper, Bronze, and Nickel, Brass Milk-Strainer Cloth, Brass Filter Wire Cloth, Wire Guards, and Wire Screens.

Claims use since June, 1916.

Ser. No. 201,273. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) JOSEPHINE A. WOOD, Los Angeles, Calif. Filed Aug. 11, 1924.

"Ok-Cal-Co."

Particular description of goods.—Liquid Tonic in the Treatment of Diseases From Malaria; Nasal Spraying Solution for the Treatment of Colds, Coughs, Croup, Catarrh, Bronchitis, Tonsilitis, Throat, Lung Trouble, Earache, and Headache; and Liquid Poultry Remedy for the Extermination of Poultry Vermin.

Claims use since July 25, 1924.

Ser. No. 203,478. (CLASS 40. FANCY GOODS, FURNISHINGS, AND NOTIONS.) KATHERINE MCCLAIRE, doing business as Ideal Curler Co., Not Inc., Chicago, Ill. Filed Oct. 6, 1924.

IDEAL

Particular description of goods.—Hair Curlers.

Claims use since Apr. 4, 1916.

Ser. No. 203,749. (CLASS 44. DENTAL, MEDICAL, AND SURGICAL APPLIANCES.) JAY J. REKAR, doing business as De Luxe Lamp Mfg. Co., Los Angeles, Calif., assignor to De Luxe Lamp Mfg. Co., Los Angeles, Calif., a Corporation of California. Filed Oct. 11, 1924.

SUPER

Particular description of goods.—Medical and Surgical Lamps.

Claims use since August, 1924.

Ser. No. 203,878. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) FARMERS UNION EXCHANGE, Des Moines, Iowa. Filed Oct. 15, 1924.

The words "Des Moines, Iowa" are disclaimed apart from the mark as shown. The vertical lines shown on the drawing indicate red, and the horizontal lines indicate blue.

Particular description of goods.—Wheat Flour.

Claims use since Feb. 1, 1923.

Ser. No. 204,448. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) FRIEDR. HERDER ABR. SOHN, Solingen, Germany. Filed Oct. 27, 1924.

Particular description of goods.—Table Knives and Carvers; Fruit, Butter, and Fish Knives, Paring, Bean, and Kitchen Knives; Gardeners', Pruning, and Inoculating Knives; Knives of All Sorts for Craftsmen, as Shoemakers', Painters', Glaziers', Basket-Makers', Sculpture, Putty, and Cook Knives, Bakers' Knives; and Ham, Meat, and Larding Knives; Chopping Knives With Handle for Meat and Vegetables, Sailor Knives, Cigar Knives, Razors, Pen and Pocket Knives, Hunting, Bowie Knives, and Daggers, Hair and Beard Clippers; Horse, Sheep and Cattle Clippers; Scissors; Edge Tools—Namely, Spatulas (Tools of Painters for Scraping off Colors), Chisels, Tongs, Cheat Openers, Weapons for Cutting and Stabbing, Forks, Spoons, Corkscrews, and Nutcrackers, All Made of Base Metal.

Claims use since 1875.

Ser. No. 204,725. (CLASS 48. MALT BEVERAGES, EXTRACTS, AND LIQUORS.) ADAM SCHEIDT BREWING CO., Norristown, Pa. Filed Nov. 1, 1924.

The words "Double Stout" are disclaimed apart from the mark shown.

Particular description of goods.—Beverages Made From Malt, Either Intoxicating or Nonintoxicating.

Claims use since Sept. 15, 1924.

Ser. No. 204,832. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) PHOENIX FLOUR MILL, Evansville, Ind. Filed Nov. 4, 1924.

FOUR ROSES

Particular description of goods.—Wheat Flour and Self-Rising Flour.

Claims use since December, 1922.

Ser. No. 204,848. (CLASS 39. CLOTHING.) GUSSIE J. ALLEN, Oakland, Calif. Filed Nov. 5, 1924.

Particular description of goods.—Infants', Children's, and Misses' Apparel—Namely, Abdominal Bands, Aprons, Baby Buntings, Bands, Bibs, Bloomers, Blouses, Booties, Capes, Caps, Coats, Creepers, Drawers, Dresses, Ear Conformers (Caps With Ear Tabs), Garters, Gowns, Hats, Hose and Socks, Leggings (Textile Fabric), Middies, Mittens (Fabric and Leather), Play Suits, Princess Slips, Robes, Rompers; Sets, Knit—Sweater, Leggings, and Toque; Sets, Knit—Sacks, Booties, and Toque; Sacks, Shoes (Leather, Fabric, or Combination), Shirts, Skull Caps, Sunbonnets, Sweaters, Tams, Toques, Underwaists, Underwear (Knitted and Textile Fabric), Wash Suits (Knitted and Textile Fabric).

Claims use since October, 1922.

Ser. No. 205,113. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) ROSARIO DUPREZ, New York, N. Y. Filed Nov. 11, 1924.

Rosario

Particular description of goods.—Face Powders, Beauty Creams, Rouge in both Liquid and Paste Forms, Skin-Cleansing Creams and Ointments, Muscle Oil, Oriental Kohl for the Eyes, Scalp Ointment, and Skin Tonic.

Claims use since July 17, 1923.

Ser. No. 205,628. (CLASS 39. CLOTHING.) THE BEDELL COMPANY, New York, N. Y. Filed Nov. 21, 1924.

Bellco

Particular description of goods.—Caps, Undergarments, Robes, Bath Robes, Breakfast Coats, Negligees, Pyjamas, Brassières, Slips, Kimonos, Dressing Sacks, Petticoats, Sweaters, and Knitted Garments for Women and Children.

Claims use since about Oct. 30, 1924.

Ser. No. 205,962. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) E. R. SQUIBB & SONS, New York, N. Y. Filed Nov. 28, 1924.

Cream of Magnesia

Particular description of goods.—Aqueous Suspension of Magnesium Hydroxide for Medicinal and Oral Antacid Purposes.
Claims use since Oct. 17, 1924.

Ser. No. 206,084. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) RA-DIX CO., Jersey City, N. J. Filed Dec. 1, 1924.

RA-DIX

Particular description of goods.—Soldering Solution.
Claims use since Oct. 9, 1924.

Ser. No. 207,279. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) ANDREW WILSON, INCORPORATED, Springfield, N. J. Filed Dec. 26, 1924.

AWINC

Trade-mark "Awinc."
Particular description of goods.—Insecticides.
Claims use since May, 1918.

Ser. No. 207,311. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) H. M. NEWHALL & CO., San Francisco, Calif. Filed Dec. 27, 1924.

Newhall Quality

The word "Newhall" as shown on the drawing is a facsimile signature of one of the members of the firm. Applicant disclaims the exclusive right to the use of the word "Quality" apart from the mark as shown on the drawing.

Particular description of goods.—Canned Fruits, Canned Vegetables, Canned Fish, Dried Vegetables, Salt Fish, Tomato Paste, Canned Evaporated Milk.
Claims use since Oct. 7, 1919.

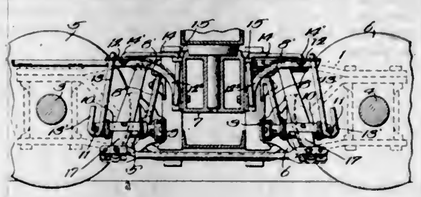
REISSUES

JANUARY 5, 1926.

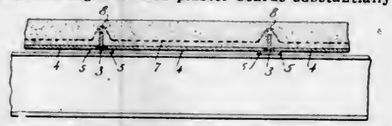
16,240. COATING COMPOSITION. CARL D. HOCKER, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 22, 1923. Serial No. 682,362. Original No. 1,422,861, dated July 18, 1922, Serial No. 344,177, filed Dec. 11, 1919. 18 Claims. (Cl. 134—26.)



1. A liquid coating composition resulting from a combination comprising glycerine, resin, and free fatty acid.

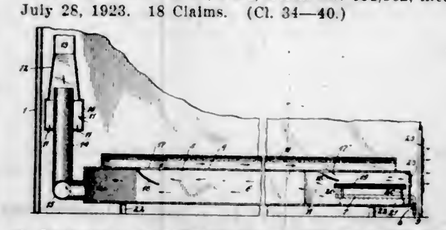
16,241. APPARATUS FOR MANUFACTURING SHEETS AND OTHER ARTICLES FROM PLASTIC MATERIALS. SAMUEL SCOTT WILSON, Meyerton, Transvaal, South Africa. Filed Aug. 7, 1925. Serial No. 48,905. Original No. 1,520,791, dated Dec. 30, 1924, Serial No. 679,248, filed Dec. 7, 1923. 11 Claims. (Cl. 25—42.)

1. An apparatus of the nature indicated, including a table of absorbent material, and heating means embedded in said table.



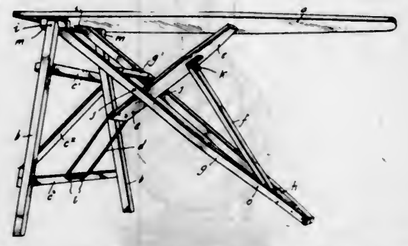
16,242. CAR TRUCK. HERMAN C. PHIEBE, Chicago, Ill. Filed Nov. 9, 1925. Serial No. 68,032. Original No. 1,551,904, dated Sept. 1, 1925, Serial No. 704,799, filed Apr. 7, 1924. 2 Claims. (Cl. 188—209.)

1. In a car truck, the combination with the side frames thereof; of wheels carrying said side frames; brakes for said wheels; a brake beam having a brake upon each end; brake hangers upon the side frames and carrying the ends of said brake beam and the brakes thereon; a fulcrum post having one end assembled with a mid portion of said brake beam; a rod assembled at its ends with end portions of the brake beam and engaged at its mid portion by the other end of said fulcrum post; an operating lever upon said fulcrum post; a truck bolster; a bracket upon the truck bolster and overhanging the beam; and a carrier upon the bracket in the form of a U-shaped loop whose bight is mounted to turn upon the bracket and whose ends are shaped into hooks receiving and supporting said rod.



16,243. ROOF STRUCTURE. HERBERT E. MARKS, Glen Osborne, Pa. Filed Oct. 15, 1925. Serial No. 62,677. Original No. 1,398,079, dated Nov. 22, 1921, Serial No. 407,189, filed Aug. 31, 1920. 4 Claims. (Cl. 108—6.5.)

4. A roof of the character described, comprising purlins, metal angle members supported on the purlins and presenting oppositely projecting flanges, plaster boards supported on said flanges, metal reinforcing fabric supported over and in spaced relation to said plaster boards and forming a continuous reinforcement for the length of said angle members, transverse supporting means for holding adjacent edges of said plaster boards substantially in

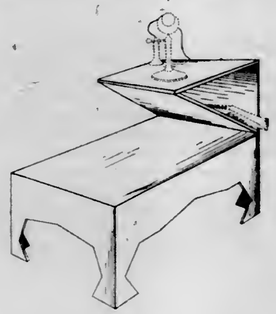


alignment with each other, and a cementitious body molded onto the plaster boards and bonding therewith and of a depth materially greater than said angle members, thereby forming a monolithic roof slab including the plaster board, cementitious body, metal reinforcement and said transverse supporting means.

16,244. DRIER. JULIUS JUDELSON, New York, N. Y. Filed Oct. 24, 1925. Serial No. 64,701. Original No. 1,513,597, dated Oct. 28, 1924, Serial No. 654,362, filed July 28, 1923. 18 Claims. (Cl. 34—40.)

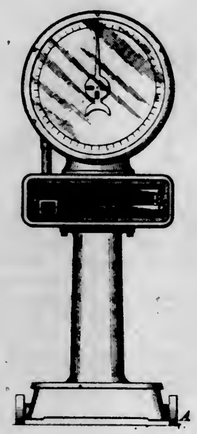
1. In a drier, a heating unit comprising an elongated box, a longitudinal partition in the box dividing the same into a pair of main flues, and a return flue on top of the main flues and communicating therewith.

16,245. IRONING TABLE. ROY DONALD SPRINGER, Portland, Oreg. Filed Oct. 9, 1924. Serial No. 742,674. Original No. 1,432,215, dated Oct. 17, 1922, Serial No. 512,446, filed Nov. 3, 1921. 3 Claims. (Cl. 68—10.)



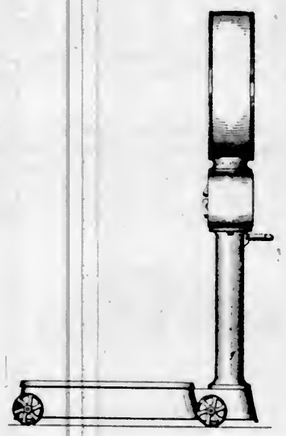
3. In combination with a table-top a foldable supporting frame therefor, comprising a leg, a crutch bingedly connected with the top of said leg and adapted to be arranged diagonally therewith, and foldable means for supporting the free end of the table-top, said means including a strut between the table-top and the crutch, and a compression-member bearing against the strut and the crutch, the compression member being arranged to bear directly on the lower end of the crutch when the table is set up, thereby, enabling the crutch to carry the load imposed upon it without tending to bend and break thereunder.

DESIGNS



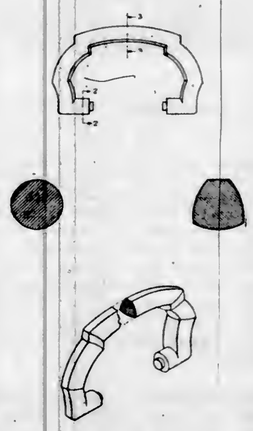
JANUARY 5, 1926

69,170. COMBINED TELEPHONE SEAT AND DESK. FREDERIC BREWSTER BASSETT, Washington, D. C. Filed Sept. 15, 1923. Serial No. 7,210. Term of patent 7 years.

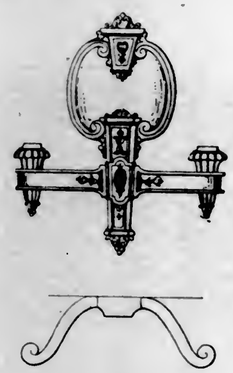


The ornamental design for a combined telephone seat and desk, substantially as shown.

69,171. WEIGHING SCALE. ALFRED BOUSFIELD, St. Johnsbury, Vt., assignor to E. and T. Fairbanks and Company, St. Johnsbury, Vt., a Corporation of Vermont. Filed Nov. 14, 1925. Serial No. 15,417. Term of patent 14 years.



69,171



The ornamental design for a weighing scale, as shown.

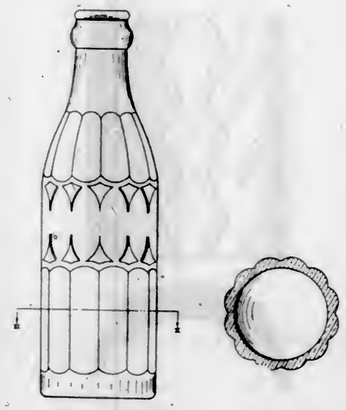
69,172. WATCHCASE BOW. ARTHUR P. CONANT, Fort Thomas, Ky., assignor to The Wadsworth Watch Case Company, Dayton, Ky., a Corporation of Kentucky. Filed Oct. 9, 1925. Serial No. 15,078. Term of patent 14 years.

The ornamental design for a watchcase bow, substantially as shown.

69,173. LIGHTING-FIXTURE BRACKET. FRANK S. CROWELL, Toledo, Ohio, assignor to The Edward N. Riddle Company, Toledo, Ohio, a Corporation of Ohio. Filed July 29, 1924. Serial No. 10,287. Term of patent 7 years.

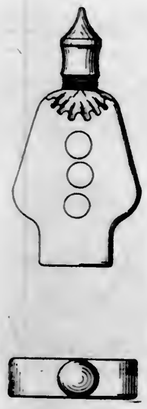
The ornamental design for a lighting fixture bracket, as shown.

69,174. BRACKET BACK FOR LIGHTING FIXTURES. FRANK S. CROWELL, Toledo, Ohio, assignor to The Edward N. Riddle Co., Toledo, Ohio, a Corporation of Ohio. Filed Aug. 22, 1924. Serial No. 10,526. Term of patent 7 years.



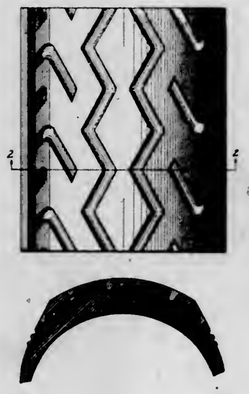
The ornamental design for a bracket back for lighting fixtures, as shown.

69,175. TUMBLER. DAVID FISHER, Paden City, W. Va., assignor to Paden City Glass Manufacturing Company, Paden City, W. Va., a Corporation of West Virginia. Filed Oct. 28, 1925. Serial No. 15,278. Term of patent 7 years.



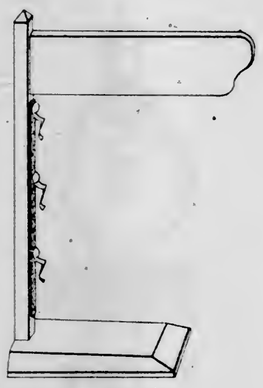
The ornamental design for a tumbler as shown.

69,176. BOTTLE. JEROME P. CURRAN, Toledo, Ohio, assignor to The American Bottle Company, Toledo, Ohio, a Corporation of Ohio. Filed Nov. 28, 1924. Serial No. 11,511. Term of patent 14 years.



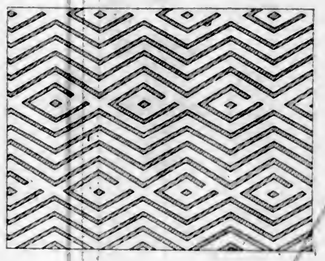
The ornamental design for a bottle, substantially as shown.

69,177. PERFUME BOTTLE. GUY T. GIBSON, New Rochelle, N. Y. Filed Sept. 29, 1925. Serial No. 14,947. Term of patent 14 years.



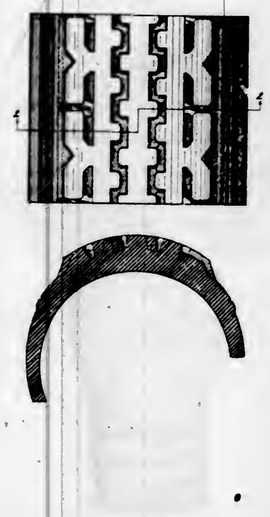
The ornamental design for a perfume bottle as shown.

69,178. RESILIENT TIRE. ALBERT HARGRAVES, Akron, Ohio, assignor to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Nov. 1, 1924. Serial No. 11,262. Term of patent 14 years.



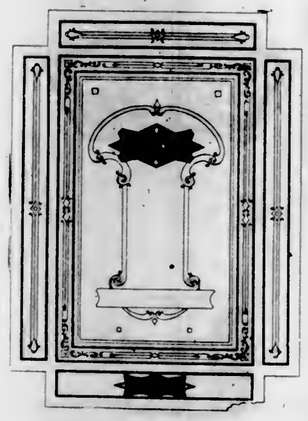
The ornamental design for a resilient tire, as shown.

69,179. DISPLAY STAND FOR TOBACCO PIPES AND SMOKERS' ACCESSORIES. HARRY JUTSUM HARTSHORN, Herne Bay, England. Filed Feb. 24, 1925. Serial No. 12,468. Term of patent 14 years.



The design for tobacco pipes and smokers' accessories as shown.

69,180. SAFETY PAPER. WILLIAM R. HOTCHKISS, St. Paul, Minn. Filed Sept. 11, 1925. Serial No. 14,750. Term of patent 14 years.



The ornamental design for safety paper substantially as shown and described.

69,181. RESILIENT TIRE. ROBERT IREDELL, Akron, Ohio, assignor to The General Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Nov. 14, 1924. Serial No. 11,375. Term of patent 14 years.

The ornamental design for a resilient tire, as shown.

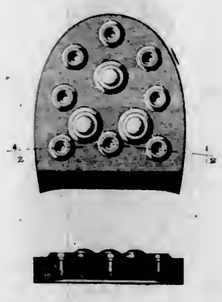
69,182. BOX COVERING. JACOB H. KRAILING, East Haven, Conn. Filed Oct. 22, 1925. Serial No. 15,221. Term of patent 14 years.

The ornamental design for a box covering, as shown.

69,183. VANITY CASE. THOMAS J. LEWIS, New York, N. Y. Filed Oct. 26, 1925. Serial No. 15,261. Term of patent 14 years.

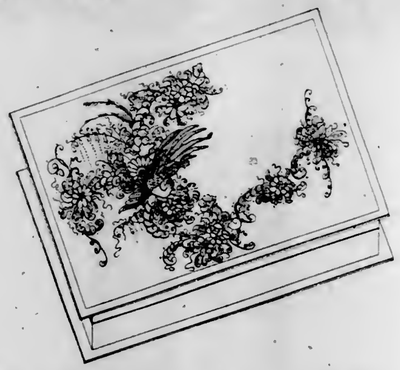
The ornamental design for vanity case, as shown.

69,184. GLASS GOBLET OR SIMILAR ARTICLE. WILLIAM H. MAGEE, Moundsville, W. Va., assignor to Fostoria Glass Company, Moundsville, W. Va., a Corporation of West Virginia. Filed Aug. 7, 1925. Serial No. 14,332. Term of patent 14 years.



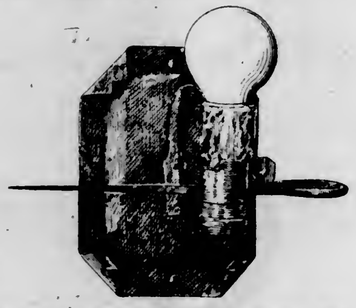
The ornamental design for a glass goblet or similar article, as shown.

69,185. BOTTLE. PHILIP W. MCABEE, Muncie, Ind. Filed Sept. 8, 1925. Serial No. 14,721. Term of patent 14 years.



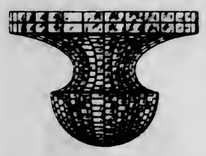
The ornamental design for a bottle as shown.

69,186. HEEL FOR BOOTS AND SHOES. HERMAN E. MORSE, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Feb. 10, 1922. Serial No. 642. Term of patent 14 years.

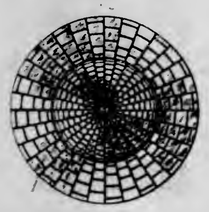


The ornamental design for a heel for boots and shoes as shown.

69,187. CANDY BOX. LEWIS PERRY, New York, N. Y. Filed Nov. 14, 1925. Serial No. 15,418. Term of patent 7 years.



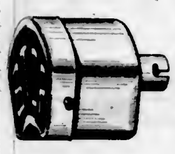
The ornamental design for a candy box as shown.



69,188. ELECTRIC-LIGHT FIXTURE. SARA R. POWELL, San Francisco, Calif. Filed Sept. 9, 1925. Serial No. 14,730. Term of patent 14 years.

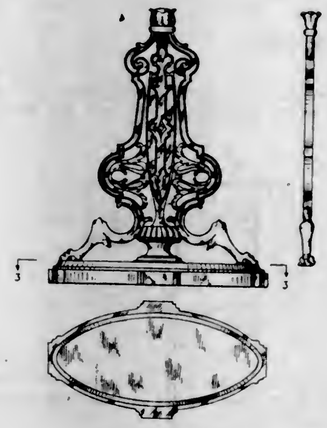
The ornamental design for an electric light fixture, as shown.

68,189. LIGHT-REFLECTOR FIXTURE. WILLIAM E. PRICE, White Plains, N. Y. Filed Oct. 30, 1925. Serial No. 15,295. Term of patent 14 years.



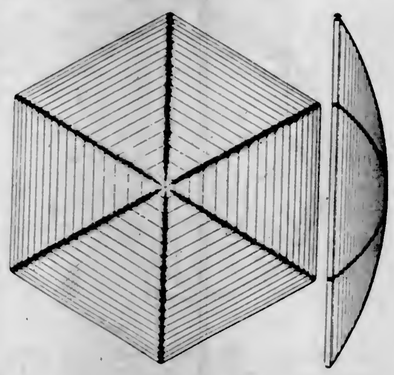
The ornamental design for a light reflector fixture, as shown.

69,190. VEHICLE SIGNAL LAMP. BENJAMIN PUTTERMAN, Brooklyn, N. Y., assignor to American Auto Lamp Co., Inc., a Corporation of New York. Filed Aug. 13, 1924. Serial No. 10,444. Term of patent 14 years.



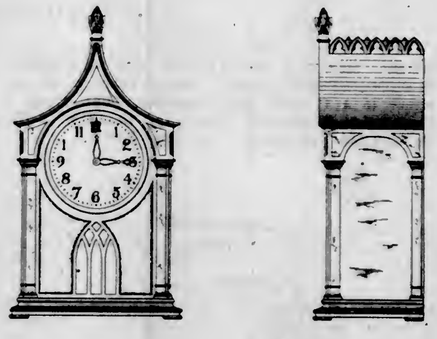
The ornamental design for a vehicle signal lamp, substantially as shown and described.

69,191. LODGE PIN. HELEN M. VERMILLION, Omaha, Nebr., assignor to Order of Job's Daughters, Omaha, Nebr., a Fraternal Organization. Filed Mar. 16, 1925. Serial No. 12,729. Term of patent 3½ years.



The ornamental design for a lodge pin, as shown.

69,192. BASE FOR PORTABLE ELECTRIC LAMPS. GUSTAVE E. VILLARET, Leonia, N. J., assignor to William R. Noe & Sons, New York, N. Y., a Copartnership. Filed May 21, 1925. Serial No. 13,520. Term of patent 7 years.



The ornamental design for a base for portable electric lamps, as shown.

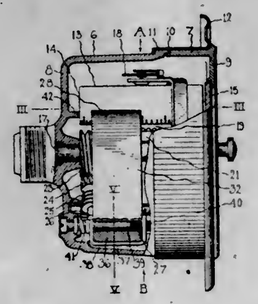
69,193. DIAL GLASS FOR CLOCKS. RICHARD H. WHITEHEAD, New Haven, Conn., assignor to The New Haven Clock Co., New Haven, Conn., a Corporation. Filed Nov. 4, 1925. Serial No. 15,351. Term of patent 14 years.

The ornamental design for a dial glass for clocks as shown.

69,194. CLOCK CASE. RICHARD H. WHITEHEAD, New Haven, Conn., assignor to The New Haven Clock Co., New Haven, Conn., a Corporation. Filed Oct. 26, 1925. Serial No. 15,253. Term of patent 14 years.

The ornamental design for a clock case as shown.

69,195. CLOCK CASE. RICHARD H. WHITEHEAD, New Haven, Conn., assignor to The New Haven Clock Co., New Haven, Conn., a Corporation. Filed May 25, 1925. Serial No. 13,556. Term of patent 14 years.



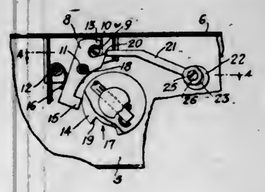
The ornamental design for a clock case as shown.

PATENTS

GRANTED JANUARY 5, 1926.

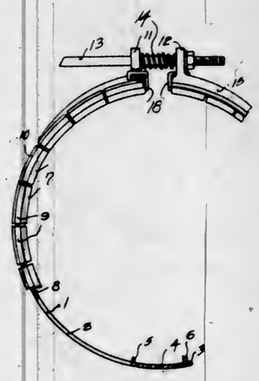
1,568,040. MAGNET MECHANISM FOR MAGNETIC SPEEDOMETERS. JOSEPH BERGE, Flint, Mich., assignor to A C Spark Plug Company, Flint, Mich., a Corporation of Michigan. Filed Apr. 14, 1919. Serial No. 289,825. 27 Claims. (Cl. 264—13.)

27. In a device of the class described, the combination with a rotatable armature, of a magnet substantially C-shaped in form, said magnet being tiltable to thereby vary the position of its poles relative to the armature, and means for tilting said magnet to thereby move the poles thereof toward and away from the periphery of said armature.



1,568,041. AUTOMATIC MEANS FOR INDICATING THE CONDITION OF AIR-BRAKE MECHANISM ON TRAINS. CLARENCE J. BESHEARS, Memphis, Tenn., assignor of one-half to Harry C. Agnew, Washington, D. C. Filed Aug. 21, 1923. Serial No. 658,642. 5 Claims. (Cl. 177—311.)

1. In combination with an air brake system for trains having a train pipe and cut-out cocks on individual cars, a circuit closer at one end of said train and extending the full length thereof, a source of current and a current strength indicator in series in said circuit, a resistance of similar value on each car in said circuit and means operable by the closure of a cut-out cock to close said circuit to include the resistances between it and the normally closed end of said circuit to indicate the number of cars having their air brakes connected.

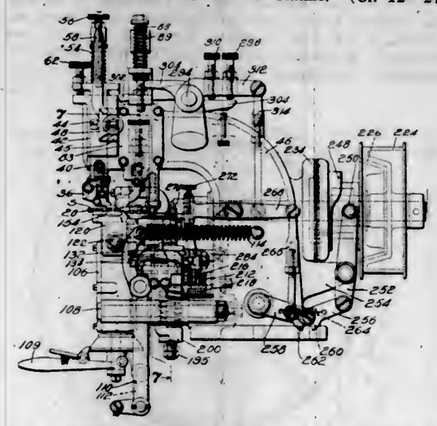


1,568,042. INCLOSED SWITCH. HARRY M. BROADWELL, Plainville, Conn., assignor to The Trumbull Electric Manufacturing Company, Plainville, Conn., a Corporation of Connecticut. Filed Feb. 27, 1923. Serial No. 621,508. 14 Claims. (Cl. 200—50.)

13. In an inclosed switch, a box having a hinged cover, a movable switch member within the box, an operating member therefor, a latch for holding said cover closed when the switch is closed, a key actuated means for

moving said latch to free said cover when the switch is closed, said moving means being automatically reset when the cover is closed.

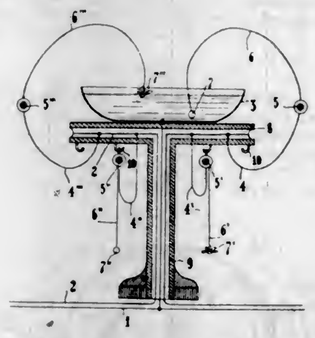
1,568,043. BRAKE BAND. CARL ANDERSON, Roza, Wash., assignor of one-half to Thomas C. Doolittle, Roza, Wash. Filed Dec. 12, 1924. Serial No. 755,437. 4 Claims. (Cl. 188—249.)



3. The combination with a split brake band having a pair of spaced circumferentially extending slots, and two strings of friction blocks carried in said band, of notched lugs on the adjoining ends of said band, removable locking means frictionally engaging said notched lugs, and retaining devices on said locking means for engaging said strings of blocks.

1,568,044. COMPOSITION OF MATTER. HARRY P. BASSETT, Cynthiana, Ky., and MONS R. ISAACS, Philadelphia, Pa., assignors to United Products Corporation of America, a Corporation of Delaware. Filed Nov. 1, 1922. Serial No. 598,271. 2 Claims. (Cl. 167—6.)

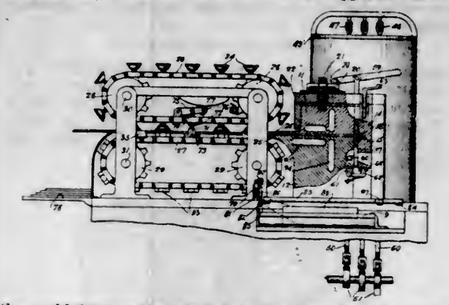
1. A composition of matter containing calcium caseinate and an arsenate.



2. A composition of matter containing substantially, by weight, seventy parts of calcium diarsenate, thirty parts of calcium oxide and three parts of casein.

1,568,045. MACHINE FOR USE IN MAKING SHOES. FREDERIC E. BERTRAND, Lynn, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Nov. 10, 1917. Serial No. 201,211. Renewed June 2, 1922. Serial No. 565,396. 89 Claims. (Cl. 12—27.)

1. A channeling machine having, in combination, an edge knife slide movably mounted on the frame and provided with an edge knife, an edge presser gage slide movably mounted on the frame and provided with a presser gage, and connections between said slides whereby they may move independently of one another or whereby the position of the edge knife slide is controlled by the position of the edge presser gage slide.

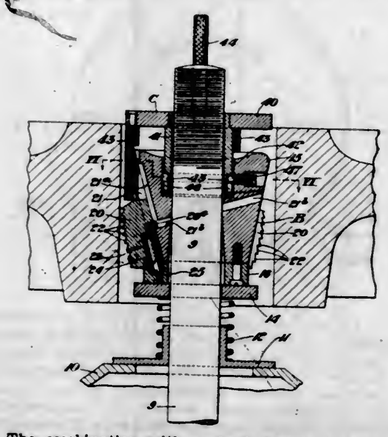


1,568,046. TELEPHONIC AND RADIOTELEPHONIC MESSAGE OR AUDITION BY MEANS OF FLUID RESISTANCE. ERNEST BERTRON, Brussels, Belgium. Filed Aug. 24, 1923. Serial No. 659,070. 5 Claims. (Cl. 179—81.)

1. The method of improving the telephonic or wireless messages auditions, concerts, and the like transmitted in an electric circuit, consistsing in introducing in series into the circuit of a receiver or receivers one or more liquid resistances.

1,568,047. TYPOGRAPHICAL CASTING MACHINE. SUNKER ABAJI BISEY, New York, N. Y. Filed Aug. 31, 1921. Serial No. 497,229. 26 Claims. (Cl. 199—1.)

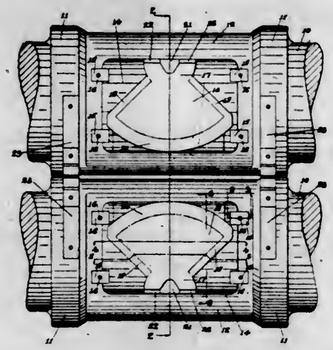
1. In a machine of the character disclosed, a relatively adjustable mold for casting finished leads, rules or typographical line slugs, in different sizes determined by the adjustment of the mold, said mold being open at one end, means for forcing the casting metal under substantially continuous pressure into the opposite end of



the mold irrespective of the various adjustments of the same and means for continuously withdrawing the cast product from the exit end of the mold.

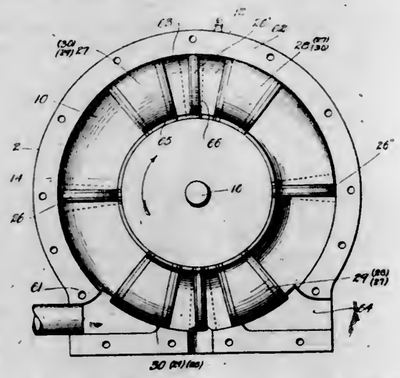
1,568,048. MANUFACTURE OF LACE WITH BODY BEARING LEAFLIKE FIGURES. EMIL BÖSEBECK, Barmen, Germany, assignor to Max Henkels, New York, N. Y. Filed Sept. 7, 1923. Serial No. 661,536. 6 Claims. (Cl. 96—24.)

4. Machine-braided torchon lace with leaflets standing out in relief from both sides, the major axis of which leaflets extends transversely of the major axis of the lace, each leaflet being formed by spaced ground threads extending in warplike manner transversely through the leaflet, and by at least one selected ground thread interlacingly led in weftlike manner to and fro through said warp threads in closely aggregated loops in the longitudinal direction of the leaflet.



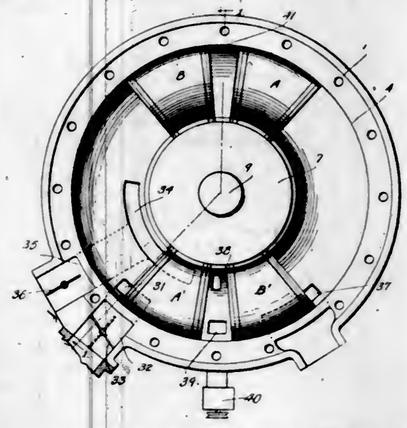
1,568,049. CHUCK. JOHN W. BAISCOE, Ingram, Pa. Filed Mar. 22, 1924. Serial No. 701,066. 5 Claims. (Cl. 82—40.)

1. The combination with a chuck having a head provided with at least one spring pressed jaw, of a jaw depressing tool adapted to be engaged with said jaw



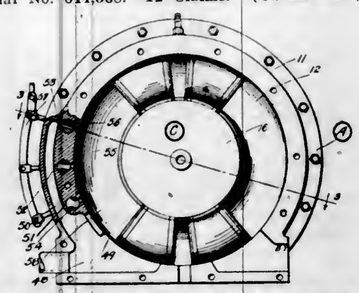
and move it against the spring tension into depressed position, and means on said head adapted to co-operate with said tool to lock said tool and jaw in depressed position.

1,568,050. MILL AND METHOD FOR ROLLING TAPERED DISKS. EDWARD G. BUDD, Philadelphia, Pa., assignor to Budd Wheel Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Nov. 22, 1921, Serial No. 517,026. Renewed June 10, 1925. 32 Claims. (Cl. 80—16.)



32. The process of making tapered disks comprising assembling face to face a plurality of substantially square metal blanks to form a pack of blanks, rolling said pack, successively, along a plurality of different radii extending from the center of the pack to the midpoints of the sides between rolls having eccentric, longitudinally concave working faces of substantially triangular outline, and then separating the rolled blanks.

1,568,051. DIVIDED-CHARGE ROTARY ENGINE. FRANK A. BULLINGTON, Kansas City, Mo., assignor to Bullington Motors, Kansas City, Mo., a Common Law Trust consisting of Solomon Stoddard, Ernest E. Howard, and Frank A. Bullington. Filed June 2, 1923. Serial No. 643,096. 9 Claims. (Cl. 123—11.)

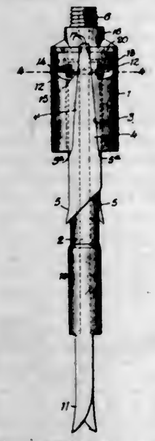


1. In a rotary alternating piston engine, a cylindrical casing, pairs of pistons therein rotating about a common axis, the pistons having relative movements to compress fuel charges to combustible pressures, and charge-dividing partitions between complementary pistons separating the combustion spaces between the complementary pistons into a primary explosion chamber and a secondary explosion chamber so that the two separated parts of each fuel mixture charge confined between two complementary power pistons will be independently exploded one after the other, the charge in the primary chamber being exploded at lower pressure than that in the secondary chamber.

1,568,052. INTERNAL-COMBUSTION ENGINE. FRANK A. BULLINGTON, Kansas City, Mo., assignor to Bullington Motors, Kansas City, Mo., a Common Law Trust consisting of Solomon Stoddard, Ernest E. Howard, and Frank A. Bullington. Filed June 9, 1923. Serial No. 644,367. 12 Claims. (Cl. 123—11.)

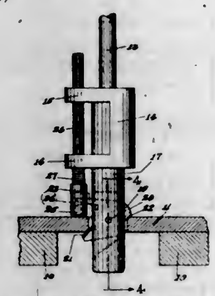
1. An explosion engine comprising a cylinder, piston means therein, the cylinder being divided by the piston means into a compression chamber and a separate expansion chamber, provided with an inlet port for the compression chamber and an exhaust port for the expansion chamber, means for admitting fuel mixture into the compression chamber, means for admitting a secondary volumetric fluid into the compression chamber simultaneously with the fuel mixture to maintain constant compression within the compression chamber irrespective of the amount of the fuel mixture admitted, and means for exploding the fuel mixture so that it can exert expansion force within the expansion chamber against the piston means.

1,568,053. MULTICYLINDER ROTARY ENGINE. FRANK A. BULLINGTON, Kansas City, Mo., assignor to Bullington Motors, Kansas City, Mo., a common-law trust consisting of Solomon Stoddard, Ernest E. Howard, and Frank A. Bullington. Filed June 9, 1923. Serial No. 644,368. 12 Claims. (Cl. 123—11.)



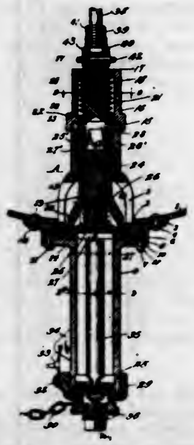
1. An internal combustion engine comprising a cylinder and piston means therein, the piston means dividing the cylinder into a compression chamber and an expansion chamber, capable of equal volumetric capacity, and means for varying the capacity of one of said chambers.

1,568,054. TOOTH WEDGE. GILDEROY O. BURLEW, Newark, N. J. Filed July 18, 1924. Serial No. 726,664. 5 Claims. (Cl. 32—10.)



1. As a new article of manufacture, a wedge for separating teeth having a grooved edge to contact with one of the teeth.

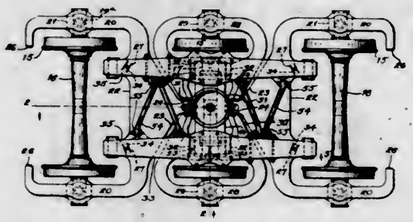
1,568,055. ROTARY WELL DRILL. NELSON S. BURTON, Ardmore, Okla. Filed Feb. 19, 1925. Serial No. 10,224. 8 Claims. (Cl. 255—73.)



1. The combination with a reamer-body having an internal, threaded socket at a point midway of the length thereof, a bit-carrying pipe-member having a threaded end engaging said socket, said reamer-body being provided exteriorly with longitudinally extending grooves, reamer-blades having shanks disposed in said grooves, and means for holding said shanks in said grooves against accidental displacement.

1,568,056. METAL-CUTTING TOOL. WILLIAM BUTZ, Philadelphia, Pa., assignor to Budd Wheel Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 14, 1922. Serial No. 543,684. 11 Claims. (Cl. 77—58.)

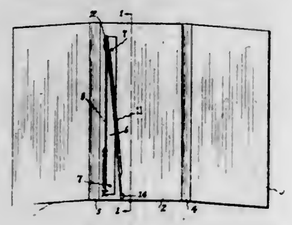
1. A device of the class described comprising a rotatable cutter-carrying member having a shank adapted to be inserted through a hole in the work, a cutter pivoted in a slot in said shank, and a part carried by said member and rotatable therewith adapted to engage the work and operating automatically to swing said cutter on its pivot in said slot into working engagement with an edge of the hole.



1,568,057. OUTLET STRUCTURE FOR OIL CONTAINERS. RICHARD H. CARR, Columbus, Ohio, assignor to The Pure Oil Company, Columbus, Ohio, a Corporation of Ohio. Filed June 23, 1920, Serial No. 391,202. Renewed Nov. 4, 1925. 4 Claims. (Cl. 137—21.)

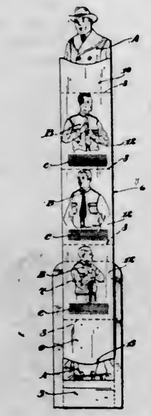
1. In a valve of the character described, a cage member rigidly mounted within the bottom of a fluid container, said cage member being formed to include an outlet port through which fluid from said container is drawn off and a cooperative valve seat, a main valve normally disposed in engagement with said seat to obstruct fluid flow through said port, a secondary valve situated above said main valve and disposed in engagement with the same seat, an actuating mechanism connected with said secondary valve, and means whereby said secondary valve will operate to open said main valve after said actuating mechanism has been operated to open the secondary valve.

4. In a valve of the character described, a metallic fluid container having an opening formed therein, a reinforcing ring surrounding said opening and secured to said container, a valve casing extending into said container and having a flange folded to said ring, a removable valve seat positioned in the lower end of said casing, and an outlet conduit removably secured to said ring to permit of the exterior removal of said valve seat.



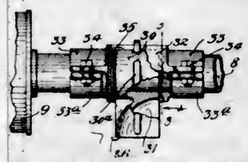
1,568,058. RAILWAY-CAR TRUCK. CARL L. CHARLES and PERCY R. DRENNING, Baltimore, Md., assignors, by mesne assignments, to Herbert M. Brune, Charles E. Scarlett, and Janon Fisher, trustees, all of Baltimore, Md. Filed Jan. 7, 1925. Serial No. 947. 14 Claims. (Cl. 105—166.)

1. In a six wheel truck, the combination with a bolster for each pair of journals, a vertically flexible, horizontally rigid coordinating bolster engaging with the central bolster and with each of the pilot and trailer bolsters



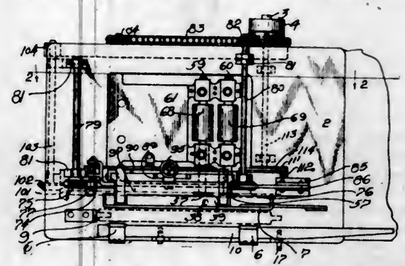
to control the mutual angularity of said journals, friction reducing elements between said coordinating bolster and said pilot and trailer bolsters and a ball and socket joint between each of said pilot and trailer bolsters and said central bolster.

1,568,059. COMBINED PAD OR LEAF HOLDING AND LOCKING DEVICE FOR MANIFOLDING SALES BOOKS. GEORGE CORNELIUS CLEMENT, Baltimore, Md., assignor to the Baltimore Salesbook Company, Baltimore, Md., a Corporation of Maryland. Filed Mar. 27, 1923. Serial No. 628,020. 10 Claims. (Cl. 129—38.)



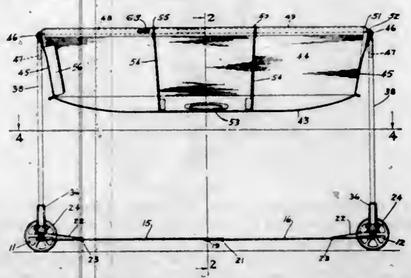
1. In a holding and locking device for use in association with manifolding sales books comprising a tissue pad and cover therefor, an angle iron member attached to the cover, a movable tensioned clamping member which is attached to the upright section of the angle member at one end, means integral with the clamping member and upright section of the angle iron member to hold the movable member in juxtaposition to the upright section of the angle iron member and a separate locking means to prevent the movable clamping member from becoming disengaged from its clamping position or from moving in vertical directions with respect to the upright section of the angle member, thereby yieldingly locking the connected clamping members together.

1,568,060. ADVERTISING DEVICE. ORVEL JAY CRAIG, Minneapolis, Minn. Filed June 4, 1925. Serial No. 34,851. 9 Claims. (Cl. 40—2.)



1. An advertising device comprising a tag having a transverse slit, and a strip having one of the ends attached to the tag, said strip being normally folded and inserted part way through said slit and held with its loose end projecting outward of said slit.

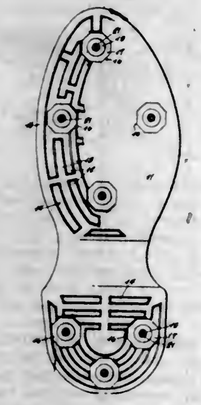
1,568,061. EXHAUST CUT-OUT. EMIL R. DRAVES, Richmond, Ind. Original application filed May 13, 1921, Serial No. 469,217. Divided and this application filed Sept. 8, 1921. Serial No. 499,192. 3 Claims. (Cl. 251—73.)



1. A cut-out device comprising a yoke adapted to span a gap in an exhaust pipe, the yoke having axially spaced sleeves, the inner ends of which are in parallel planes to which the common axis of the sleeves is perpendicular, in combination with a supplemental pipe section mounted for sliding movements in a plane that transversely intersects the axis of said sleeves, into and out of registration with said sleeves, and in which the sides of said supplemental pipe section are provided with narrow vertical guide ribs that engage the adjacent sides of said yoke, the body of said supplemental pipe section being spaced with considerable clearance from the side walls of said yoke, so as to permit free circulation of air therebetween.

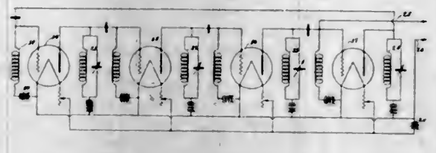
1,568,062. WOODWORKING MACHINE. OSCAR G. EDMOND, Spokane, Wash., assignor of one-half to White Pine Sash Company, Spokane, Wash. Filed July 21, 1924. Serial No. 727,303. 6 Claims. (Cl. 144—245.)

1. In a feed mechanism the combination with a rock shaft having a loose cam lever thereon and a fixed member on said shaft, of resilient means operatively connecting said lever and member, a cam for actuating the lever, and means for permitting a slip movement between the rock shaft and lever to free the lever from said member.



1,568,063. BABY HOLDER. ABRAHAM A. FAGEN, Minneapolis, Minn. Filed Oct. 7, 1922. Serial No. 593,100. 5 Claims. (Cl. 5—99.)

1. In a collapsible baby holder, the combination of a base having end and side members, means pivotally to attach said members whereby the base may be collapsed

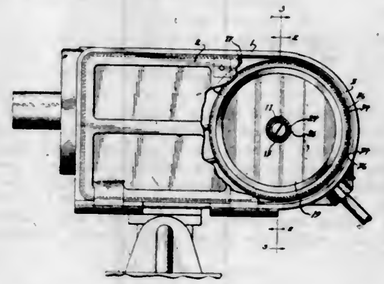


with said members in substantially parallel proximity to occupy a relatively small space or extended into operative position, uprights pivotally attached to said base and adapted to be inoperatively swung into alinement with said members, means to retain said uprights in operative position, and a baby support adapted to be demountably attached to said uprights when in operative position.

1,568,064. ANTISLIPPING DEVICE FOR SHOE SOLES AND HEELS. DAVID H. GOLDMAN, Cleveland, Ohio. Filed Oct. 6, 1924. Serial No. 741,947. 7 Claims. (Cl. 36—59.)

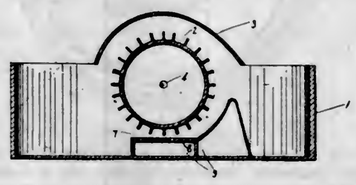
1. In an anti-slipping device of the character described, the combination of a shoe sole of resilient material having a set of individual gripping pockets, a set of double relatively telescoping suction cups arranged upon the tread surface of the sole, and ice grippers associated with the suction cups and operable with compression of the cups.

1,568,065. CONSTANT FREQUENCY SOURCE. ROSS GUNN, Dayton, Ohio. Filed June 9, 1923. Serial No. 644,441. 1 Claim. (Cl. 250—36.)



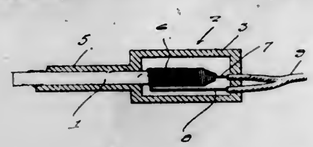
A system for the generation of high frequency oscillations of a predetermined single frequency comprising a plurality of vacuum tubes exceeding two in number, each tube having a plate, a grid and a filament, a circuit for each tube for maintaining the average grid potential at some definite negative value, an output circuit from the plate of each tube electrically connected to energize the grid of another of said tubes, and a plurality of exactly similar control circuits one for each of said output circuits connected across the same for determining the frequency of the oscillations produced by the system irrespective of plate voltage or filament currents, each said control circuit having an adjustable impedance comprising an inductance and a condenser connected together, in parallel arrangement.

1,568,066. LENS POLISHER. HARRY W. HILL, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Sept. 18, 1922. Serial No. 588,903. 1 Claim. (Cl. 51—279.)



A lens polisher comprising a fabric base having cross strands with voids between them, a wax covering the strands but not filling the voids, and a granulated abrasive covering the strands and filling in the voids, held in place by the wax on the strands.

1,568,067. PHOTOGRAPHIC-FILM MAGAZINE. ALBERT S. HOWELL, Chicago, Ill., assignor to Bell & Howell Company, Chicago, Ill., a Corporation of Illinois. Filed July 29, 1922. Serial No. 578,444. 7 Claims. (Cl. 242—55.)

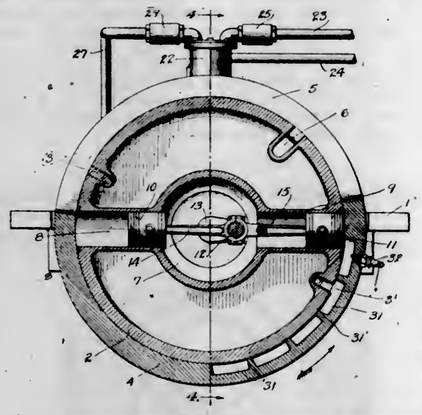


1. A film magazine including two enclosure members detachably secured together and providing spaced parallel walls and provided with central alined openings in said walls and having coaxial cylindrical flanges on said walls surrounding said openings and extending inwardly toward each other with their adjacent ends spaced from each other, and a concentrically bored film spool between said walls and surrounding said flanges and rotatably mounted thereon and having an intermediately disposed, internal, and toothed concentric flange extending through the space between said flanges.

1,568,068. CONTINUOUS PULP BEATER. KENNETH B. HOWELL, Maplewood, N. J., assignor to The Barrett Company, a Corporation of New Jersey. Filed Aug. 20, 1923. Serial No. 658,206. 5 Claims. (Cl. 92—23.)

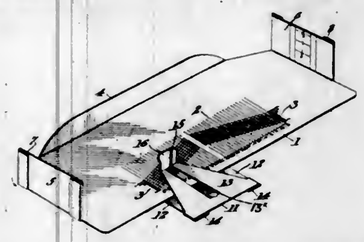
1. In a pulp beater having a beater roll, a horizontally disposed reticulated member located below the beater roll and adapted to permit the passage of beaten pulp therethrough.

1,568,069. SQUIB. ISAAC T. JENKINS, Tunkhannock, Pa. Filed July 9, 1925. Serial No. 42,473. 1 Claim. (Cl. 102—10.)



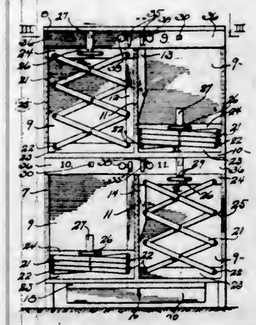
A device of the class described comprising a hollow cylinder having an elongated opening on one side and an open ended tubular extension at one end, a squib fitted into and extending through said extension with its inner end located in said cylinder, and a resistance coil supported in said cylinder, the coil being formulated to provide a pocket for reception for the inner end of said squib.

1,568,070. METHOD OF MAKING ARTIFICIAL STONE. WILLIAM H. JENNENS, Kansas City, Mo. Filed Apr. 3, 1925. Serial No. 20,452. 7 Claims. (Cl. 18—48.8.)



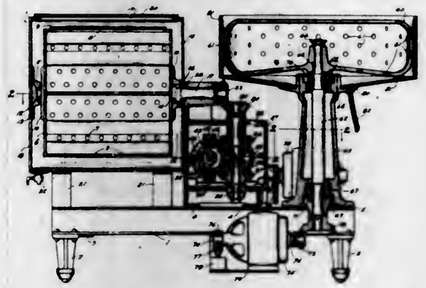
1. The method of making artificial stone, which consists in depositing upon a surface, a plurality of irregular narrow layers of material to simulate veins, applying small fractions of material upon the surface to provide nodules, applying a gas-forming material upon the surface, applying a plastic cementitious material on top of the surface and upon top of the previously deposited material, sealing the outer surface of the cementitious material.

1,568,071. INTERNAL-COMBUSTION ENGINE. WILLIAM A. KEENE, Kansas City, Kans. Filed Mar. 28, 1924. Serial No. 702,596. 4 Claims. (Cl. 123—37.)



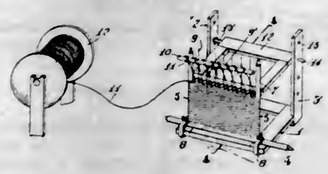
1. An internal combustion motor comprising a stator having oppositely disposed cylinders and a crank case between them, a crank shaft mounted in the crank case, reciprocatory pistons in the cylinders connected to the crank shaft, a rotor about the periphery of the stator having a plurality of fuel delivering pockets arranged in series adapted to successively communicate with the cylinders and an exhaust port with which the cylinders may intermittently register, means for feeding fuel into the several pockets in series under pressure and means for igniting the fuel charges.

1,568,072. FOOT-MEASURING DEVICE. LOUIS C. KRUEGER and LEONARD J. BRECHT, Iowa City, Iowa. Filed Jan. 26, 1923. Serial No. 615,037. 2 Claims. (Cl. 33—3.)



1. A foot measuring device, comprising a foot-rest provided with two sets of transverse graduations to indicate length and superposed oblique graduations to indicate width, each set extending from a mid-point toward the opposite ends of the foot-rest, respectively, heel-stops fixed to and rising from opposite ends of the foot-rest, a side-stop fixed to and rising from one side of the foot-rest, and a sliding indicator provided with a longitudinal slot exposing to view said graduations, a concave upstanding flange adapted to be brought into contact with the ball of the foot of a customer, and a pointer at the bottom of said flange and extending therefrom in line with the slot and cooperating with the two sets of graduations to indicate respectively the length and width of a shoe to fit the customer, the device being capable of use on either a right or a left foot.

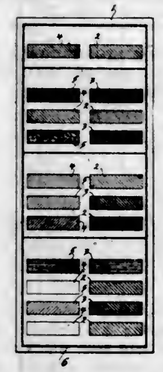
1,568,073. LOCKER. CLARKE R. LAKE, Kansas City, Mo. Filed Oct. 8, 1923. Serial No. 667,185. 1 Claim. (Cl. 45—37.)



In a locker of the class described, a vertical inwardly facing groove formed in each side wall adjacent the front edge thereof, a rigid front wall member joining said sides and extending downwardly below and in alinement with said grooves, a tie member slidably mounted in said grooves, a collapsible grate door attached at its upper end to a side face of said tie member and movable therewith across the locker opening and normally held in a raised position by a detent to drop by gravity to the folded position upon said rigid wall member immediately upon releasing the detent whereby the folded grate and tie member forms a substantially continuous low front wall.

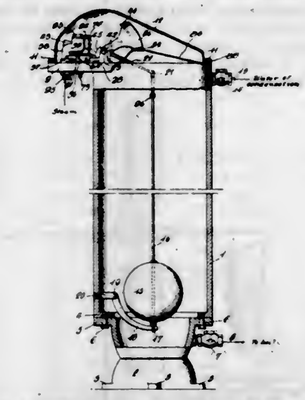
1,568,074. WASHING MACHINE. EDWARD LINDMUELLER, Cleveland, Ohio. Filed Oct. 27, 1920. Serial No. 419,849. 7 Claims. (Cl. 74—50.)

6. A gearing for washing machines, comprising a power shaft provided with a gear, a second shaft provided with loose gears meshing therewith, a shiftable clutch on and adapted to drive said second shaft and adapted to be shifted into engagement with either of said loose gears, a third shaft, intermittent gears connecting said third and first mentioned shaft, a cam on said third shaft, and a lever between said cam and shiftable clutch whereby the latter is moved into and out of engagement with said loose gears to reverse the direction of rotation of said second shaft.



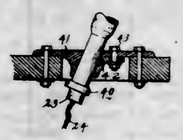
1,568,075. METHOD OF PRODUCING WOVEN-REED ARTICLES. MARSHALL B. LLOYD, Menominee, Mich., assignor to Heywood-Wakefield Company, Boston, Mass., a Corporation of Massachusetts. Original application filed Aug. 20, 1920, Serial No. 404,800. Divided and this application filed Jan. 19, 1924. Serial No. 687,188. 5 Claims. (Cl. 139—17.)

1. The method of producing reed articles that consists in securing a plurality of spaced frame members, at one end, to a common frame member, securing a plurality of stakes at one end to said common frame member within the confines of said spaced frame members, securing certain of the stakes at the other end detachably to a temporary member free to move relative to the frame members, moving said member, with the stakes secured thereto, to one side of the normal plane of the stakes thereby forming a shed, placing a filler strand in said shed, moving said member and attached stakes to the other side of the normal plane of the stakes, thereby forming another shed, laying a filler strand in said shed, meanwhile passing the filler strand around one of the spaced frame member each time a shed is formed, and finally removing said stakes from said temporary member and securing them permanently to a frame member.



1,568,076. METHOD OF PRINTING SAMPLE COLOR CARDS AND THE LIKE. GEORGE H. LUND, Chicago, Ill., assignor to Rothschild Colortype Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 10, 1922. Serial No. 600,019. 7 Claims. (Cl. 101—211.)

2. The method of printing adjacent sections of a sheet, each with a different ink, which consists in printing one group of nonadjacent sections, each with a different ink, with one printing operation and printing a second group



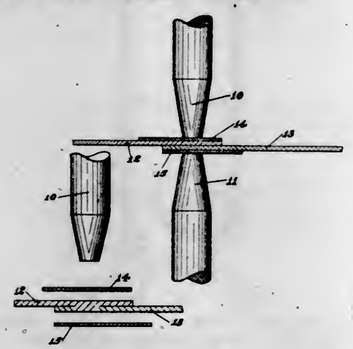
of non-adjacent sections, each with a different ink, disposed adjacent respective sections of the first mentioned group with a second printing operation.

1,568,077. AUTOMATIC PUMP AND BOILER FEEDER. VINCEN P. MCVOY, Mobile, Ala., assignor to Phoenix Machine Works, Mobile, Ala. Filed Apr. 7, 1928. Serial No. 630,659. 39 Claims. (Cl. 137—101.)

6. An automatic pump or boiler feeder comprising a cylinder, a float therein controlled by the inflow of water of condensation, a steam inlet valve, an oscillatory weight actuated by the float, a counterbalance on the pivot of said weight, and a pilot valve controlled by said weight for initially exhausting the pressure from the space above the top of the said steam inlet valve.

1,568,078. GLOVE FORMER. CHARLES W. MABEY, Indianapolis, Ind. Filed Nov. 2, 1922. Serial No. 598,459. 2 Claims. (Cl. 223—17.)

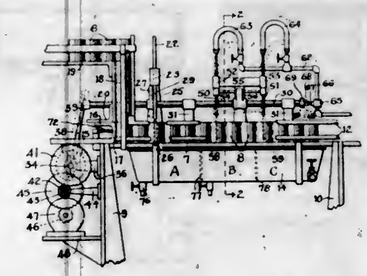
1. The combination, with an arm member, of a benchplate having an opening through which the arm is inserted, said plate having an integral underside jaw, and



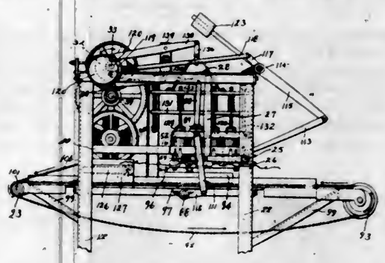
a clamp-jaw removably secured to the under side of the plate and movable toward and from the integral jaw of the plate to engage and hold the arm.

1,568,079. VEHICLE LIGHT. JEAN L. MAY, Salt Lake City, Utah. Filed May 29, 1924. Serial No. 716,658. 1 Claim. (Cl. 240—48.4.)

A device of the class described the combination a headlight case having a parabolic reflecting interior, with a closure for said case which closure consists of a transparent upper portion and an opaque lower portion, said lower portion consisting of a segment shaped reflector with its reflecting surface directed into said case and spaced in front of and below a light mounted centrally inside said case and with a portion of its apex cut out in arc shape; and a concavo-convex segment shaped with its convex side contiguous said segment shaped reflector and its concave side directed into said case.



1,568,080. ELECTRIC WELDING. JOSEPH W. MEADOWCROFT, Philadelphia, Pa., assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed May 18, 1922. Serial No. 561,843. 8 Claims. (Cl. 219—10.)

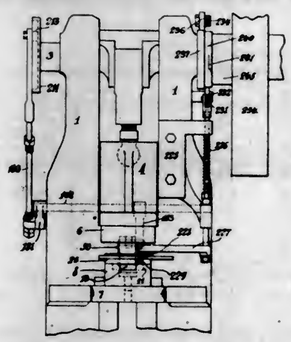


1. The method of uniting pieces of metal of which aluminum is the major constituent consisting in welding said pieces together at spots by the application of heat, electrically generated in greater part and localized at a spot or spots in a sheet or plate of resistance material external to the pieces to be united, and the application of pressure localized at the spot or spots at which the pieces are to be welded, whereby the mass of aluminum juxtaposed to said spot or spots is heated to welding temperature by conduction of the heat generated therein.

1,568,081. APPARATUS FOR RECOVERING THE CONTENTS OF CANS. WILLIAM E. MITTON, New London, Wis., assignor to The Borden Company, New York, N. Y., a Corporation of New Jersey. Filed Sept. 22, 1923. Serial No. 664,183. 5 Claims. (Cl. 141—7.)

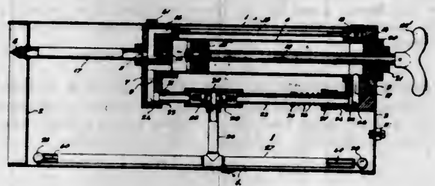
4. An apparatus for recovering the contents of cans comprising, means for intermittently advancing the cans in vertical position, a punch for piercing through the top and bottom covers of each can as it comes to rest, means for receiving the contents of the can, a nozzle for introducing wash fluid into each can, means for receiving the rinsing from the can, means for supporting the punch and the nozzle so that they may be actuated simultaneously, and means for actuating the punch and nozzle simultaneously.

1,568,082. APPARATUS FOR LOADING TRAYS WITH CANS. WILLIAM E. MITTON, New London, Wis., assignor to The Borden Company, New York, N. Y., a Corporation of New Jersey. Filed Apr. 24, 1924. Serial No. 708,635. 20 Claims. (Cl. 226—14.)



3. An apparatus for loading trays with cans and the like comprising, a platform movable to one position to receive the cans, means for placing a predetermined number of cans on the platform, means for bringing a tray into position to receive the cans from the platform, means for moving the platform to another position so that the cans may be removed therefrom, means for removing the cans from the platform and placing them in the tray, and means for preventing the transfer of the cans from the platform to the tray until a predetermined number of cans are on the platform.

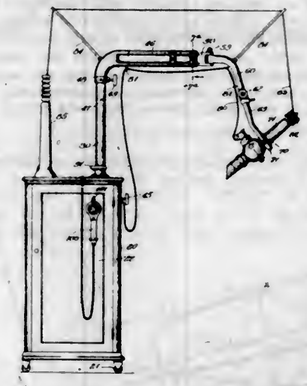
8. An apparatus for loading trays with cans and the like comprising, a pivotally mounted platform, means for placing the cans to be transferred to the tray on the platform, a conveyor for carrying forward a tray, means for holding the tray in position to receive the cans, means for tilting the platform so that the cans may be transferred into the tray, means for releasing the tray, and means for removing the cans from the platform and placing them in the tray.



11. An apparatus for loading trays with cans and the like comprising, means for conveying the cans to be transferred to the trays into the apparatus, pivotally mounted means for receiving a predetermined number of cans from the conveying means, means for holding a tray in position under the receiving means, means for tilting the receiving means, means for transferring the cans from the receiving means into the tray, and means for preventing the operation of the appsratus until a predetermined number of cans have been placed on the receiving means.

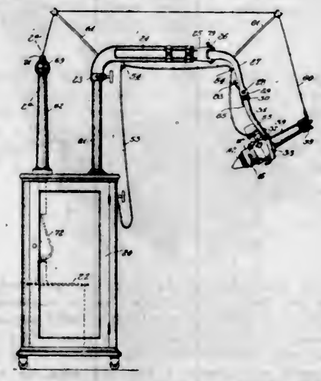
1,568,083. STOP MECHANISM FOR DIE PRESSES. HERMAN OSSWALD, Niverville, N. Y. Filed Nov. 10, 1923. Serial No. 673,895. 2 Claims. (Cl. 192—129.)

1. The combination with a plurality of reciprocating tools, a drive shaft for operating them, a drive-wheel and means for locking the drive-wheel to and releasing it from the shaft, of a reciprocating work transferring slide for transferring the work to be acted upon by the tools in succession, said transferring slide having a safety hole, a reciprocating rod arranged to enter said hole when the work is properly centered with respect to the tools, and means under the control of said reciprocating rod for releasing the shaft from the drive-wheel when the work is not centered, a pair of interconnected levers on the said shaft, a cam for operating the same and means for pivoting the said reciprocating rod to one of said levers.



1,568,084. FIRE EXTINGUISHER. GEORGE T. PEARSONS, New York, N. Y., assignor to Pyrene Manufacturing Company, New York, N. Y., a Corporation of Delaware. Filed Feb. 28, 1916. Serial No. 80,796. 11 Claims. (Cl. 299—98.)

1. In a syringe, the combination with a reservoir having an outlet at one end; a piston chamber in the reservoir connected at both ends to the reservoir outlet; inlets at opposite ends of said chamber; a piston; a piston rod to extend to the exterior of the piston chamber and cylinder to reciprocate the piston; a tubular suction intake connected to the inlets of the piston chamber to swing on an axis longitudinally of the piston chamber and reservoir; and collars on said tubular intake having cone-shaped portions to co-operate with cone-shaped seats in the inlets to the piston chamber, substantially as and for the purpose specified.

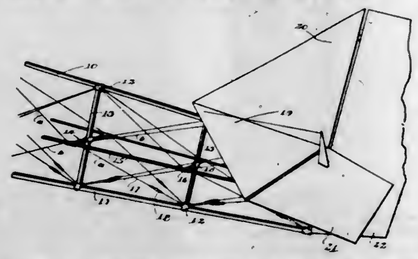


1,568,085. UNITARY LIGHT-PROJECTING APPARATUS. OSCAR H. PIEPER and ALPHONSE F. PIEPER, Rochester, N. Y. Filed Sept. 15, 1920. Serial No. 410,468. 27 Claims. (Cl. 250—84.)

1. A unitary light projecting apparatus comprising a container, electrical operating means therein for said apparatus, an upwardly projecting standard extending at its lower end into said container and supported for extensible movement into and out of the same, movably connected parts carried by said standard and supporting a light source for universal movement, and electrical connections between said light source and said operating means in the container.

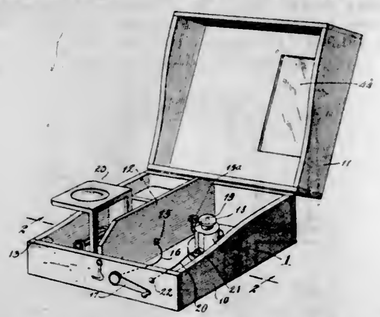
17. In a unitary light projecting apparatus, electrical operating means, an upwardly projecting standard, a substantially horizontal arm comprising longitudinally extensible sections pivotally connected with said standard for universal adjustment of the outer end thereof, to position the same above an object to be treated, a downwardly extending arm pivotally supported on the outer end of said lateral arm and comprising portions movably connected with one another, a light source carried by said arm portions for universal adjustment about said object, and electrical connections between said light source and operating means.

1,568,086. UNITARY APPARATUS FOR PROJECTING LIGHT RAYS. OSCAR H. PIEPER and ALPHONSE F. PIEPER, Rochester, N. Y. Filed Aug. 13, 1921. Serial No. 491,903. 13 Claims. (Cl. 250—34.)



1. In a unitary light projecting apparatus, the combination of a container, a standard for supporting a source of electric light for adjustment to different positions about an object to be illuminated, devices in the container for controlling the power supplied to the light source, a relatively high hollow post on the container having its bore communicating with the container interior, a spring actuated reel housed within the bore of said post, an extensible conductor wound on the reel and extended through the outer end of the post into connection with the light source, and a conductor extending

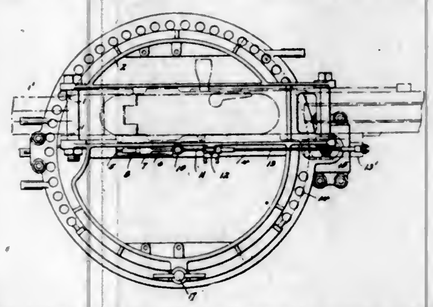
through the inner end of the post bore and connecting the controlling devices in the container with the conductor wound on said reel.



11. A unitary light projecting apparatus comprising a standard, an X-ray tube housing having an enlarged portion and an opening provided with connections for the tube filament, collars adjustably carried by the standard and engaging the opposite sides of said enlarged housing portion, bolts connecting said collars for clamping the latter on the housing, a protective cap for said housing opening, and clips adjustably and detachably securing said cap to said bolts intermediate said collars.

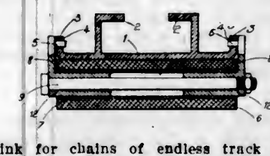
1,568,087. AIRPLANE-FUSELAGE CONSTRUCTION. JEAN A. ROCHÉ, Dayton, Ohio. Filed Apr. 18, 1924. Serial No. 707,381. 5 Claims. (Cl. 244—30.)

1. In an aircraft construction, a plurality of crisscross struts, longitudinal members joined to said struts, and stays extending diagonally from the junction of a strut and longitudinal member at one station, to the junction with another longitudinal member at another station, of a strut transverse with respect to the last mentioned strut.



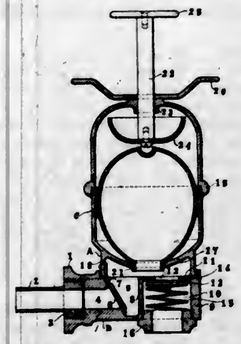
1,568,088. THREAD-COUNTING APPARATUS. GEORGE H. ROSENSTEIN, New York, N. Y. Filed Dec. 26, 1923. Serial No. 682,847. 13 Claims. (Cl. 88—39.)

1. In an apparatus of the character described, a support for the fabric to be tested and a counting device detachably and pivotally mounted on said support, said device comprising a base member, a lens holder disposed over said base member, said base member being provided with a scale, a screw bolt disposed with its axis substantially parallel to the length of the scale and journaled in the base member, and an indicator carried by said screw bolt for movement over said scale.



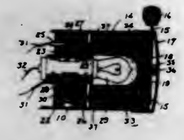
1,568,089. MOUNT FOR FLEXIBLE SYNCHRONIZED GUNS. HERBERT O. RUSSELL, Detroit, Mich., and CHARLES LEIGH PAULUS, Dayton, Ohio. Filed Apr. 18, 1922. Serial No. 555,422. 2 Claims. (Cl. 89—27.)

1. A mount for a flexible synchronizing gun, embodying a stationary base, a turntable on said base between said gun and its impulse generator, a gun having trunnions in bearings on said turntable, a trigger motor on the gun, and means for operating said trigger motor from a stationary impulse generator while permitting rotation of



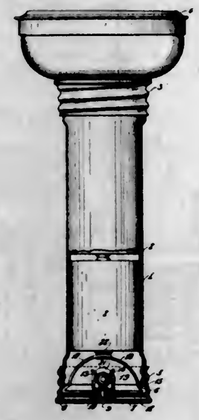
the turntable, said means comprising an impulse cable, a trigger motor operating cable, and connecting means between said cable including a connecting rod the longitudinal axis of which is coincident with the axis of rotaton of the turntable.

1,568,090. ENDLESS-TRACK VEHICLE. LEON SAIVES, Billancourt, France, assignor to Louis Renault, Billancourt, France. Filed Apr. 1, 1924. Serial No. 703,389. 2 Claims. (Cl. 305—10.)



1. A link for chains of endless track vehicles provided with lateral perforated lugs, a resilient tread block, and means for detachably connecting said block to the link, said means comprising sleeves inserted in the ends of the block, arms on the sleeves having pins engaging the perforated lugs, and a tie bolt passing through the sleeves.

1,568,091. DISPENSING DEVICE. WILLIAM A. SCHATZ, Astoria, N. Y., assignor of seventy per cent to William J. Atwood, New York, N. Y. Filed Dec. 13, 1921. Serial No. 522,092. 2 Claims. (Cl. 103—148.)

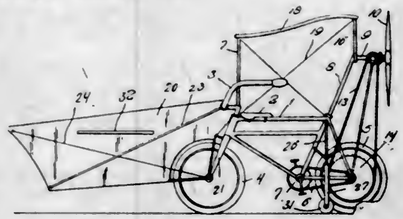


1. A dispensing device, including, in combination, a casing formed with a pair of chambers, a receptacle including a body of resilient material and a mouth disposed within one of said chambers and having its mouth in connection with the second of the same, means for collapsing said receptacle, the second chamber of said casing being formed with intake and outlet openings, and valves independent of said receptacle for controlling the flow of fluid through said latter openings.

1,568,092. TELLTALE SWITCH. WENDELIN P. SENG, Chicago, Ill. Filed Apr. 24, 1920. Serial No. 376,378. 9 Claims. (Cl. 177—311.)

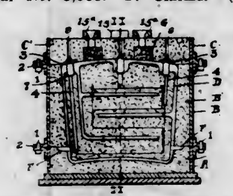
9. In a switch, a pair of members, one fixed and the other relatively movable, a plurality of spring pressed contacts projecting from the face of one of the members, a contact plate carried by the other member having a portion adapted to make continuous engagement with one of the spring pressed contacts, the other contacts being engaged by the contact plate upon the relative movement of the members, an electric lamp carried by one of the members and enclosed between them, the movable member having a recess for receiving the lamp and radiating opening therefrom covered by transparent indicating material, the lamp being in series with the continuously engaged contact so that whenever one of the other contacts is engaged by the contact plate, the member will be lighted in accordance with the different positions thereby and this may be observed through the indicating transparent material.

1,568,093. FLASH LIGHT. JAMES L. SHANNON, Springfield, Mass. Filed Mar. 14, 1925. Serial No. 15,553. 5 Claims. (Cl. 240—10.5.)



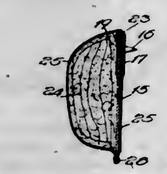
1. A flashlight construction comprising a casing member which is formed with a threaded end, a threaded cap member therefor, a bar having spring members attached to the cap and arranged in overlapping and slidable contact with each other for engagement with one terminal of the battery, spring clips attached to the cap and located between the end of the cap and the said spring members for receiving the extra bulb, the construction and arrangement being such that when the said inner ends are depressed they will always be out of engagement with the bulb.

1,568,094. PIPE-CLEANING TOOL. JOHN W. SHELBURNE, Hannibal, Mo. Filed Apr. 17, 1922. Serial No. 554,251. 4 Claims. (Cl. 137—70.)



1. A pipe cleaning tool comprising a brace having an offset portion between its ends for forming a crank for rotating the same, said brace being provided with a bore extending through said brace from end to end thereof, a flexible bit slidably mounted in said bore, and means for adjustably holding said bit within said brace.

1,568,095. CYCLE PLANE. PIUS A. C. SILVER, New Smyrna, Fla. Filed Sept. 4, 1925. Serial No. 54,489. 1 Claim. (Cl. 244—14.)

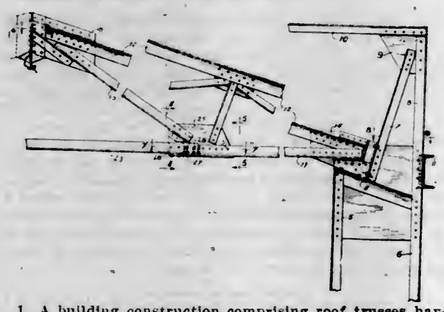


In combination, a cycle frame, a steering fork on the frame, a seat on the frame adjacent the steering fork, handle bars connected with the steering fork, a dirigible wheel journaled in the steering fork, a drive wheel journaled in the frame, means for driving the drive wheel, a hollow standard extending upwardly from the frame and having an extension disposed above the drive wheel, a propeller shaft in the extension, a propeller on the shaft, a beveled gear on the shaft, a second beveled gear meshing with the first mentioned beveled gear, a sprocket fixed to the second beveled gear, a sprocket on the drive wheel, a chain trained over the sprocket, a plane supported above the frame, a rudder attached to the handle bar and to the fork, and stabilizers extending rectangularly from the rudder, one on each side thereof.

1,568,096. PROCESS AND APPARATUS FOR CASTING FURNACE BOSH PLATES. JAMES SMITH, deceased, late of Dormont Borough, Pa., by Isabella K. Smith, administratrix, Dormont Borough, Pa., assignor to Isabella K. Smith, Dormont, Pa. Filed Jan. 29, 1925. Serial No. 5,658. 17 Claims. (Cl. 22—131.)

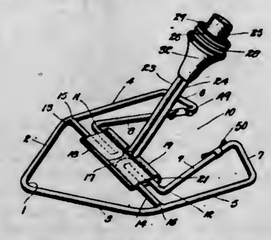
1. The process of casting a furnace boshplate, nose downwardly and in a vertically disposed position in a mold wherein the core is suspended from above, which consists in admitting the metal into the mold cavity surrounding the mold at a level above but near the lower end of the cavity, so that the molten metal first flows downwardly from the admission level to form the nose of the plate which metal in setting anchors the core in position, and the subsequently admitted metal flows upwardly within the cavity to form the remainder of the plate.

1,568,097. HAT PAD. LENA SMITH, Chicago, Ill. Filed Aug. 16, 1924. Serial No. 732,391. 2 Claims. (Cl. 2—185.)



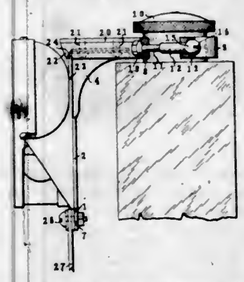
1. In a hat pad, a supporting strip, a plurality of spaced attaching spurs secured independently on one side of said strip, a cushion attached to the other side thereof, and a non-resilient metal member secured to one edge of said strip and adapted to hold said strip in curved position against the inside of the hat without tending to distort said hat.

1,568,098. MODELING CLAY. EARL E. SNOOK, Billings, Mont. Filed Feb. 16, 1925. Serial No. 9,705. 1 Claim. (Cl. 106—36.)



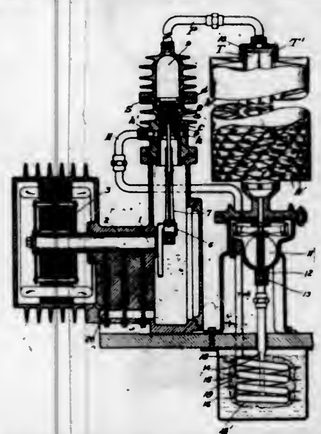
A plastic composition adapted to form a modeling clay comprising approximately 8 oz. of gelatine glue, 11½ oz. of water, 8 oz. of boiled linseed oil, 1 lb. of "titanox," 6 lbs. 1 oz. of bolted whiting, 3 oz. of chrome yellow and ½ oz. of methyl salicylate.

1,568,099. BUILDING CONSTRUCTION. JOSEPH B. STRAUSS, Chicago, Ill. Filed Aug. 10, 1920. Serial No. 402,646. 3 Claims. (Cl. 108—23.)



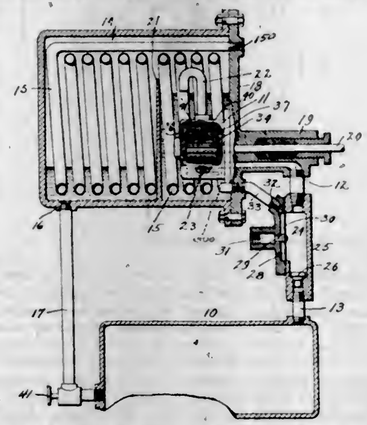
1. A building construction comprising roof trusses having substantially straight bottom chords, a series of seaprated posts, said posts formed wih re-entrant sections at the top, the bottom chords of the trusses having inclined members which fit into the re-entrant sections of the posts, whereby the trusses and posts may be quickly assembled without filed riveting.

1,568,100. MOP HEAD. HERBERT M. STURGIS, Kansas City, Mo. Filed Nov. 14, 1924. Serial No. 749,814. 3 Claims. (Cl. 15—229.)



1. A mop head comprising a flat frame of wire bent intermediate its ends to provide diverging portions, parallel arms integral with the diverging portions, inwardly extending portions at the ends of the parallel arms, inwardly directed diverging arms at the inner ends of the inwardly extending portions and terminating in reversely bent ends to provide clip brackets, the brackets being fast to the parallel arms, a sheet metal clip fastened to the brackets and a shank hinged to the clip.

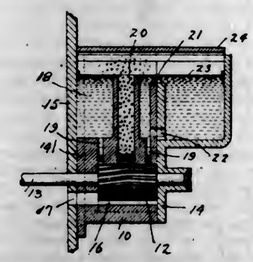
1,568,101. CLAMP. EDWARD COOPER TAYLOR, New York, N. Y. Filed Nov. 25, 1922. Serial No. 603,291. 21 Claims. (Cl. 40—125.)



18. In a device of the class described, in combination, a pair of substantially arc shaped members adapted to engage opposite sides of a radiator collar, and shaped to contact with the collar at points spaced apart from each other, sectional bolts engaging the ends of the members for drawing them together, the sections having threaded engagement, the bolts having ball and socket connections with one member and sliding connections with the other, and cooperating cam surfaces in connection with the said member and the bolts for moving said bolts inwardly when they are tightened.

1,568,102. REFRIGERATING APPARATUS. ELIHU THOMSON, Swampscott, Mass., assignor of one-third to John A. McManus, Lynn, Mass., and one-third to James E. Graham, Newtonville, Mass. Filed July 28, 1923. Serial No. 654,377. 6 Claims. (Cl. 62—178.)

1. In a refrigerator the combination of a compressor having a spring supported piston yielding increasingly as compression pressure increases to reduce supply of a volatile refrigerant and reduce the compressed charge under increasing back pressure, a condenser having multiple metallic fins a chimney carrying air for condensation in amount corresponding to increased condenser temperature, controlling means at the outlet of said condenser comprising an automatic intermittent valve, an evaporator receiving refrigerant periodically in small increments, and a water tank of such capacity as to permit a graduated thickness of ice as a thermal barrier in amount to cover rest periods from compression, said tank surrounding and closely adjacent to the evaporator.

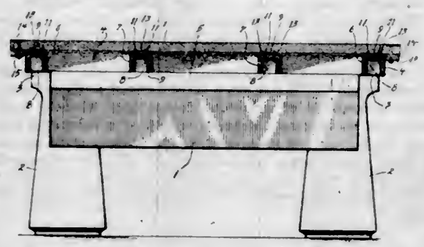


1,568,103. REFRIGERATING APPARATUS. RAYMOND W. TIBBETTS, Boston, Mass., and MYRON S. CURTIS, Pawtucket, R. I. Filed Dec. 8, 1919, Serial No. 343,306. Renewed Sept. 9, 1925. 4 Claims. (Cl. 62—116.)

1. A gas using refrigerating apparatus having a condensing chamber with two compartments side by side and in communication in the upper part of the chamber, one of such compartments being an oil well, a pump within said chamber having an outlet for mingled oil and gas with its discharge end located to deliver mingled oil and gas to the oil well and a passage being provided leading into the pump from such oil well whereby the well contents enter the pump and gas condensing surfaces in the upper part of the condensing chamber above both compartments therein.

3. The combination of a chamber into which a refrigerant gas to be condensed is introduced, means for the flow of a condensing liquid associated with such chamber, a pump, means for the flow from such condensing chamber to the pump of the refrigerant comprising a chamber, a diaphragm within such chamber providing a passage through the chamber of refrigerant on its way to the pump and also providing a passage for the condensing liquid, and a valve carried by said diaphragm to control the flow of said condensing liquid.

1,568,104. GAS PUMP FOR REFRIGERATING APPARATUS, ETC. RAYMOND W. TIBBETTS, West Roxbury, Mass., and MYRON S. CURTIS, Pawtucket, R. I. Filed Mar. 27, 1920, Serial No. 369,287. Renewed Sept. 9, 1925. 3 Claims. (Cl. 230—30.)



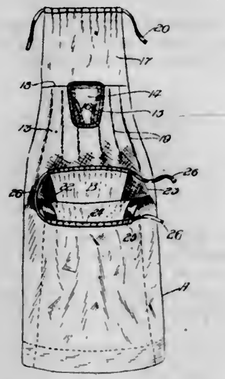
1. A pump comprising a casing intermeshing gears mounted for rotation in such casing, a port for delivering gas to said gears and a liquid tank having liquid inlet and outlet passages establishing communication between the tank and the gears, said tank having a vertical partition, terminating below the level of liquid in the tank.

1,568,105. PRINTING POSTERS. HUMPHREY C. TIFFANY, Detroit, Mich. Filed Mar. 20, 1922. Serial No. 545,245. 1 Claim. (Cl. 101—398.)

In the art of printing large posters having a solid color background by individual blocks adapted to print a portion or panel of the poster:—means for printing such panels comprising incised interchangeable blocks the printing surfaces of which form a common background for ink adapted to produce the color background of the poster, certain of said interchangeable blocks adapted to imprint over the margins of the background formed by adjacent blocks so that there are overlapped ink portions adjacent each panel obliterating any line demarcation between panels.

1,568,106. GAME TABLE. THEODORE R. TREIBER, Chicago, Ill., assignor to William H. McWhorter, Chicago, Ill. Filed Jan. 18, 1924. Serial No. 687,035. 22 Claims. (Cl. 273—3.)

1. The combination in a metal game table of a plurality of metal bed supporting members fixed on the frame of the table, and a slate bed provided with a plurality of finished grooves on its lower surface providing finished surfaces for engagement by said supporting members when the bed is seated thereon.



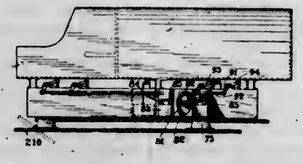
7. The combination with a metal game table frame of a plurality of horizontally disposed spaced bed supporting members secured thereon and all extending in the same direction and constituting the sole support for the bed of the table.

9. The combination with a game table frame, of a plurality of horizontally disposed channels carried by the frame, of a cement substance, capable of taking on an unyielding set, in the channels and hardened therein, and a plurality of bed supporting members set in the cement substance in respective channels for supporting the bed of the table.

1,568,107. BURIAL GARMENT. ZOE S. TUCKER, South Bend, Ind. Filed Jan. 17, 1923. Serial No. 613,112. 4 Claims. (Cl. 2—64.)

3. A burial garment in which is comprised a robe formed to surround the body from the waist line down, an under slip secured to the robe adjacent the waist line and extending downwardly therefrom, means for tying both the robe and under slip about the waist line of the body, connected front and back pieces extending

from the waist line of the robe upwardly to the shoulders, thereover, and thence downwardly to the waistline at the rear of the body, and tying means secured along the

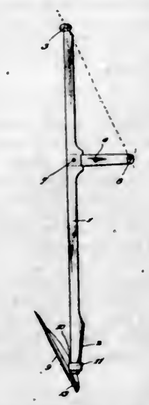


lower edge of one of these pieces adapted to be passed around to the opposite side of the body and there secured together, substantially as described.

1,568,108. METHOD OF PRODUCING IMPRESSIONALISTIC ORNAMENTAL SURFACES. MARSHALL A. TURNER, Peterborough, Ontario, Canada, assignor to Wilfred Hall, Peterborough, Ontario, Canada. Filed Oct. 11, 1922. Serial No. 593,909. 2 Claims. (Cl. 91—68.)

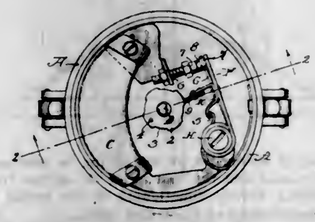
1. A method of ornamenting surfaces which consists in applying a coating of corn-starch mixed with sufficient liquid to make it of a viscous consistency whereby such coating is of varying thickness, applying a colouring pigment to the coating while still in the viscous state wherein upon liquid being evaporated out of the cornstarch the coating will dry substantially flat on the surface treated while presenting the appearance of being embossed.

1,568,109. STEPPER. RICHARD VENZLAFF, Berlin, Germany, assignor of two-thirds to Arthur von Mumm and Walter von Mumm, both of Berlin, Germany. Original application filed Feb. 16, 1921, Serial No. 445,552. Divided and this application filed Mar 23, 1922, Serial No. 546,175. Renewed Nov. 28, 1925. 2 Claims. (Cl. 180—8.)



1. A vehicle of the kind described comprising in combination two pairs of runners adapted to be alternately moved forward, a frame adapted to glide across said runners and a horizontal shaft extending across said frame, horizontal slides with cam slots adapted to be displaced on said frame, an arm on said shaft adapted to move within and in contact with said slot slides connected with said runners and adapted to be displaced vertically on said frame for lifting said runners and connecting rods establishing an operative connection between said shaft and said runners.

1,568,110. PARTITION AND LIKE BUILDING CONSTRUCTION. FREDERICK M. VENZIE, Philadelphia, Pa. Filed Feb. 6, 1923. Serial No. 617,281. 7 Claims. (Cl. 72—118.)



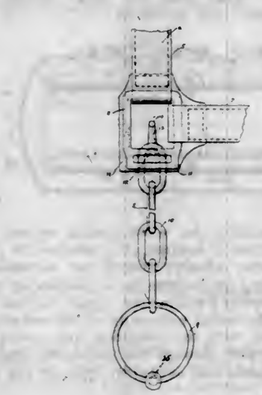
1. A construction of the character stated comprising spaced and fixed supporting strips arranged in parallelism, a plurality of spaced clips detachably engaging said strips each clip forming opposed U-shaped unit accommodating sockets, a plurality of units comprised of blocks of fire-proofing material of a width approximating the distance edgewise between the U-shaped portion of adjacent strips fitted between pairs of strips end to end and engaging in said sockets and a fire-proofing surfacing material applied to the opposite faces of said units.

1,568,111. SCYTHE. MIKE VIDOS, Renton, Wash. Filed Dec. 1, 1924. Serial No. 753,265. 1 Claim. (Cl. 56—135.)

In a scythe, a straight snath having a tapered lower end, a grip member extending from the upper end of the snath at a right angle thereto, a post extending from an intermediate point of the snath at a right angle thereto and also at a right angle to the longitudinal axis of the grip member, a second grip member extending from the free end of the post parallel with the first-mentioned grip member, a blade, a tang rigidly connected with the butt end of the blade in fixed angular relation thereto, the width of the blade being disposed in a plane parallel with a plane passing through the centers of the grip members, and a clamping collar encircling the tang and the lower tapered end of the snath and having a wedging binding engagement with the snath.

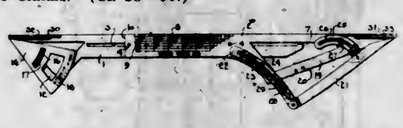
1,568,112. IGNITION DEVICE. CHARLES J. VOGE, Chicago, Ill. Filed Nov. 1, 1924. Serial No. 747,310. 6 Claims. (Cl. 200—27.)

3. An ignition device having two sets of interrupter points and a cam for mechanically operating each set, said cams being so adjusted with relation to each other that the cam first to operate will close and open its set of interrupter points before the second cam closes and opens its set of interrupter points.



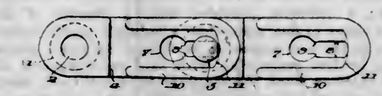
1,568,113. BREECHING LEAD-UP ATTACHMENT. JAMES M. WALSH, Milwaukee, Wis. Filed Apr. 21, 1924. Serial No. 707,977. 6 Claims. (Cl. 54—5.)

2. In combination, a breeching body formed of an outer casing of flexible leather, a soft core enclosed therein, and a longitudinally extending reenforcing strip, a metallic hook member secured to the breeching and partially covered by the reenforcing strip, the mouth of said hook member facing said section and normally yieldingly closed thereby, means formed on said hook member cooperating with said reenforcing strip for preventing lateral movement of said hook member, a lead up strap having its end portion looped, and a member having an opening carried by the looped portion of said lead up strap and engageable with said hook member for disengageably securing the lead up strap to the breeching body.



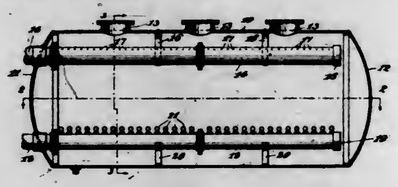
1,568,114. BRIDLE. JAMES M. WALSH, Milwaukee, Wis. Original application filed May 22, 1924, Serial No. 715,121. Divided and this application filed Feb. 7, 1925. Serial No. 7,590. 5 Claims. (Cl. 54—6.)

5. The combination with a bridle including a head-stall and bit, a connector secured to the head-stall and formed with a hook portion extending into the plane of the connector, and connecting means connected to the bit and detachably engaged by the hook portion of said connector, said connecting means being formed of a plurality of sections movable with respect to each other so that movement of a lower section of said connecting means will



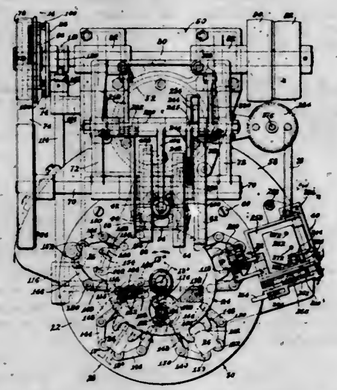
not move an upper section to accidentally disengage it from said hook, any portion of the connecting means being selectively engaged by said hook.

1,568,115. IMPLEMENT FOR MARKING ROOF RAFTER CUTS AND BRACES. JOHN DUDLEY WEAVER, Woodriver, Ill. Filed Dec. 7, 1922. Serial No. 605,460. 9 Claims. (Cl. 33—90.)



1. An instrument of the character described comprising two members relatively adjustable longitudinally and provided with suitably designated graduations for indicating the length of a rafter to be cut, said graduations being so arranged that the length of the instrument adjusted according to the graduations bears the same ratio to the length of the rafter to be cut that the length of the instrument when fully contracted bears to one-half the width of the building.

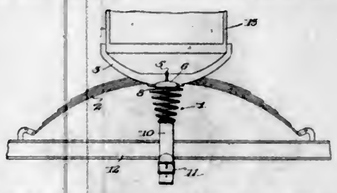
1,568,116. SPROCKET CHAIN. JERVIS B. WEBB, Royal Oak, Mich. Filed June 11, 1925. Serial No. 36,348. 3 Claims. (Cl. 74—32.)



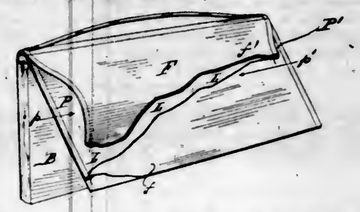
1. In a sprocket chain composed of similar links each having a tubular member and side members, said side members each having, near their free ends, elongated key-hole slots, outwardly facing shoulders on said side members near their junction with the tubular member, cylindrical pins having segmental grooves at diametrically opposite points near their ends adapted to enter the tubular member and the circular portion of the key-hole slots and lie in the rectangular portion thereof when the links are assembled, the key-hole slot being restricted at the junction of the circular and rectangular portions to a width slightly less than the distance between the bottoms of the grooves in the locking pin.

1,568,117. APPARATUS FOR THE STANDARDIZATION OF SOLUTIONS. JOHN FRANKLIN WHITMAN, Brooklyn, N. Y. Filed Aug. 27, 1924. Serial No. 734,547. 6 Claims. (Cl. 23—271.)

1. In a device suitable for a circulating system for standardizing the chemical content of a solution, in combination, a receptacle, closable means for introducing a liquid directly into the receptacle, a perforated pipe positioned longitudinally within the upper portion of the receptacle and extending outwardly of the receptacle, exit means connected with the receptacle and means capable of forcing a liquid through the perforated pipe inwardly of the receptacle and outwardly through the exit means.



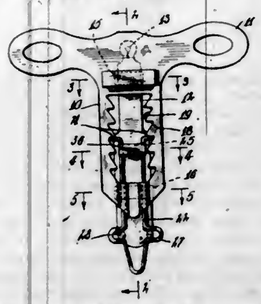
1,568,118. HEEL-BUILDING MACHINE. ERASTUS E. WINKLEY, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Sept. 22, 1922. Serial No. 589,794. 35 Claims. (Cl. 12—50.)



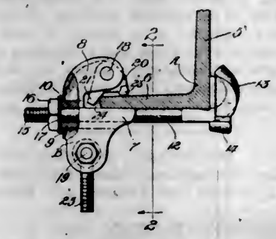
1. A heel building machine for forming heel-sections of at least two lifts having, in combination, a frame providing a number of lift-receiving stations equal to the number of lifts in the heel-section and a discharge station; a conveyer provided with a number of lift-holders equal to one more than a multiple of the number of lifts in the heel-section to be formed, an equal number of said holders registering with said receiving and discharge stations when the conveyer is at rest; and means for periodically advancing the conveyor through the same number of spaces between the holders as there are lifts in the heel-section.

1,568,119. COMBINED BUFFER AND SNUBBER. DAVIS L. WOLF, Archer County, Tex. Filed Aug. 13, 1924. Serial No. 731,801. 2 Claims. (Cl. 267—67.)

1. In a combined snubber and buffer, the combination with an axle and a transverse leaf spring, of a central vertical coiled spring fixed at its upper end to the leaf spring and suspended therefrom directly above and normally spaced from and out of contact with the axle and adapted to be carried into contact with the axle by excessive downward movement of the spring to act as a buffer and check such downward movement, and means loosely suspended from the lower end of the spring about the axle and unconnected with the axle and arranged to engage the axle and distend and tension the spring during excessive upward movement of the spring in rebound, said connecting means and the spacing of the spring from the axle permitting normal functioning of the spring of the vehicle independently of the coiled spring.

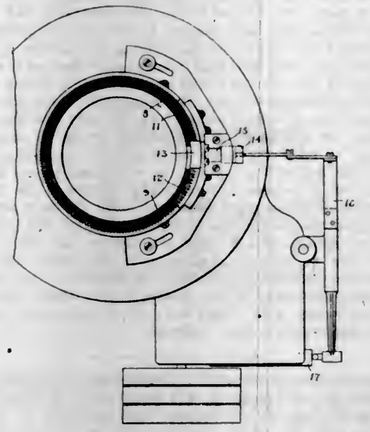


1,568,120. POCKETBOOK. MORRIS WUNTHAL, New York, N. Y. Filed Dec. 23, 1924. Serial No. 757,616. 3 Claims. (Cl. 150—28.)



1. A pocket book of the character designated, having a flap member constructed with duplex co-related longitudinal pockets inverted with relation to each other and extended each for the full length of the flap, the mouth of each pocket being at the extremity thereof adjacent to the closed end of the other twin pocket, substantially in the manner and for the purpose set forth.

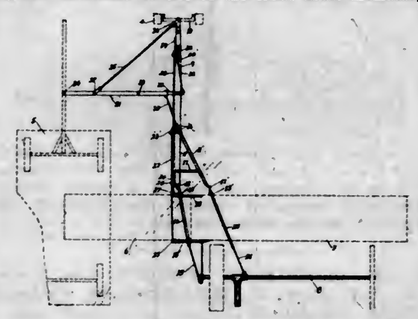
1,568,121. CRAVAT FRAME. JOSE B. YANEZ, Davenport, Iowa. Filed Aug. 1, 1924. Serial No. 729,455. 2 Claims. (Cl. 24—57.)



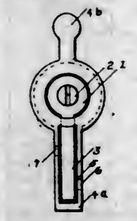
1. A device of the class described comprising a plate adapted to hold a tie, said plate being formed with a vertical slot, ratchet teeth formed on the side walls of said slot, a bar engaged with said plate for vertical adjustment thereon and having its upper end formed with an eye, and pawl elements carried by said bar and removably engaging said ratchet teeth, a U-wire mounted on said plate and having said pawl elements formed on the upper ends of its legs, and means attaching said wire to said bar to permit of lateral movement to its legs while preventing longitudinal displacement of the wire on said bar.

1,568,122. CLAMP. LOTHAR R. ZIFFERER, Columbia, Pa. Filed May 8, 1923. Serial No. 636,844. 7 Claims. (Cl. 189—35.)

1. The combination with a beam having a flange, of a clamp adapted to be secured thereto and comprising a fixed element adapted to underlie the flange, and pivoted to the fixed element a rocking wedge element adapted to overlie the flange, and means for forcing the clamp transversely upon the flange whereby the rocking element is wedgingly engaged with the upper flange side, substantially as described.



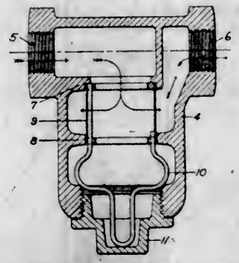
1,568,123. METHOD AND MEANS OF KNITTING FULL-FASHIONED HOSIERY ON A CIRCULAR-KNITTING MACHINE. JOHN M. ALLEN, Toronto, Ontario, Canada. Filed July 10, 1924. Serial No. 725,249. 3 Claims. (Cl. 66—24.)



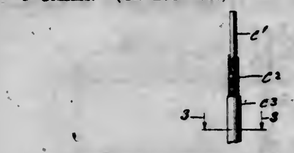
1. A method of knitting full fashioned hosiery on a circular knitting machine, consisting in knitting the fabric upon a circular knitting machine with a reciprocating action of the needle cylinder to form the foot, the ankle and the leg portion in a fashioned shape utilizing practically the entire circle of needles by intermittently withdrawing the top centre cam of the knitting machine out of the path of the needles.

1,568,124. TRACTOR HITCH FOR HEADERS. EMIL F. ANDERSON, Chicago, Ill., assignor to International Harvester Company, a Corporation of New Jersey. Filed June 12, 1920. Serial No. 388,641. 8 Claims. (Cl. 56—6.)

1. In a tractor hitch for harvesters, a pair of front draft members, rear draft members connected at one end to the front draft members and secured at their opposite ends to the axle of the harvester, means securing the rear draft members to the harvester platform, an adjusting bar connected to one of the front draft members, a lever carried by the same draft member, and means connecting the lever, bar and harvester whereby movement of the lever will adjust the harvester platform.

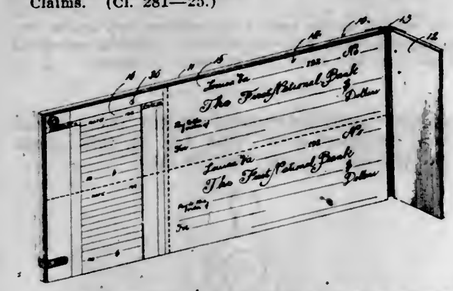


1,568,125. IGNITION-SWITCH LEVER. ORRIN G. BARLOW, Davenport, Iowa. Filed Aug. 14, 1924. Serial No. 732,118. 4 Claims. (Cl. 74—33.)



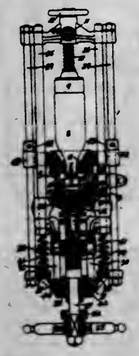
1. An attachment for an ignition switch for automobiles, comprising an annular hub, a yoke adapted to embrace the hub and handle of the ignition switch, with an upwardly projecting handle united thereto.

1,568,126. LIQUID STRAINER. ROBERT S. BASSETT, Buffalo, N. Y. Filed May 4, 1925. Serial No. 27,668. 2 Claims. (Cl. 210—165.)



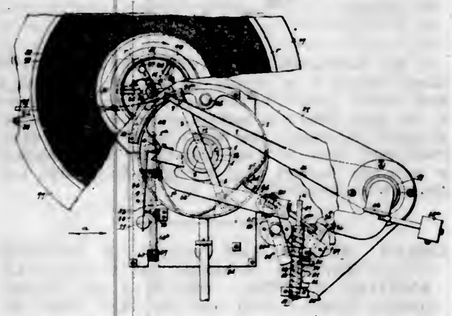
1. A liquid strainer comprising a casing having an inlet passage, an outlet passage, a sediment chamber, a cleaning opening at the end of said casing, a partition with one perforation separating said inlet passage from said outlet passage, a second partition below said first partition, with one perforation and separating said outlet passage from said sediment chamber, combined with a tubular screen open at both ends, insertible through said cleaning opening and said sediment chamber, engaging said partitions at the perforations, and connecting said inlet passage to said sediment chamber.

1,568,127. TENNIS RACKET. ALLEN H. BEHR, Brooklyn, N. Y. Filed May 13, 1925. Serial No. 29,957. 6 Claims. (Cl. 273—73.)



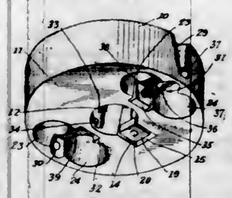
1. A tennis racket having an impact medium consisting of a weave of cord comprising a core of glue-impregnated animal ligature, enclosed in a textile covering coated with waterproof varnish, substantially in the manner and for the purpose set forth.

1,568,128. CHECK BOOK. WILLIAM C. BIBB, Louisa, Va. Filed June 23, 1925. Serial No. 39,111. 2 Claims. (Cl. 281—25.)



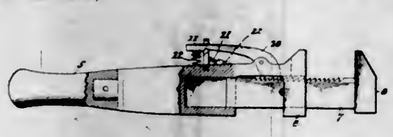
1. In a check book, a cover having a back, a plurality of checks arranged on the bank having stubs, means for pivotally connecting the check stubs on the back including a stud bolt extending through one corner of the cover, a relatively thin disk shaped plate formed on one end of the stud bolt connected with the back, the stud bolt extending through one corner of the check stubs, and a relatively thin nut fitted upon the opposite end of the stud bolt, and a clip carried by the opposite corner of the back for detachably engaging the said check stubs at a point remote from said stud bolt.

1,568,129. MACHINE FOR FILLING AND SEALING BOTTLES. ARTHUR JAMES BILLOWS, London, England. Filed Sept. 8, 1922. Serial No. 586,939. 4 Claims. (Cl. 226—28.)



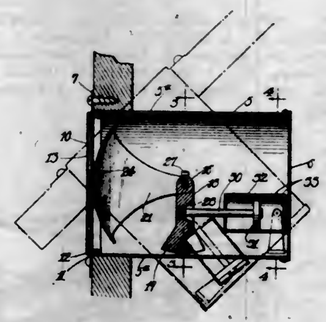
1. A machine for filling and sealing bottles comprising top and bottom bridge pieces connected by vertical rods, a head slidably mounted on the rods, a sealing gasket in said head, a chuck also in the head below the sealing gasket, guide rods carried by the head and slidably engaging the top bridge piece, retracting springs connecting the head with the bottom bridge piece, stop pins carried by the head, a striker plate for automatically locking said stop pins in an elevated position, a spindle having a screw part engaging in a portion of said head and adapted to operate the chuck, and a resetting cam carried by the spindle and adapted to release the striking plate from locking engagement with said stop pins after the bottle has been sealed.

1,568,130. MULTIDISK PHONOGRAPH. HOWARD BLACKWELL, Youngstown, Ohio. Filed Oct. 7, 1921. Serial No. 505,998. 38 Claims. (Cl. 274—10.)



35. In a talking machine, the combination with a record carrying turntable, driving mechanism therefor, and a tone arm swingable over the turntable and vertically oscillatable with respect to the said turntable; of means set into action by the driving mechanism for lifting the tone arm, swinging it outwardly clear of a record carried by the turntable and controlling its return above and the lowering thereof into cooperation with the start of that record, means engaged by the tone arm during a portion of its outward swing and acting to store up energy to force the same to cooperative operation with the said controlling action, the said last named means including a pusher rod normally projected by spring pressure and a member associated with the tone arm for engaging the pusher rod to force it against the pressure of the spring, and devices for setting the pusher rod relatively to the engaging member associated with the tone arm whereby to regulate the amount of the spring impelled movement of the pusher rod to adapt the same to cooperation with varied sizes of records and to render the same inactive when desired.

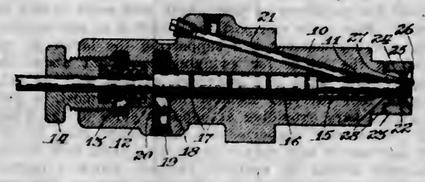
1,568,131. CABLE-BOX ANCHORAGE. WILLIAM A. BONNELL, Brooklyn, N. Y. Filed Sept. 18, 1922. Serial No. 588,779. 3 Claims. (Cl. 247—1.)



1. A cable box comprising a cast body having a centrally apertured support receiving hub and provided with a plurality of cable receiving sockets, said body being further provided with a plurality of aligned openings communicating with said socket and centrally apertured hub, said openings being adapted to receive means for securing cables in said sockets and formed in said cast body entirely by casting methods.

1,568,132. WRENCH. GEORGE W. BRADLEY, Avery, Tex., assignor of one-half to Brose P. Medford, Avery, Tex. Filed Oct. 30, 1922. Serial No. 597,906. 2 Claims. (Cl. 81—136.)

1. In a wrench comprising a tubular handle, a yoke carried thereby and provided with a slot in the upper face thereof, a rack bar slidable in said handle and said yoke, a pawl pivotally carried by said handle and having its forward end receivable in said slot for engagement with said rack bar, the opposite end of said pawl having an elongated slot provided therein, a pivoted locking member carried by said handle and extending through said slot in said pawl, a shoulder extending outwardly from one of the side faces of said locking member and adapted for engagement with the rear portion of said pawl, the aforesaid shoulder adapted to limit the movement of the end portion of said pawl to actuate said pawl out of engagement with said rack bar, and resilient means engaging said pivoted locking member for urging the same toward the rear portion of said pawl.

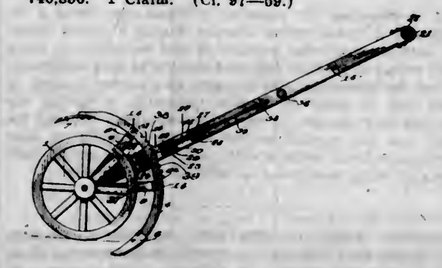


1,568,133. GRADOMETER. MILTON BROOKS, Esperance, N. Y. Filed June 23, 1922. Serial No. 570,321. 1 Claim. (Cl. 33—220.)

A gradometer comprising a cylindrical housing having a front observation opening, a horizontal rod extending across the casing, a segmental indicator dial adjustably secured on the rod and movable across the face of the observation opening, a weight suspended from the rod for normally holding the indicator dial in a predetermined position, a bracket arranged within the housing below and forward of the pivot rod, a cylinder rockably mounted on the bracket below said rod, a piston reciprocally mounted within the cylinder, and a piston rod rigidly connected to the piston and pivotally connected to the weight below the pivot rod, as and for the purpose specified.

1,568,134. FUEL NOZZLE. LEOPOLD F. BURGER and WILLIAM F. BORGERD, Riverside, Ill., assignors to International Harvester Company, Chicago, Ill., a Corporation of New Jersey. Filed Sept. 9, 1922. Serial No. 587,255. 5 Claims. (Cl. 299—133.)

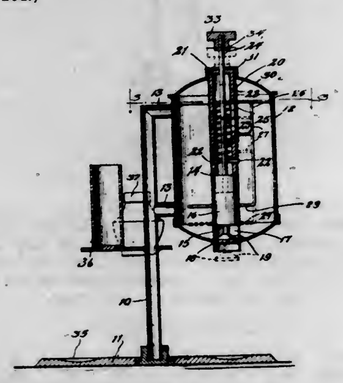
1. In a fuel nozzle, a body having a longitudinal bore, a valve having an enlarged portion freely slidable in the bore and having a reduced cylindrical flat end, a valve seat at one end of the body having a central aperture, the seat having a flat bottomed frustro-conical recess co-axial with the aperture and adapted to receive



the reduced end of the valve, and means for pressing the reduced end of the valve against the flat bottom of the recess to close the aperture.

1,568,185. PANIC BOLT LOCK. WILLIAM J. CARROLL, West Haven, Conn., assignor to Sargent & Company, New Haven, Conn. Filed Jan. 9, 1923. Serial No. 611,685. 27 Claims. (Cl. 292—92.)

1. Door holding mechanism comprising a latch bolt adapted to be mounted in the door jamb and to enter a keeper opening in the door; a second bolt mounted upon the door and controlling said latch bolt, said latch bolt holding said door in position to prevent the binding of said second bolt against the door jamb.

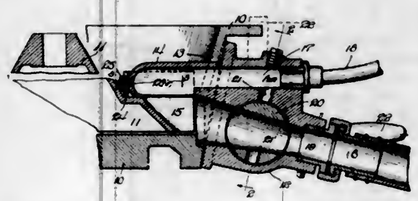


1,568,136. GARDEN IMPLEMENT. WILEY A. CRUMP, Humble, Tex. Filed Sept. 27, 1924. Serial No. 740,356. 1 Claim. (Cl. 97—59.)

An implement of the character described comprising a ground wheel, an axle extending through the hub of the wheel and projecting beyond the ends of the hub, an arcuate tool carrying member having the inner wall

thereof defined in the arc of a circle struck by a radius of greater length than the radius of said wheel, pairs of arms swingingly supported on the end portions of said axle and extending at opposite sides of said wheels beyond the periphery of said wheel, said arms having inwardly offset outer end portions attached to said arcuate tool carrying member and supporting the latter in the plane of the wheel for swinging movement about the axis of said axle, the convexly curved wall of said arcuate tool carrying member being outermost, a pair of handle bars extending at opposite sides of the wheel and respectively supported at their inner ends on the end portions of said axle, a block connecting said handle bars and having an aperture through which a portion of said arcuate tool carrying member extends, said portion of the arcuate tool carrying member having notches in its outer wall, a latch bar supported between said handle bars to have limited movement in the direction of its length and being movable in said direction to and from position to engage the notches of said tool carrying member, a spring urging said latch to position to engage with said notches, a pair of inwardly extending opposite eye members carried by the handle bars outwardly of the outer end of said latch, a link attached at its inner ends to said latch and having a loop portion at its outer end, said loop portion having parallel side members extending slidably through the eyes of said eye members, and a cross member between the handle bars rearwardly of said loop and adjacent thereto, said cross member and said loop being adapted to be gripped at the same time in the hand of the operator and the link thereby actuated to retract said latch bar.

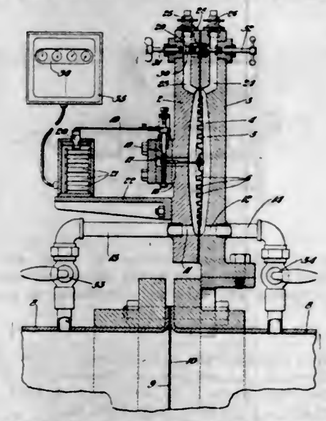
1,568,137. DISPENSING DEVICE. NORMAN F. DAHNS and ANDREW L. THANOS, La Porte, Ind. Filed Feb. 28, 1924. Serial No. 695,651. 5 Claims. (Cl. 221—104.)



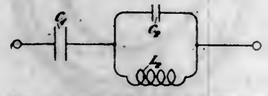
1. A dispenser for granular material comprising a receptacle, a reciprocating plunger having a recess therein, said plunger being movable in said receptacle to bring said recess alternately into and outside of said receptacle, a rod for operating said plunger, an agitator secured to said rod to move in unison therewith, a spring for moving said plunger in one direction, and a housing for said rod and spring to exclude the material in said receptacle from contact with said rod and spring, said agitator being positioned outside of said housing.

1,568,138. CURTAIN WINDOW. WILLIAM J. DECKER, Detroit, Mich., assignor to Decker Manufacturing Company, a Corporation of Delaware. Filed Aug. 30, 1920. Serial No. 406,845. 7 Claims. (Cl. 296—145.)

7. The combination with the curtain fabric and the lining fabric forming the covering of an auto top of a two-piece window frame adapted to be secured one to each fabric section and concealed therebetween, a window secured between the frame sections and the fabric sections and means for securing the frame sections together.



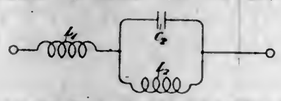
1,568,139. DEVICE FOR FEEDING COMMINUTED MATERIAL TO A CONDUIT. CLARENCE L. DEWEY, Wilmette, Ill., assignor to Cement Gun Construction Co., Chicago, Ill., a Corporation of Illinois. Filed Feb. 23, 1923. Serial No. 620,667. 2 Claims. (Cl. 302—40.)



1. A device of the character described comprising a charge holder for comminuted material, a conduit thru which the material is to be passed; means for introducing air under pressure to move the charge and a valve arranged to close the charge-holding container and to by-pass the container providing a direct path into the conduit.

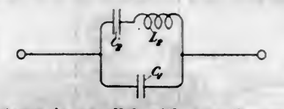
1,568,140. PRESSURE GAUGE. DEXTER EDGE, Pittsburgh, and JOHN A. HUNTER, Ben Avon, Pa. Filed Sept. 28, 1923. Serial No. 665,375. 3 Claims. (Cl. 73—110.)

3. In a differential pressure gauge, the combination of a closed receptacle, a diaphragm dividing said receptacle into two chambers and adapted to be deflected to an extent varying with the difference between the fluid pressures in said chambers, conduits leading from said chambers to sources of fluid pressures, an upwardly extending conduit leading from the upper end of each of said chambers and provided with a valved outlet, said last named conduits serving as vents when desired and having a by-pass formed therebetween, an automatic pressure operated valve for controlling the flow through said by-pass, and means operable by said diaphragm for registering the pressure changes in said chambers.

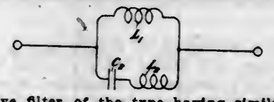


1,568,141. FREQUENCY SELECTIVE CIRCUITS. HENRY W. ELSASSER, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Aug. 13, 1920. Serial No. 403,367. 8 Claims. (Cl. 178—44.)

1. A wave filter of the type having like recurrent sections and in which each section consists of a series element and a shunt element, one of these elements consisting of a capacity reactance in series with a plurality of paths in parallel with each other, one of said paths comprising inductive reactance and the other of said paths comprising capacity reactance.



1,568,142. FREQUENCY SELECTIVE CIRCUITS. HENRY W. ELSASSER, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Aug. 13, 1920. Serial No. 403,368. 5 Claims. (Cl. 178—44.)

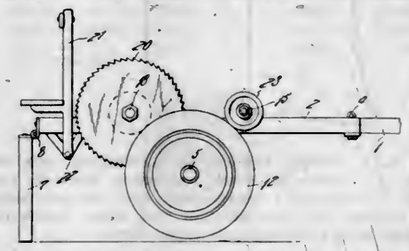


1. In a wave filter of the type having like recurrent sections, each section consisting of a series element and a shunt element, a complete element consisting of a network of impedances so arranged and so proportioned that at low frequencies the reactance thereof has a small positive value which increases as the frequency is raised to a large positive value, then undergoes a sudden change from a large positive to a large negative value, and thereafter decreases in negative value, finally becoming increasingly positive.

1,568,143. FREQUENCY SELECTIVE CIRCUITS. HENRY W. ELSASSER, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Aug. 13, 1920. Serial No. 403,369. 9 Claims. (Cl. 178—44.)

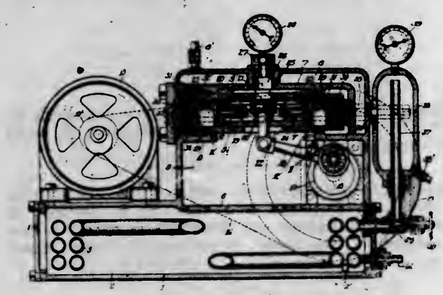
1. A wave filter of the type having similar recurrent sections, each section having a series element and a shunt element, one of those elements in each section consisting of a single lumped reactance and the other element in each section being a network comprising a capacity reactance in parallel with a path comprising an inductive reactance and a capacity reactance in series with each other.

1,568,144. FREQUENCY SELECTIVE CIRCUITS. HENRY W. ELSASSER, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Aug. 13, 1920. Serial No. 403,370. 4 Claims. (Cl. 178—44.)



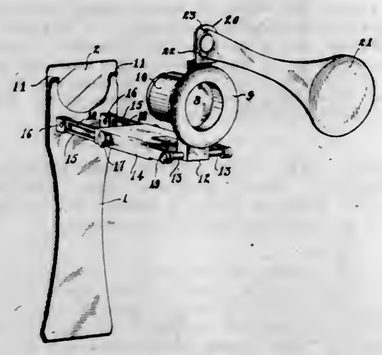
1. A wave filter of the type having similar recurrent sections, each section comprising a series element and a shunt element, and one of those elements consisting of a single lumped reactance, the other element being a network comprising an inductive reactance in parallel with a path comprising an inductive reactance and a capacity reactance in series with each other.

1,568,145. FREQUENCY FILTER FOR ELECTRIC CURRENTS. HENRY W. ELSASSER, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Feb. 26, 1921. Serial No. 448,029. 5 Claims. (Cl. 178—44.)



1. A wave filter of the recurrent section type and a network at the input end consisting of a midseries input network and a midshunt input network connected in series between the input terminals and across the main body of the said filter whereby the filter has an impedance value approximately the average of the values that it would have with each termination alone.

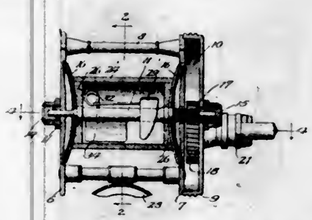
1,568,146. SAW ATTACHMENT FOR VEHICLES. CHRISTIAN F. ERNST, Manchester, Mich. Filed Feb. 2, 1925. Serial No. 6,480. 5 Claims. (Cl. 74—106.)



1. A device for the purpose indicated comprising in combination with a vehicle having a chassis frame, of beams carried by the frame, a tool shaft spanning the beams, and means engaging the beams and the vehicle axle for elevating the latter, the tool shaft having a friction roll for engagement with one of the driving wheels of the axle.

1,568,147. REFRIGERATING APPARATUS. PHILIP FISCHBACHER, Quincy, Ill. Filed Mar. 16, 1923. Serial No. 625,448. 3 Claims. (Cl. 230—6.)

1. Apparatus providing, in combination, a casing for cooling medium, said casing being provided with inner walls providing a chamber, a cylindrical sleeve supported within said chamber, said inner walls providing abutment means, for one of said cylindrical sleeve, a second cylindrical sleeve encircling said first mentioned sleeve and having abutting relationship with the other end of said first mentioned sleeve, cooperating ports in said sleeve, a piston within said first mentioned sleeve and transmitting mechanism for communicating reciprocating motion to said piston, said piston and said first mentioned sleeve being provided with cooperating valves, said valve in said sleeve being adapted to control said ports, said transmitting mechanism, piston and valves being so proportioned that said piston at a limit of its travel reduces to substantially zero the space between said valves when said valve uncovers in said sleeve the port in said first mentioned sleeve.

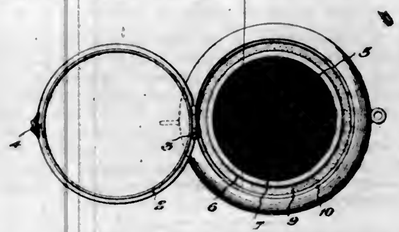


1,568,148. READING MACHINE. BRADLEY A. FISKE, New York, N. Y. Filed Feb. 21, 1925. Serial No. 10,849. 6 Claims. (Cl. 88—39.)

1. In a reading machine, the combination with the lens, of a frame on which the lens is mounted, said frame constituting a spring clamp, open on three sides, for holding the paper, sheet or card which carries the reading matter, substantially as set forth.

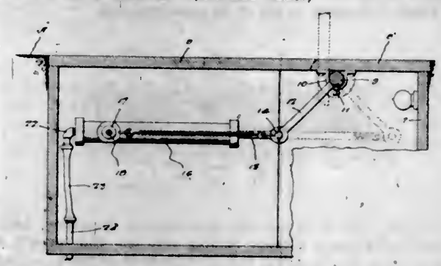
1,568,149. FISHING REEL. WILLIAM A. FOSS, Cleveland, Ohio. Filed Dec. 10, 1923. Serial No. 679,546. 12 Claims. (Cl. 242—84.5.)

1. In a fishing reel, the combination of a frame adapted to be secured to a fishing rod, a spool rotatably mounted in the frame, means for operating the spool to wind a line thereon, and a centrifugal device substantially and constantly free to rotate without variation in the



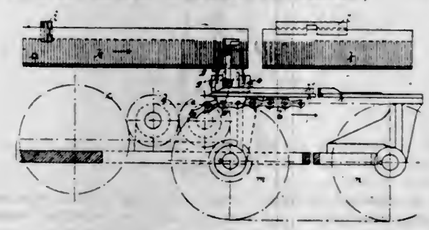
retardational engagement between the spool and frame and connected to the spool so its movement under centrifugal influence will vary its retardance of the spool.

1,568,150. CONTAINER. THEODORE CLYDE FOSTER, Providence, R. I., assignor to Theodore W. Foster & Bro. Co., Providence, R. I. Filed Oct. 6, 1924. Serial No. 741,857. 3 Claims. (Cl. 220—55.)



1. In combination with a container including a central body having a peripheral hollow slotted bead and a pair of opposed covers hinged to the body, a single spring latch for both of the covers having a central lateral car riveted to the body, a pair of catches for the covers struck-out from the respective opposite ends of the latch, and disposed on opposite sides of the bead and finger pieces on the ends of the latch projecting through the slots of the bead.

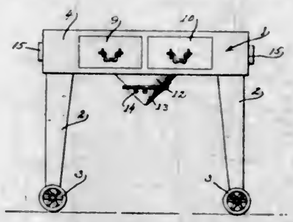
1,568,151. VANITY CASE. THEODORE W. FOSTER, Providence, R. I., assignor to Theodore W. Foster & Bro. Company, Providence, R. I. Filed Apr. 4, 1925. Serial No. 20,669. 5 Claims. (Cl. 132—82.)



2. In a vanity case, a body having a side wall, a screen, a felt member seating on the surface of the powder and secured to and extending outwardly beyond the periphery of the screen and having its periphery frictionally and movably engaged with the side wall of the body, and means to connect the felt member to the screen.

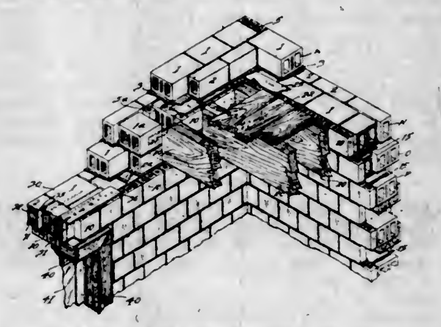
1,568,152. RAILWAY SIGNAL. CHARLES GILLESPIE, New Braunfels, Tex. Filed Nov. 18, 1922. Serial No. 601,875. 3 Claims. (Cl. 246—128.)

1. A signal of the character described, comprising a casing, a signal panel normally closing the top of the casing, a shaft extending across the casing and supporting said panel for swinging movement in a vertical direction, and means contained within the casing for operating said shaft comprising a cylinder, a piston operating in the cylinder and connected with said shaft, means for supplying fluid to the cylinder to move the piston in one direction and spring means connected between the cylinder and the piston for moving the latter in the opposite direction.



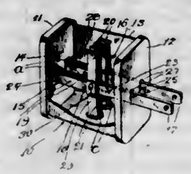
1,568,153. MATCH-MAKING MACHINE. KARL PAUL GOTTSCHALK, Dresden, Germany, assignor, by mesne assignments, to The Diamond Match Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 23, 1923. Serial No. 627,282. 4 Claims. (Cl. 144—51.)

1. In a match making machine having means for transversely cutting a continuous web of matches into succeeding strips, an endless conveyer, including a succession of clamp elements, movable in a path adjacent the leading end of each strip and operable to position a clamp element in longitudinal alignment with the strip, a gripper element, means for supporting said gripper element and moving it in a path transversely of the conveyer and longitudinally of each succeeding strip and the adjacent clamp element, and means for periodically actuating the said gripper element whereby it is caused to seize the strip, move it lengthwise and into the grasp of the adjacent clamp element of the conveyer, and then release the strip.



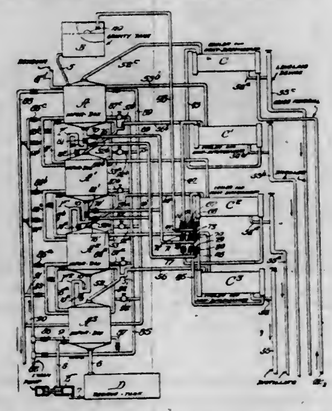
1,568,154. TABLE. ANNA M. HANNON, Wabek, and WILLIAM LENNON, Overly, N. Dak. Filed Jan. 16, 1924. Serial No. 686,551. 1 Claim. (Cl. 45—31.)

A table of the class described, comprising inner and outer spaced apart rectangular frames, vertical leg members of rectangular design in cross-section having their upper end portions secured between said frames at the corners thereof, the upper ends of said leg members extending to the horizontal plane of the upper edges of said frames and the upper faces of said leg members being depressed to form cups therein, bottom strips secured to the lower edges of said frames between said legs, whereby to provide deep receptacles at the sides of said table, a hollow inverted conical member secured at its upper end to the inner side faces of said inner frame and forming a central receptacle therein, the lower conical end of said member being cut horizontally and hingedly secured in position to provide a removable flap bottom



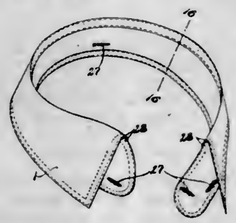
therefor, snap fasteners in connection with said member and said hinged bottom to removably secure the latter in position, and a rectangular cover applicable to the upper edges of said frames and adapted for use as a game top, as and for the purposes described.

1,568,155. FIREPROOF HOLLOW WALL CONSTRUCTION. FREDERICK HEATH, Tacoma, Wash., assignor to Heath Unit Tile Company, Tacoma, Wash., a Corporation of Washington. Filed Oct. 8, 1921. Serial No. 506,234. 12 Claims. (Cl. 72—41.)



1. In a fireproof building structure, the combination of a main load bearing wall consisting of hollow tile, floors within the structure, and a fireproof lining for the wall extending past the floors and extending around the normally exposed portions of the wall at window and door openings.

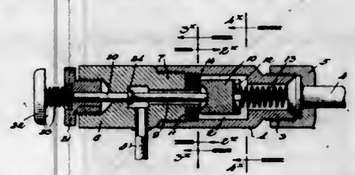
1,568,156. MULTIPLE-PLUG RECEPTACLE. ABRAHAM HERSKOVITZ, New York, N. Y., assignor to Peerless Light Company, Chicago, Ill., a Corporation of Maine. Filed May 2, 1924. Serial No. 710,493. 6 Claims. (Cl. 173—334.)



1. A multiple plug receptacle comprising a housing having a side wall and end walls made of insulating material, and plug jacks in said housing and secured to one end wall, having contact parts protruding therefrom, said plug jacks having means engaging the other end wall to solidly close said housing.

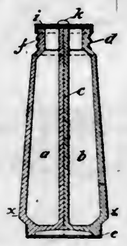
1,568,157. METHOD OF AND APPARATUS FOR EFFECTING CONTINUOUS DISTILLATION. FRANCIS M. HESS, Whiting, Ind. Filed Dec. 29, 1921. Serial No. 525,597. 10 Claims. (Cl. 196—73.)

1. In a method of effecting continuous distillation, the steps or operations which consist in causing the crude material to flow by gravity through a series of vapor boxes, passing a heating agent through said vapor boxes out of contact with the crude material and in counter-direction to the flow of the latter, simultaneously passing the vapor given off by one of said vapor boxes through a higher vapor box out of contact with the crude material flowing through the latter, and simultaneously passing the residuum from the lowermost vapor box upwardly through a higher vapor box out of contact with the crude material flowing through the latter.



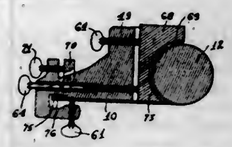
1,568,158. FOLD-OVER COLLAR. JOHN WILLIAM HESS, Kitchener, Ontario, Canada, assignor to Cluett, Peabody & Company, Inc., Troy, N. Y., a Corporation of New York. Filed Oct. 11, 1921. Serial No. 507,087. 1 Claim. (Cl. 2—131.)

A fold-over collar comprising a band having one edge portion folded toward its body, and a top having one edge portion folded toward its body, the said top and band being elsewhere edge-folded and the edge fold fastened down to form the outer edges of the collar, and delimit a pocket under said first-mentioned edge portion of one of the parts, said first-mentioned edge portions being interlocked by one of them being in the pocket formed by the other, and fastened to each other and to the body portions respectively of said band and said top, the seam so formed determining a line of fold between the band and top.



1,568,159. HIGH-PRESSURE VALVE. CHARLES FREDERIC HEYWOOD, Detroit, Mich. Filed Nov. 10, 1924. Serial No. 748,925. 4 Claims. (Cl. 251—27.)

1. In a valve of the type described, a chambered casing, a valve seat member in said casing, and a valve member slidably and longitudinally engaging said casing at various points in its perimeter, and provided with radial slots in its rear end whereby free passage of fluid thereabout is ensured in all of its open positions.

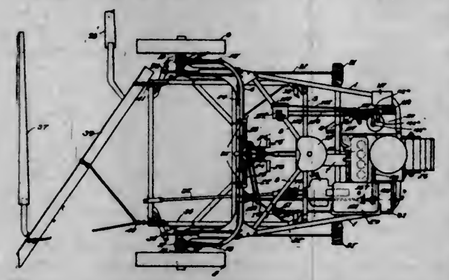


4. In a valve of the type described, a chambered body portion having a passage leading into one end thereof, a valve seat in the other end of said body portion, a plug entering said body portion and seating said seat therein, said plug having a passage therethrough to the chamber of said body portion, a valve member having air passages in its sides freely movable longitudinally in and rotatable about the axis of said body portion, resilient means seating said valve member on said seat member, and a valve unseating rod extending through said plug to said valve member.

1,568,160. COMBINED SALT AND PEPPER SHAKER. WILLIAM HIBBERT, Victoria, British Columbia, Canada. Filed July 21, 1924. Serial No. 727,233. 1 Claim. (Cl. 65—45.)

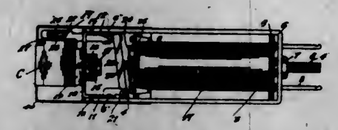
A combined condiment cruet consisting of two separate receptacles united and held in place by a circular metal band at each end, one of said bands forming the side and rim of a cap which closes the orifice of both receptacles, said cap being perforated and covered by an outer cap concentric with and sliding upon it, said outer cap being also perforated and adapted to cover and uncover the perforations in the other said cap by a circular motion.

1,568,161. PRINTING PRESS. FERDINAND W. HUEMPFNER, Chicago, Ill., assignor of one-third to Mid-States Gummed Paper Company, Chicago, Ill., a Corporation of Illinois, and one-third to George F. Schilling, Chicago, Ill. Filed Nov. 25, 1922. Serial No. 603,304. 5 Claims. (Cl. 101—194.)



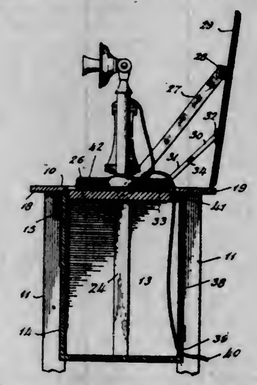
1. In combination with a printing press, means for feeding different inks from a single fountain comprising a divider adapted to be applied to said fountain, said divider including a member adapted to be removably applied to said fountain, clamping means to maintain said member in position on the fountain, and adjustable ink retaining means on said member adapted to cooperate with the inking roller of the printing press, said means including a relatively movable member adapted to fit closely against the ink roller, means for adjusting the position of said relatively movable member, said means including thumb screws mounted in the divider member.

1,568,162. FRUIT AND CEREAL PRODUCT AND METHOD OF PRODUCING SAME. GEORGE F. HUMPHREY, Bridgetown, Nova Scotia, Canada, assignor to Appo-Krisp Limited, Kentville, Nova Scotia, Canada. Filed Feb. 4, 1924. Serial No. 690,668. 4 Claims. (Cl. 99—11.)



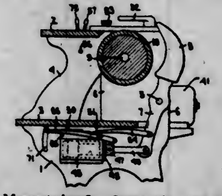
1. The process of producing a breakfast food, which consists in mixing a fruit pulp with sugar, yeast and a cereal, baking same, then dividing the mass into particles of desired size, reducing the particles to flaked form, and then toasting said flakes.

1,568,163. POWER-DRIVEN IMPLEMENT. EDWARD A. JOHNSTON, Chicago, BERT R. BENJAMIN, Oak Park, and CHARLES PEARSON, Chicago, Ill., assignors to International Harvester Company, a Corporation of New Jersey. Filed May 8, 1920. Serial No. 378,623. 30 Claims. (Cl. 56—25.)



1. In a motor propelled implement, the combination of a frame, traction means for propelling the frame, an implement adjustably connected thereto, a power unit carried by the frame, and mechanism operatively connected to the power unit for propelling and steering traction means and for driving and adjusting the implement.

1,568,164. SERVICE METER. WILLIAM KAISLING, Chicago, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed June 11, 1921. Serial No. 476,757. 6 Claims. (Cl. 235—92.)

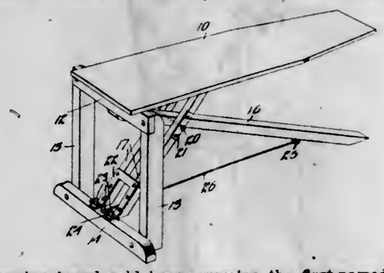


1. A device of the character described including an electromagnet having a U-shaped heel iron, a front plate secured to and between the free ends of the legs of said U-shaped heel iron and adapted to close the gap between said free ends, an armature pivotally supported on said front plate, a pawl pivotally secured to the armature, a register mechanism secured to the front plate and a shaft therefor having a ratchet secured thereto, a rectangular orifice in the forward end of said pawl cooperating with said ratchet to actuate said register mechanism upon each energization of said electromagnet, and adjustable stop-means integrally formed with said front plate for regulating the stroke of said armature.

1,568,165. DISAPPEARING TELEPHONE TABLE. GEORGE KARP, Long Island City, N. Y. Filed Apr. 20, 1923. Serial No. 633,351. 1 Claim. (Cl. 45—52.)

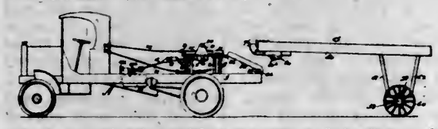
A device of the character described, including a table having an open topped compartment, a pivotally mounted closure adapted to close the top of said compartment, a pair of vertically extending guide rods centrally mounted in the sides of said compartment, a horizontally extending platform having a pair of grooves therein for receiving said guide rods, pivot pins fixed to the central portions of the sides of said platform contiguous to said grooves, links pivotally connected to said pins and said closure to cause said platform to be raised out of or lowered into said compartment when said closure is moved from closed to open position or vice versa, said grooves and guide rods cooperating to hold said platform in a horizontal position during its vertical movement, and stop members pivotally connected at their outer ends to said closure and to the main frame of said table respectively, and at their inner ends pivotally connected to each other, to stop the movement of said platform and closure when said platform is raised to the top of said compartment.

1,568,166. IRONING MACHINE. JAMES B. KIRBY, West Richfield, Ohio. Filed May 8, 1922. Serial No. 559,237. 18 Claims. (Cl. 68—9.)



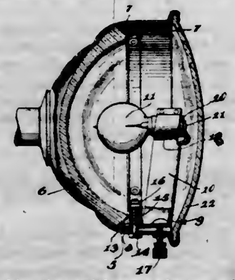
1. In a self-contained, domestic ironing machine, a frame, a revoluble roller and a heated shoe carried thereby, said roller and shoe being movable one toward and from the other, in combination with fluid pressure means for effecting such movement and electrically operated means carried by said frame for driving said roller and for producing such fluid pressure.

1,568,167. IRONING BOARD. JOSEPH KUNKLE, Indianapolis, Ind. Filed Apr. 6, 1925. Serial No. 21,189. 2 Claims. (Cl. 68—10.)



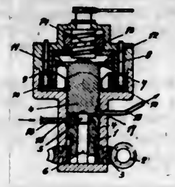
1. A folding ironing board comprising a table section, a pair of posts for supporting the same, cross-bars connecting said posts at their upper and lower ends, pivotal connections between the upper cross-bar and the rear end of the board, a pair of braces pivotally connected to the board, a U-shaped metallic strip connecting said braces

near their free ends and having its extremities bent to rest on the lower cross-bar, apertured lugs on the cross-bar adapted to enter orifices in said extremities, a pin passing through the apertures in such lugs for holding the braces in position, a brace pivotally connected to the upper cross-bar and extending forward underneath the



ironing board said brace crossing the first-named braces, and a rod pivotally connected to the last-named brace adjacent its forward end said rod having an eye at its free end, an apertured lug in line with said first-named lugs on the lower cross-bar to receive said eye said pin passing through said aperture above said eye on the rod, substantially as set forth.

1,568,168. TRAILER. CHARLES H. LAND, Jr., Detroit, Mich., assignor of one-half to William H. Wilson, Detroit, Mich. Filed Mar. 16, 1922. Serial No. 544,167. 14 Claims. (Cl. 280—33.1.)

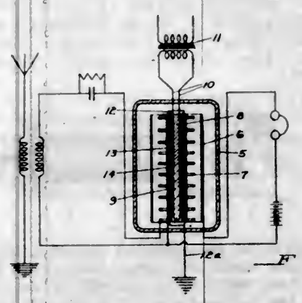


1. In combination with a tractor and trailer, a fifth wheel mechanism movable upwardly and downwardly, guiding means for the fifth wheel mechanism, resilient means for yieldingly supporting the fifth wheel mechanism in an elevated position, inclined guide-ways flexibly connected with the tractor frame and with the fifth wheel mechanism, a coupling unit carried by the fifth wheel mechanism of the tractor, a coupling unit carried by the trailer adapted to automatically co-ordinate with the coupling unit carried by the tractor upon backing the tractor into the trailer whereby the inclined flexibly connected guide-ways of the fifth wheel mechanism may depress said fifth wheel mechanism to secure a coupling relation between said coupling units of the tractor and trailer.

1,568,169. FOCUSING MEANS FOR LIGHT PROJECTORS. STATES LEE LIBBEY, Corning, N. Y. Filed Sept. 15, 1922. Serial No. 588,402. 7 Claims. (Cl. 240—44.)

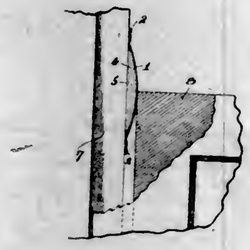
1. The combination with a projector, of a light source carrying plate mounted for pivotal movement about an axis, an adjusting means operating against the plate in one direction, and spring means operating against the plate in the opposite direction and between the adjusting means and the axis of pivotal movement of the plate.

1,568,170. PUMP. LUDWIG LE BRET, Charlottenburg, Germany. Filed Oct. 17, 1924. Serial No. 744,247. 4 Claims. (Cl. 103—2.)



1. In a pump for a supply of different liquid quantities to a plurality of consumption places by means of one plunger only: the combination of a rotary plunger drum, a disclike extension on said drum, cams on said extension of a corresponding number to that of the consumption places and of which one forms a pressure and suction cam and the others pressure cams only, all said cams having a common and simultaneous action, a suction cam race formed of separate cam pieces and an integral pressure cam race, said races forming between them an endless cam groove consisting of a number of cam portions corresponding to that of the consumption places, substantially as set forth.

1,568,171. RECOVERY OF ALUMINUM CHLORIDE. ALMER MCDUFFIE MCAFEE, Port Arthur, Tex., assignor to Gulf Refining Company, Pittsburgh, Pa., a Corporation of Texas. Filed Jan. 25, 1922. Serial No. 531,611. 6 Claims. (Cl. 23—95.)

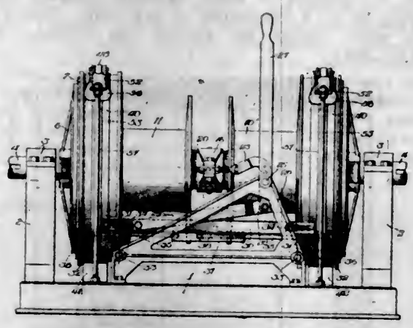


1. In the simultaneous recovery of aluminum chloride and oil from oily residues containing the same, the process which consists in heating the same to a temperature sufficient to volatilize the chloride and maintaining a minimal partial pressure of aluminum chloride vapors in contact with said residue.

1,568,172. THERMIONIC TUBE. FREDERICK S. MCCULLOUGH, Wilkinsburg, Pa. Filed May 6, 1925. Serial No. 28,341. 4 Claims. (Cl. 250—27.)

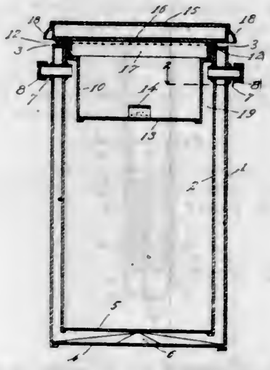
1. A hot cathode device including an anode, a control electrode, and a cathode structure, said cathode structure including a porcelain body having a heater therein, a shield associated with the body, and a cathode element associated with the body, said shield being magnetically interposed between the heater and cathode element and out of electrical contact with the latter.

1,568,173. SASH PLUG. LOUIS A. MACKLANBURG, Oklahoma City, Okla. Filed May 9, 1923. Serial No. 637,861. 2 Claims. (Cl. 292—76.)



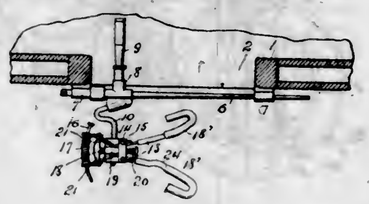
1. An article of manufacture comprising a piece of flat flexible sheet metal of substantially rectangular form having a block of felt secured to one face, this felt having its outer face of convex form tapering toward the ends of the metal strip.

1,568,174. CARBONIZING BOX OR THE LIKE. CHARLES ELLISON MACQUIGG, Flushing, N. Y., assignor to Electro Metallurgical Company, Niagara Falls, N. Y., a Corporation of West Virginia. Filed Nov. 21, 1921. Serial No. 516,867. 5 Claims. (Cl. 75—1.)



1. An article of manufacture composed of an alloy comprising chromium and a metal of the iron group, in amounts adapted to form an oxidation-resisting composition, and sufficient copper to render the composition resistant to carbonization.

1,568,175. WINDING-DRUM MECHANISM. CHAUNCEY L. C. MAGEE, Chicago, Ill. Filed May 20, 1920. Serial No. 382,882. 23 Claims. (Cl. 254—185.)

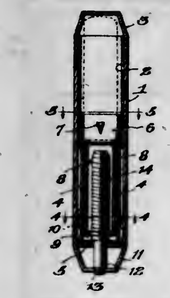


1. In winding drum mechanism, the combination of a driving shaft, drums slidable on said shaft, friction clutch members fixed on said shaft, the structure and arrangement being such that movement of either drum away from the other closes the clutch of the shifted drum only, friction brake bands to engage the drums, within which bands the drums are slidable axially, devices to shift said drums into engagement with said members, and instrumentalities to control said brake bands, having structural provisions whereby either drum is friction driven or friction held at will, together with shaft bearings between which all of said shaft supported elements are disposed in operative relation, said devices comprising a collar loosely mounted on said shaft between said drums, a transverse lever engaging said collar, a fulcrum for one end of said lever, a clutch-controlling hand lever common to both drums, and means to connect said hand lever to the other end of said transverse lever.

1,568,176. MILK CAN. MICHAEL J. MOHAN, Covington, Ky. Filed Feb. 7, 1924. Serial No. 691,118. 2 Claims. (Cl. 220—9.)

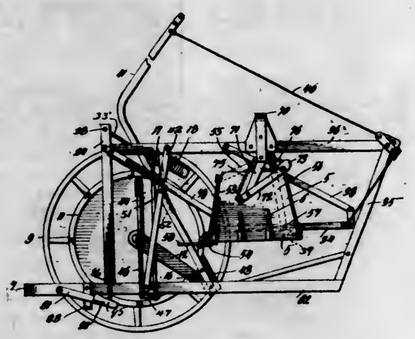
1. In a device of the character specified, the combination with a main cylindrical receptacle open at the top the full diameter of the vessel and having a double wall throughout with an intermediate sealed air space between the walls, of a double closure for the vessel comprising an inner depending vessel for ice to fit the main cylinder, flanged to rest on the open top, and provided with semi-circular recesses on opposite sides with tubular air vents opening into said recesses and extending through the double walls of the main receptacle to permit air circulation without passage through the ice receptacle.

1,568,177. MAIL-POUCH CATCHER. CHARLES W. NEISWENDER and RAYMON B. FURGASON, Bucyrus, Kans. Filed Aug. 3, 1923. Serial No. 655,506. 3 Claims. (Cl. 258—22.)



1. In a mail pouch catcher, supporting means adapted to be attached to a car body, two pouch engaging members pivoted thereon so as to swing to and from a closed position and arranged to be carried by said supporting means to and from a pouch catching position, means normally forcing said members toward the closed position, a detent movable on said supporting means to and from a position in which it will be engaged and moved from a set position by a mail pouch passing between said members said detent in the set position engaging said members and having means for holding them in the open position, and means for normally forcing said detent to the set position.

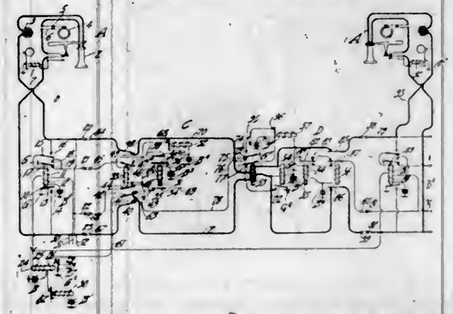
1,568,178. LIP-STICK HOLDER. ARTHUR H. NOBLE, Pawtucket, R. I., assignor to Theodore W. Foster & Bro. Co., Providence, R. I. Filed Sept. 6, 1924. Serial No. 736,227. 3 Claims. (Cl. 206—56.)



2. In a lip stick holder, a tubular casing, a liner sleeve on the interior of the casing having opposed longitudinal keys and a perforated bottom, a lip stick carrier

having a lip-stick end receiving part, depending legs connected to said part, U-guides on the legs receiving the keys, a connecting part for the legs having a threaded

aperture, a screw, and means to rotate the screw, the screw being loosely and guidingly engaged through the perforated bottom of the liner and being threaded through said aperture of the connecting part of the legs.

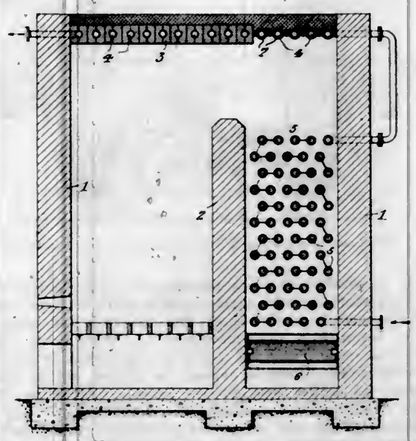


1,568,179. SHOCKER. HANS P. OLSEN, Esther, Alberta, Canada. Filed July 9, 1921. Serial No. 483,614. 5 Claims. (Cl. 56—42.)

5. In a shocking machine, a main frame, a basket collector supporting frame rockingly mounted on the main frame, a basket collector mounted in the supporting frame and including a structure consisting of three sides only, a bottom associated with said basket collector, a lid associated with said basket collector, means for rocking the supporting frame and moving the basket collector to a dumping position simultaneously, and means for opening the bottom and closing the lid simultaneously as the supporting frame is rocked to a raised position.

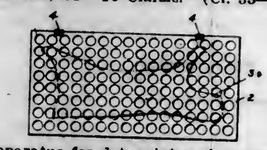
1,568,180. AUTOMATIC TELEPHONE SYSTEM. WINFRED T. POWELL, Chicago, Ill., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 14, 1917, Serial No. 161,957. Renewed May 31, 1924. 26 Claims. (Cl. 179—18.)

1. In a telephone system, a calling line, a called line, a connector switch, means for operating said switch to connect said lines for conversation, a line relay in said connector switch, a release relay in said connector switch, circuit connections whereby the called subscriber is supplied with talking current through the windings of said line relay alone, and said calling subscriber is supplied with talking current through the windings of



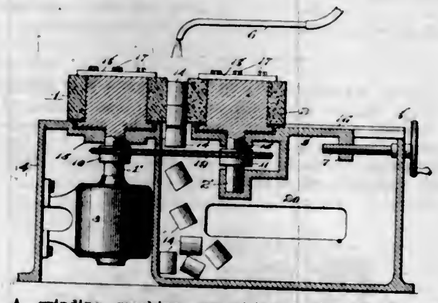
said line relay and release relay in series, said release relay controlled by the calling subscriber to release said connection.

1,568,181. PROCESS OF MAKING CHLORIDES. GEORGE L. PRICHARD and HERBERT HENDERSON, Port Arthur, Tex., assignors to Gulf Refining Company, Pittsburgh, Pa., a Corporation of Texas. Filed Nov. 17, 1921. Serial No. 515,852. 6 Claims. (Cl. 23—95.)



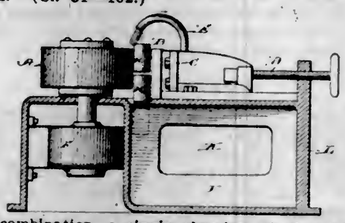
4. In the manufacture of aluminum chloride, the process which comprises preheating a mixture of aluminous material and carbon, tumbling said mixture down a reaction zone and passing chlorin in contact with said mixture in an opposite direction to produce vapors of aluminum chloride, conducting said vapors away from the reaction zone and condensing them.

1,568,182. OIL STILL. JOHN PRIMROSE, New York, N. Y., assignor to Power Specialty Company, New York, N. Y., a Corporation of New York. Filed July 2, 1921. Serial No. 482,135. 15 Claims. (Cl. 196—110.)



5. In a furnace, a combustion chamber in which intense radiant heat is developed, a heat absorption chamber in open communication therewith, fluid conveying means located in said heat absorption chamber, said heat absorption chamber having wall portions in radiant heat receiving relation relative to said combustion chamber and in heat radiating relation to said fluid conveying means, and means upon said wall to prevent such heat radiation.

1,568,183. QUALITY GAUGE FOR LEATHER. MARTIN H. REYMOND, Binghamton, N. Y. Filed Oct. 24, 1921. Serial No. 510,184. 10 Claims. (Cl. 33—126.)

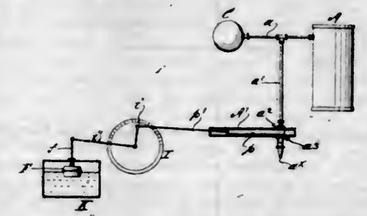


1. An apparatus for determining the cutting quality of leather, comprising a table on which to spread the leather, and a regularly apertured screen superimposed over said table whereby regular-sized regularly-spaced areas of the same order of size as the parts to be cut from said leather are indicated over the surface of the leather for individual inspection relative to imperfections in the leather.

1,568,184. GRINDING MACHINE. WINFIELD S. ROGERS, Bantam, Conn., assignor to Nellie Scott Rogers, Bantam, Conn. Filed Oct. 15, 1924. Serial No. 743,667. 1 Claim. (Cl. 51—88.)

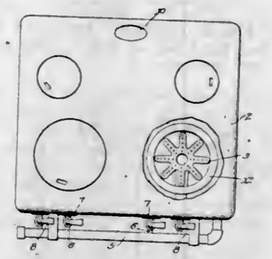
A grinding machine comprising horizontal abrasive wheels revolving upon vertical axes and capable of grinding the surfaces of cylindrical objects fed perpendicularly therebetween, which objects automatically gravitate therethrough by their own weight; and a conduit capable of discharging by gravity a cooling medium upon the vertical grinding surfaces of said wheels and upon the object being ground, so as to thoroughly remove, ahead of the work, all cuttings and grit from said grinding and to maintain free from such cuttings and grit the said object and the said grinding surfaces.

1,568,185. GRINDING MACHINE. WINFIELD S. ROGERS, Bantam, Conn., assignor to Nellie Scott Rogers, Bantam, Conn. Filed Feb. 14, 1925. Serial No. 9,237. 2 Claims. (Cl. 51—102.)



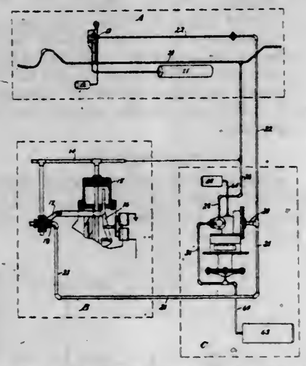
2. In combination, a single abrasive wheel revolvable upon a vertical axis, the cutting surface being the periphery of said wheel, an adjustable work-guide capable of holding and downwardly directing in a substantially vertical course against said cutting surface the object to be ground, a means for applying a cooling medium to said cutting surface vertically downward so as to positively free the grinding wheel and the work from all fines and grit, and a frame-work containing and supporting said members.

1,568,186. PROCESS FOR DEPHOSPHORIZING IRON AND STEEL. ISAAC M. SCOTT and SAMUEL PEACOCK, Wheeling, W. Va. Filed Mar. 7, 1925. Serial No. 13,849. 4 Claims. (Cl. 75—27.)



1. The process of dephosphorizing iron and steel in a basic open hearth process which consists in providing a molten mass of the metal to be dephosphorized; and adding to said mass a quantity of oxygen carrying compounds containing combined chromium sufficient to dephosphorize a substantial portion of the iron phosphide present in said mass.

1,568,187. PROTECTIVE MEANS FOR HYDROCARBON MOTORS. JOHN F. SEARING, New Rochelle, N. Y. Filed Apr. 20, 1925. Serial No. 24,704. 1 Claim. (Cl. 116—109.)

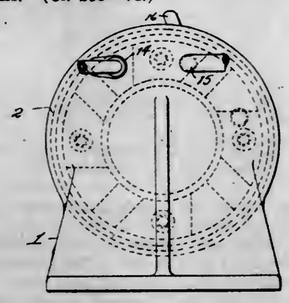


In a device of the character described a receptacle, a float therein controlled by the height of the fluid therein, an indicator, having a hand which is pivotally connected with the float, an air pressure tank having connection with the carbureter of a motor, a casing having direct connection with the connection between the carbureter and the tank, an alarm signal in communication with said casing and a piston slidable in said casing and connected with the hand of the indicator and constructed to control the flow of air from said casing through the signal device by reciprocation of the piston.

1,568,188. GAS RANGE. FRANK E. SEELEY, Port Chester, N. Y., assignor to Abendroth Brothers, Port Chester, N. Y., a Corporation of New York. Filed Dec. 6, 1923. Serial No. 678,921. 2 Claims. (Cl. 126—214.)

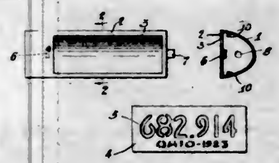
1. In a gas stove, the combination with a burner chamber having an outlet for products of combustion, of a top plate covering said chamber and provided with four apertures, each adapted to receive a cooking utensil, all situated in transverse planes between said outlet and the front edge of the plate and arranged in two pairs positioned, respectively, adjacent the front edge of the plate and rearward thereof, and a burner below each said aperture, the members of the rear pair of apertures and the burners in alignment therewith being of smaller diameter than the aperture and burners of the forward pair and the centers of the rear pair of apertures and burners being spaced laterally a greater distance than the centers of the forward pair, whereby the flow of products of combustion from the forward pair of burners to the outlet is not obstructed by the rear burners.

1,568,189. AIR BRAKE. ERNEST C. SHAW, Chicago, Ill. Filed Dec. 19, 1923. Serial No. 681,492. 26 Claims. (Cl. 303—35.)



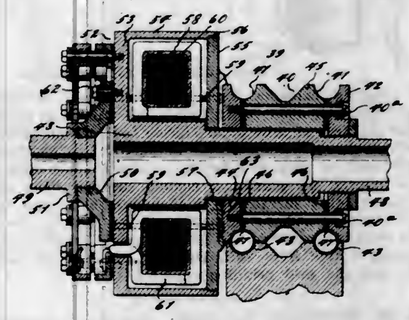
1. In an air brake system including a train pipe, means controlled thereby for applying the brakes and means for venting the system to cause a brake application, in combination with means set in operation at such venting to produce a later venting of the system independent of the duration of the first venting.

1,568,190. PAVEMENT-BREAKING DEVICE. WILLIAM W. SHOB, Philadelphia, Pa. Filed Apr. 4, 1924. Serial No. 704,148. 3 Claims. (Cl. 94—11.)



1. A pavement breaking device, comprising a body permanently positioned between abutting pavement elements, said body having engaging surfaces extending beneath adjacent portions of said pavement elements so that upward vertical movement of said body will dislodge said elements.

1,568,191. TURBINE ENGINE. BENJAMIN F. SINGER, Lancaster, Pa. Filed Dec. 4, 1923. Serial No. 678,440. 4 Claims. (Cl. 253—74.)

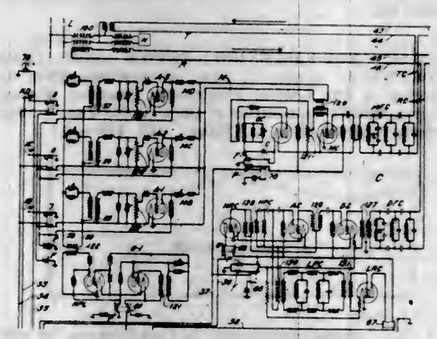


1. In a turbine engine, the combination of a support comprising two opposed casing members, and a rotatable member mounted on the support within the casing, for rotation, said rotatable member having a series of pockets on each opposed vertical face, the pockets on one side being alternately arranged with relation to the pockets on the opposite side, discs located between the casing and the rotatable member, and springs interposed between the casing and the discs, said casing having inlet and outlet openings, and a fluid supply jet in each of the inlets.

1,568,192. AUTOMOBILE LICENSE TAG. DANIEL A. SMITH and JOHN M. DAVIDSON, Xenia, Ohio. Filed Jan. 9, 1923. Serial No. 611,610. 2 Claims. (Cl. 40—131.)

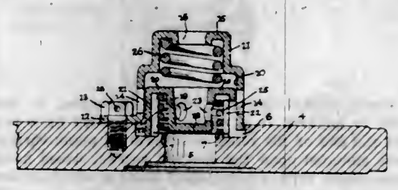
1. A light reflector made of sheet metal, the reflecting surface of which is finished with a neutral colored light hue, and the front of which has an opening in combination with a license number plate adapted to close the opening in front of the reflector, the license number consisting of symbols perforated through the body of an opaque sheet of metal, the rear face of the sheet of material being coated with a brilliant, non-neutral color, the said reflector and symbol carrying sheet being separable, and means upon the reflector for permitting the symbol carrying sheet to be attached and held in position in front of the reflector, all for the purpose specified.

1,568,193. METHOD OF AND APPARATUS FOR WELDING. HARLAN E. SNODGRASS, Summit, and THOMAS M. HUNTER, Newark, N. J., assignors, by mesne assignments, to Newark Tube Company, Newark, N. J., a Corporation of New Jersey. Filed Mar. 24, 1922. Serial No. 546,225. 29 Claims. (Cl. 219—6.)



1. The method of welding a plurality of seamed tubes which consists in maintaining the edges of the tubes on opposite sides of the seams in abutting engagement, and utilizing the secondary current of a single transformer for simultaneously welding the seams of the various tubes.

1,568,194. CARRIER-WAVE TRANSMISSION AND COMMUNICATING SYSTEM. EDWIN H. SMYTHE, Evanston, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 5. 1921. Serial No. 467,043. 92 Claims. (Cl. 179—15.)

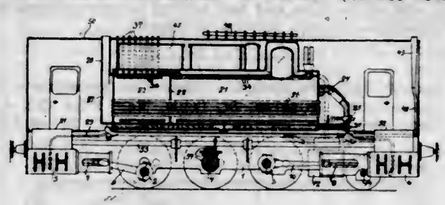


49. In a carrier-wave communicating system, the combination with a line and a plurality of stations connected therewith, of a frequency selective calling channel connected with said line and available for use at each of said stations, selective controlling and responsive apparatus associated with said channel at each station for enabling any station to select any desired one of the other stations, and means for preventing the other stations from using said channel for calling while it is in use by any of said stations.

58. In a high frequency communicating system, the combination with two stations, of a plurality of high frequency channels available for use at each of said stations, a channel selecting switch at one of said stations,

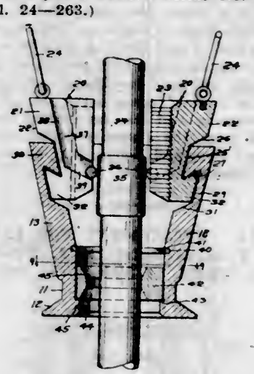
means controlled at the other station for effecting the energization of said switch to effect its channel selecting operation, and means controlled at said other station for effecting the release of said switch.

1,568,195. COMPRESSOR. CHARLES C. SPRAGUE, Detroit, Mich., assignor, by mesne assignments, to Kelvinator Corporation, Detroit, Mich., a Corporation of Michigan. Filed Nov. 6, 1924. Serial No. 748,067. 7 Claims. (Cl. 251—144.)



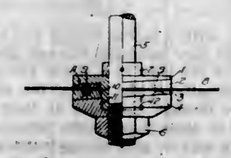
1. In a gas compressor, the combination with a closure having an outlet port, said port being surrounded on its outward side by an integral upstanding annular flange, of a valve disk adapted to seat on said flange and close said port, a relief member having depending cylindrical portions surrounding said disk in guiding relation and a stop portion overhanging said disk in movement limiting relation, the walls of said relief member having outlet ports, a light spring interposed between said relief member and disk, and a second stronger spring pressing said relief member axially towards said closure.

1,568,196. VITAMINE PREPARATION AND A PROCESS OF MAKING SAME. OTTO STINER and ALFRED HAUSWIATH, Bern, and ALFONS GAMS, Basel, Switzerland, assignors to Society of Chemical Industry in Basle, Basel, Switzerland. Filed Jan. 18, 1919. Serial No. 271,921. 6 Claims. (Cl. 195—32.)



1. The herein described manufacture of a vitamine malt preparation in durable form, containing not only the vitamines stable to heat and storing, but also those liable to these influences, by simultaneously mashing and saccharifying amylaceous material rich in vitamines with ground fresh green malt and water in the presence of a non-toxic polybasic organic acid in a quantity not higher than that sufficient to make the reaction feebly acid to congo and at temperatures below 60° C., filtering and evaporating the filtrate in a known manner to the desired degree of consistency.

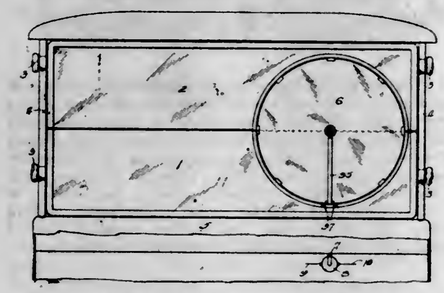
1,568,197. LOCOMOTIVE WITH COMBINED DRIVE. JOHANN STUMPF, Berlin, Germany. Filed June 29, 1920. Serial No. 392,844. 20 Claims. (Cl. 105—62.)



1. The method of operating locomotives with combined steam and internal combustion drive, each medium acting directly upon different drive wheels, in which the waste heat of the internal combustion is utilized in generating the steam, which consists in controlling the respective steam and internal combustion cycles, so that the work of the steam shall be displaced after a few strokes of internal combustion, and the steam consumption confined within such limits that the amount required can be produced by said waste heat of internal combustion.

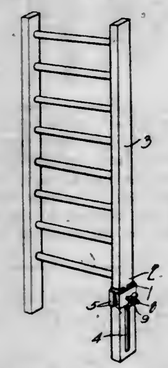
1,568,198. COMBINATION TUBING SPIDER AND SUPPORT. SHERIDAN P. TSCHAPPAT, Tulsa, Okla., assignor of one-half to Harold Callahan, Independence, Kans. Filed May 23, 1925. Serial No. 32,519. 9 Claims. (Cl. 24—263.)

1. A device of the character described comprising, a housing, a pair of opposed slips slidable therein, said slips and housing being provided upon their engaging faces with transverse recesses producing interfitting parts whereby the slips are adapted to move outwardly to clear the tubing and its collar or collars when elevated and to be locked within the housing in the elevated position, and elements carried by the slips to raise them.



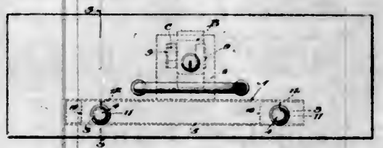
1,568,199. CUTTER MOUNTING. GUY WATSON, Canastota, N. Y. Filed May 16, 1925. Serial No. 30,701. 5 Claims. (Cl. 144—238.)

1. A circular saw or cutter mounting applicable as an entity to a shaft and comprising a body having a clamping head at one end and a hub projecting from the head, said head and hub having a bore for the reception of a



shaft, a second head slidably mounted on the hub and coacting with the clamping head, said heads having opposing faces that are inclined to a plane perpendicular to the axis of the bore, and saw holding elements rotatably mounted on the hub between the heads.

1,568,200. VISION SHIELD. ERWIN O. AEGERTER and GUSTAVE W. AEGERTER, St. Louis, Mo. Filed Oct. 4, 1922. Serial No. 592,273. 11 Claims. (Cl. 20—40.5.)



1. In combination with a vertically disposed pane of glass, a member fixed to the glass having an annular channel providing an internal drain, the outer wall thereof being higher than the inner wall thereof, and provided with a flange, said outer wall forming with the pane an outer drain, a shaft, a transparent vision disc fixed to one end of said shaft, a peripheral band fixed to said disc having its inner edge receivable in the annular channel of the aforesaid member to prevent the weather elements from finding access to the rear of said disc and means for rotating said disc for freeing the exposed surface thereof from the elements during stormy weather by centrifugal force and evaporation, thereby establishing clear vision therethrough.

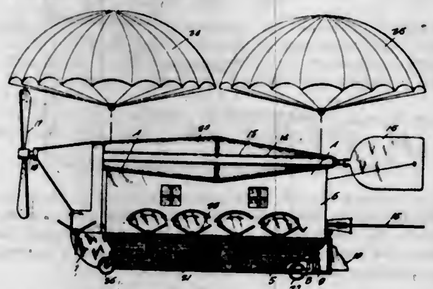
1,568,201. ATTACHMENT FOR LADDER LEGS. CHARLES V. ALLEN, Buffalo, N. Y. Filed Oct. 5, 1922. Serial No. 592,530. 1 Claim. (Cl. 228—63.)

In combination with a ladder having one leg shortened and having a bolt hole extended through that shortened leg in the plane of the ladder; a sleeve having side slots extended longitudinally of the sleeve, the said slots extending clear out through the sides at their upper ends but being closed at their lower ends, whereby the upper ends of the sleeve may be pinched against the ladder leg, the said sleeve being adapted to slidingly engage the shortened leg with the slots of the sleeve aligned with the said bolt hole; a clamp consisting of a split band slidingly mounted over the sleeve and having bolt holes therethrough aligned with the slots of the said sleeve and the bolt hole of the said shortened leg; and a bolt with a wing nut inserted through the said bolt holes of the shortened leg and the clamp and the slots of the said sleeve, as means for pinching the clamp against the ladder leg.

1,568,202. ROD-FASTENING DEVICE FOR CARD DRAWERS. ALFRED J. BALL, Youngstown, Ohio, assignor to The General Fireproofing Company, Youngstown, Ohio, a Corporation of Ohio. Filed Jan. 8, 1924. Serial No. 684,260. 11 Claims. (Cl. 129—16.)

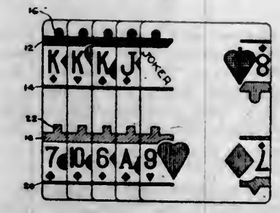
1. In a rod-fastening device for card drawers, the combination with a hollow metal drawer front, of a key-controlled reciprocating lock bolt and a rod-locking member housed within said hollow drawer front, and said rod-locking member being guided by the walls of the hollow drawer front to slide transversely therein when moved by the latch bolt.

1,568,203. SHADE-ROLLER-OPERATING MECHANISM. LON A. BERNARD, Houston, Tex. Filed Apr. 3, 1924. Serial No. 703,981. 1 Claim. (Cl. 156—35.)



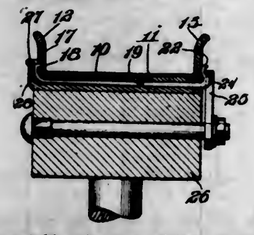
A shade roller operating device including a shaft adapted to be fixed to a roller and provided at a point beyond the end of the roller with parallel plane surfaces, a sleeve mounted upon the shaft, a ratchet wheel having a substantially rectangular shaped opening which receives the parallel surfaces of the shaft, a bracket receiving the end of the shaft, a lever pivoted upon the bracket and having a dog adapted to engage the teeth of the ratchet wheel, the lever having an angularly disposed slotted extension, and a cable passing through the slot of the extension and adapted to wind upon the sleeve.

1,568,204. TRACTOR HITCH. FRANK L. BLADE, Sycamore, Ill. Filed Oct. 29, 1923. Serial No. 671,582. 1 Claim. (Cl. 280—33.13.)



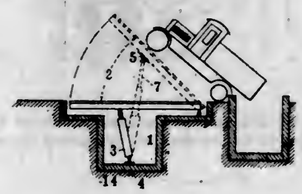
A tractor hitch comprising a front draw bar including upper and lower beams, a spacer beam disposed between and connected to the upper and lower beams and having its terminals ending short of the front and rear end of the upper and lower beams, the rear end of the spacer beam having a wide V-shaped notch formed therein, a rear draw bar having its forward terminal arranged between the rear terminals of the upper and lower beams of the front draw bar and having a longitudinally extending slot formed therein, a pivot bolt carried by the rear ends of the upper and lower beams of the front draw bar extended through said slot, and a V-shaped terminal formed on the front end of the rear draw bar fitting in said notch when the rear draw bar is disposed in the front draw bar to its ful extent, as and for the purpose specified.

1,568,205. FLYING MACHINE. FRANK S. BLISS, Portland, Oreg. Filed May 20, 1925. Serial No. 31,654. 3 Claims. (Cl. 244—6.)



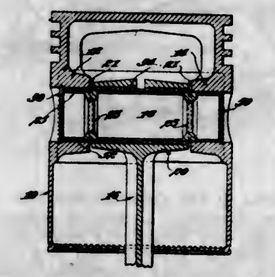
1. A vehicle comprising a boat shaped hull, a propeller and rudder associated with the hull, a fuselage supported by the upper end of the hull, an air propeller carried by the forward end of the fuselage, an air rudder and elevator carried by the rear end of the fuselage, and releasable parachutes supported by the extreme upper end of the fuselage.

1,568,206. PLAYING CARDS. MATTHEW A. BRANDT, Minneapolis, Minn. Filed May 11, 1923. Serial No. 638,216. 2 Claims. (Cl. 273—152.)



1. A deck of playing cards in which the cards have a plurality of different values thereon in combination with associated indices which are distinguishable from each other and indices on the back thereof corresponding in character and position to said first mentioned indices.

1,568,207. DEMOUNTABLE RIM FOR VEHICLES. BENJAMIN E. BRAUCHT, Crosby, N. Dak. Filed Mar. 14, 1925. Serial No. 15,605. 2 Claims. (Cl. 301—11.)

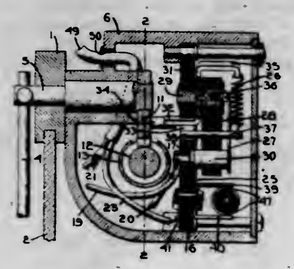


1. A demountable rim comprising two telescopic sections each having upon its outer edge an upstanding tire retaining flange, the flange of one of said sections being provided with circumferentially spaced openings, the flange of the other of the sections having a circumferential shoulder and spring clips each having one end engaged in an opening of the first named flange and the opposite end sprung over the shoulder of the last named flange retaining said sections in assembled relation, the outer ends of said clips having spaced shoulders adapted to receive therebetween the ends of lugs f r maintaining the rim in position upon the wheel of a vehicle.

1,568,208. DUMPING DEVICE. EDGAR D. CHURCH, Saginaw, Mich. Filed Mar. 10, 1925. Serial No. 14,531. 1 Claim. (Cl. 214—49.)

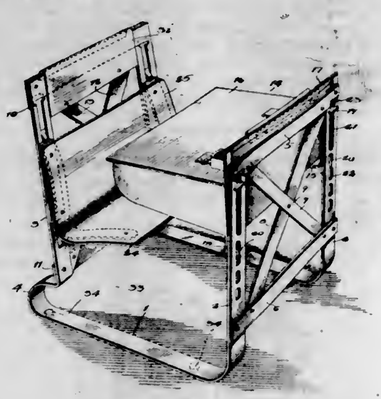
In a device of the class described including a pit and a tiltable vehicle platform, a telescopic fluid pressure cylinder having lateral trunnions on the head thereof, and a projection therebetween, a bearing pad having a pair of trunnion-bearings spaced apart and a bearing socket member for said projection therebetween, a bearing pad secured to the under side of said platform and having a socketed bearing member, said pads and socketed bearing members comprising means whereby the telescopic cylinder is releasably seated in operative self-alining position, for the purposes set forth.

1,568,209. WRIST PIN FOR RECIPROCATING ENGINES. GUY B. COLLIER, Kinderhook, N. Y. Filed Jan. 2, 1924. Serial No. 683,877. 4 Claims. (Cl. 74—108.)



1. A piston assembly for a reciprocating engine comprising a hollow piston having internal bosses adapted to receive a wrist pin, a connecting rod positioned between the bosses and having relatively small regions of clearance upon opposite sides, a wrist pin extending through the connecting rod and received at opposite ends within the piston bosses, and a reinforcing rib or annulus formed integral with the wrist pin and bridging each region of clearance between the connecting rod and the piston boss.

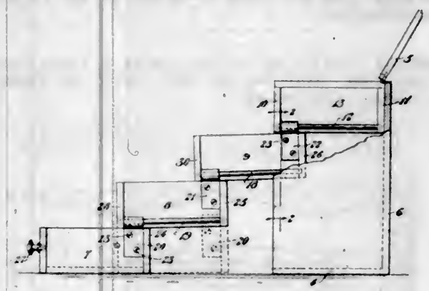
1,568,210. WINDSHIELD WIPER. CHARLES N. COLSTAD, Norfolk Downs, Mass. Filed Feb. 17, 1922. Serial No. 537,280. 4 Claims. (Cl. 172—126.)



1. In a motor device for operating a wind shield cleaner and the like, the combination with two solenoids, of a core element common to both, said core element

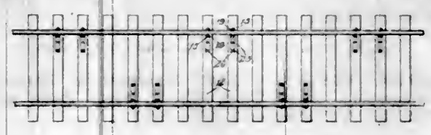
having annular rack teeth, a gear meshing with said rack teeth, the annular shape of the rack teeth providing operative engagement between the rack and gear in any

position which the core may assume about its axis, and means controlled by the gear for energizing the solenoids alternately.



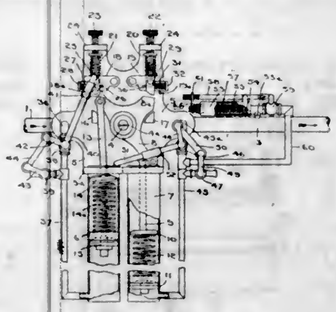
1,568,211. COMBINED SEAT AND DESK. SIMON WILLIAM CONWELL, Mineral Wells, Tex., assignor of one-tenth to Josephine Porter, Mineral Wells, Tex., and one-tenth to David C. Kuder, Hopeville, Iowa. Filed Feb. 21, 1924. Serial No. 694,305. 2 Claims. (Cl. 155—124.)

1. In a device of the character described, a supporting structure comprising a pair of substantially U-shaped members, each formed of a single length of material having inherent resiliency and each consisting of a substantially horizontal intermediate portion, substantially parallel upstanding end portions and an outwardly bowed curved spring portion merging one of said end portions into said intermediate portion and cross members staying said U-shaped members to each other and holding said members in spaced parallel relation, said upstanding end portions being adapted for connection with articles which are to be supported thereby.



1,568,212. SILVER CHEST. JOSEPH J. CYGAN, Thompsonville, Conn. Filed Apr. 7, 1925. Serial No. 21,302. 4 Claims. (Cl. 45—7.)

1. An inclosing casing having its front wall formed with an opening in the lower portion of the same, rods attached to the upper parts of the casing for slidably supporting a drawer next below the rods, said drawer having rods attached to its opposite ends for slidably supporting a drawer immediately below, and this immediately located drawer also having rods attached to its opposite ends for slidably supporting the lowermost drawer of the casing, ear pieces on each of the drawers

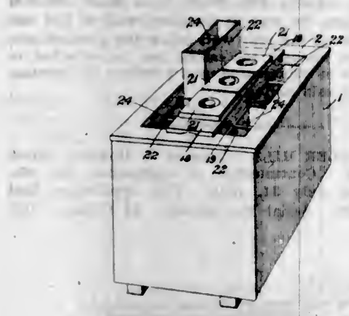


for sliding on the said rods and engaging the drawer above, the construction and arrangement being such that when the lowermost drawer is pulled outward it operates to withdraw all of the drawers above.

1,568,213. RAIL ANCHOR. WILLIAM DELANEY, Denver, Colo. Filed July 28, 1925. Serial No. 46,593. 2 Claims. (Cl. 238—299.)

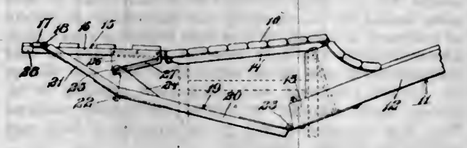
1. In combination with a rail, a plate secured to the flange of the rail at the under surface thereof and extending transversely of the rail, said plate having at its side edges depending flanges and having at its ends reduced extensions each provided with a spike receiving opening immediately adjacent the edge of the flange of the rail.

1,568,214. APPARATUS FOR WATERING AREAS OF LAND. DONALD ELDER, Onehunga, Auckland, New Zealand. Original application filed Jan. 5, 1922, Serial No. 527,259. Divided and this application filed July 28, 1922. Serial No. 578,196. 15 Claims. (Cl. 137—144.)



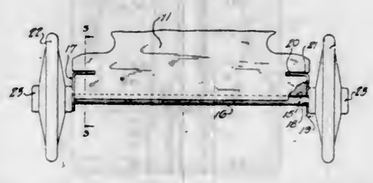
1. Apparatus for use in watering land comprising a main cock including an inlet, an outlet and a cock plug adapted to control the passage of water to a sprayer; a lever on said cock, a cylinder, plungers in said cylinder connected with one end of said lever on the cock plug, said cylinder being adapted to receive water from the inlet side of said cock; a second cylinder, plungers in said second cylinder connected with the other end of said lever, said second cylinder being adapted to receive water from the outlet of the cock; means for discharging water from the cylinders; and means whereby there is caused in the pipe leading water from the cock, a pressure greater than that which exists in said pipe when the sprayer is in use.

1,568,215. PAINT. CORNELIUS S. FLEMING, Berkeley, Calif., assignor to The Paraffine Companies, Inc., San Francisco, Calif., a Corporation of Delaware. Filed Nov. 28, 1921. Serial No. 518,242. 13 Claims. (Cl. 134—51.)



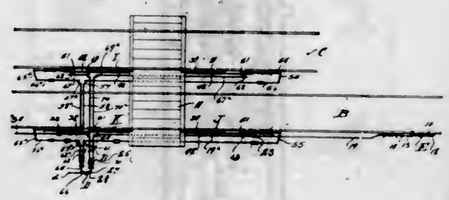
12. A paint comprising a bituminous vehicle of substantially dark color, and a bronzing powder.

1,568,216. ICE-CREAM CABINET. PHILIP FRITZ, Grand Rapids, Mich. Filed May 18, 1925. Serial No. 30,895. 3 Claims. (Cl. 62—75.)



1. In a construction of the class described, a cabinet having sides and ends and an interior space adapted to receive ice cream holding containers, said space at the lower portion thereof being relatively narrow and of a width to receive a single ice cream container and of a length to receive a plurality thereof, and at its upper portion being widened whereby an elongated space is left between a side of the cabinet and containers for ice cream placed therein, and a plurality of refrigerant holding receptacles located end to end in said last mentioned space and adapted to be freely placed therein or removed therefrom.

1,568,217. LEG REST FOR CHAIRS. GEORGE D. GOODWIN, McRae, Mont. Filed May 12, 1925. Serial No. 29,756. 3 Claims. (Cl. 155—107.)

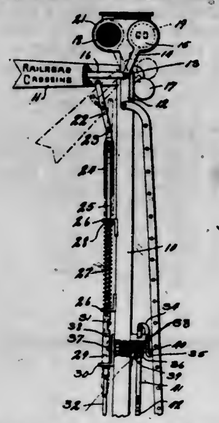


1. In combination with a chair having a fixed seat, a back pivoted to the rear edge of the seat and embodying portions extending below a surface of the seat, a leg rest pivoted to the front edge of the seat, a brace comprising two sections pivoted to one another at their adjacent ends, the free end of one section being pivoted to the leg rest adjacent the free end thereof, the free end of the other section being pivoted to the portion of the chair back projecting below the seat and a pin and slot connection between the last named section and the inner end of the leg rest shifting the leg rest from a position aligned with the chair seat when the seat back is substantially horizontally disposed to a position beneath the outer seat when the seat back is vertically disposed.

1,568,218. RUNNING GEAR FOR COASTER WAGONS. HARRY G. GOULD, Oshkosh, Wis., assignor to Gould Manufacturing Company, Oshkosh, Wis., a Corporation of Wisconsin. Filed Nov. 22, 1924. Serial No. 751,550. 3 Claims. (Cl. 28—87.5.)

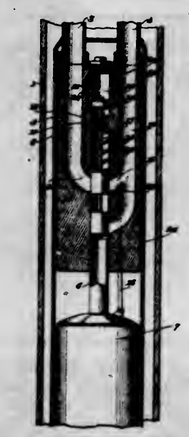
1. In a coaster wagon, the combination with an axle and a bolster having an axle-receiving groove and longitudinally extending recesses in its end portions above the groove, of axle retainer members disposed at the ends of the bolster, each member having a part abutting against an end of the bolster and through which the axle passes and a laterally extending portion adapted to enter and fit within the recess in the end of the bolster for preventing relative movement of said retainer member and bolster.

1,568,219. HIGHWAY-CROSSING SIGNAL SYSTEM. CARL R. GRAVES, Clarion, Iowa. Filed Mar. 31, 1925. Serial No. 19,688. 5 Claims. (Cl. 246—293.)



1. In a highway crossing signaling system, a main track, a signal disposed beside the highway, train operated actuating means along the main track at each side of the highway and acting upon the approach of a train to set the signal to a danger position, train operated means associated with the main track located relatively adjacent the crossing for restoring the signal to safety position and operated by a train on the main track departing from the crossing each restoring device being operated in one direction to restore the signal to safety position and the same restoring device being operable in the opposite direction to set the signal to danger if it has been previously set to safety.

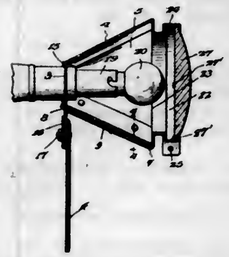
1,568,220. HIGHWAY-CROSSING SIGNAL. CARL R. GRAVES, Clarion, Iowa. Filed Mar. 31, 1925. Serial No. 19,689. 9 Claims. (Cl. 246—293.)



1. A crossing signal for railways including a support, a signal arm mounted on said support and urged by gravity to a lowered position, a vertically shiftable mem-

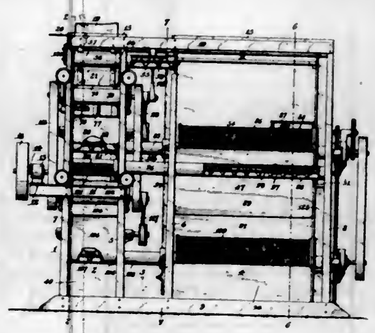
ber adapted, when raised, to hold the signal arm raised, train-actuated means for shifting the member downward to thereby permit the signal arm to drop to its

safety position, means urging the shiftable member upward, means latching the shiftable member in its lowered position, and train-actuated means for releasing said latch.



1,568,221. AUTOMATIC MECHANISM FOR RAISING LIQUIDS. SAMUEL M. GREENIDGE, Washington, D. C. Original application filed Dec. 24, 1921, Serial No. 524,602. Divided and this application filed Oct. 23, 1924. Serial No. 745,479. 4 Claims. (Cl. 162—3.)

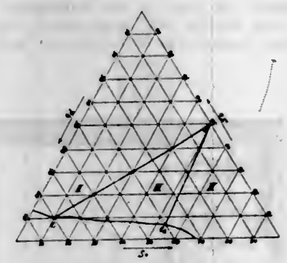
1. An automatic mechanism for raising liquid from a well, including a pressure supply passage and an eduction passage, a reciprocating valve for controlling communication between said passages, and a cylinder communicating directly with the pressure supply passage for opening said valve in accordance with the level of the liquid in the well.



1,568,222. COMBINED TAIL LIGHT AND LICENSE-TAG ILLUMINATOR. ALBERT HEMMER, Lincoln, N. J., assignor of one-half to Harold A. Schneider, Newmarket, N. J. Filed May 1, 1924. Serial No. 710,342. 3 Claims. (Cl. 40—131.)

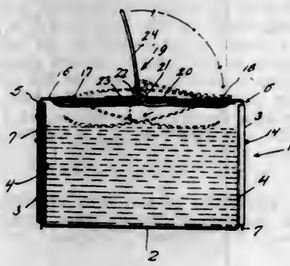
2. A device of the class described comprising a casing having front and rear walls located in vertical parallel planes, a top wall extending between the upper edges of the rear and front walls and inclined upwardly from the rear to the front wall, the casing being open at its bottom, the rear wall having a channel extending longitudinally thereof above its lower edge, the front wall having an inwardly extending flange located in a plane below the plane of the channel, a transparent pane

supported at its rear and front edges respectively in and upon the channel and flange in a plane inclined downwardly from the rear to the front wall of the casing, the portion of the rear wall below the channel constituting means whereby the casing may be attached to a license tag to be illuminated, and a source of illumination within the said casing.



1,568,223. ROLLER MILL. CHARLES T. HOWSON, Silver Creek, N. Y. Continuation of application Ser. No. 247,560, filed July 31, 1918. This application filed July 12, 1920. Serial No. 395,461. 15 Claims. (Cl. 83—12.)

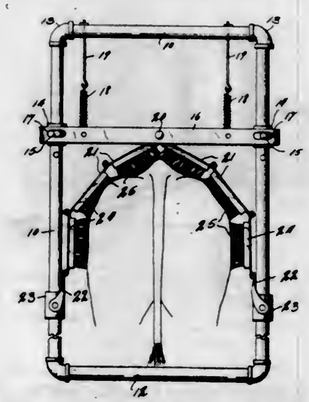
1. A mill of the kind described, comprising a casing having a roll section provided with break rolls and reduction rolls, a reel section provided with bolting reels, means for conveying material from said rolls to said reels, means for re-conveying the material from certain of said reels to certain of said rolls including a materials-grader whereby the finer material is delivered to said last-mentioned rolls to be returned to said reel section for further treatment, and independent grinding or reducing means adapted to receive the coarser material from said materials-grader to be returned to said reel section for further treatment.



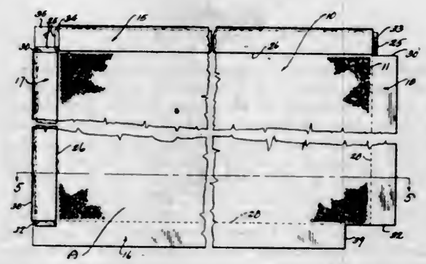
1,568,224. BEARING METAL. JOSEF KARAFIAT, Schwechat, near Vienna, Austria. Filed Feb. 1, 1924. Serial No. 690,009. 6 Claims. (Cl. 75—1.)

1. Bearing metals of the ternary system tin-antimony-leads with an addition of metals capable of forming a solid solution with tin and lead excepting thallium, the said metals being added to main substance alloys of the state field III of the diagram of the said ternary system,

the corner points of which state field represent; 10% Sn, 10% Sb, 80% Pb;—55% Sn, 5% Sb, 40% Pb;—50% Sn, 50% Sb, 0% Pb.



1,568,225. ADJUSTABLE CLAMP. JOHN H. KORTES, Telluride, Colo. Filed Aug. 3, 1925. Serial No. 47,792. 3 Claims. (Cl. 24—17.)

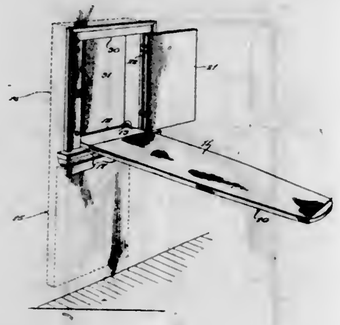


1. An adjustable clamp comprising a substantially U-shaped member, having vertically disposed channels associated with the parallel arms thereof, a complementary inverted U-shaped member, the parallel arms thereof being adapted for slidable movement in the respective channels, means for adjustably securing the U-shaped members together, said means comprising ratchet teeth provided on the depending arms of the inverted U-shaped member, and a pivoted locking pawl arranged in each of said channels for cooperation with the ratchet teeth of the respective depending arms of the inverted U-shaped member.

1,568,226. AUTOMATIC CURRIER. ERICK LARSON, Paulina, Iowa. Filed Mar. 10, 1925. Serial No. 14,543. 8 Claims. (Cl. 119—83.)

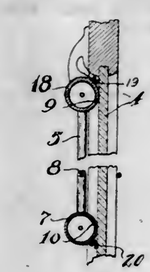
5. A device of the character described comprising a frame including vertical members, a transversely extending bar, vertical slides mounted upon the vertical members and with which said bar is loosely connected, means limiting the downward movement of the bar but permitting its free upward movement, a series of flexibly connected brushes, the series being pivotally connected at its middle to the middle of the bar and the brushes extending downward and outward laterally in opposite directions therefrom, and slides mounted upon the vertical members and with which the ends of the series of brushes are pivotally connected.

1,568,227. ROOFING. FRANK P. LEONARD, Troy, N. Y., assignor of one-half to Frederick C. Claessens, Troy, N. Y. Filed Jan. 25, 1923. Serial No. 614,899. 2 Claims. (Cl. 108—7.)



1. A roofing section comprising a body having a protecting and wear coating formed upon the top surface thereof, an inserting flap formed integral and along an edge of the said body, said protecting coating terminating short of the juncture line of the inserting flap and body, a receiving flap permanently overlapping the body at an edge thereof opposite to said inserting flap to provide a socket, said protecting coating of the body terminating short of the said socket, the facing surfaces between said receiving flap and body having adhesive coatings thereon, and temporary spacing means between said adhesive coatings.

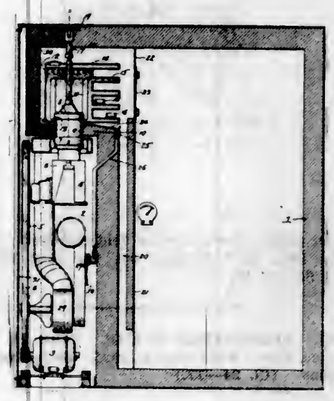
1,568,228. CONCEALED IRONING BOARD. GEORGE A. LIPPERT, Dubuque, Iowa. Filed Oct. 11, 1923. Serial No. 667,008. 1 Claim. (Cl. 68—10.)



A device of the class described comprising a housing rising from the floor within the wall of a room and having an opening in its upper portion, the sides of the housing having vertical grooves in their inner faces at the back thereof extending from the floor to points

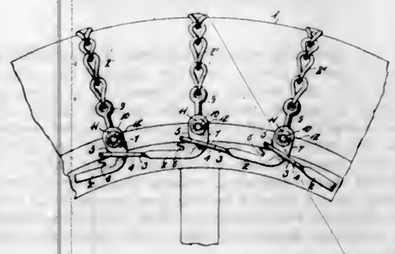
slightly above the lower end of the opening through the housing, a shelf projecting from the housing at the lower end of the opening, a board adapted to extend upright

within the housing or extend therefrom and rest upon the shelf, and guiding stops at the inner extremity of the board playing in the grooves in the sides of the housing.



1,568,229. WINDSHIELD CLEANER AND HEATER. BENEDICT J. LOAGUE, St. Paul, Minn. Filed Mar. 2, 1925. Serial No. 12,682. 2 Claims. (Cl. 20—40.5.)

1. In a device of the character described, a frame pivotally connected to a windshield, comprising a pair of slotted tubular members, means to hold the tubular members in laterally spaced relation from each other with the slots therein directed toward each other and angularly toward the windshield, pressure means in open communication with the interior of one of said hollow members to discharge a blast of heated air into said hollow members and outwardly through the slot therein, and evacuating means in open communication with the other of said hollow members to draw air through the slot in said hollow member from the face of the windshield into said hollow member.

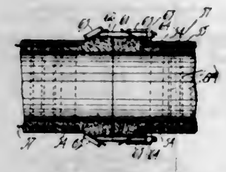


1,568,230. REFRIGERATING MACHINE. IVAR LUNDGAARD, Hartford, Conn., assignor to The Automatic Refrigerating Company, Hartford, Conn., a Corporation of New Jersey. Filed Feb. 5, 1924. Serial No. 690,781. 6 Claims. (Cl. 62—98.)

4. A mechanical refrigerator, comprising a machine compartment and a cold compartment with a heat insulating partition between them, a refrigerating machine using a gaseous mediating fluid and having a hot cylinder in the machine compartment and a cold cylinder in the cold compartment, the cold cylinder having heat absorbing vanes attached thereto, a brine tank mounted on the cold cylinder and surrounding the said vanes and the top of the cylinder, the said brine tank having shelf extensions with passages for brine therearound, and a partition between the part of the refrigerator containing the brine tank and the food compartment, and a door in said partition opposite the shelves in the brine tank.

5. A domestic mechanical refrigerator comprising a machine compartment, a cold compartment, a refrigerating machine having a hot cylinder in the machine compartment and a cold cylinder in the cold compartment, a heat insulating connection uniting the hot cylinder and cold cylinder closely surrounded by the heat insulating partition between the two compartments and a removable section of the insulating wall split along the center line of the cylinder.

1,568,231. ANTISKID CHAIN FOR VEHICLE TIRES. LEWIS K. MCCLELLAN, Belfry, Mont. Filed Aug. 22, 1924. Serial No. 733,630. 3 Claims. (Cl. 152—14.)

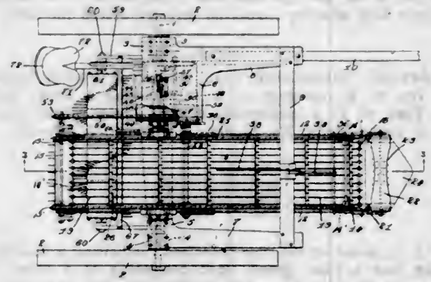


2. An anti-skid device comprising a series of interlocking links adapted to extend around the sides of a vehicle tire, each link having an aperture at one end, and a hook portion at the other end, the hook portion of one link being adapted to pass through the aperture of an adjacent link to unite said links together, and cross chains connected to the hook portion of each link and extending over the thread of the tire.

1,568,232. LIGHTING FIXTURE. GLENN E. MCFADDEN, Lakewood, Ohio, assignor to Alfred Vester Sons, Inc., Providence, R. I., a Corporation of Rhode Island. Filed Dec. 18, 1923. Serial No. 681,317. 4 Claims. (Cl. 41—10.)

1. In a device of the character described, the combination with a cylindrical tube of a metal embossment simulating melted wax, a lip formed on said metal adjacent its top which engages the end of the cylindrical tube when in position.

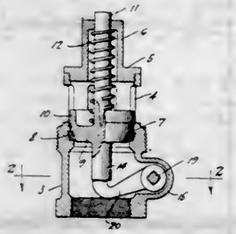
1,568,233. REENFORCEMENT FOR CONCRETE PIPES. ARNOLD NESBITT MACNICOL, Melbourne, Victoria, Australia. Filed Aug. 9, 1922. Serial No. 580,729. 3 Claims. (Cl. 72—53.)



1. In concrete pipes, a reenforcement and jointing means comprising reenforcement rings, spaced horizontal bars connected thereto and having their ends bent so as to project at a small angle through the surface of the pipe, and means for connecting such projections on adjacent pipes.

1,568,234. COATING FOR MOLDS. DANIEL H. MCLOCHE, Detroit, Mich., assignor to Earl Holley, Detroit, Mich. Filed Jan. 12, 1924. Serial No. 685,898. 5 Claims. (Cl. 22—189.)

1. A coating for protecting iron molds, consisting of an inert refractory insulating material mixed with lampblack and a small percentage of soluble silicate acting as a binder only, for the lampblack and the refractory insulating coating.



1,568,235. POTATO DIGGER. JOSEPH MORAU, Montreal, Quebec, Canada. Filed Aug. 9, 1924. Serial No. 731,083. 15 Claims. (Cl. 55—136.)

1. A potato digger comprising a vehicle frame, a chute supported longitudinally thereof, a scoop carried at the forward end of said chute, the bottom of said chute being constructed to permit the passage of material therethrough, means for carrying material along said chute

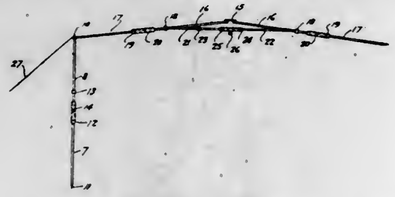
from the forward to the rear end thereof, and means supported beneath said chute for sweeping material to one side of said vehicle.

1,568,236. VALVE. FRANK Y. PEARNE, Los Angeles, Calif., assignor to Lacy Manufacturing Company, Los Angeles, Calif., a Corporation of California. Filed June 26, 1924. Serial No. 722,475. 2 Claims. (Cl. 251—134.)

2. In a valve, the combination of a valve body adapted to be attached in the opening of a tank, a cage on the top of said body arranged to be disposed in the tank chamber, said cage having a cylindrical bore, said valve body having an opening connecting the interior with said cage, a leather ring disposed in a recess in the wall surrounding said opening and having a bevelled seat, a valve having a tapered portion for engagement with said seat and a cylindrical portion arranged to be slidably guided in said cage, an operating stem depending from said valve and a guide stem upstanding therefrom, a pintle mounted in said body and extending outside thereof for connection to valve operating mechanism, an arm within said body secured to said pintle so as to be engaged with said operating stem for lifting said valve, a cap detachably secured in the top of said cage having a crown to receive said guide stem and a closure spring in said crown engaging said valve.

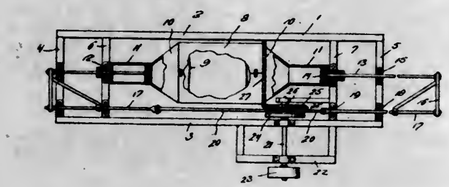
1,568,237. GENERATOR. LAURENCE M. PERKINS, Syracuse, N. Y. Filed Jan. 3, 1921. Serial No. 434,528. 3 Claims. (Cl. 171—223.)

1. The combination with a variable speed constant potential generator in which the load is taken off two brushes, one of which is practically on neutral and the other of which is off neutral to such an extent that the



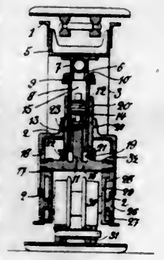
angle between the two brushes is less than 180 electrical degrees, and a third brush substantially on the other neutral point, a shunt field connected between the brush which is off neutral and said third brush, of a second shunt field winding connected directly across the load.

1,568,238. SHOULDER PAD. GEORGE L. PIERCE, Brooklyn, N. Y., assignor to A. G. Spalding & Bros., New York, N. Y., a Corporation of New Jersey. Filed Sept. 3, 1925. Serial No. 54,309. 2 Claims. (Cl. 2—2.)



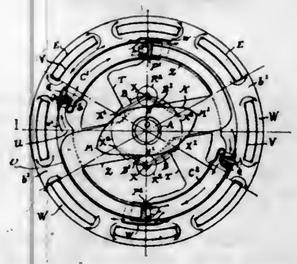
1. A device of the type described comprising a shoulder pad and a joint guard, each consisting of a sheet of foam rubber, a heavy protective covering therefor, a lighter marginal strip secured to the protective covering, a reinforcing strip beneath the foam rubber, and stitching passing through marginal strip, rubber and reinforcing strip.

1,568,239. TENT STRUCTURE. HARVEY J. REILLY, Los Angeles, Calif. Filed Aug. 20, 1923. Serial No. 658,381. 2 Claims. (Cl. 135—4.)



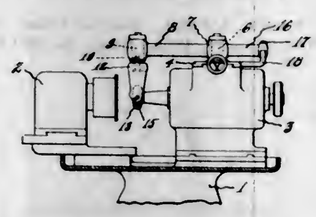
1. A tent frame comprising four uprights, a pyramid roof frame supported thereon and having four rafters joined at an apex, diagonal trusses pivotally connected at their ends to oppositely disposed rafters intermediate the ends of the latter, said trusses being jointed intermediate their ends, and means to lock the truss joints in aligned position, said rafters having eyes at their ends for receiving said uprights so as to be detachably supported thereon.

1,568,240. WASHING MACHINE. JAMES R. RICE, Elkhart, Kans. Filed May 2, 1925. Serial No. 27,473. 1 Claim. (Cl. 68—18.)



In a washing machine of the class described, a frame, a drum rotatably mounted in the frame and provided with axial end extensions in the form of cylinders, plungers slidable in the cylinders, a gear formed on the drum, a second gear meshing therewith, a pin extending eccentrically from the gear, connecting rods pivoted thereto, means for connecting the connecting rods with the plungers, and means for operating the second gear thereby causing simultaneous rotation of the drum and reciprocation of the plungers.

1,568,241. TRAVELING TRACK DEVICE WITH PNEUMATIC SUSPENSION. EMILE RIMAILHO, Paris, France, assignor to Compagnie des Forges & Acieries de la Marine & D'Homecourt, Paris, France, a Company. Filed Jan. 31, 1923. Serial No. 616,192. 4 Claims. (Cl. 305—9.)

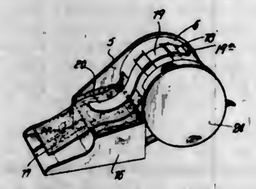


4. A suspension device for vehicles comprising traveling tracks, supports for the traveling tracks, carriages adapted to bear upon these tracks and to move vertically, checks on the carriages, means for guiding these carriages relatively to the supports, pistons submitted to the action of a fluid under pressure, vertical cylinders having these pistons movable therein; threaded sleeves which maintain these cylinders upon the said supports, cross pieces connected with the lower ends of the pistons, sleeves connected with these cross pieces and adapted to slide upon the cylinders, collars slidable on said sleeves and adapted to abut against said supports, stop springs interposed between said collars and the cross-pieces, rollers mounted upon said cross-pieces and bearing upon the checks of the carriages, and other rollers mounted upon the said cross pieces, the said supports being provided with guiding slots in which the said cross pieces are slidable.

1,568,242. ROTARY MOTOR. FRANÇOIS ROCHEFORT, Paris, France. Filed Feb. 25, 1919. Serial No. 279,200½. 3 Claims. (Cl. 123—43.)

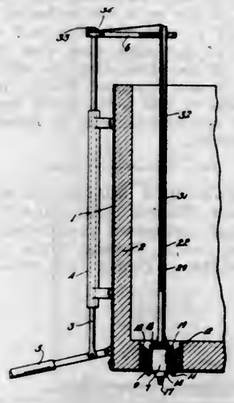
1. A polycylindrical internal combustion rotary motor comprising pairs of curved cylinders diametrically disposed with reference to a central stationary shaft about which the motor rotates, pistons operating in said cylinders, Z-shaped central pieces carrying said pistons and rotatable about said shaft, pairs of diametrically opposed toggle links connecting the Z-shaped pieces with the cylinders, stationary cams mounted on the central shaft, and rollers mounted on the toggle joints of the toggle links, said rollers bearing freely on the exterior running surfaces of the stationary cams and following the profile thereof.

1,568,243. WHEEL-DRESSING DEVICE. HUGH M. ROCKWELL, Bristol, Conn., assignor, by mesne assignments, to Standard Steel and Bearings Incorporated, Wilmington, Del., a Corporation of Delaware. Filed May 29, 1920, Serial No. 385,224. Renewed May 29, 1925. 2 Claims. (Cl. 125—11.)



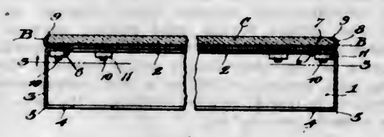
1. A device of the character described, comprising a plate adjustably mounted on the wheel-carrying head, a lever pivotally mounted on said plate, a stop on said plate, an arm, a ratchet on said arm to hold it against said stop, a shaft rotatably mounted in one arm of said lever, a bracket carried by said shaft and a dressing tool carried by said bracket.

1,568,244. FOLDING CHAIR. WILHELM ROSENKRANZ, Holzminden-on-the-Weser, Germany. Filed Mar. 18, 1925. Serial No. 16,589. 1 Claim. (Cl. 155—146.)



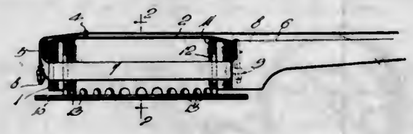
In a folding chair of the character described, the combination with a main frame and a seat, of S-shaped hinge elements having one end member connected to the seat and the other to the frame, the seat being recessed to accommodate the intermediate member of the hinge element so as to prevent rotary displacement of the latter relative to the seat.

1,568,245. STAMP OR LABEL MOISTENER. JOHN RUZE, New York, N. Y. Filed June 4, 1925. Serial No. 34,981. 4 Claims. (Cl. 91—14.5.)



1. A stamp or label fixing device comprising a housing having an opening in the front thereof, a closure for said housing, means for supporting a roll within the housing, a container forwardly of said housing adapted to receive a moisture absorbing element therein and a resilient member carried by said housing and extending over the said opening for urging the gummed surface in engagement with said moisture absorbing element.

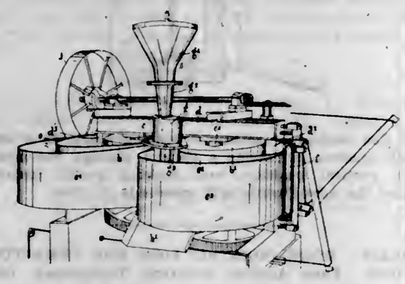
1,568,246. METHOD OF AND APPARATUS FOR SETTING POURING NOZZLES IN LADLES. MALCOLM SAUNDERS, Canton, Ohio. Filed May 16, 1925. Serial No. 30,700. 8 Claims. (Cl. 22—85.)



1. The method of setting a pouring nozzle in a ladle which consists in placing a spindle through the nozzle, in a vertical position, and packing plastic material around the nozzle while said spindle is in place.

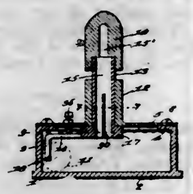
1,568,247. EDGE CONSTRUCTION FOR FURNITURE TOPS. FRED AUGUST SCHMITZ, Youngstown, Ohio, assignor to The General Fireproofing Company, Youngstown, Ohio, a Corporation of Ohio. Filed Feb. 13, 1922. Serial No. 536,244. 3 Claims. (Cl. 45—31.)

1. An edge construction for furniture tops including a top body comprising a flat upper surface and an angularly disposed side flange, a bead strip of angular cross section having the horizontal flange thereof secured to the flat surface of the toy body at the upper edge of the flange and exposing the latter, and a cover applied to the flat surface of the top body and having its edge portion overlying the horizontal flange of the bead strip.

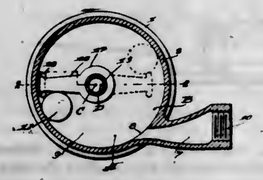


1,568,248. BANJO RESONATOR. ALBERT SHUTT, Topeka, Kans. Filed Mar. 31, 1924. Serial No. 703,193. 1 Claim. (Cl. 84—272.)

In a banjo having a main rim, a skin, and means anchoring the edge of the skin to the rim; a floating supplemental rim independent of said anchoring means and spaced inwardly from the main rim, said supplemental rim being of greater width than said main rim and projecting beyond both edges of the latter, one edge of said supplemental rim being in contact with the

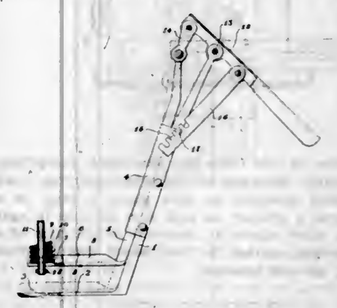


skin, a thin resonant sound board contacting with the other edge of said supplemental rim and spaced outwardly from the adjacent edge of the main rim, said sound board being of a diameter greater than the internal diameter of said main rim, and means at the outer periphery of the main rim anchoring the edge of said sound board to said main rim, said supplemental rim being free of anchorage other than that afforded by engagement of its edges with the skin and sound board, whereby it may float and directly impart vibrations of said skin to said sound board, openings being formed in said supplemental rim to permit escape of vibrations therefrom.

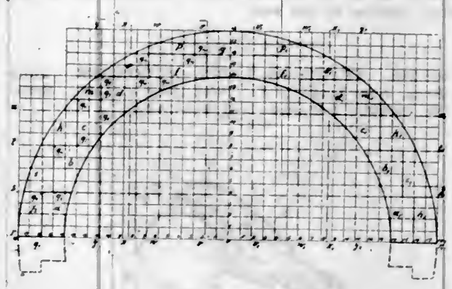


1,568,249. SEPARATING SOLIDS FROM LIQUIDS. OLOF SÖDERLUND, TEOFRON BOBERG, and NILS TESTRUP, London, England, assignors to Techno-Chemical Laboratories, Limited, London, England. Filed Aug. 30, 1923. Serial No. 660,234. 4 Claims. (Cl. 100—37.)

1. Apparatus for removing liquid from material containing it comprising in combination pressing rolls with their axes substantially parallel with one another and their circumferential surfaces closely adjacent, not less than one endless flexible band passing between said surfaces to divide into substantially equal compartments the more or less wedge-shaped cavity preceding the bite of the rolls, means for feeding to each compartment the material to be treated and means pressing the axes of said rolls towards one another.



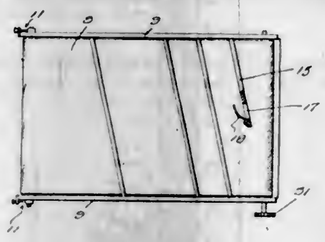
1,568,250. SPRINKLER. LENTHEL STANTON, Spokane, Wash. Filed Jan. 20, 1925. Serial No. 3,623. 8 Claims. (Cl. 299—18.)



1. A lawn sprinkler structure including a substantially cylindrical water chamber having a water inlet discharging tangentially thereinto to impart a whirling movement to the water, a sprinkler nozzle rotatively mounted on said chamber and communicating with said chamber, an operating arm in said chamber connected with said nozzle, and an unrestrained body in said chamber actuated by the whirling water to engage said arm and rotatively actuate said sprinkler nozzle.

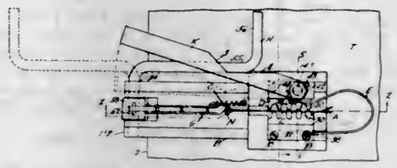
1,568,251. VALVE LIFTER. GEORGE STOFF, Canton, Ohio. Filed Nov. 20, 1924. Serial No. 751,034. 2 Claims. (Cl. 29—86.3.)

1. A tool of the character described, including an inclined normally stationary upright having an angular jaw at its lower end and provided with a tubular guide, a movable upright slidably mounted in said guide and provided at its lower end with a bifurcated jaw normally contacting with the stationary jaw, a lever pivotally connected intermediate its ends to the stationary upright, and a link pivotally connecting one end of the lever to the upper end of the movable upright for raising the movable jaw out of contact with the stationary jaw.



1,568,252. BUILDING BLOCKS FOR TOY STRUCTURES. OTTO H. STRUB, Rudolstadt, Germany, assignor to the Firm F. Ad. Richter & Cie. A. G., Baukastenfabrik, Rudolstadt, Thuringia, Germany. Filed Aug. 10, 1923. Serial No. 656,719. 14 Claims. (Cl. 46—35.)

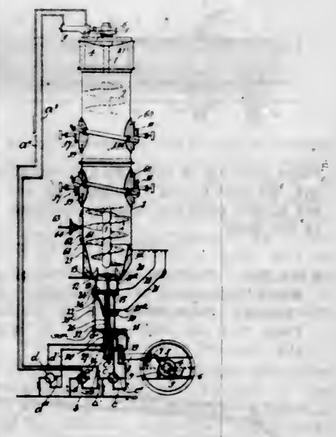
2. In a set of complementary toy building blocks adapted to interengage to form a ring, a plurality of units having only one curved surface, certain of which surfaces are concave and certain of which are convex.



1,568,253. BEAN SEPARATOR. FRANK STUHR, Rhodes, Mich. Filed Apr. 14, 1925. Serial No. 23,011. 1 Claim. (Cl. 209—114.)

In a bean separator of the class described, an inclined frame, rollers journaled for rotation in said frame, an endless apron trained over said rollers, a plurality of transverse strips supported between the side bars of the frame, said strips being spaced longitudinally from each other, and disposed diagonally to the path of movement of the apron, flexible flaps on the under sides of the strips disposed adjacent the surface of the apron, a relatively

short strip below the lowermost of the aforesaid strips, said short strip being disposed diagonally and provided adjacent its free end with a bean hole of a predetermined size, and a guide finger carried by the end portion of the strip and disposed in association with said hole.



1,568,254. MACHINE FOR STRAIGHTENING DROP WIRES. DANIEL TAYLOR, Lawrence, Mass. Filed May 19, 1925. Serial No. 31,323. 4 Claims. (Cl. 153—32.)

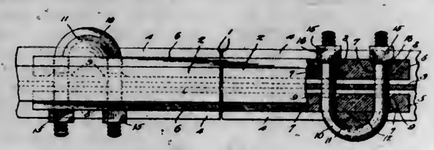
1. In a wire straightening machine, the combination with a base; of a jaw fixed thereto which has spaced teeth the tips of which are alined; a second jaw slidable on the base to and from the first jaw, such second jaw having spaced teeth the tips of which are alined and are positioned opposite the spaces between the teeth of the first jaw; pressure means near the entering end of the second jaw to advance that end towards, and retract it from, the first jaw; a handle for the pressure means; gripping means to seize a wire proximate the delivery end of the jaws; pulling means to move said gripping means away from the jaws; and a handle connected to the pulling means to operate said pulling means, so arranged as to also operate the handle for the pressure means.

1,568,255. JUICE-EXTRACTING APPARATUS. JOHN ISAAC THORNYCROFT, Bembridge, Isle of Wight, England. Filed Apr. 19, 1921. Serial No. 462,730. 7 Claims. (Cl. 127—8.)

1. Juice extracting apparatus of the kind herein referred to, comprising a vertical diffusing vessel, a screw conveyor located vertically therein, means whereby the screw conveyor can be rotated in an intermittent manner, a lift valve normally closing the lower end of the diffusing vessel, a feed cylinder located vertically below the diffuser and lift valve and provided with a vertically movable piston, a feed chute located at one side of said feed cylinder, the wall of said feed cylinder being divided vertically into two parts one of which is fixed whilst the other is movable and adapted to act as a feed valve between said chute and the interior of said feed cylinder and separate hydraulic cylinder and ram, for actuating the rotating

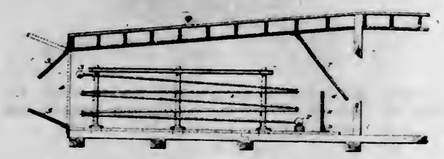
means for said conveyor, for lowering the lift valve, for lifting the feed piston and for raising and lowering the feed valve, substantially as described.

1,568,256. ELECTRIC LAMP. JOHN TORRENT, Muskegon, Mich. Filed Jan. 17, 1925. Serial No. 3,118. 1 Claim. (Cl. 176—27.)



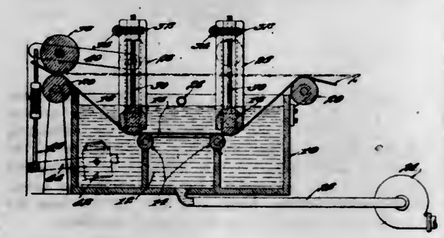
In an electric lamp, a base, a filament including a central wire and lateral wires in circuit with the central wire at one of its ends, a contact screw extending through the base, contact members in circuit with the lateral wires, said contact screw adapted to engage the contact members to complete circuits through the wires, and a removable section forming a part of the base for spacing the screw from one of the contact members.

1,568,257. RAIL JOINT. WILLIS F. WALKER, Siesholtzville, Pa. Filed May 16, 1925. Serial No. 30,797. 6 Claims. (Cl. 238—256.)



1. In a device of the class described, rails each including a ball, a web, and a flange, the lower surface of the ball and the upper surface of the flange converging inwardly, bridge bars having inwardly converging edges cooperating with said surfaces of the ball and of the flange, the bridge bars being spaced from the web, fastening devices including arms and an intermediate portion, the arms passing through the bridge bars and the webs, saddles within the securing devices and engaging one bridge bar, the saddles completely filling the space de-

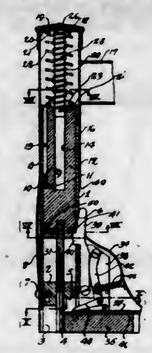
fined by said bridge bar and the arms and the intermediate portion of the fastening devices, means for holding the saddles against movement within the fastening de-



vices, and nuts on the arms and engaging the other bridge bar, the nuts having rounded ends, and said other bridge bar having concaved recesses receiving the rounded ends of the nuts.

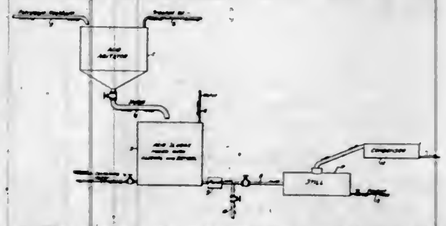
1,568,258. VENEER KILN. PATRICK M. WILLIAMS, North Wilkesboro, N. C., assignor to Moore Dry Kiln Company, Jacksonville, Fla., a Corporation of Florida. Filed Nov. 20, 1920. Serial No. 425,473. 4 Claims. (Cl. 34—19.)

3. A horizontal kiln having a heating chamber and a drying chamber, a throat between the chambers comprising an upstanding damper substantially perpendicular to the floor of the kiln, and a dependent damper of the kiln overhanging said upstanding damper at an angle thereto there being an opening between said dampers.



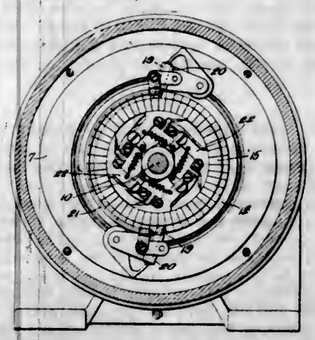
1,568,259. METHOD AND APPARATUS FOR CLEANING FELTS. EZEKIEL J. WILSON, East Greenbush, N. Y., assignor to F. C. Huyck & Sons, Rensselaer, N. Y., a Corporation of New York. Filed Nov. 15, 1923. Serial No. 674,887. 8 Claims. (Cl. 92—50.)

1. The method of cleaning the felt of a paper making machine or similar material which consists in causing it to travel through a body of liquid below the surface of the liquid and drawing the liquid therethrough by suction.



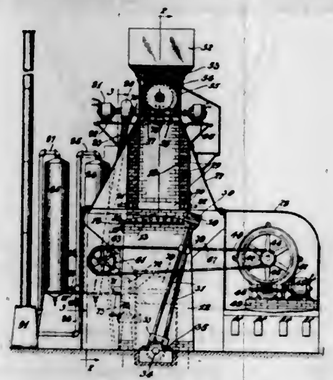
1,568,260. STAPLING MACHINE. JESSE G. BATES, Chicago, Ill. Filed Jan. 9, 1925. Serial No. 1,354. 14 Claims. (Cl. 1—48.)

1. A stapler comprising a casing, a spring controlled ram therein, latching means for holding the ram in retracted position, a spring controlled sleeve on said casing adapted to be manually operated to cause retraction of said latching means and automatic operation of said ram to cause a staple to be cut off from a staple strip and forced out of said casing, and means for returning the



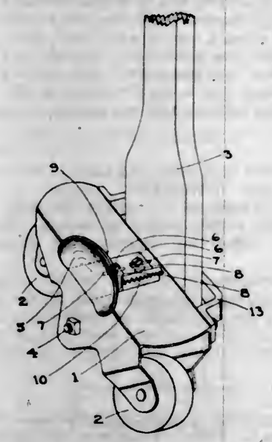
latching means to normal position and at the same time causing automatic feeding of the staple strip a predetermined distance.

1,568,261. PRODUCT DERIVED FROM ACID SLUDGE AND METHOD OF MAKING THE SAME. HARRY T. BENNETT, GEORGE B. MURPHY, and LE ROY G. STORY, Tulsa, Okla. Filed Dec. 20, 1924. Serial No. 757,221. 11 Claims. (Cl. 106—31.)



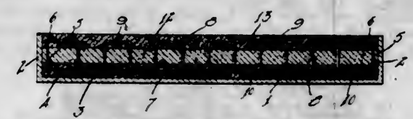
5. The method of converting acid sludge containing asphalt-like substances into useful products, which comprises commingling a solvent including alcohol and a coal tar product with the acid sludge, and distilling the resultant solution to remove the excess solvent therefrom.

1,568,262. DYNAMO-ELECTRIC MACHINE. CARL O. BERGSTROM, Boston, Mass., assignor to B. F. Sturtevant Company, Boston, Mass., a Corporation of Massachusetts. Filed Aug. 29, 1922. Serial No. 585,005. 11 Claims. (Cl. 172—279.)



1. In a dynamo electric machine the combination of a rotor having windings and a commutator, the commutator being provided with an internal contact face, supporting means carried by the rotor and a plurality of contact members pivotally mounted upon said means to turn about axes substantially parallel to the axis of the rotor, said members being normally held out of contact with the internal face of the commutator and arranged to be thrown by centrifugal action into contact with such face of the commutator when the rotor reaches the predetermined speed.

1,568,263. RETORT SLICING DEVICE. JOSIAH BRADLEY, Brooklyn, N. Y. Filed May 26, 1924. Serial No. 715,774. 10 Claims. (Cl. 126—173.)

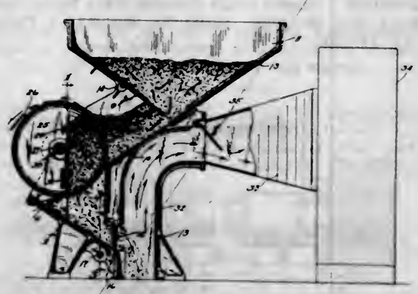


1. In a retort slicing apparatus, a grate beneath the open lower end of a retort, and upon which the lower portion of the material in the retort rests, and an oscillating slicer bar adapted to move over the said grate to remove a portion of the material above the grate with each oscillation of the slicer bar.

1,568,264. SHOE-POSITIONING DEVICE FOR SKATES. JULIEN A. BRIED, Oakland, Calif. Filed Oct. 27, 1921. Serial No. 510,773. 9 Claims. (Cl. 208—177.)

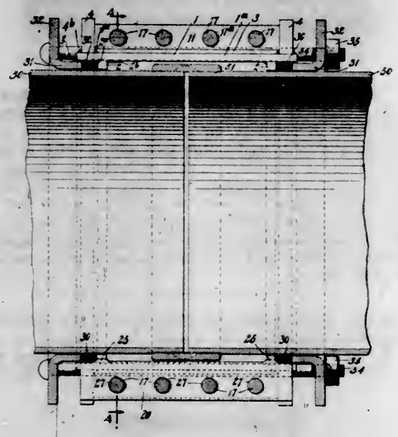
1. In a skate, a shoe receiving portion, means for positioning the outer side of a shoe thereon, a stop adjustable transversely of the skate for engaging the inner side of the shoe, and a latch co-operating with a portion of said stop for holding it in adjusted position.

1,568,265. PROCESS FOR MAKING REENFORCED-CONCRETE WALLS. CHARLES CARRILLON, St. Louis, Mo., assignor of one-half to Joseph M. Klamon, St. Louis, Mo. Filed Feb. 9, 1924. Serial No. 691,764. 2 Claims. (Cl. 25—131.)



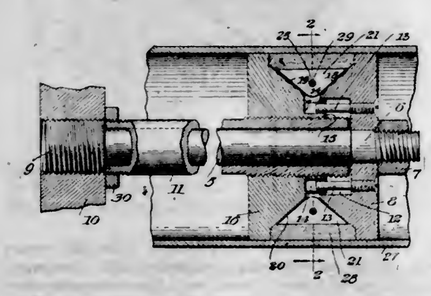
1. The herein described steps in the process of forming a hollow concrete wall section, which consists in depositing a layer of concrete, in placing on said layer a reenforcing screen in embedding said screen with a superposed layer of concrete, having reenforcing means extending upwardly therefrom, in covering said last named layer with a layer of sand to partially cover said reenforcing member, placing a layer of concrete on the layer of sand in contact with the upper end of said reenforcing member, and removing the sand when the concrete has set.

1,568,266. REENFORCED-CONCRETE WALL SECTION. CHARLES CARRILLON, St. Louis, Mo., assignor of one-third to Joseph M. Klamon, St. Louis, Mo. Filed Aug. 1, 1924. Serial No. 729,575. 3 Claims. (C. 72—44.)



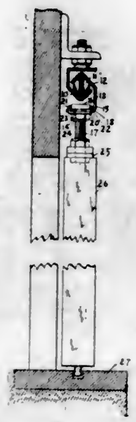
1. A reenforced concrete wall section comprising a pair of concrete walls spaced apart from one another, connecting members for securely holding said walls in spaced apart relation, consisting of angular convoluted metal rods having parallel portions in staggered relation to one another, one set of said parallel portions being embedded in one of said walls, and the other set being embedded in the opposite wall, and a metal screen disposed in one of said walls and parallel thereto, said screen having two of its outermost edges bent laterally to extend into the opposite wall adjacent the edges of the section.

1,568,267. SCALPER. CLARENCE W. CARTER, Minneapolis, Minn., assignor to Carter-Mayhew Manufacturing Company, Minneapolis, Minn., a Corporation of Minnesota. Filed Aug. 27, 1924. Serial No. 734,423. 15 Claims. (Cl. 209—285.)



1. A scalping machine comprising a drum-like rotary screen, means for delivering commingled stock in compact mass against said screen, and means for causing the stock to accumulate in compact mass within said screen, whereby said screen will fall over large and long foreign substances, while the main stock will pass through said screen to the interior thereof, and from thence out of said screen.

1,568,268. WROUGHT-METAL REPAIR DEVICE FOR PIPE LINES. JAMES CLARK and JOSEPH E. WALBORN, Bradford, Pa., assignors to S. R. Dresser Manufacturing Company, Bradford, Pa., a Corporation of Pennsylvania. Filed Aug. 25, 1925. Serial No. 52,346. 5 Claims. (Cl. 285—100.)



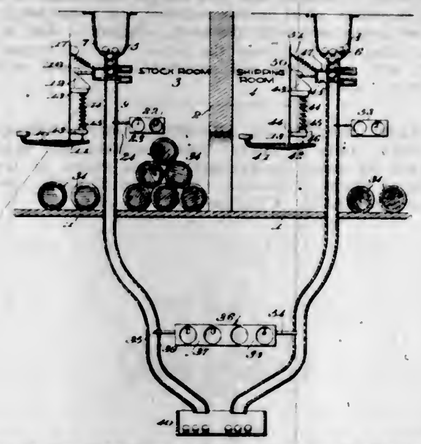
1. In a wrought metal repair device for pipe lines, a split sleeve comprising a plurality of wrought metal body segments, each of which is provided at each end with a marginal portion comprising a segment of a cylinder, a wrought metal segment end piece welded to the inner face of each of said marginal portions of the body segments at a distance from the end face thereof, forming a packing recess of which marginal portions of the body segments form the outer wall, and the segmental end pieces form the inner ends, whereby the packing in said recesses will seal the welded joints between the said end pieces and body segments, and prevent leakage in cases of defective welding, means for securing said body segments together, and side packings for making tight joints between the longitudinal meeting edges of the body segments.

1,568,269. EXPANSIBLE PACKING MECHANISM FOR PISTONS. ALFRED JULES CORMIER, Long Beach, Calif. Filed July 24, 1923. Serial No. 653,612. 3 Claims. (Cl. 74—109.)

1. In a piston packing expander the combination of a piston rod, of a stationary coniform piston element carried thereby, a sleeve carried by said piston rod having an exterior threaded end portion, a movable coniform piston element mounted on the threaded end of said sleeve, an expansible packing mounted in the space between said coniform piston elements, and a plurality of packing expanding members arranged behind said packing and between said piston elements for expanding said packing on a forward movement of said movable piston element.

1,568,270. DOOR HANGER. STOUGHTON P. CROSS, Hartsdale, N. Y., assignor to The McCabe Hanger Mfg. Co., New York, N. Y., a Corporation of New Jersey. Filed Aug. 26, 1922. Serial No. 584,452. 2 Claims. (Cl. 16—105.)

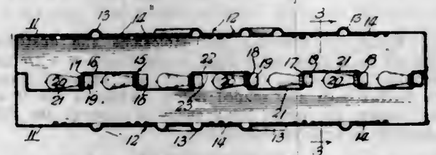
1. In a sliding door-hanger, a hanger bolt, a rider bar the base portion of which is provided with a transverse slot receiving the shank of the hanger bolt and is also provided with a longitudinal slot beyond the transverse slot, a washer of a width less than the width of the said base portion, said washer having a ward inset from one edge of the base portion and extending through said transverse slot into engagement with one side of the bolt head, said washer having a second ward inset from the opposite edge of said base portion and extending through said longitudinal slot into engagement with the opposite side of said bolt head, and a nut for clamping the base portion and washer between said nut and the bolt head.



1,568,271. PROCESS FOR TREATING METALS AND COMPOSITION THEREFOR. DAVID H. CROSSER, Chicago, Ill., assignor to Chicago Crucible Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 29, 1924. Serial No. 735,040. 10 Claims. (Cl. 75—27.)

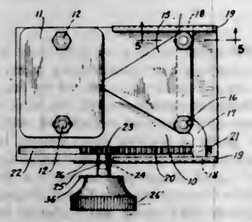
7. A composition for treating metal, comprising a briquette containing a relatively finely divided modifying element, and a ceramic binder of relatively great volume compared to the volume of said modifying element, said modifying element being disseminated throughout said binder.

1,568,272. GRAVITY REGISTER. FEDERICO GUILLERMO DIAGO, Habana, Cuba. Filed Nov. 24, 1923. Serial No. 676,818. 1 Claim. (Cl. 235—91.)



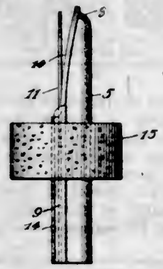
Registering apparatus comprising a hopper containing weights, a chute in connection with the hopper intended to receive the weights, and a slide arranged to reciprocate across the chute at right angles, said slide being composed of a pair of parallel plates spaced sufficiently

apart to receive a weight therebetween, the upper plate having an opening in normal registration with the chute



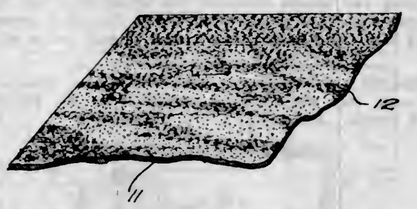
above, the lower plate having an opening registerable with the chute below when the slide is shifted to permit a weight to drop through.

1,568,273. ELECTRICALLY-ILLUMINATED SIGN. HERMAN A. GRIESINGER, Chicago, Ill., assignor to Thomas Cusack Company, Chicago, Ill., a Corporation of New Jersey. Filed June 25, 1923. Serial No. 647,429. 3 Claims. (Cl. 40—133.)



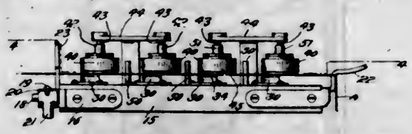
1. In an electrically illuminated sign, the combination of a sign body having glass letter plates upon opposite sides thereof, a reflecting partition in said sign body midway between said letter plates, said partition comprising a plurality of vertically disposed reflecting panels extending from the top to the bottom of the body and providing a succession of channel-like, vertically disposed open chambers, and lamp sockets carried by said partition and so positioned thereon that the associated lamps are arranged in axial alignment with at least one lamp in each chamber.

1,568,274. CONDENSER. DAVID GRIMES, Grasmere, N. Y., assignor to Grimes Radio Engineering Co. Inc. Filed May 18, 1922. Serial No. 561,829. 12 Claims. (Cl. 250—41.)



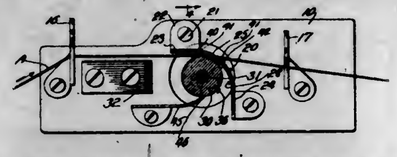
1. A condenser comprising a stationary condenser element having a straight side edge, and a plate conforming in shape to an isosceles triangle movable to overlapping position with respect to said element, the base of the triangular plate being substantially parallel to the straight edge of the element.

1,568,275. SOUND-PRODUCING REED. LEO J. GRUBMAN, New York, N. Y., assignor to Voices, Incorporated, Newark, N. J., a Corporation of Delaware. Filed Nov. 15, 1923. Serial No. 674,809. 3 Claims. (Cl. 46—46.)



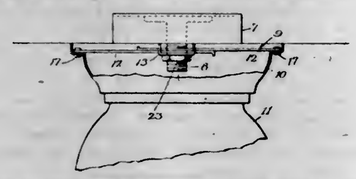
1. A reed comprising a body member having a longitudinally extending air channel opening upon one side thereof and provided with angular shoulders at opposite edges of said channel, a vibratory sound producing element having a part positioned over said channel between said shoulders and another relatively yieldable vibrating part projecting longitudinally over the ingress end of the air channel beyond said shoulders, a pressure resisting material engaged upon the first named part of said sound producing element and also positioned between said shoulders, and a support for the reed coacting with said pressure resisting material and holding said material and the sound producing element against longitudinal movement with respect to the reed body.

1,568,276. AMALGAMATING MEANS. CHARLES C. HAMILL, Randsburg, Calif. Filed July 12, 1924. Serial No. 725,721. 1 Claim. (Cl. 209—50.)



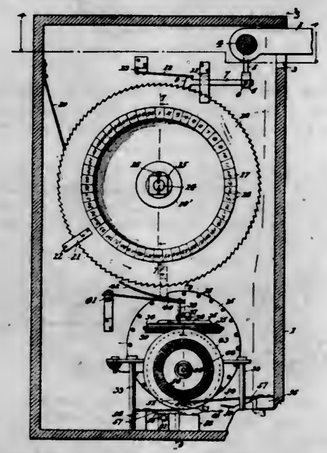
A means for the recovery of gold by amalgamation comprising a base plate covered with a mixture of mercury and silver fillings producing a rough surface.

1,568,277. YARN CLEANER. LOUIS B. HASBROUCK, Elmira, N. Y., assignor to Eclipse Textile Devices Inc., Elmira Heights, N. Y., a Corporation of New York. Filed Jan. 3, 1924. Serial No. 684,131. 20 Claims. (Cl. 28—66.)



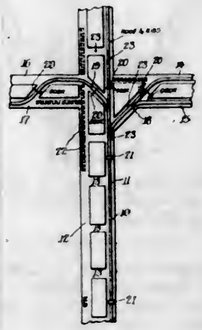
1. A yarn cleaner for removing particles from a traveling yarn, comprising means providing a scraping edge, means for guiding the yarn across said edge so that it scrapes particles from the yarn, and continuously moved means for carrying away from the line of travel of the yarn the particles and fibrous matter scraped off by the edge.

1,568,278. YARN CLEANER. LOUIS B. HASBROUCK, Elmira, N. Y., assignor to Eclipse Textile Devices, Inc., Elmira Heights, N. Y., a Corporation of New York. Filed Jan. 3, 1924. Serial No. 684,132. 19 Claims. (Cl. 28—66.)



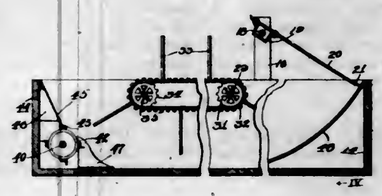
1. A yarn cleaner for removing particles from a traveling yarn, comprising a member providing a scraping edge across which the yarn is drawn, and a member providing a smooth surface opposite said edge and in contact with the yarn, one of said members being so moved that the part thereof in contact with the yarn travels longitudinally of the scraping edge to carry away particles and fibrous matter scraped from the yarn by the edge.

1,568,279. ADJUSTABLE STRAP FOR ELECTRIC-LIGHTING FIXTURES. MAX HERSKOVITZ, Chicago, Ill.; William Herskovitz and Charles Weinfeld executors of said Herskovitz, deceased. Filed June 4, 1924. Serial No. 717,696. 4 Claims. (Cl. 240—85.)



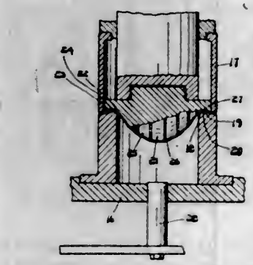
1. An adjustable strap for lighting fixtures, comprising a centrally apertured centre piece formed with flanges, and two similar fixed supporting members, each having two spaced branches, the branches of one end member overlapping the branches of the other member and both being held by the flanges of said centre piece.

1,568,280. RECORDER. MILTON HOHENEMS, Hummelstown, Pa. Filed Feb. 8, 1922. Serial No. 534,894. 9 Claims. (Cl. 234—1.)



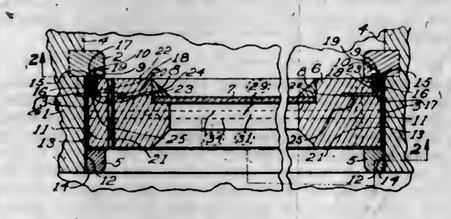
4. A registering device of the class described including a casing, a primary registering wheel rotatably mounted therein, a secondary registering wheel rotatably mounted in said casing, a recording disc carried on said secondary wheel, a spring supported reciprocating pin adapted to perforate said disc and simultaneously lock said secondary wheel against rotation, and means adapted for engagement with the spring support of said reciprocating pin to release the latter from its engagement with said disc and simultaneously rotate said secondary wheel.

1,568,281. SYSTEM OF ARRESTING MINE EXPLOSIONS. JOHN E. JONES, West Frankfort, Ill., dedicated, by mesne assignments, to the People of the United States of America. Filed Nov. 22, 1924. Serial No. 751,565. 4 Claims. (Cl. 169—2.)



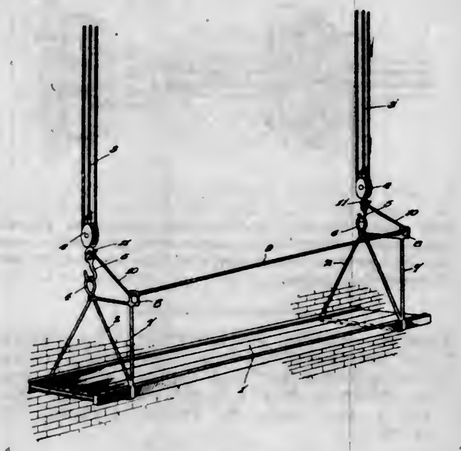
1. Means for arresting gas explosions and dust explosions in a mine comprising, in combination, a trough container adapted to hold an inert dust, supports therefor having each a V-shaped notch containing the V of the trough, the notch being small to support the full container in unstable equilibrium.

1,568,282. CARCASS-SCALDING MACHINE. JOHN W. KOHLHEPP, Chicago, Ill. Filed Sept. 19, 1925. Serial No. 57,266. 10 Claims. (Cl. 17—16.)



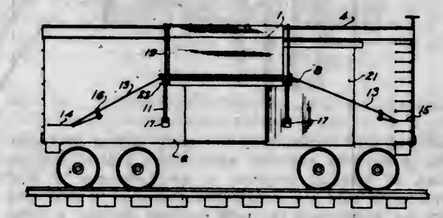
1. The combination with a carcass dehairing machine, of a carcass scalding unit comprising a scalding tank, a carcass feed drum rotatably mounted in one end thereof, a carcass discharge guide chute in the opposite end thereof, carcass guide aprons associated with the carcass feed drum to guide carcasses downwardly into the tank, a conveyor mechanism in the tank between the carcass feed drum and said chute to convey the carcasses from said aprons in a submerged condition through the lower part of the tank and onto said chute, and rotatable means adapted to enter the tank to engage and lift the scalded carcasses from said chute and deposit the same in said dehairing machine.

1,568,283. METHOD OF MAKING REFLECTORS. EUGENE A. KUHN, Cincinnati, Ohio, assignor, by mesne assignments, to The American Flatlite Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Aug. 21, 1923. Serial No. 658,649. 8 Claims. (Cl. 118—51.)



1. A method of making reflectors consisting in forming a reflector shell of basic contour, and then stretching the basic contour into configurations by subjecting portions of one side of the reflector to sufficient pressure to stretch the material thereof into configurations without supporting the opposite side during the stretching operation.

1,568,284. WEATHER STRIP. DOMNICK KULAGE and RICHARD O. OAKLEY, St. Louis, Mo., assignors to Peerless Weatherstrip and Caulking Company, St. Louis, Mo., a Corporation of Missouri. Filed Jan. 5, 1924. Serial No. 684,499. 1 Claim. (Cl. 20—69.)

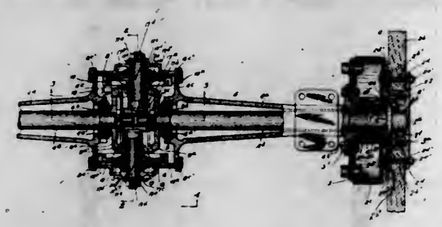


The combination with a window frame having an inside bead—a parting bead provided with a recess extending longitudinally of its inner face but spaced outwardly from the side of the frame—and a sliding sash between the said beads, of a weatherstrip having its inner longitudinal edge seated in the said recess of the parting bead and its outer longitudinal edge secured between the said inside bead and the adjacent face of the said frame, said weatherstrip having the portion between the said beads lying flat against the side of the said frame and being povided with a channel-forming bend in the portion adjacent the said parting bead, and a second weatherstrip of L-shaped cross-section and uniform thickness having one leg adjustably secured to the said sliding sash and the other leg engaged in the channel of the first mentioned strip.

1,568,285. SAFETY DEVICE FOR SWINGING SCAFFOLDS. ROLPH J. LACKNER, New York, N. Y., assignor to Lackner Products Corporation, Brooklyn, N. Y., a Corporation of Delaware. Filed Aug. 25, 1924. Serial No. 734,014. 2 Claims. (Cl. 304—16.)

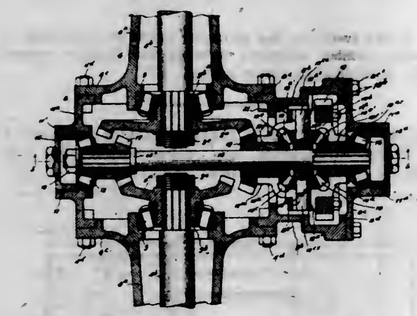
1. A safety device for swinging scaffolds consisting of a guard member extended between and fixedly secured to the scaffold-suspending means.

1,568,286. CANOPY FOR LOADING CARS. ARTHUR T. MCWANE, Birmingham, Ala. Filed Nov. 5, 1923. Serial No. 672,909. 5 Claims. (Cl. 156—15.)



4. A loading canopy for railroad freight cars, comprising a canopy adapted to extend over the car running board and having hooks to engage same, braces adapted to engage the car on each side of its door, a rigid cross member attached to the outboard end of the canopy to which member said braces are connected, and means to support the braces in set position on the car.

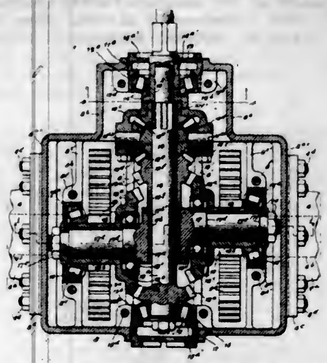
1,568,287. POWER-TRANSMITTING MECHANISM. LEO MELANOWSKI, Cleveland, Ohio, assignor to The Citizens Savings and Trust Company, operating trustee, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 24, 1919. Serial No. 278,672. 55 Claims. (Cl. 74—99.)



1. The combination in a driving axle of a housing, a pair of driven axle sections arranged end to end therein, a driving shaft mounted in said housing at an angle to said driven axle sections, differential mechanism mounted on said driving shafe section and actuated thereby and

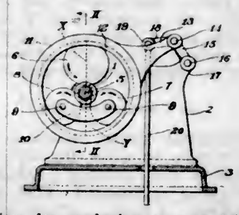
double speed reduction gearing interposed between said differential mechanism and the inner ends of said axle sections, comprising bevel gears on said axle sections meshing with bevel pinions supported in said housing,

spur gears mounted to turn with said bevel pinions, spur pinions mounted to engage said spur gears, each of which spur pinions is operated from one side of said differential mechanism.



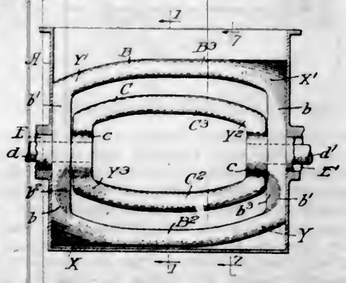
1,568,288. POWER-TRANSMITTING MECHANISM. LEO MELANOWSKI, Cleveland, Ohio, assignor to The Citizens Savings and Trust Company, operating trustee, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 7, 1919. Serial No. 288,012. 6 Claims. (Cl. 74—99.)

1. The combination with a housing formed with openings in its front and rear walls, and a pair of axle sections, of bearings mounted in said openings, a shaft mounted in said bearings, devices mounted in said openings for positioning the said bearings therein, a differential having a casing mounted on said shaft, and differential gears one of which is connected to said shaft, pinions respectively connected to said shaft and the other differential gear for driving said axle sections, a separate shaft mounted in said housing and gear connections between said shaft and said differential casing.



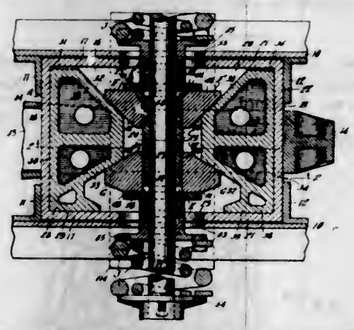
1,568,289. POWER-TRANSMITTING MECHANISM. LEO MELANOWSKI, Cleveland, Ohio, assignor to The Citizens Savings and Trust Company, operating trustee, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 7, 1919. Serial No. 288,013. 30 Claims. (Cl. 74—99.)

2. The combination with a pair of driven axle sections, a shaft, a housing for said axle sections and shaft, a pair of gear elements fixed to the opposite ends of said shaft, a pair of gear elements loosely mounted on said shaft between the first pair of gear elements, a driving element having a plurality of pinions meshing with one element of each of said pairs of gears, a bearing for said shaft carried by said housing and disposed between one of said gears which is fixed and the pair of gears which



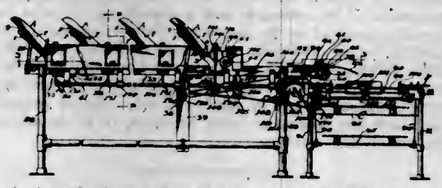
is loosely mounted on said shaft, and power transmitting elements between each of the other elements of said pairs of gears and said axle sections, respectively.

1,568,290. ROLLER ECCENTRIC. GEORGE SMITH MORISON, Pittsburgh, Pa. Filed Aug. 2, 1923. Serial No. 655,376. 14 Claims. (Cl. 74—34.)



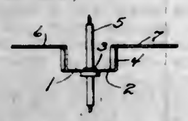
1. Mechanism for producing an eccentric motion comprising a circular rotatable driving shaft, an internally circular ring surrounding said shaft and held against free rotation, circular rolling members positioned between the shaft and ring and bearing against said shaft and ring, two of said circular rolling members being of different respective diameters.

1,568,291. DOUGH-MIXING MACHINE. FELIX NOTZ and GEORGE ROYAN, Chicago, Ill., assignors to American Oven & Machine Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 5, 1925. Serial No. 482. 6 Claims. (Cl. 259—105.)



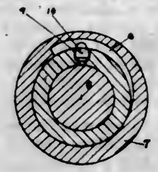
5. In a dough mixing machine, the combination with a mixing chamber of a pair of mixing frames mounted to revolve one within the other, each of said frames comprising longitudinal arms and end members to which said arms are joined, the end members of the outer frame having inwardly inclined working surfaces to move the dough towards the inner frame.

1,568,292. FRICTION SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed Apr. 12, 1923. Serial No. 631,507. 12 Claims. (Cl. 213—38.)



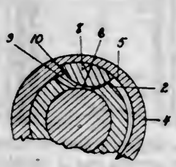
1. In a friction shock absorbing mechanism, the combination with end followers movable relatively toward each other; of end wedges movable with the respective followers; a central friction element having friction faces extending transversely to the axis of the mechanism; a plurality of friction shoes co-acting with said wedges, and slidable on the friction faces of said element, said shoes being separable transversely of the mechanism; and means for yieldingly opposing relative movement of said friction shoes, said means including spring elements, each of which is adapted to engage a plurality of said friction shoes.

1,568,293. GATHERING MACHINE. CHARLES A. RICHARDS, Chicago, Ill. Filed Aug. 22, 1921. Serial No. 494,065. 2 Claims. (Cl. 270—59.)



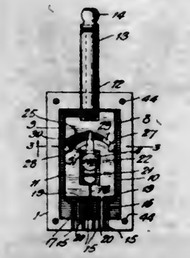
1. A gathering machine having a series of hoppers for holding stacks of sheets of material, a conveyor for transferring sheets from the hoppers, a platform to which the conveyor delivers the sheets, a reciprocating guide which moves toward the center of the platform upon the receipt of each sheet and moves away between the receipt of sheets whereby the delivered sheets are stacked, mechanism connected to said conveyor for continuously driving the same, clutch means operable by said mechanism for intermittently actuating said hoppers to deliver to said conveyor, and continuously driven means connected to said mechanism for actuating said guides.

1,568,294. PALLET. CLIFFORD G. RILEY, Manchester, England. Filed Nov. 12, 1924. Serial No. 749,517. 2 Claims. (Cl. 58—116.)



1. As a new article of manufacture, a pallet in the form of a square shaped U and having an apertured middle portion and portions extending at right angles to the middle portion; the said pallet being formed of flat metal.

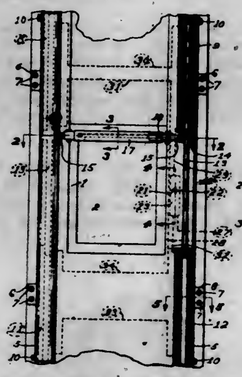
1,568,295. LOCKING DEVICE FOR DEPTH-GAUGE MICROMETERS. JOHN A. SCHLEICHER, Saginaw, Mich., assignor to Lufkin Rule Co., Saginaw, Mich., a Corporation of Michigan. Filed July 17, 1925. Serial No. 44,395. 2 Claims. (Cl. 33—167.)



1. In a depth gauge micrometer including a shoe and a micrometer head having a part of reduced diameter secured to said shoe, a spindle slidable in said reduced part and an internally eccentric ring revolvable thereon, a movable plug in the wall of said reduced part, between the spindle and eccentric ring, for the purposes set forth.

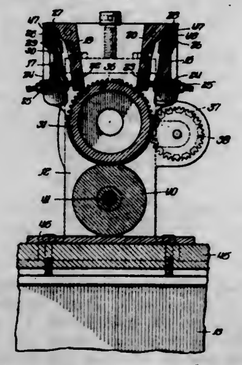
1,568,296. SPINDLE-CLAMPING DEVICE. JOHN A. SCHLEICHER, Saginaw, Mich., assignor to Lufkin Rule Co., Saginaw, Mich., a Corporation of Michigan. Filed July 17, 1925. Serial No. 44,396. 4 Claims. (Cl. 33—167.)

1. A spindle clamping device comprising a tubular spindle-receiving member provided with a hole through the wall thereof, an anvil loosely received in said hole and tiltable therein, a ring rotatable on said tubular member and provided with an internal cam adapted to engage said anvil to clamp said spindle, said ring formed with a shoulder at an end of said cam, said shoulder adapted to engage said anvil to move it out of contact with said spindle.



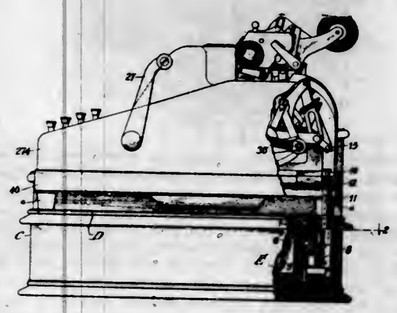
1,568,297. TELEPHONE SWITCH FOR RADIO SETS. EDWARD ANTHONY SMALENBERGER, Brooklyn, N. Y., assignor to Franklin L. Duerk, Brooklyn, N. Y. Filed Sept. 24, 1924. Serial No. 739,521. 10 Claims. (Cl. 179—1.)

1. A telephone switch for radio sets, comprising a pair of conductors for connection in the telephone circuit of a set, a support for the conductors, a switch member carried by the support for movement in a definite path thereon, spaced contact elements, one connected to each of the two conductors and another to the switch member, whereby a telephone receiver may be electrically connected between one of the conductors and the element that is connected to the switch member, and another re-



ceiver between the other of the said conductors and the switch member, and switch elements connected to the two conductors and disposed in spaced relation to one another within the path of the switch member, whereby either receiver may be temporarily short circuited by moving the switch member into engagement with that switch element which is connected to the same conductor that that receiver is directly connected to, and both receivers rendered active and placed in series by moving the switch member out of engagement with both switch elements.

1,568,298. WIPER. JOSEPH A. SOMERVILLE, St. Louis, Mo. Filed Dec. 18, 1924. Serial No. 756,679. 2 Claims. (Cl. 15—253.)

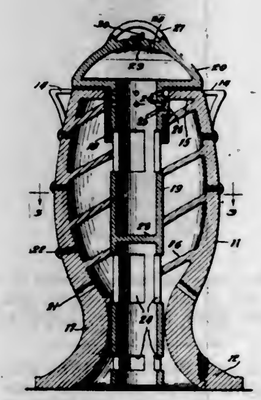


1. In a window wiper, a pair of laterally spaced guide tubes respectively slotted for a portion of their length to provide guide openings, a plunger within each guide tube adapted to slide from one end to the other thereof, a slidable collar on each plunger, a pair of studs, each of said studs having a screw-threaded shank engaged in a screw-threaded opening in a collar and seating against the plunger for locking the said collar thereon, a wiping strip, a holder therefor having its opposite ends embracing the said studs, and removable transverse bolts securing the said ends of the holder to the said studs.

1,568,299. INKING FOUNTAIN. BURT D. STEVENS, Evanston, Ill., assignor to Miehle Printing Press & Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 15, 1923. Serial No. 657,471. 2 Claims. (Cl. 101—363.)

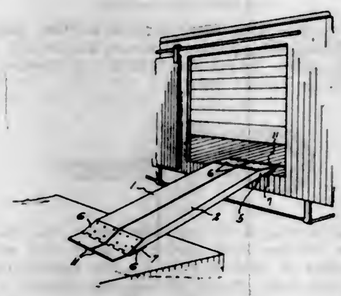
1. An ink fountain comprising a fountain roll, an ink controlling blade, pivoted supporting means for the blade, said blade and supporting means comprising a wall of the fountain, an outwardly extending flange on the blade supporting means, a frame holding the pivots of the blade supporting means, compression springs carried by said frame and engaging the flanges of the blade supporting means to urge the blade away from the roll and adjustable means engaging the body of the blade support to move it toward the roll.

1,568,300. CASH REGISTER. OSCAR J. SUNDSTRAND, Rockford, Ill., assignor to Rockford Milling Machine Company, Rockford, Ill., a Corporation of Illinois. Filed Aug. 15, 1921. Serial No. 492,243. 2 Claims. (Cl. 235—22.)



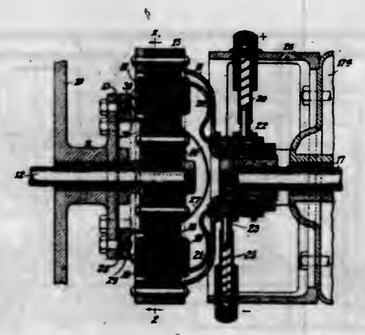
1. The combination of a casing, a cash drawer in the casing, a drawer lock in the casing, a tubular guide fixed in and extending above the top of the casing, a plunger vertically reciprocable in the guide and arranged to operate the lock, means to limit the upward movement of the plunger, and a registering machine removably mounted on the top of the drawer and having an opening in its base into which said guide projects, said guide serving to locate the registering machine upon the casing, and to prevent access to said plunger when the registering machine is in place, and said plunger projecting above the guide and being arranged to be moved by the registering machine.

1,568,301. BRAKE-APPLYING MECHANISM. GEORGE J. THOMAS, South Bend, Ind., assignor to Bendix Brake Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 2, 1925. Serial No. 66,276. 1 Claim. (Cl. 74—5.)



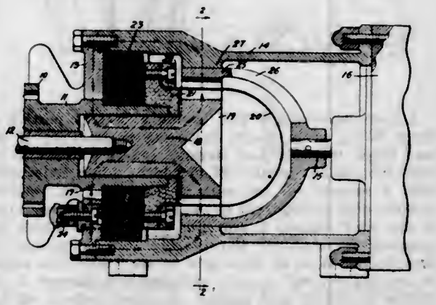
A vehicle having brakes and a vehicle-driving longitudinally-arranged propeller shaft, and comprising, in combination therewith, substantially coaxial brake-applying cross shafts arranged on opposite sides of the propeller shaft with their inner ends approximately on a level with the propeller shaft, and means for rocking said shafts together to apply the brakes including a connecting casting or forging offset at its center to clear the propeller shaft and secured at its ends to the inner ends of the cross shafts, together with an arm at one end of the casting or forging and a brake pedal connected to the arm.

1,568,302. FUEL-SAVING DEVICE. OLOF A. TOFFTEEN, Chicago, Ill. Filed Apr. 1, 1924. Serial No. 703,565. 17 Claims. (Cl. 110—75.)



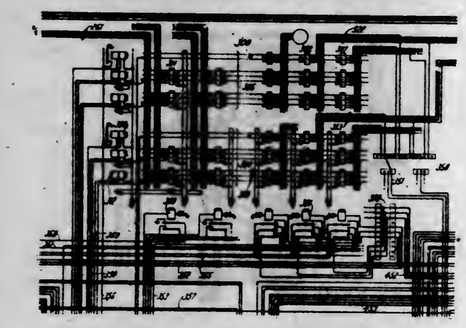
1. A fuel saving device comprising a hollow perforate member having a spiral passage therein, and an adjustable element carried by said hollow member and formed with perforations adapted to register with said spiral passage.

1,568,303. FREIGHT SKID. WILLIAM E. WEBSTER, Birmingham, Ala. Filed Feb. 16, 1925. Serial No. 9,368. 6 Claims. (Cl. 14—72.)



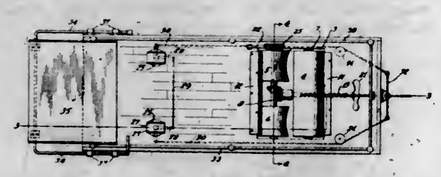
1. A freight skid formed in longitudinal half sections having interconnecting dowels and dowel holes on their abutting side edges, each section having hinges at each end to connect thereto a flat metallic apron adapted to provide inclined approaches to both ends of the skid, and to swing freely above and below the plane of the skid.

1,568,304. MAGNETIC COUPLING. EDWARD T. WILLIAMS, Brooklyn, N. Y., assignor of one-half to William O. Smith, Brooklyn, N. Y. Filed June 1, 1922, Serial No. 565,275. Renewed June 10, 1925. 4 Claims. (Cl. 172—284.)



1. The combination of a machine having a closed casing and an inner shaft extending through a wall of the later, an outer shaft, outer and inner magnetic coupling elements carried by said shafts to drive one from the other, and a sealing shell of which substantially all the unsupported area is of substantially spherical curvature enclosing the inner coupling element and hermetically sealed to the casing.

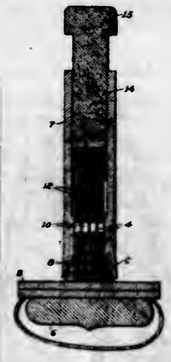
1,568,305. MAGNETIC CLUTCH. EDWARD T. WILLIAMS, New York, N. Y. Filed Oct. 15, 1923. Serial No. 668,508. 3 Claims. (Cl. 172—284.)



1. The combination with a machine of the class described, having a casing and a shaft extending through the same, said casing having a tubular extension coaxial with and surrounding the outer end of the shaft; of an inner magnetic coupling member having a hub extending into said tubular extension and secured to the end of the shaft therein, a sealing cup enclosing the coupling member and sealed around the outer end of said tubular extension, an outer magnetic coupling member rotatable around the inner member outside of the sealing cup, and a stationary magnetizing coil surrounding said tubular extension between the casing and the sealing cup and having a magnetic circuit including the tubular extension, hub, and both coupling members.

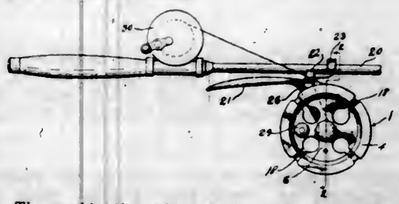
1,568,306. TELEPHONE-EXCHANGE SYSTEM. SAMUEL B. WILLIAMS, Brooklyn, N. Y., and EARL S. GIBSON, Ridgewood, N. J., assignors, by mesne assignments, to Western Electric Company, Incorporated, a Corporation of New York.. Filed Jan. 23, 1925. Serial No. 4,147. 13 Claims. (Cl. 179—18.)

1. In combination, a group of trunks, selective switches in which said trunks appear, testing means normally associable with a particular one of said trunks, and means for partially operating said switches to associate all of said trunks with said testing means.



1,568,307. AUTOMOBILE BARGE. PHILIP F. ACOCELLA, Brooklyn, N. Y. Filed Aug. 20, 1924. Serial No. 733,038. 1 Claim. (Cl. 115—0.5.)

A boat embodying a hull having a deck, a portion of which is cut away, shafts extending transversely of the boat below the deck and carrying rollers adapted to occupy the cut out portion of the deck and to collectively form a support for the rear wheels of a car, whereby rotation may be imparted to the rollers through operation of the rear wheels, a propellor, a shaft on which the propeller is mounted, and gearing for connecting the propeller shaft to at least one of the transverse shafts in combination with a pair of turntables adapted to individually engage and support the front wheels of the car and mounted for rotation on vertical spindles, a bell crank on each spindle, a tie rod connecting one arm of each bell crank to the corresponding arm, a rudder at the rear of the boat, and cables for securing the free arms of said bell cranks to the rudder to permit steering of the boat from the steering wheel of the car.



1,568,308. FOOTBALL-CLEAT-APPLYING TOOL. WILLIAM HENRY ALBER, Marlboro, Mass., assignor to Koehler Manufacturing Company, Marlboro, Mass., a Corporation of Massachusetts. Filed Oct. 4, 1922. Serial No. 592,332. 3 Claims. (Cl. 1—47.)

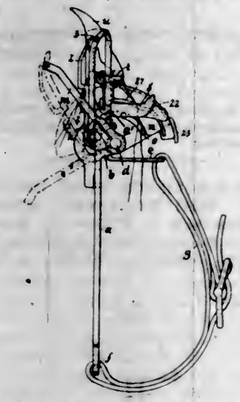
1. A football cleat attaching tool, comprising an elongated body having a cavity in one end thereof, said cavity having inclined walls to fit snugly against the tapered sides of a football cleat, a series of nail guiding holes opening into the upper end of said cavity, drivers slidably mounted in said holes, a driver bar slidably

mounted in said body and having a head to engage said body at the end of its driving stroke, and means for preventing said driver bar from turning in the body.

1,568,309. SPARE-FISHING-LINE HOLDER AND REEL THEREFOR. FREDERICK H. AULD, Columbus, Ohio, assignor to The D. L. Auld Company, Columbus, Ohio. Filed June 16, 1924. Serial No. 720,296. 8 Claims. (Cl. 242—84.1.)

1. The combination with a fishing rod, of a reel, means for rotatably and detachably connecting the reel with the rod, a spare line holder consisting of a collapsible split ring, and means for detachably connecting the holder with the reel.

1,568,310. HOLDING DEVICE FOR ROPES, CABLES, AND THE LIKE. PETER E. BAGGE, Moline, Ill. Filed Nov. 8, 1924. Serial No. 748,710. 8 Claims. (Cl. 24—133.)



2. In a holding device for lines, cables, and the like, a pair of clevises, each having its inner face rounded to be convex in cross-section, a pivot member passing through both arms of said clevises and adapted to hold them in assembled relation, and means surrounding the pivot member substantially filling the space between the inner arms of said pair of members.

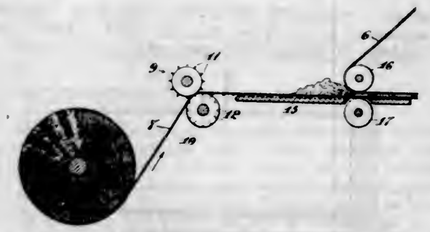
1,568,311. KNOT-TYING IMPLEMENT. ROBERT W. BARKER, Providence, R. I., assignor to Edward A. Taft, trustee, Brookline, Mass. Filed Feb. 7, 1918, Serial No. 215,789. Renewed Sept. 3, 1920. Serial No. 408,053. 29 Claims. (Cl. 289—3.)

1. A strand-cross-forming instrumentality having strand checks arranged one forward of the other and

against which the respective strands are adapted to bear, said instrumentality having means to guide the strands

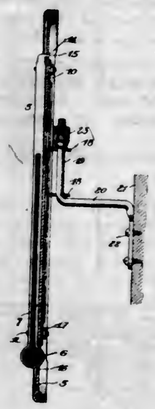
against said checks and affording clearance to one strand to be displaced laterally under the check for the other strand.

1,568,312. CAN OPENER. AUGUST M. BECKER, New York, N. Y. Filed July 29, 1924. Serial No. 728,810. 1 Claim. (Cl. 220—43.)



An improved can opener, comprising a main member, a handle on said main member, two lever members on the main member at opposite sides thereof, all of said members being of one single piece and integral with each other, each of said lever members having a flat portion flush with one surface of the main member and another portion bevelled off from said flat portion to the oppositely disposed surface of said main member and having a recess between the two lever members curved inwardly from one, across and outwardly to the other.

1,568,313. BOWLING PIN. HAROLD J. BLUHM, Muskegon Heights, Mich., assignor to The Brunswick-Balke-Collender Company, Wilmington, Del., a Corporation of Delaware. Filed Feb. 16, 1925. Serial No. 9,514. 8 Claims. (Cl. 273—63.)

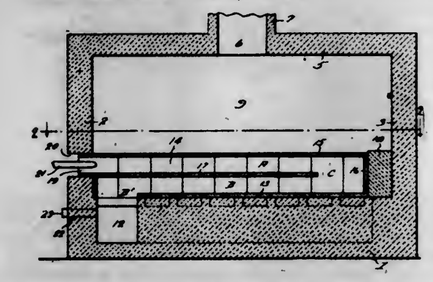


1. A bowling pin having a neck relatively softer than the body of the pin.

1,568,314. COMPOSITION BOARD. GEORGE A. BUTTRESS and CHARLES F. CRAIG, Los Angeles, Calif., assignors to Rex Goodcell, Los Angeles, Calif. Filed May 27, 1924. Serial No. 716,083. 3 Claims. (Cl. 154—2.)

3. The method of forming a composition wall board, consisting in puncturing a facing sheet to form a multiplicity of minute apertures therein having frayed marginal portions projecting from one side of the sheet, applying a coating of plastic material to the surface of the facing sheet opposite the frayed projecting portions, and causing portions of the plastic material to extend into the apertures, and pressing the frayed projecting portions of the facing sheet over the plastic in the apertures.

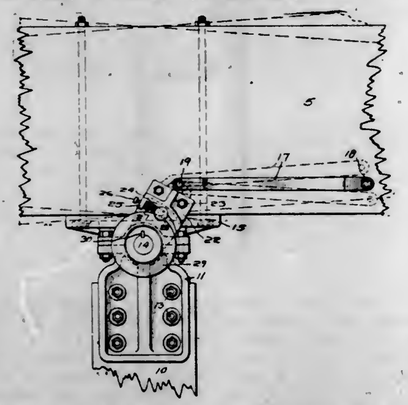
1,568,315. THERMOMETER MOUNTING. HENRY B. BROWN, Rochester, N. Y., assignor to Taylor Instrument Companies, Rochester, N. Y., a Corporation of New York. Filed Sept. 18, 1922. Serial No. 588,824. 5 Claims. (Cl. 73—52.)



1. A thermometer comprising a tube, a mounting plate provided with openings therein and with a scale and having a rearwardly turned, peripheral flange, a back plate disposed within said flange having openings therein registering with those in said mounting plate, means on said back plate for supporting the instrument, and securing devices passed through said registering openings and embracing said tube for securing the latter on said mounting plate and said plates together.

1,568,316. PROCESS FOR ARTIFICIALLY CURING GREEN TOBACCO. ALFRED CHARLES BUENSOD, New York, N. Y., assignor to The Tobacco Treating Co., Inc., New York, N. Y., a Corporation of New York. Filed Dec. 30, 1921. Serial No. 525,996. 19 Claims. (Cl. 131—6.)

1. A process of the character described comprising the subjection of the tobacco cells to air currents forced



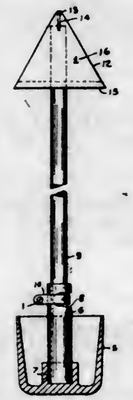
through the rows of tobacco, such air having a temperature of from 95° F. to 110° F. and a relative humidity of from 70% to 75% until substantially all of the food in the cells has been consumed.

1,568,317. FURNACE OR OVEN. HIRAM B. CANNON, Metuchen, N. J. Filed May 14, 1924. Serial No. 713,188. 9 Claims. (Cl. 263—43.)

1. A furnace or oven comprising in combination walls forming a heating chamber, the bottom wall constituting a floor for said chamber and being provided with a flue beneath said floor, a combustion chamber within the heating chamber and arranged to heat the same by radiation, means for heating the said combustion chamber interiorly and means for discharging the products of combustion from the combustion chamber into said flue, the said flue being provided with one or more openings for delivering the products of combustion into the heating chamber whereby the said chamber is heated by radiant heat from the combustion chamber and from the floor and by the sensible heat of the gases delivered through the opening or openings in said flue.

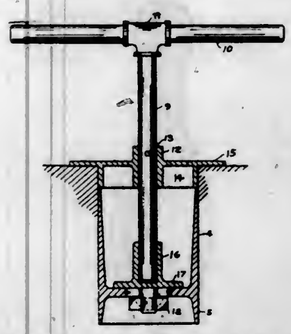
1,568,318. HEAVY-DUTY BEARING. FRANK WILLIAM CARLSON, Oilfields, Calif. Filed Feb. 3, 1925. Serial No. 6,611. 4 Claims. (Cl. 308—21.)

2. The combination with a walking beam, a saddle carried thereby, a pin carried by said saddle, a side plate in which said pin is journaled and clutch mechanism engaged with said pin and with the walking beam for imparting a step by step turning movement to said pin in the side plate.



1,568,319. TOY AEROPLANE. WILTON W. COGSWELL, Colorado Springs, Colo. Filed Dec. 1, 1924. Serial No. 753,223. 2 Claims. (Cl. 244—12.)

1. A device of the character described consisting of a shaft divided by longitudinal slits into a plurality of sections, wings fitting into one of said slits and held in place by said sections, a fin fitting into one of said



slits and held in place by two of said sections and the wings, and a resilient bumper securing the free ends of the sections together.

1,568,320. GOLF-HOLE-CUP FLAG HOLDER, BASE, AND FLAG. HARRY T. COLDWELL, Arlington, N. J., assignor of one-third to William H. Mabie and one-third to Henry E. Lex, both of Newburgh, N. Y. Filed Aug. 13, 1924. Serial No. 731,696. 4 Claims. (Cl. 273—34.)

1. In a golf hole cup flag holder the combination of a base member adapted to removably and snugly fit a golf hole cup and means for supporting and removably mounting a flag pole therein comprising a tubular member rigidly mounted in said base member and having a cut out portion near the top adapted to carry a clamp member to detachably secure a flag pole therein.

1,568,321. GOLF-HOLE CUP AND TOOL FOR INSERTING AND EXTRACTING SAID CUP. HARRY T. COLDWELL, Arlington, N. J., assignor of one-third to William H. Mabie and one-third to Henry E. Lex, both of Newburgh, N. Y. Filed Aug. 13, 1924, Serial No. 731,697. Renewed Sept. 3, 1925. 6 Claims. (Cl. 273—34.)

4. In combination a golf hole cup having a key hole in the base with lugs secured under said base offset from said key hole but within the circle described by said hole

as a diameter and means adapted to cooperate with said cup means for inserting and extracting the same from said golf hole.

1,568,322. METHOD OF MAKING BRAKE-BEAM FULCRUMS. SETH A. CRONE, East Orange, N. J., assignor to Buffalo Brake Beam Company, New York, N. Y., a Corporation of New York. Filed Mar. 31, 1923. Serial No. 628,971. 7 Claims. (Cl. 29—161.)

1. The method hereinbefore described of forming a brake-beam fulcrum which consists in providing a bar of requisite length and uniform thickness throughout and having at its middle portion diagonally disposed lateral edge extensions of the thickness of the bar, laterally offsetting in opposite directions corresponding end portions of the bar, angularly twisting said end portions in opposite directions to set them at the proper angle for final engagement with the compression member of the beam, depressing V-portions of said lateral extensions at diagonally opposite edges and at opposite sides of a center line across the bar, U-ing the bar at said center line, and further depressing the metal at said V-portions to form a saddle or seat for the truss-rod, said saddle or seat being horizontal and crossing the outer ends of the angularly set sides of the fulcrum.

1,568,323. ENAMEL-CLEANING COMPOUND. CHARLES W. DEEB, Ellensburg, Wash. Filed Nov. 27, 1923. Serial No. 677,320. 1 Claim. (Cl. 87—5.)

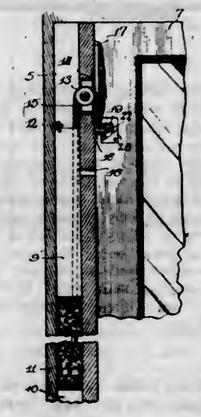
An enamel cleaning solution formed by mixing the following ingredients consisting of approximately five per cent of acetic acid, twelve and one half percent of ammonia, twenty-five percent of pulverized rotten stone and fifty-seven and one half percent of water.

1,568,324. PROCESS OF MANUFACTURING ADHESIVE BLENDS OF SODIUM NITRATE AND AMMONIUM NITRATE FOR EXPLOSIVE PURPOSES. WILLIAM M. DEHN, Seattle, Wash. Filed Oct. 13, 1924. Serial No. 743,199½. 18 Claims. (Cl. 52—19.)

1. The process of manufacturing conglomerate masses of ammonium nitrate and sodium nitrate for explosive purposes, which comprises changing by application of heat mixtures of said salts to sludges and then cooling rapidly to uniform conglomerates which are to be pulverized.

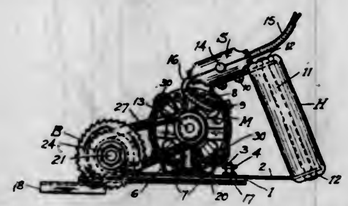
1,568,325. FISH LURE. CLARENCE L. DEWEY, Michigan City, Ind. Filed May 7, 1923. Serial No. 637,403. 3 Claims. (Cl. 43—42.)

1. A fish lure having a body comprising two complementary units, a hook and a hook guard located between the units, said guard being flexible and having its greater transverse dimension in a plane parallel with the hook and means to clamp the sections together about the parts.



1,568,326. SIGN-LETTER PLATE. CHARLES B. EHNBORN, Chicago, Ill., assignor to Thomas Cusack Company, Chicago, Ill., a Corporation of New Jersey. Filed June 25, 1923. Serial No. 647,459. 4 Claims. (Cl. 40—140.)

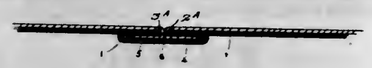
1. A sign character plate comprising in combination, a sheet metal stencil plate having a letter opening therein, means providing flanges at the sides and at the top and bottom ends of said stencil plates on the near surface thereof, a translucent glass backing plate, means providing an open metallic frame for said backing plate, said frame including forwardly extending flanges along



its sides, said frame flanges engaging the rear face of the stencil plate to space the backing plate therefrom and substantially engaging the side flanges of said stencil plate, the top and bottom ends of said backing plate being adapted to be removably engaged beneath the flanges at the top and bottom ends of said stencil plate.

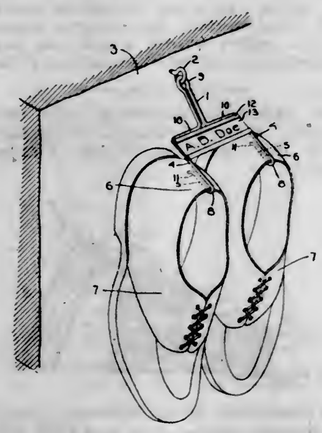
1,568,327. WINDOW CONSTRUCTION. WILLIAM EUTIN, Chicago, Ill. Filed May 2, 1925. Serial No. 27,535. 6 Claims. (Cl. 20—11.)

1. A window construction comprising a frame having a lateral aperture, and a sash co-operating therewith and having a lateral aperture, said apertures adapted to be brought into registry whereby a sash cord may be inserted therethrough and into the weight-box of the frame.



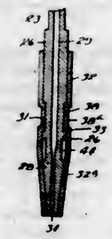
1,568,328. ELECTRIC HANDSAW AND GROOVING MACHINE. ELSAMUR S. FRENCH, Denver, Colo. Filed Nov. 27, 1923. Serial No. 677,330. 2 Claims. (Cl. 143—43.)

1. The combination in an electrically operated hand saw and grooving machine of the fixed plate, the slidable motor supporting stand mounted on said fixed plate; and the hinged plate underneath said fixed plate, and hinged thereto; with an electric motor operatively mounted on said sliding stand having an axial shaft provided with belt pulleys on its opposite ends, a saw supporting shaft rotatably mounted in adjustable bearings at a short dis-



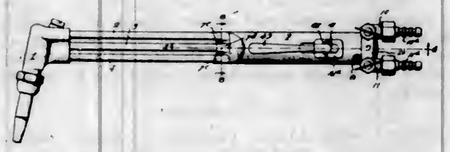
tance from said motor, that are secured to said fixed plate, and a saw removably mounted on one end of said shaft; a hand grasping handle secured to said motor on the opposite side of said motor from said saw supported shaft; with means, including an adjustable screw, threaded through said adjustable bearings and said fixed plate, and bearing on top of the plate hinged underneath said fixed plate for controlling the cutting depth of said saw; a belt pulley on each end of said saw supporting shaft and belts mounted thereon and extending to and mounted on the pulleys of the shaft of said motor; the laterally movable guide member for guiding the plate of the saw; and means including the screw and the slot for adjusting the tension of the driving belts of the saw.

1,568,329. METHOD OF ALTERING WAISTLINE OF TROUSERS. JACOB GREENBERG, Rochester, N. Y. Filed Sept. 10, 1924. Serial No. 787,002. 2 Claims. (Cl. 2—236.)



2. The method of making and altering the waist line of a pair of trousers which consists in sewing the two sections of trousers together at the back with a folded edge leaving short extensions of the trousers sections projecting inwardly thereof, then sewing a continuous strip of waist band to the waist line of the trousers with a free loop of the waist band overlapping the inwardly projecting extensions of the trousers sections, allowing said folded edge to be opened and sewed together again after shortening or lengthening the inwardly projecting flanges of said trousers sections without disturbing said waist band and making said waist band overlap said altered lengths of said inwardly projecting flanges of said trousers sections.

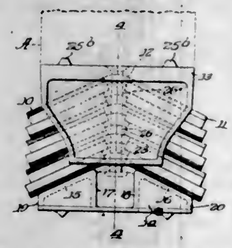
1,568,330. SHOE HANGER. JESSE S. HARDING, Stoughton, Mass. Filed Oct. 12, 1925. Serial No. 61,968. 2 Claims. (Cl. 24—261.)



1. A shoe hanger having a shank portion, means for pivotally connecting said shank portion to a wall, and two arms spaced from each other and each having at its end a hook portion adapted to hook over the counter of a shoe, said arms having an angular relation to the shank and the hooks being of less length than the height of the shoe counter, whereby when the two hooks are hooked over the counters of the shoes of a pair said shoes will be hung toes downward with the heel and soles resting against the wall and will be supported partly by the wall and partly by the hanger.

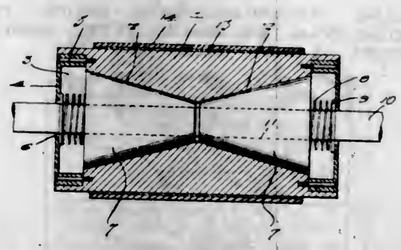
1,568,331. BLOWPIPE. JOHN HARRIS, Cleveland, Ohio. Filed Jan. 27, 1923. Serial No. 615,189. 7 Claims. (Cl. 158—27.4.)

1. A blowpipe comprising a head, a tip carried by said head and comprising an inner member having a central passage for cutting oxygen and provided intermediate its ends with an enlargement having passages for preheating oxygen and a combustible gas, and an outer member surrounding the inner member and engaging the enlargement thereof, the engaging portion of the inner member being provided with recesses in the exterior thereof, and the surrounding portion of the outer member being pressed inwardly into such recesses to form integral locking lugs, and means for supplying cutting oxygen from said head through the first mentioned passage and a mixture of preheating oxygen and combustible gas through the passages therefor in said enlargement.



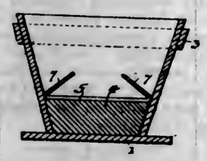
1,568,332. BLOWPIPE. JOHN HARRIS, Cleveland, Ohio. Filed Jan. 27, 1923. Serial No. 615,190. 4 Claims. (Cl. 158—27.4.)

3. In a blow pipe, the combination of a head, a valve block, tubes connecting the said head and valve block for conducting cutting and preheating oxygen and a combustible gas from the block to the head, and a handle casing mounted upon and projecting forwardly from the valve block, the front end of said casing being formed into a pair of opposed resilient walls each having seats formed therein for said tubes and yieldingly engaging the latter.



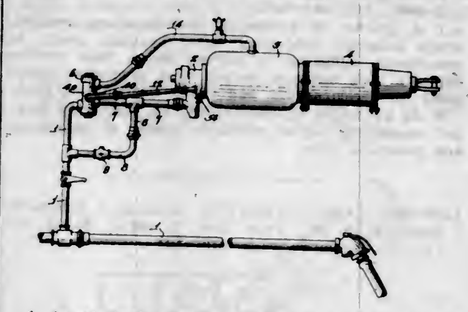
1,568,333. BOLSTER CUSHION. GEORGE L. HARVEY, deceased, late of Chicago, Ill., by Helen A. Harvey and Kellogg Fairbank, executors, Chicago, Ill. Filed May 17, 1924. Serial No. 714,034. 2 Claims. (Cl. (267—36.)

1. In a device of the class described, the combination of a pair of opposed members each having surfaces disposed at an obtuse angle, the surfaces being convex on one member and concave on the other member, angular spring plates between said members, said plates being notched at the angle, one of said members having de-



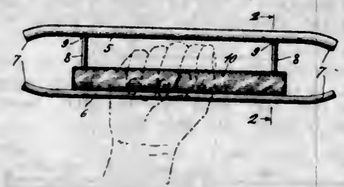
pending side wings, and inside webs for bracing said wings, said webs being accommodated in the notches in the plates.

1,568,334. MECHANICAL CUSHION ROLL FOR SPINNING FRAMES. WILLIAM J. HUBBARD, Yarmouth, Nova Scotia, Canada. Filed June 11, 1925. Serial No. 36,407. 2 Claims. (Cl. 19—141.)



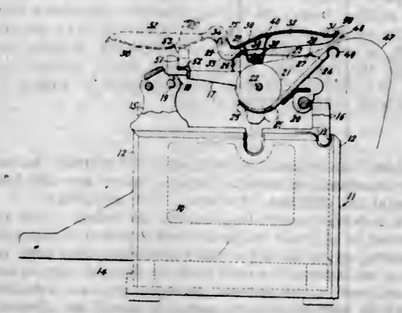
1. A drawing roll of the class described including a body, a covering on the body, a pair of cone journals in the body, and resilient means for urging the cone bearings toward the center of the body, said bearings adapted to be slidably received on a shaft.

1,568,335. MOLD FOR THE MANUFACTURE OF CEMENT BLOCKS. OTTIS L. HUSBAND, Thurman, Iowa. Filed Jan. 26, 1925. Serial No. 4,820. 1 Claim. (Cl. 25—121.)



In a mold of the class described, a rectangular base plate, side and end walls mounted thereon in spaced relation from the side and end edges of said base plate, said walls tapering smaller toward their lower ends and inclined outwardly toward their upper ends, the vertical plane of the upper ends of said walls being beyond the vertical plane of the side and end edges of said base plate, a securing band applied to the outer faces of said walls adjacent their upper ends, and a transverse block mounted centrally on said base plate having its ends beveled coincident to and abutting the inner faces of opposed end walls, said block being of a thickness equal to approximately one-third the distance between the lower ends of the side walls, as and for the purposes described.

1,568,336. AIR-BRAKE SYSTEM. THOMAS JAMES, Jr., Philadelphia, Pa. Filed Mar. 20, 1924. Serial No. 702,841. 13 Claims. (Cl. 303—78.)

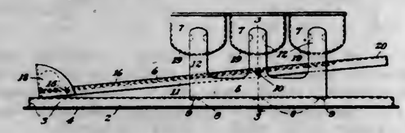


1. An air brake system comprising a retaining valve adapted to control the exhaust pressure outlet from the brake system, a train pipe, and a connection between the train pipe and the retaining valve adapted to close said exhaust outlet when charging the system.

1,568,337. BRICKLAYER'S JOINTER. BERNARD J. KAHN, Denver, Colo. Filed Aug. 3, 1925. Serial No. 47,756. 2 Claims. (Cl. 72—138.)

1. A tool for use in finishing joints in brick walls, comprising, in combination, two bars of unequal diameters connected together at points near their ends by means of two parallel rods and a handle slidably connected with each of said rods and adapted to be moved towards either one of said bars.

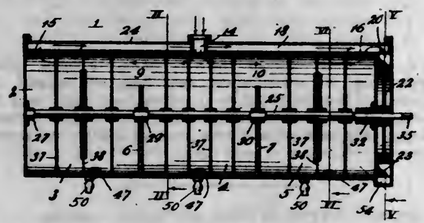
1,568,338. TYPEWRITING MACHINE. ALFRED G. F. KUROWSKI, Brooklyn, N. Y., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Nov. 2, 1923. Serial No. 672,262. 16 Claims. (Cl. 197—180.)



1. In a typewriting machine, a platen, a platen-carriage, a sound-deadening canopy on the platen-carriage over the platen and partly supported thereon and holding the work-sheet to the top thereof, and means for pivotally securing the canopy at the forward portion thereof to the carriage.

1,568,339. ALIMENTARY PRODUCT AND PROCESS OF MAKING SAME. JESSE H. LEETWICH, Chicago, Ill. Filed Oct. 31, 1923. Serial No. 671,880. 9 Claims. (Cl. 99—11.)

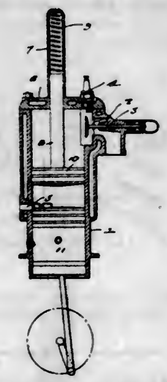
1. A process of producing an alimentary product, which comprises subjecting water hyacinth plants to compression sufficient to express water, then further reducing their moisture content to a proportion inadequate for decomposition, and finally comminuting them.



5. As an article of manufacture, an alimentary product comprising water hyacinth plants in compacted and desiccated form.

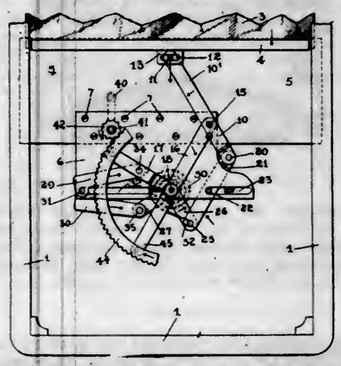
1,568,340. GAME APPARATUS. PATRICK J. MCGRATH, Brooklyn, N. Y. Filed May 3, 1924. Serial No. 710,717. 4 Claims. (Cl. 273—101.)

1. A game apparatus embodying ball throwing means, including a ball-throwing lever having a longitudinal groove and a ball socket and ball receiving means effective for automatically returning the ball to the ball throwing means after a throw and which receiving means include a receptacle having an elongated bottom opening alined to and communicating with the groove of said lever.



1,568,341. CARBURETOR. THOMAS W. L. MCGUIRE, Kansas City, Mo. Filed July 18, 1917. Serial No. 181,260. 1 Claim. (Cl. 261—92.)

In a carburetor, a liquid fuel mixing chamber having an air space, rotary elements mounted in said mixing chamber to carry a portion of the fuel upwardly into the air space at each revolution to produce a fuel mixture, a duct leading from said mixing chamber, partitions dividing the mixing chamber in said carburetor into compartments, a supply chamber, and partitions dividing said supply chamber into compartments which communicate with the mixing chamber compartments to supply the same with different kinds of fuel.

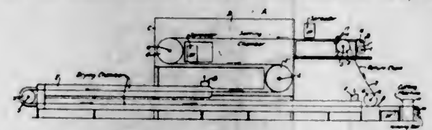


1,568,342. INTERNAL-COMBUSTION ENGINE. ARTHUR D. MACFARLANE, Seattle, Wash. Filed Apr. 28, 1924. Serial No. 709,578. 1 Claim. (Cl. 123—66.)

An internal combustion engine including a cylinder provided at one end in its side wall with a transversely extending recess having a valve controlled inlet port, and at a point between its ends with an exhaust port, a head on said end of the cylinder provided with an outwardly extending hollow guide, a piston mounted for movement in the cylinder and adapted to cover and uncover the exhaust port, a displacer piston mounted in the cylinder at the end adjacent the head and adapted to move across the intake port in a path of movement which terminates short of the exhaust port, a stem extending from the displacer piston into the hollow guide, a spring impinging against the outer end of the hollow guide and the end of the stem, and a mixture ignition means disposed

through the head and extending into the recess to function between the intake port and the path of movement of the displacer piston.

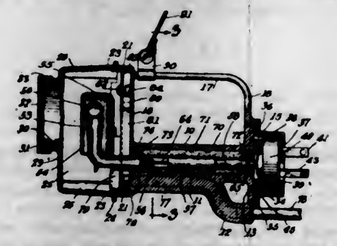
1,568,343. WINDOW-REGULATING DEVICE. DORR MILLER, Toledo, Ohio. Filed Apr. 11, 1923. Serial No. 631,275. 11 Claims. (Cl. 268—4.)



1. In a window regulator, in combination with a window member to be operated, articulated operating connections therefor comprising angularly disposed operating levers, movable fulcrum means to control the movement of said levers in symmetrical angular relation to a fixed plane for transmitting a rectilinear motion to the operated member, resilient means suitably connected to the operating connections to counterbalance the weight of the parts and means adapted for manually manipulating the operating connections.

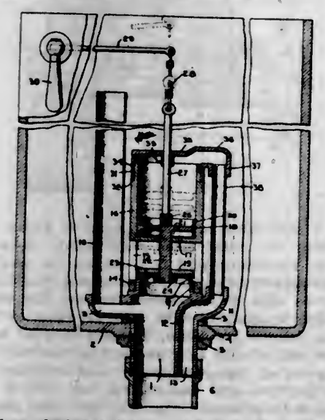
1,568,344. APPARATUS FOR MAKING PHOTOGRAPHIC FILMS. CLARENCE S. MOODY and WILLIAM OEPTS, St. Louis, Mo., assignors to Harry L. Griesedieck, St. Louis, Mo. Filed July 11, 1924. Serial No. 725,492. 10 Claims. (Cl. 91—69.)

1. In an apparatus for making photographic film, means whereby motion is imparted to a strip of base material, means whereby a coating of emulsion is applied to one surface of the moving strip of base material, a setting chamber through which said coated strip of base material passes, means whereby a coating of emulsion is applied to the other surface of said moving strip of base material, and a drying chamber through which said strip of material passes to dry said coatings of emulsion.



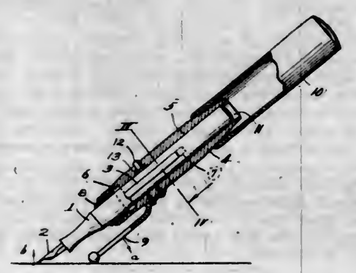
8. In an apparatus for making photographic film, flexible traveling means provided with gripping jaws adapted

to grip a strip of base material, whereby said strip of base material is caused to travel with said traveling means, means associated with said traveling means whereby said strip of base material is drawn taut in lateral direction, means whereby said strip of base ma-



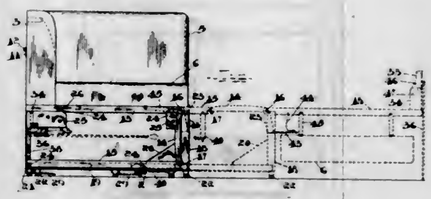
terial gripped by said flexible traveling means is drawn taut in longitudinal direction, said means comprising feed rolls arranged to rotate at a rate of speed which is relatively lower than the rate of speed at which said flexible means travels, and means for applying a coating to said strip while it is so held in the taut condition.

1,568,345. THERAPEUTICAL LAMP. FREDERIC W. ROBINSON and KENNETH V. KNAPP, Newark, N. J., assignors to Hanovia Chemical and Mfg. Co., Newark, N. J., a Corporation of New Jersey. Filed Feb. 1, 1924. Serial No. 689,859. 8 Claims. (Cl. 176—42.)



2. A vacuum chamber for an electric arc lamp comprising a hollow transparent body composed of quartz glass and having lobes, said lobes being bent at points uniform in their length to extend at right angles in spaced parallel relation as tubes, said lobes being partially filled with mercury, bar conductors in each tube in contact with the mercury therein and means in said tubes for centering said conductors remote from the sealing point.

1,568,346. SLOW-CLOSING VALVE MECHANISM FOR FLUID-CONTAINING TANKS. THOMAS W. RYAN, Concord Junction, Mass. Filed Oct. 18, 1924. Serial No. 744,353. 9 Claims. (Cl. 4—62.)



2. A slow closing valve construction for a liquid-containing tank comprising an outlet conduit having a valve seat, a co-operating valve tending normally to engage said valve seat, means for withdrawing said valve from the seat, means operable by the water flowing through said outlet to produce a partial vacuum and means operable thereby to exert a gradual retarding action upon the closing movement of said valve.

1,568,347. HOLDER FOR GRAPHIC INSTRUMENTS. ERNEST SHAW, Rosette, Utah. Filed Feb. 16, 1925. Serial No. 9,450. 5 Claims. (Cl. 120—9.)

1. A holder, a guide on said holder, a graphic instrument freely sliding in said holder, means for preventing the rotation and limiting the sliding movement of said instrument in one direction, and adjustable means for limiting the sliding movement of the instrument in the other direction.

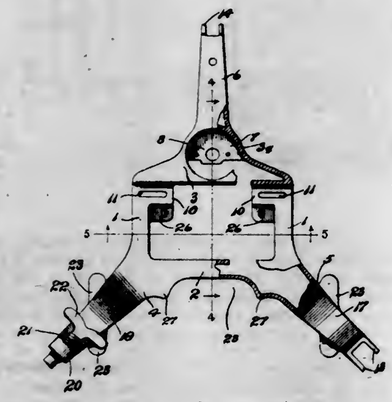
1,568,348. FOLDING BED. FREDERICK L. H. SIMS, Toronto, Ontario, Canada. Filed Dec. 8, 1921. Serial No. 520,986. 14 Claims. (Cl. 5—31.)

1. In a folding bed, the combination of a housing and a truck slidable relative to the housing; a mattress frame pivotally connected intermediate of its ends to the forward part of the truck and formed in three sections hinged to one another; projections on the inner mattress frame section; and supports on the rearward part of the housing adapted to support the inner section of the mattress frame when the bed is extended and the truck pushed in to bring the projections over the supports.

5. In a folding bed, a sectional mattress frame having its sides formed substantially of T angle bars similarly arranged in each section, the flanges of the sides of the sections being pivoted together by pivots positioned in alinement with the stems of the T's, the stem of the side of one section at each joint being cut away to clear the adjacent pivot and the stem of the side of the adjacent section extending past the axis of the pivot to substantially contact with the first mentioned stem when the sections are in alinement.

13. In a folding bed, the combination of a housing provided with fixed ends; a truck slidable into and out of the housing; a seat supported on the truck and extending above the fixed ends when the truck is positioned

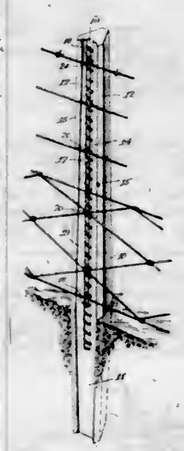
within the housing; movable end members for the housing; and hinged connections for said movable end members proportioned to enable each of the movable end members to be swung to lie with either of two adjacent sides parallel to the top of the corresponding fixed end member and the other of said sides pressed against the end of the seat.



1,568,349. PROCESS OF OBTAINING ABSOLUTE PROPYL ALCOHOL. JOHN A. STEFFENS, Baltimore, Md., assignor to U. S. Industrial Alcohol Co., a Corporation of West Virginia. Filed Apr. 5, 1921. Serial No. 458,835. 11 Claims. (Cl. 260—156.)

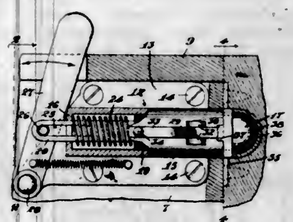
1. The process of obtaining absolute propyl alcohol from aqueous propyl alcohol, which consists in adding a third liquid thereto, miscible with the alcohol but substantially immiscible with water; distilling the mixture to evolve a ternary constant boiling mixture and leave absolute propyl alcohol as a residue; returning to the top of the rectifier a portion of the evolved distillate as a reflux; condensing the remainder of the distillate and allowing it to separate into two layers; returning to the first named liquid undergoing distillation the layer richer in said third liquid; rectifying the alcoholic layer and returning to said first named liquid the rectified alcohol.

1,568,350. PAINT. DAVID TAYLOR, Denver, Colo. Filed Oct. 6, 1924. Serial No. 742,066. 1 Claim. (Cl. 134—39.)



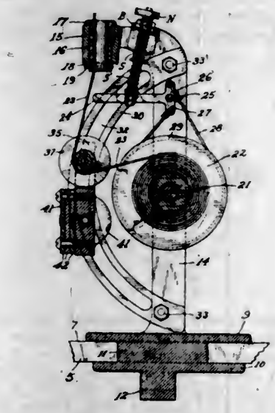
A paint, comprising, in combination, linseed oil, a lead compound, asbestos powder, Portland cement, zinc and chill room paint.

1,568,351. TIRE CARRIER. HUSTON TAYLOR, Detroit, Mich., assignor to Brennan-Taylor Corporation, Detroit, Mich., a Corporation of Michigan. Filed June 14, 1922. Serial No. 568,112. 3 Claims. (Cl. 224—29.)



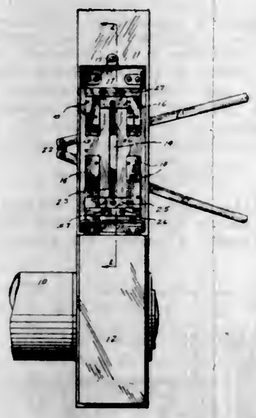
1. A device of the class described, comprising a central member, a plurality of arms extending therefrom in different directions, one of said arms having an inwardly bent portion terminating in an outwardly projecting end, a screw member threaded through said end to engage with a tire rim, a handle on the inner end of the screw member operable in the recess made by said inwardly bent portion of the arm, and means on the outer ends of the other arms to engage with the tire rim, substantially as described.

1,568,352. CONCRETE POST. RICHARD TOENNES, Boonville, Mo. Filed Jan. 2, 1925. Serial No. 203. 2 Claims. (Cl. 256—51.)



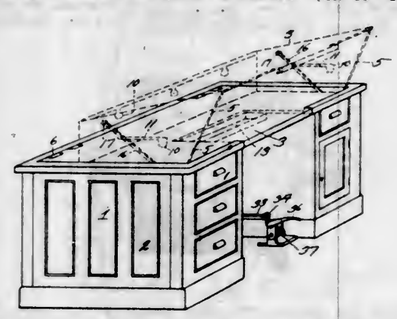
2. A concrete post of triangular cross-section having a wire helix partially embedded therein, the outer sides of the coils of said helix being projected centrally from the front-flat-face of the post, ridges projecting along both sides of said front-face the extreme outer edges of which lie substantially in alinement with the outer sides of the coils, and a lock-rod for engaging between the outer sides of the coils and the fence-wires.

1,568,353. AUTOMOBILE DOOR LATCH. ROLAND L. TULLIS, Monrovia, Calif. Filed July 9, 1923. Serial No. 650,309. 7 Claims. (Cl. 293—335.)



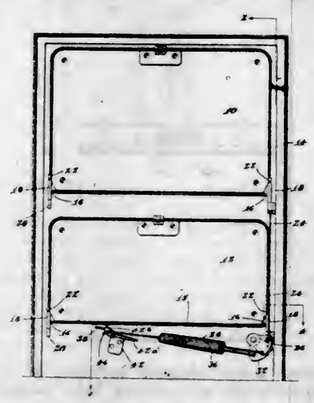
1. In a door latch, a bolt, a casing in which said bolt is mounted for rotary and longitudinal movement, a spring for advancing said belt, means for manually retracting said bolt in opposition to said spring, an annular shoulder on said bolt, a spring pressed dog carried by said casing engageable with said shoulder to hold the bolt in a retracted position, a socket adapted to receive the outer end of said bolt, and means operable to throw said dog out of engagement with said shoulder on moving the bolt laterally whereby the bolt will be released and caused to advance to position its outer end in said socket when the bolt reaches a position in alignment with said socket.

1,568,354. CARRIER FOR BRAIDING MACHINES. COBURN F. VALLEY, Cuyahoga Falls, Ohio, assignor to Lloyd E. Ellsworth, Cuyahoga Falls, Ohio. Filed May 18, 1925. Serial No. 30,934. 12 Claims. (Cl. 96—13.)



1. A spool carrier comprising a base, a frame, a spool carried by the frame, a brake for the spool, and an automatic tension regulating device movable in a curved path about said spool and adapted to actuate the brake at a predetermined point along said path.

1,568,355. BELT-ADJUSTING APPARATUS FOR GRAIN ELEVATORS. ARTHUR C. VAN HOUWELING, Pella, Iowa, assignor to Garden City Feeder Company, Pella, Iowa, a Corporation of Iowa. Filed Jan. 5, 1924. Serial No. 684,603. 2 Claims. (Cl. 254—52.)

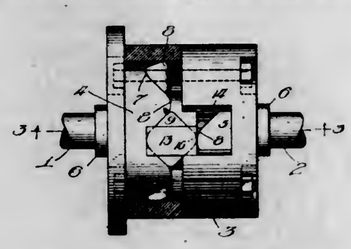


1. A device of the class described comprising elevator legs formed with a door opening on one side and longitudinal slot on the opposite side adjacent to the door, an elevator belt extended through the leg, clamps designed to be detachably secured to the end portions of the belt, rods extended through said slot and detachably connected to the said clamps and two levers pivotally connected to each other and pivotally connected to said rods on the exterior of the elevator leg, for the purposes stated.

1,568,356. PROTECTIVE DEVICE FOR DESKS. ANTHONY VUMBACA, South Bend, Ind. Filed Mar. 30, 1925. Serial No. 19,285. 8 Claims. (Cl. 89—36.)

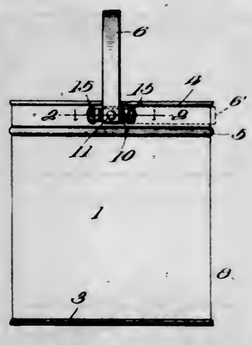
1. The combination with a desk, of a protecting shield therefor, said shield having hingedly connected thereto at its forward end a protecting wall, said wall being hingedly connected to the desk, said wall, when the shield is in inoperative position being disposed below the shield.

1,568,357. COUNTERPOISE FOR STOVE DOORS. ARTHUR W. WALKER, Malden, Mass. Filed Apr. 28, 1925. Serial No. 25,316. 1 Claim. (Cl. 126—191.)



In a cooking range having a plurality of doors, one below the other, each on a horizontal hinge, the combination, with said doors, of an arm on each door swinging with the door; a stud on a stationary part of the range, below the lower door forming a journal; a plurality of bell cranks mounted on said stud, one for each said arm; linkage connecting each bell crank with its arm; a bracket stationarily mounted at a distance from the bell crank, below the lower door; and a plurality of spiral springs, all anchored to said bracket and each connected to one of said bell cranks and adapted to counterpoise one of the doors.

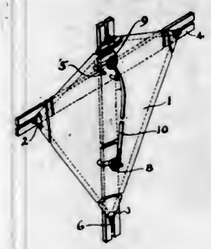
1,568,358. DIFFERENTIAL DRIVE MECHANISM. GEORGE I. WELSH, Dixon, Ill. Filed Dec. 4, 1924. Serial No. 753,829. 7 Claims. (Cl. 74—7.)



1. A differential mechanism comprising two similar members each having radial valleys alternating with radial elevations on the face directed toward the other member, the sides of the valleys and elevations being sloping and the tops of the elevations being flattened, two dogs each shaped on one side to fit a valley in one

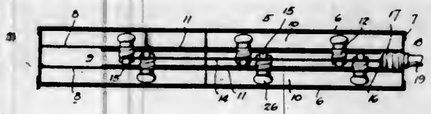
member and on the opposite side to fit a valley in the other member, said members being so spaced relatively to each other that when one of the dogs lies in the valley of one it rests against the top of an elevation on the other, the dogs being so disposed that when one lies in a

valley in one member the other lies in a valley on the other member, and a driving element for rotating said members, said driving element being interlocked with said dog so as to permit the dogs to move relative thereto in the axial direction and also to a limited extent in the circumferential direction.



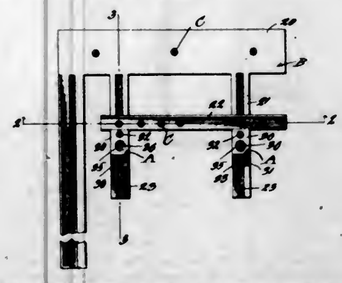
1,568,359. SHEET-METAL CONTAINER. FREDERICK M. ASSMANN, East Orange, N. J., assignor to Continental Can Company, Inc., New York, N. Y., a Corporation of New York. Filed Nov. 15, 1924. Serial No. 750,113. 2 Claims. (Cl. 220—91.)

1. A sheet metal container including a cylindrical body portion having a projecting bead formed therein a slight distance below the upper end of the container, a flat sheet metal bail which is semi-circular and of substantially the same radius as the outer wall of the container body, said bail having a perforation at each end thereof, an ear having an offset central portion and a perforation therein, corresponding to the perforation at the end of the bail, a headed rivet for joining the end of the bail to said offset portion of the ear, said ear being soldered to the body portion of the container, said bail when folded down into the plane of the top of the container and its supporting ears and rivets being substantially coincident with the periphery of the bead whereby said container can be rolled when applying a label thereto.



1,568,360. KITE. GEORGE W. AYLING, Springfield, Ill. Filed Mar. 19, 1925. Serial No. 16,812. 7 Claims. (Cl. 244—12.)

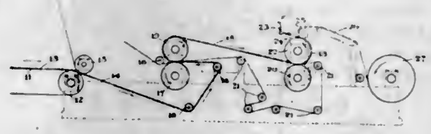
3. In a two stick folding bow kite of the character described having an upright and a cross frame member supporting a body member a clinch loop staple secured to and encompassing the upright and longer frame member and slidably engaging the shorter and cross frame member; means for detachably securing the body member at predetermined points in the periphery thereof normally registering with corresponding ends of said string normally secured by both ends to the upright frame member in spaced positions thereon; said belly band string adapted to extend through a round aperture in the body member of the kite in two locations each registering over the position of the belly band string's respec-



tive attachments to said frame member; circular gummed washer reinforcing units of material tougher than the body member secured to said body member in positions to respectively encircle said apertures in the body member closely; said reinforcements adapted to substantially protect the body member from tearing where the belly band string passes through the same in normally holding the kite in flight.

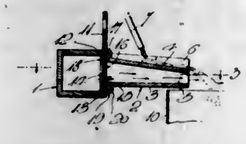
1,568,361. STOP AND DIRECTION INDICATOR. ELIZABETH LOUISE BLANCHFIELD, San Pedro, Calif. Filed Sept. 20, 1924. Serial No. 738,888. 1 Claim. (Cl. 177—329.)

As a new article of manufacture, a direction and stop signal comprising a receptacle having transparent portions, metallic partitions in said receptacle, sockets carried by said partitions, a shell directly engaged with said partitions, and a feed wire operatively connected with the shell and with all of said sockets, the shell adapted to receive the plug connection of a circuit and the said sockets adapted to receive incandescent lamps.



1,568,362. BALL BEARING FOR SHEAR TABLES. GLENNE W. BROWN, Hobart, Ind. Filed Mar. 16, 1925. Serial No. 16,038. 5 Claims. (Cl. 164—78.)

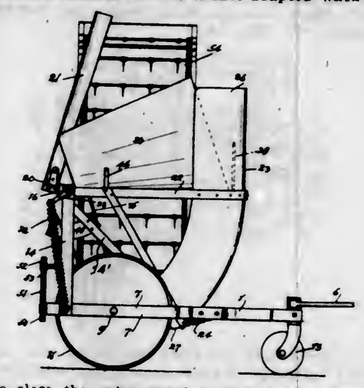
1. The combination with steel sheet cutting shears including a table top, gage horns and a gage bar, of means for facilitating the moving of sheet metal packs over the gage bar onto the top including blocks connected



with the gage horns in abutting relation to the gage bar, the blocks having inclined leading edges, and ball bearings incorporated with the body portions of the blocks and with the inclined leading edges thereof.

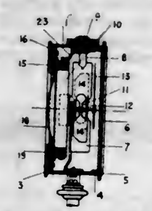
1,568,363. PAPER-MAKING MACHINE. JOSEPH M. CATHCART, Merriton, Ontario, Canada, assignor of one-half to Edwin S. Crabtree, Montreal, Quebec, Canada. Filed May 1, 1924. Serial No. 710,377. 1 Claim. (Cl. 92—49.)

In a paper making machine, an endless travelling wire, a suction roll around which the wire travels, a couch roll, a primary press, a secondary press, a primary felt between the couch roll and the primary press, said felt being adapted to contact with the wire at the couch roll and pick up the paper directly therefrom, means for guiding the primary felt, a secondary felt between the primary and secondary presses adapted to contact with the primary felt at the primary press and pick up the paper sheet directly from the primary press, means for guiding the secondary felt between the primary and secondary presses, means situated at the secondary press for crêping the paper, a drying roll, and an endless conveyor positioned between the crêping means and the drying roll to support the paper in its passage between them.



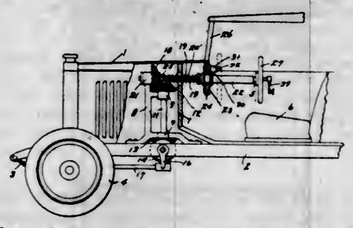
1,568,364. EVAPORATOR. JOHN F. CLINGINSMITH, New Castle, Pa. Filed Apr. 9, 1925. Serial No. 21,908. 2 Claims. (Cl. 83—91.)

1. A device of the class described comprising a main fluid conducting pipe having a lateral fluid discharge branch, the latter being provided with an outwardly declined top having upstanding longitudinal flanges coextensive in length with the discharge branch, said top and flanges jointly forming a flat bottomed trough adapted to discharge a substance across the outer end of the branch to be acted upon by the discharged fluid and means for supplying the substance to be treated to said trough.



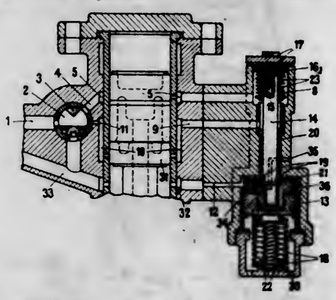
1,568,365. SHOCKING MACHINE. WILLIAM JAMES COCKBURN, Superb, Saskatchewan, Canada. Filed Apr. 15, 1922. Serial No. 553,068. 11 Claims. (Cl. 56—419.)

1. In a shocking machine, a rearwardly pivoted sheaf receiving and shock forming basket having a sheaf entry opening in the top thereof, spring means normally maintaining the basket in sheaf receiving position, a normally open closure member for the basket adapted when actu-



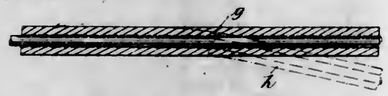
ated to close the entry opening of the basket and subsequently rotate the basket to shock absorbing position and means for driving the closure member.

1,568,366. TESTING TOOL FOR INSULATION. MARIO DE MICHELI, Genoa, Italy. Filed June 21, 1924. Serial No. 721,528. 3 Claims. (Cl. 175—183.)



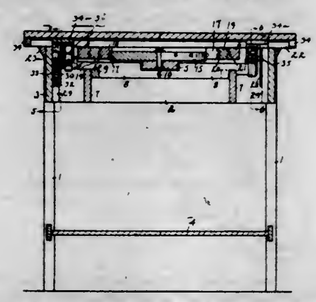
1. An electrostatic tool for testing insulating material comprising a casing, a rotatable ring in the casing, means for rotating said ring from the exterior of said casing, stationary brushes of textile material bearing against said ring, a metallic member in the casing, means for transmitting static electricity from the ring to said member, an element connected to said means and adapted to be contacted with the insulating material to be tested, an oscillating lever associated with said member and including a plurality of contact surfaces adapted to normally bear against said member, a pointer rotatable with the lever, and a scale cooperating with said pointer.

1,568,367. STEERING POST FOR AUTOMOBILES. GUY R. DERA, Santa Margarita, Calif. Filed Apr. 4, 1925. Serial No. 20,809. 3 Claims. (Cl. 70—129.)



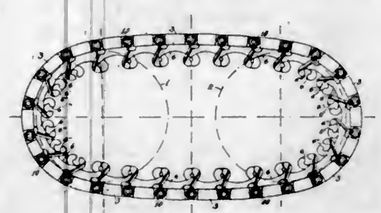
1. Means for operating a steering knuckle tie bar of a motor vehicle comprising an extensible steering post with a steering wheel secured thereto and operative connections from the steering post to the knuckle, and means for locking said post in minimum extension with the wheel free for non-operative rotation.

1,568,368. VALVE MECHANISM FOR COMPRESSED-AIR BRAKES. IVAR DROLSHAMMER, Drammen, Norway. Filed Nov. 7, 1924. Serial No. 748,493. 7 Claims. (Cl. 303—54.)



1. In compressed air brake mechanism the combination of a train pipe, a brake cylinder, an auxiliary reservoir, a brake main valve controlling the flow of air to the brake cylinder and a supplementary valve operated by the air pressure in the brake cylinder and a series of ports controlled by said supplementary valve whereby the rate of charging the brake cylinder is varied in the course of the charging operation.

1,568,369. PRODUCTION OF METAL TUBING AND OF TUBULAR METAL ARTICLES OR INSTRUMENTS. SAMUEL JAMES EVERETT, Thornton Heath, England. Filed Oct. 20, 1923. Serial No. 669,786. 5 Claims. (Cl. 29—188.)



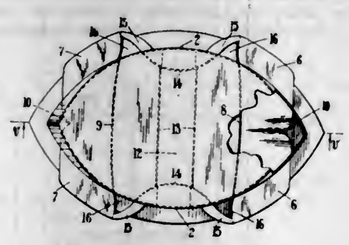
1. The production of a lined steel tube of small gauge consisting in the reduction to small gauge of a composite billet comprising an outer steel tube, an inner tube of noncorrodible metal, a core of metal capable of extreme elongation and retention of tensile strength, and a uniting medium between said outer and inner tubes, subjecting said tubes and core to a heat treatment, severing a length of the finished tube but not the core and removing said length of tube from the core by a pulling operation which extends said core, substantially as set forth.

1,568,370. EXTENSION TABLE. MILTON H. FAHRNEY, Culver City, Calif., assignor to Marjorie Alexandria Fahrney, Culver City, Calif. Filed Feb. 20, 1924. Serial No. 693,983. 5 Claims. (Cl. 45—9.)

1. A table comprising a rigid frame having supporting legs, a top mounted on said frame medially thereof and vertically adjustable relative to said frame, extension leaves fixed against vertical movement relative to said frame and horizontally slidable relative thereto for retraction beneath said top or withdrawal beyond the respective sides thereof, an operating connection causing retraction or projection of both of said leaves by manipulation of one of the same, and operating mechanism having a control device adjacent one of said leaves, said operating mechanism engaging said top so as to depress the same upon the leaves retracted therebeneath and arranged whereby continued movement of said operating mechanism in the same direction will successively elevate said top from binding engagement on said retracted leaves to permit withdrawal thereof, and depress said top into the space between the extended leaves.

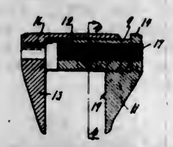
1,568,371. ENDLESS TRACTION TREAD. JOSE D. FESTARY, Santiago de Cuba, Cuba. Filed Jan. 19, 1925. Serial No. 3,517. 2 Claims. (Cl. 305—10.)

2. An endless traction belt link comprising a tread plate, pivoting lugs in the plane of, and on, the plate and pivotally connecting it to adjacent links in a belt, inwardly projecting spaced ribs on the inner face of the plate, the adjacent end portions of the ribs being parallel, and the spacing between one pair of ends being less than that of the other, and offset lugs on the ends of each rib for cooperating with lugs on adjacent links in a traction belt, the offset lugs at the one ends being parallel, and the offset lugs at the other ends being at right angles and inwardly projecting relatively to the planes of the rib portions to which they are respectively attached, the lugs parallel to their rib portions being on the ends which are less widely spaced from each other.



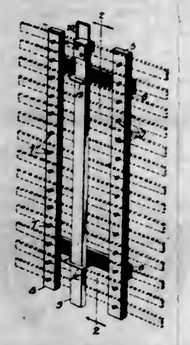
1,568,372. HAND TOOL FOR FORMING BIT WINGS. MALCOLM T. FLANAGAN, Spokane, Wash. Filed Dec. 3, 1924. Serial No. 753,686. 4 Claims. (Cl. 145—24.)

1. A hand tool for forming bit wings on the swelled end of a hot drill steel, comprising, a tool body having an elongated bill provided with V-shaped cutting ends having a downwardly extending beak-like apex, the upper face of said bill being V-shaped rearwardly from said cutting ends for a portion of the length of said bill, the lower face of said bill being substantially flat and converging on curved lines from its lateral sides toward and also curving downwardly and merging into said apex, the side portions adjacent said V-shaped cutting ends being substantially flat and extending backwardly from said cutting ends and merging into said sides and bottom of said bill.



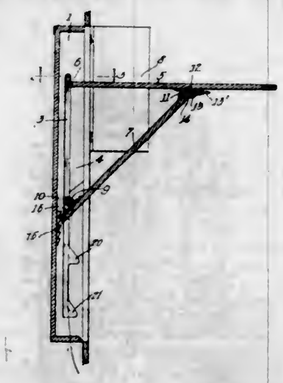
1,568,373. VENTILATOR OF THE EJECTOR TYPE. ERNEST LEONARD FORD, Darlington, England. Filed Oct. 25, 1924. Serial No. 745,915. 10 Claims. (Cl. 98—22.)

1. A ventilator of the ejector type comprising a chamber which consists of a base having a transversely arranged opening at the center of its length, a top, and a pair of forward and rearward converging side walls hav-



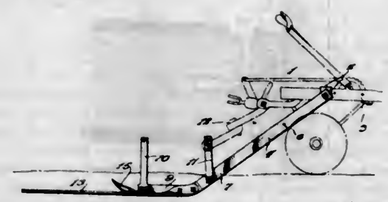
ing openings located in opposed pairs near the ends of the chamber, and plates forming exterior deflectors on the side walls of said chamber adjacent to said side openings.

1,568,374. CLAMP FOR WINDOW LOCKS. ALEXANDER T. GIBSON, Oakland, Calif. Filed June 20, 1923. Serial No. 646,670. 3 Claims. (Cl. 292—256.)



1. A clamp of the character described, comprising an elongated seat having a flat bottom, a lip extending from one end thereof at right angles to the bottom, and being of uniform cross-section except for the lip and formed with an axial threaded bore, a shoe adapted to ride on the seat and formed to completely encircle the top and the sides thereof cross-sectionally, a lip extending from one end of the shoe in juxtaposition to the lip of the shoe, and a bolt adapted to be guided through a perforation in the shoe into threaded engagement with the seat for tightening the lips upon an object.

1,568,375. LATH RACK OR HOLDER. EUGENE GILLETT, Long Beach, Calif. Filed Apr. 29, 1925. Serial No. 26,746. 12 Claims. (Cl. 72—128.)

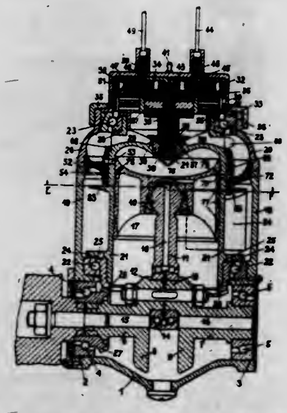


1. A lath rack comprising an oblong frame having projecting pegs spaced along longitudinal members thereof, a lock-bar securable on the rack intermediate said members in spaced relation therefrom and means for compressingly holding said lock-bar in place thereon.

1,568,376. IRONING BOARD. BENJAMIN F. GRANT, Los Angeles, Calif. Filed May 1, 1923. Serial No. 635,841. 4 Claims. (Cl. 68—10.)

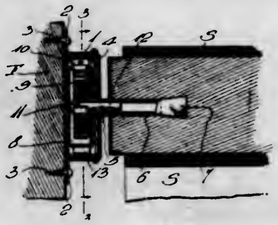
1. A device of the character described comprising a support, a board and a brace each having a vertically movable pivotal connection with said support, a pivotal connection between said brace and board at the underside of the board and near one end of the brace, said end of the brace forming an abutment surface bearing against the underside of the board when in operative position, and a releasable connection between said brace and board for locking said members against relative swinging movement in the opposite direction.

1,568,377. WEEDER. GEORGE F. GREEN, Texico, N. Mex. Filed June 5, 1924. Serial No. 718,081. 1 Claim. (Cl. 97—170.)



A weeder comprising similar frame bars adapted at their front ends to be pivotally secured to an agricultural implement, said bars extending downwardly and rearwardly the intermediate portions of the bars diverging laterally to clear plants, and their rear extremities being parallel and disposed horizontally to run upon the ground, an arched rigid brace connecting the rear extremities of the frame bars, upstanding arms on the frame bars at intermediate points thereof to be connected to a lifting element on the cultivator, flat blades each secured at its front end to the outer side of one of the frame bars and extending rearwardly and outwardly therefrom, and a mold board secured on each blade in rear of the respective frame bar and projecting inwardly from the blade.

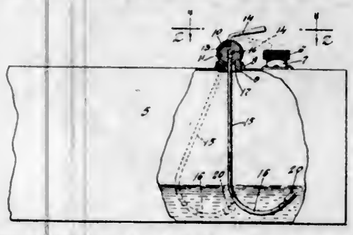
1,568,378. INTERNAL-COMBUSTION ENGINE. NICOLAI GRIBOJEDOFF, Rastatt, Germany. Filed Feb. 4, 1925. Serial No. 6,886. 10 Claims. (Cl. 123—43.)



1. In an internal combustion engine, the combination of a stationary cylindrical casing, a rotary cylinder coaxially mounted in said casing, a reciprocating piston mounted in said cylinder, a crank shaft journaled in said casing, a rod connecting said crank shaft with said

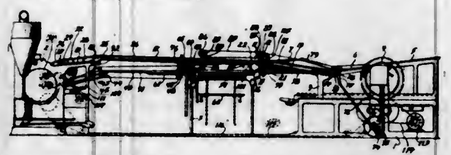
piston, bevel gear wheels mounted on said crank shaft or on said cylinder respectively and meshing with each other, a casing head mounted on said casing, a cylinder head closing the upper end of said cylinder, an annular

field magnet supported by said cylinder head, and an armature supported by said casing head and coaxially disposed in said field magnet, said field magnet and said armature being centrally arranged with respect to said casing and said cylinder.



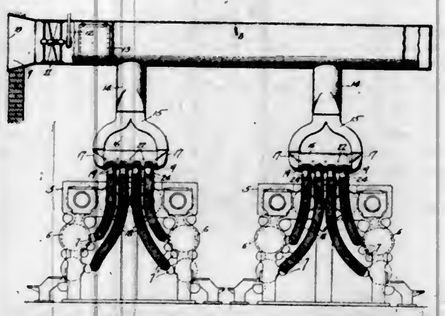
1,568,379. SHADE-ROLLER WINDING AND HOLDING DEVICE. FRANK P. HARTLEY, Bangor, Me. Filed May 19, 1924. Serial No. 714,436. 4 Claims. (Cl. 156—36.)

2. A shade roller rotating and holding device comprising a flat casing adapted to be secured to a window frame, one side of said casing having an opening and the other side of said casing being provided with a rigid inwardly projecting post concentric with said opening, a tubular shaft extending into the casing through said opening and surrounding said post rotatably, said shaft being adapted for connection with a shade roller, spring means within the casing acting on said tubular shaft and re-acting on the casing to rotate the shade roller in shade-winding direction, brake means within the casing normally holding the spring means against action, and a releasing cord for said brake means, pendant from the casing.



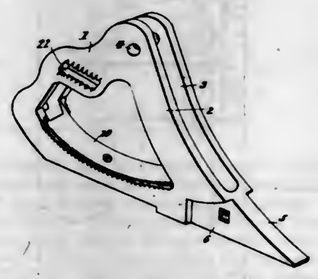
1,568,380. AUXILIARY GASOLINE-SUPPLY DEVICE. WILLIAM LEDYARD MITCHELL, Grosse Pointe Farms, Mich. Filed June 27, 1924. Serial No. 722,728. 1 Claim. (Cl. 158—46.5.)

In combination, a tank having a filler spout thereon, a member secured to said tank, a socket in said member, a movable member fitted in said socket, a passage in said movable member, a conduit in said tank having one end connected in constantly open relation with said passage and fixed to said movable member, so as to be movable therewith, a second conduit connected with said first member and open to said passage and first conduit, said first and second conduits being extended at different angles to said movable member, a handle connected with



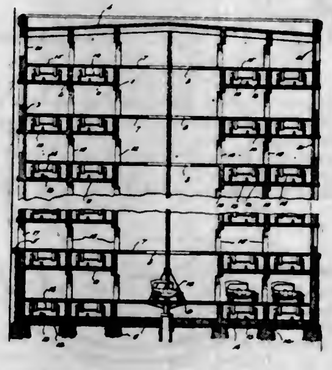
said movable member and adapted to move it on an axis concentric with the axis of said second conduit, whereby said second conduit may be kept constantly open with said passage, said handle being so fashioned that it will overlie the said filler spout when moved in one direction.

1,568,381. TANDEM ARRARGEMENT FOR PRINTING MACHINES AND THE LIKE. JACOB NIEMES and HARRY B. ENGBERSEN, Chicago, Ill.; Bertha M. Engbersen administratrix of said Harry B. Engbersen, deceased. Filed Aug. 18, 1922. Serial No. 582,825. 16 Claims. (Cl. 271—76.)



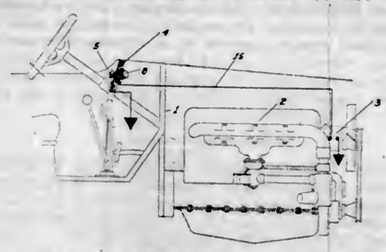
1. The combination with two spaced sheet treating machines of a sheet receiving means disposed between said machines, means for conveying sheets from one of said machines and discharging them to said sheet receiving means at an elevated point, and sheet conveying means extending over said sheet receiving means and said sheet conveying and discharging means for conveying sheets from the other of said sheet treating machines to said last mentioned sheet treating machine.

1,568,382. MEANS FOR CONDITIONING INKING ROLLS. EDWARD OTTEN, Brooklyn, N. Y. Filed Oct. 17, 1924. Serial No. 744,137. 1 Claim. (Cl. 101—349.)



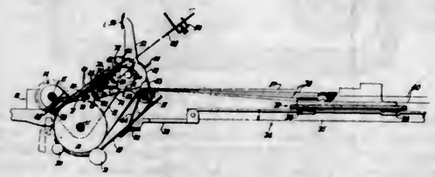
In a conditioning apparatus for the inking rolls of a printing press, an air supply pipe, a cylindrical header, connections between the opposite ends of said header and the supply pipe, the wall of said cylinder having a plurality of circumferential slots therein, independently rotatable sleeves mounted in the header and having nipples projecting through the respective slots, a series of flexible conduits respectively connected at one of their ends with said nipples and adapted to be independently adjusted to position their discharge ends adjacent to the inking rolls of the press, and means for delivering air under pressure to said supply pipe whereby air is discharged from said conduits in a plurality of streams transversely across the press contiguous to the inking rolls.

1,568,383. PLOW. JAMES F. PERRY, Cove City, N. C. Filed Apr. 17, 1922. Serial No. 553,319. 1 Claim. (Cl. 97—187.)



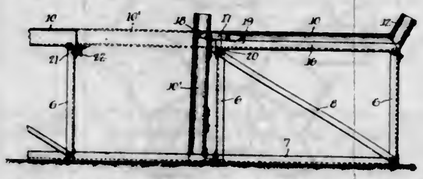
A device of the class described comprising a standard, the latter including a pair of spaced arms, a reduced portion formed at the fork of said arms, a plow share detachably supported on said reduced portion, a mold board supported on the upper faces of said arms and engaged with said plow share, and a cross bar supported against the bottom faces of said arms and fastened to said mold board for securing the latter on said standard.

1,568,384. GARAGE. WILLIAM A. PUNOS, Detroit, Mich. Filed Feb. 12, 1923. Serial No. 618,573. 6 Claims. (Cl. 214—16.)



1. A garage comprising concentric walls, rotatable car platforms between said walls, the innermost walls having doorways to permit of cars being moved from one platform to another, and means movable axially of the innermost wall to facilitate placing cars on said platforms.

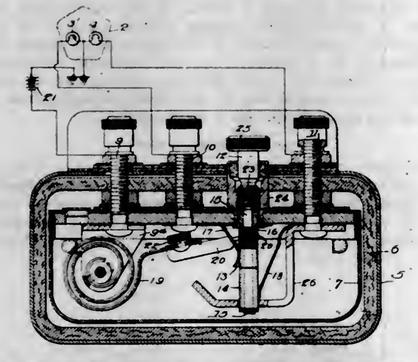
1,568,385. TROUBLE DETECTOR FOR GENERATORS. ARCHIBALD D. RAMSEY, Tuolumne, Calif. Filed Apr. 13, 1923. Serial No. 631,746. 8 Claims. (Cl. 177—311.)



1. A high voltage warning signal comprising a tube of insulating material, a resistance coil wound about the tube, a tubular light holding fixture mounted in the insulating tube, one end of the coil being adapted for connection to a source of current, electrical connection means between the fixture and the other end of the coil, and means for enabling the fixture to be maintained in clamping engagement with a metal element.

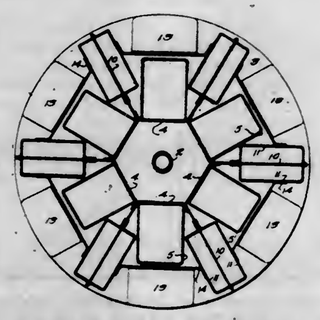
1,568,386. TYPEWRITING MACHINE. LOUIS P. ROBITOY, Fargo, N. Dak., and CHARLES L. VELANDER, Minneapolis, Minn., assignors to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 30, 1923. Serial No. 671,643. 17 Claims. (Cl. 197—126.)

1. In a composite web typewriting machine having a displaceable platen and typing instrumentalities, a worktable at the delivery side of the platen, means operative during displacement of the platen to support the composite web and permit straightening thereof beneath the platen, a chute-plate secured at the rear of said worktable to extend beyond the end thereof contiguous to the platen, and a sheet-introductory member projecting beyond the chute-plate to receive a record-sheet inserted between said platen and said sheet-introductory member and guide said record-sheet over the receiving edge of said chute-plate.



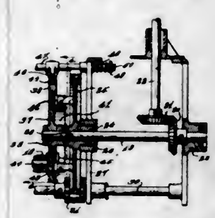
1,568,387. AUTOMOBILE ELEVATING RUNWAY. GAILARD E. WEAVER, Springfield, Ill., assignor to Weaver Manufacturing Company, Springfield, Ill., a Corporation of Illinois. Filed May 16, 1925. Serial No. 30,683. 1 Claim. (Cl. 254—88.)

An automobile runway of the character described, having a pair of spaced frame supports in one side thereof, fixed track rail sections mounted on said frame supports, a movable track rail section between said fixed sections of a length exceeding the height of said fixed sections, ledges on said frame supports on which the ends of said



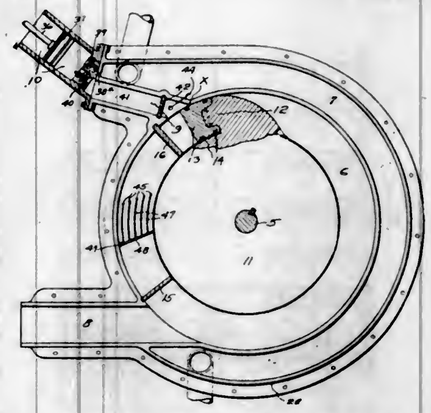
movable section normally rest in register with the ends of said fixed sections, and a link horizontally pivoted to and connecting proximate ends of said movable section and one of said fixed sections and permitting said movable section to be swung downwardly through the space between said frame supports to a substantially vertical position wherein the hinged upper end of said movable section projects above the adjacent fixed section and constitutes a stop to arrest backward movement of the automobile on the runway.

1,568,388. THERMOSTATIC SWITCH FOR TEMPERATURE INDICATORS. FREDERIK G. WHITTINGTON, Evanston, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed Apr. 20, 1922. Serial No. 555,777. 1 Claim. (Cl. 200—138.)



A thermostatic switch device comprising a member responsive to temperature change, a contact brush movable thereby, a plurality of contacts insulated from each other, but closely adjacent for immediately successive engagement by the brush, said brush having a further range of movement beyond one end of said contacts for completely opening the circuit, and means for adjusting said contacts together as a unit along the path of the brush together with fixed spring conductors mounted for sliding engagement with the contacts respectively for connecting them into different electric circuits and maintaining such connection throughout the range of adjustment of the contacts.

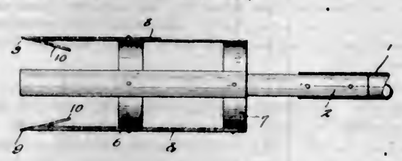
1,568,389. DISPLAY DEVICE. ROSS M. WILSON, Cleveland, Ohio. Filed Feb. 25, 1925. Serial No. 11,582. 3 Claims. (Cl. 211—21.)



1. In a device of the character described, a supporting plate, a central column mounted on said plate, a plurality of racks secured to said column and extending radially therefrom, the horizontal cross section of said racks being substantially the same as the packages to be received, the packages being adapted to be arranged in said racks one upon the other, said racks being provided with openings at the bottom to permit removal of a single package, plates extending radially from said central column between each pair of racks, a second set of racks secured to said plates, and a cover arranged over said racks.

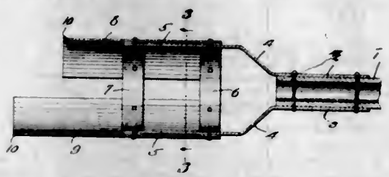
1,568,390. WASHING-MACHINE CLUTCH MECHANISM. OLIVER B. WOODROW, Newton, Iowa. Filed Sept. 27, 1921. Serial No. 503,642. 3 Claims. (Cl. 192—67.)

1. A shaft, a clutch member of disk formation, said clutch member having one of its faces provided with a series of tapering lugs projecting parallel with the axis of the shaft, a second clutch member of disk formation rotatively and slidably mounted on said shaft and parallel with the first said clutch member, said second clutch member being provided with a pair of semi-circular laterally extending flanges, the adjacent ends of said flanges each being provided with a lug, the lug of one of said flanges being spaced apart from the corresponding one of the opposite flange, the inner faces of said lugs being tapered to coact with the tapered faces of the lugs of the first said clutch member when the second clutch member is moved to its inward limit of movement, and means for moving said second clutch member toward and from said first clutch member.



1,568,391. ROTARY INTERNAL-COMBUSTION ENGINE. WALTER T. YOUNG, Weiser, Idaho. Filed Apr. 17, 1922. Serial No. 553,346. 3 Claims. (Cl. 123—14.)

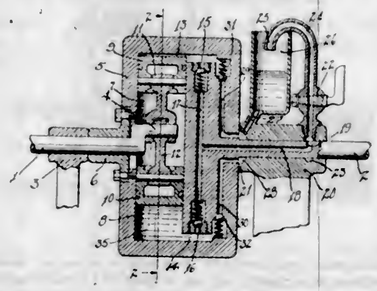
1. In a rotary internal combustion engine, the combination with an annular cylinder of a rotor and piston, the latter traveling in the cylinder, an exhaust conduit, a fixed combustion chamber projecting tangentially from the cylinder in spaced relation to the exhaust conduit, a compression cylinder at the other end of the combustion chamber, a compression piston therein, an inwardly



opening check valve disposed between the compression chamber and the combustion chamber, a source of fuel supply, a check valve between the source of fuel supply and the compression chamber, a laterally acting slide valve spanning the cylinder just beyond the mouth of the exhaust port, a second laterally acting slide valve spanning the cylinder just in advance of the mouth of the compression chamber, a main shaft upon which the rotor is mounted, a crank carried thereby, a pivoted lever, means for connecting one end of said pivoted lever to the crank and for connecting the other end of said pivoted lever to the piston of the compression chamber, a cam on the main shaft having a raised portion on its side face, levers pivoted intermediate their ends with their inner ends in position to be successively engaged by said raised portion of the cam, and their outer ends engaged with the laterally acting slide valve of the cylinder.

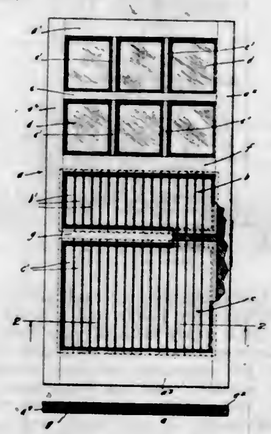
1,568,392. PIPE CLEANER. SAMUEL FRANKLIN ABERNATHY, Roanoke, Ala. Filed June 1, 1925. Serial No. 34,153. 1 Claim. (Cl. 182—29.)

In a device of the character described, supporting arms, annular bands secured to the supporting arms in spaced relation with each other, fingers secured to the bands, said fingers having substantially wide cutting ends, inwardly extended prongs secured to the fingers adjacent to the ends thereof, and a handle having connection with the supporting arms.



1,568,393. PIPE CLEANER. SAMUEL FRANKLIN ABERNATHY, Roanoke, Ala. Filed June 1, 1925. Serial No. 34,154. 2 Claims. (Cl. 182—29.)

1. A pipe cleaner comprising a handle member having diverging arms secured thereto, said arms merging at their front ends into parallel arms, annular bands connecting said arms in longitudinally spaced relation, and cleaning blades carried by said bands and spaced peripherally from each other, one of said blades being longer than the other.

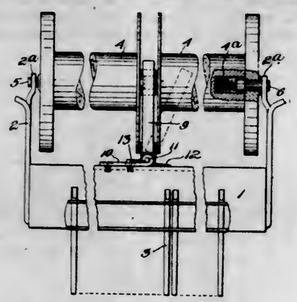


1,568,394. HYDRAULIC POWER TRANSMISSION. VICTOR ARKIN, Chicago, Ill. Filed Oct. 15, 1923. Serial No. 668,784. 1 Claim. (Cl. 192—60.)

The combination with a drive shaft and a driven shaft, of a casing carried by the driven shaft, a stationary bearing member for said driven shaft abutting the side wall of said casing, a pair of diametrically opposed cylinders disposed within said casing, a reservoir supported upon said stationary bearing, passages connecting each of the cylinders with a recess provided in the adjacent abutting end wall of the bearing, a passage extending from said recess to the reservoir, check valves disposed at the mouths of said passages where the passages communicate with the cylinders for the purpose of admitting fluid from the reservoir to the cylinders, passages communicating with said cylinders adjacent to the mouths of the first named passages and communicating with the exterior wall of the driven shaft within said bearing, said bearing having a recess on the inner wall in registration with the mouth of the passage through the shaft, a

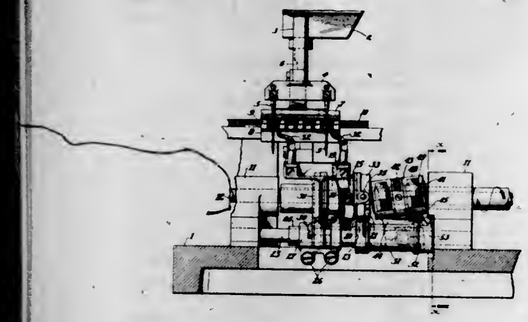
duct having a valve therein connected with the recess of the inner wall of the bearing and communicating at its opposite end with the reservoir, and check valves for the last named passages disposed adjacent to the mouths of the passages at the cylinders for permitting the flow of fluid from the cylinders.

1,568,395. METHOD OF MANUFACTURE OF WOODEN PANEL DOORS. ALFRED F. BILES, Portland, Oreg. Filed May 19, 1924. Serial No. 714,402. 4 Claims. (Cl. 20—35.)



3. A wooden panel door comprising an untreated frame and a panel united thereto, said panel prior to the assembly of the door having been treated with a hot material impervious to moisture to render the entire door unaffected by moisture.

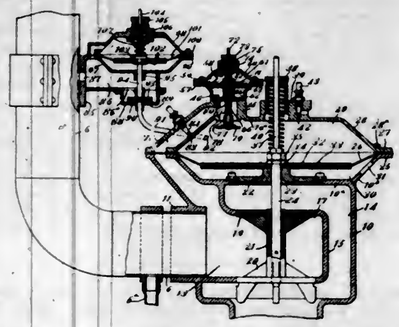
1,568,396. SUPPORTING MEANS FOR TUBE-FRAME SPOOLS. WALTER BIXBY, Boston, Mass., assignor to Shawmut Engineering Company, Boston, Mass., a Corporation of Massachusetts. Filed Mar. 7, 1923. Serial No. 623,524. 8 Claims. (Cl. 139—10.)



1. In a tube frame for weaving, the combination of a longitudinal tube-carrying bar, spool-supporting members secured to opposite ends of the carrier bar, a sectional yarn-spool rotatably supported at its outer ends in bearings in said supporting members, one or more intermedi-

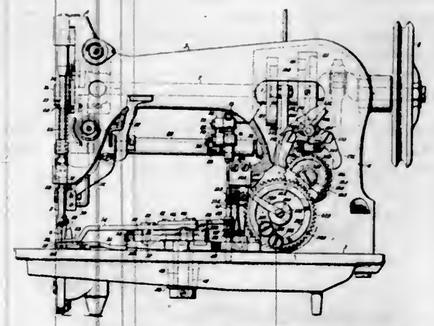
ate spool-bearing brackets mounted on said tube-carrying bar in position to normally support adjacent ends of the spool sections, said bearing bracket being movable

out of normal position for insertion of a spool section, and a bracket-engaging spring arranged to yieldingly restore said bracket to normal operative position, substantially as described.



1,568,397. LOOPER-ACTUATING MECHANISM FOR SEWING MACHINES. ANDREW B. CLAYTON, Union, N. J., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Feb. 21, 1922. Serial No. 538,208. 11 Claims. (Cl. 112—200.)

1. In a sewing machine, the combination with a main-shaft, a reciprocatory needle, and a looper, of a rotary eccentric and a rotary inclined crank deriving their operative movements from said main-shaft for actuating said looper for cooperation with said needle in the formation of stitches, operating connections between the looper and said eccentric for imparting endwise stitch-forming movements to said looper, and operative connections between the inclined crank and the looper for imparting sidewise movements thereto.

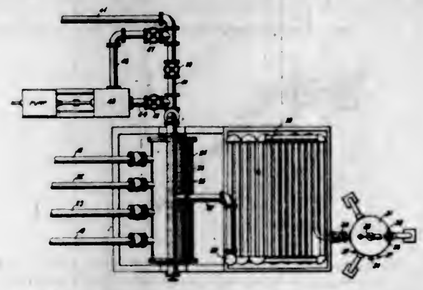


1,568,398. POWER CONTROLLER FOR PNEUMATIC-DISPATCH SYSTEMS. JAMES T. COWLEY, Syracuse, N. Y., assignor to The Lamson Company, Syracuse, N. Y., a Corporation of Massachusetts. Filed Apr. 8, 1925. Serial No. 21,720. 18 Claims. (Cl. 243—3.)

1. Pneumatic dispatch apparatus having a transmission tube, an exhauster connected therewith and a main valve for controlling the flow of air through the transmission tube, a minimum flow of air through the tube being permitted when the valve is in closed position, and a pneumatic motor for operating the main valve, said motor responding directly to slight drop in pressure in the transmission tube incident to insertion of a carrier in the tube to open the main valve, an auxiliary pneumatic responsive to pressure change in the transmission tube, means actuable by the auxiliary pneumatic for cutting off communication between the main motor and

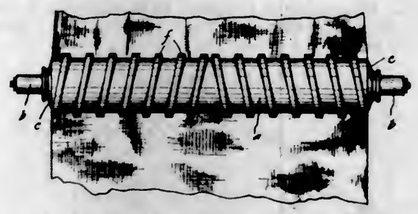
the transmission tube when the main valve opens, and independent means operative immediately to reestablish communication between the main motor and the transmission tube.

1,568,399. FEEDING MECHANISM FOR SEWING MACHINES. ALBERT H. DE VOE, Westfield, N. J., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Oct. 14, 1922. Serial No. 594,447. 12 Claims. (Cl. 112—212.)



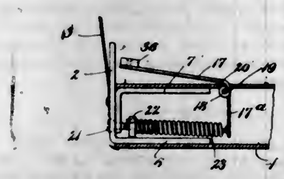
1. A four-motion upper feeding mechanism for sewing machines comprising a feed-lift rock-arm fulcrumed upon the machine frame, means for actuating said arm, a feed-bar, a yielding pivotal support for said feed-bar upon said arm, a feed-dog on said feed-bar, means for imparting work-feeding movements to said feed-bar, and a spring interposed between said arm and said feed-bar and acting by its resilience throughout the work-feeding movements of said feed-dog to yieldingly maintain the feed-dog in engagement with the work.

1,568,400. APPARATUS FOR CRACKING HYDROCARBON OILS. CARBON P. DUBBS, Wilmette, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Feb. 4, 1925. Serial No. 6,782. 6 Claims. (Cl. 196—99.)



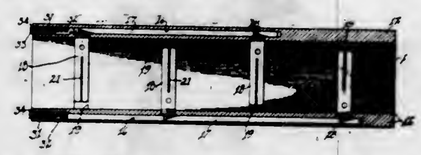
1. In an apparatus for converting oil, the combination with an elongated heating coil, of a furnace within which said coil is disposed, an enlarged reaction zone, means for passing heated oil from said heating coil to said reaction zone, a dephlegmator disposed away from said heating coil, means for passing generated vapors to said dephlegmator, means for withdrawing unvaporized oil from said reaction zone without permitting entrance

thereof to the heating coil, a conduit leading from said dephlegmator, a pump communicating with said conduit, a communication between said pump and said heating coil



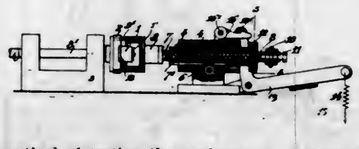
for introducing reflux oil to the coil under pressure, and means for admitting reflux oil from said dephlegmator continuously to the inlet of said heating coil in the event said pump is shunted.

1,568,401. ROLL FOR CARRYING FABRIC CONVEYER BELTS OF PAPER-MAKING MACHINES. CHARLES R. GRIFFITH, Portland, Oreg. Filed July 18, 1923. Serial No. 652,332. 3 Claims. (Cl. 92—38.)



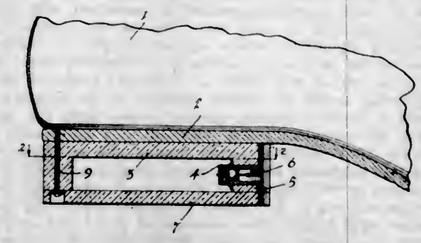
1. A felt-belt carrying roll for paper making machine, comprising an inelastic cylindrical body unaffected by certain chemicals and provided at each end with a circumferential spiral rib consisting of elastic material unaffected by said chemicals, said ribs being of substantial width and extending respectively towards the opposite ends of said roll in closely spaced turns, whereby a substantial tractive surface is provided for said belt, capable of moving the latter forward and simultaneously spreading the same, and keeping it spread, to its normal width.

1,568,402. SPOOL-RETARDING MEANS FOR TUFT FRAMES. EDGAR F. HATHAWAY, Wellesley, Mass., assignor to Shawmut Engineering Company, Boston, Mass., a Corporation of Massachusetts. Filed Jan. 29, 1923. Serial No. 615,580. 7 Claims. (Cl. 139—10.)



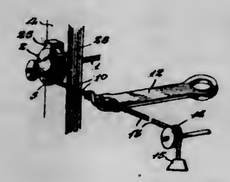
1. In a tube frame for tuft weaving, the combination with a tubular carrier bar for externally supporting a series of tuft tubes, a yarn spool rotatably supported lengthwise of said carrier-bar, a movable brake member arranged to press against a peripheral portion of said spool, a brake-actuating spring mounted inside said tubular bar and operatively combined with said brake to force the brake yieldingly against the spool, a tensioning screw projecting through an aperture formed in an enclosing wall of said carrier-bar for connection with said interior spring and acting, by its adjustment, to vary the pressure of the brake against the spool, substantially as described.

1,568,403. LOOSE-LEAF BINDER. HANS J. HOLST, Hildreth, Nebr. Filed Dec. 24, 1923. Serial No. 682,452. 5 Claims. (Cl. 129—13.)



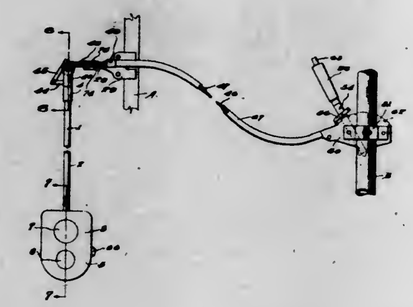
5. A loose leaf book comprising covers, loose leaves disposed between said covers, said leaves having aligned openings therein, binding posts carried by said covers and being received in the aligned openings, and means for causing said posts to engage with said leaves to secure the covers to the leaves, whereby the covers and the leaves are secured together as a unit.

1,568,404. CLOCKWORK-TESTING MACHINE. OSKAR JUNGHANS, Schramberg, Germany. Filed Aug. 7, 1924. Serial No. 730,792. 25 Claims. (Cl. 75—56.)



1. A method of testing the performance of clock-works to be driven by centrifugal action, preferably for use in mechanical time fuses, consisting in causing a clock-work, while its running parts are in a locked condition, to revolve as a whole, unlocking the said running parts automatically when a rotary speed corresponding to that in a flying projectile is attained and locking the same again automatically after a predetermined running period.

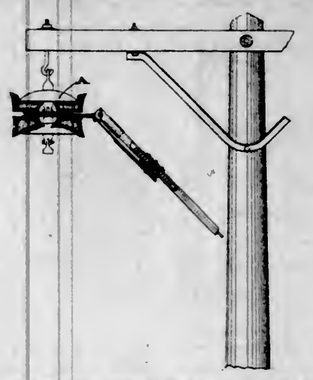
1,568,405. PNEUMATIC FOOTWEAR CONSTRUCTION. JOHN CHARLES KELLER, Chicago, Ill., assignor of one-half to Frank B. Smith, Chicago, Ill. Filed Aug. 30, 1924. Serial No. 735,127. 1 Claim. (Cl. 36—35.)



The combination with a shoe having a sole, of a hollow heel member secured to said sole, said heel member having its bottom wall constructed of a tough, vulcanized material and vulcanized to the remaining portions, the remaining wall portions being highly resilient, and a valve projected through one wall of said heel member, said valve being constructed to lie flush with the exterior surface of the adjacent wall.

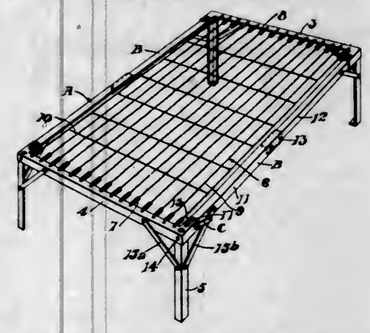
1,568,406. AUTOMATIC SHEAVE. JOHN ERWIN LE BUS, Electra, Tex., assignor of one-half to Shaw and Rathke, Wichita Falls, Tex., a Corporation. Filed Sept. 30, 1924. Serial No. 740,865. 8 Claims. (Cl. 255—35.)

1. In combination, a shaft, a sheave loosely mounted on the shaft, a line wound on the sheave, means engaged and controlled by the line for clutching the sheave to the shaft, and a release for the said means operable to unclutch the sheave from the shaft when the sheave has rotated a predetermined extent.



1,568,407. TRAFFIC SIGNAL. WILLIAM ARTHUR LEE, Wichita, Kans. Filed Aug. 8, 1921. Serial No. 490,652. 1 Claim. (Cl. 177—327.)

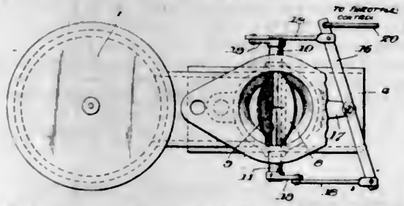
In a traffic signal, a supporting bracket, a shaft carried by said supporting bracket, a semaphore arm pivotally supported by said shaft and having electrically operating signalling means carried thereby, a hollow elbow at the inner end of said arm, a supporting sleeve in the outer end of said elbow, an insulating sleeve in said supporting sleeve, an electric terminal in the insulating sleeve, a movable cylinder having contact with the terminal, an insulating sleeve mounted upon said shaft, a contact band extending partly around the perimeter of said last insulating sleeve, a metal strip attached to the perimeter of the metal sleeve on the shaft other than the portion enclosed by the contact band, said metal strip and contact band having their ends spaced and a coil spring within the cylinder for urging the same into engagement with the contact band or metal strip.



1,568,408. INSULATOR BRUSH. HIRAM E. MILES and MASON E. MILES, San Francisco, Calif. Filed July 22, 1924. Serial No. 727,427. 4 Claims. (Cl. 15—28.)

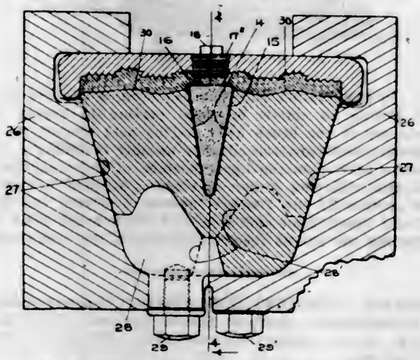
1. A device for cleaning insulators in high voltage electrical transmission lines comprising a handle, a body plate adjustably connected with and supported by the handle, a plurality of brushes disposed on opposite sides

of said plates and means operatively associated with said brushes and operable from a point on the handle for imparting a movement to said brushes.



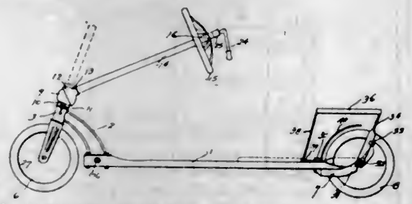
1,568,409. CAMPER'S FOLDING BED. SIGFRID A. MILLER, Oakland, Calif., assignor to Miller Auto Bed and Manufacturing Company, Oakland, Calif., a Corporation of California. Filed Jan. 24, 1924. Serial No. 688,121. 3 Claims. (Cl. 5—114.)

1. In a bed of the character described, a bed frame comprising side and end rails, a sliding interlocking connection formed between one end rail and the side rails, a mattress supporting fabric secured between the head rails, folding legs secured to the bed frame and adapted to support the same, a lever pivotally mounted on each side of the bed frame adjacent the sliding interlocking end rail, whereby said end rail is moved longitudinally on the side rails to stretch the mattress supporting fabric, and means whereby said lever may be secured to the folding legs to serve as braces therefor and to secure the end rails against movement when the mattress supporting fabric is stretched.



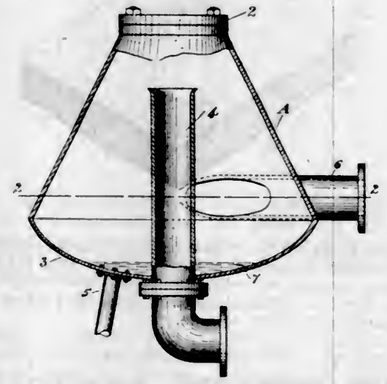
1,568,410. CHARGE-SUPPLY MEANS FOR INTERNAL-COMBUSTION ENGINES AND MEANS FOR MAINTAINING UNIFORM MIXTURE CONDITIONS OF THE CHARGE. CLARKE C. MINTER, Bloomfield, N. J. Filed Feb. 17, 1925. Serial No. 9,835. 6 Claims. (Cl. 123—141.)

5. In association with a carburetor or the like charge forming device for internal combustion engines, throttle valve means in the outlet conduit of said carburetor, said throttle valve means comprising two oppositely rotatable shafts extending in parallelism transversely through the outlet conduit of said carburetor and in the same vertical median plane of said outlet conduit, two substantially flat surfaced valve elements one mounted on each said shaft for pivotal movement in opposite directions to opening and closing positions, said valve ele-



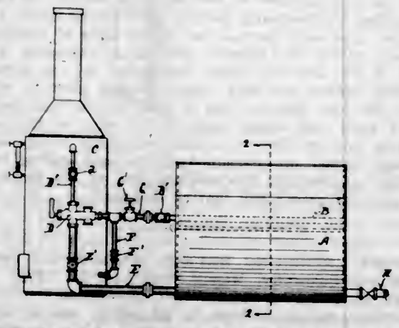
ments being cooperatively arranged and mounted to extend in opposite directions upwardly toward the walls of said outlet conduit in opening positions, and one of said valve elements extending wholly to one side of its shaft, and means for imparting turning movements to said shafts in opposite directions.

1,568,411. PROCESS OF MAKING ARTICLES OF VULCANIZABLE MATERIAL. EDWARD NELSON, Belleville, N. J., assignor to O. & W. Company, a Corporation of New York. Filed Oct. 15, 1923. Serial No. 668,611. 11 Claims. (Cl. 18—53.)



1. In a process for making cored articles of vulcanizable material vulcanized under heat, the use of a core comprising a body of substantially incoherent particles infusible at the temperature of vulcanization confined to a substantially definite form by a jacket of initially coherent material that becomes substantially incoherent during the vulcanization of the said article.

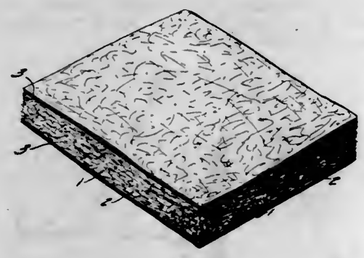
1,568,412. SCOOTER. RICHARD W. PARKES, San Francisco, Calif. Filed Dec. 9, 1924. Serial No. 754,771. 3 Claims. (Cl. 280—87.5.)



1. A scooter comprising an elongated body portion, wheels disposed adjacent the ends of the body portion, means providing for steering the front wheel, a wheel mounting attached to the rear end of the body including arms extending rearwardly and upwardly from said rear end between which arms the rear wheel is mounted, an axle for the rear wheel supported by and between said arms at a point intermediate the ends of the latter, stop members on the outer ends of said arms, seat standards pivoted on the body and said rear axle, a seat to which said arms are pivoted, which seat is movable from upright position extending over the wheel into collapsed position lying flat on the body, said stops being adapted to engage the rearmost standards and limit the movement of the seat.

1,568,413. SEPARATOR. DAVID D. PEEBLES, Eureka, Calif. Filed Apr. 30, 1923. Serial No. 635,447. 1 Claim. (Cl. 183—82.)

An entrainment trap comprising a vertically disposed cone shaped casing, a removable cover member disposed on the upper and small end of the cone, a tapering bottom section secured on the lower and large end of the cone, a vapor discharge pipe centrally disposed with relation to the bottom section and extending upwardly through the bottom section into the interior of the cone, the upper end of said vapor discharge pipe being flared and being in communication with the upper small end of the cone, a vapor inlet pipe connected to the side of the cone at a point intermediate the bottom section and the upper end of the vapor discharge pipe, and disposed on a tangent with relation to the cone, and a liquid discharge pipe connected with the bottom section of the cone.



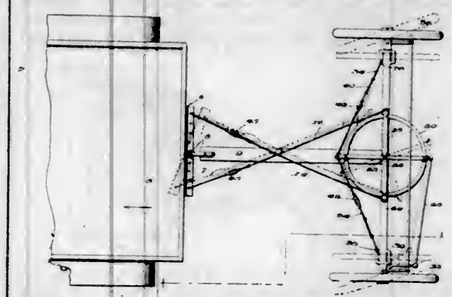
1,568,414. SNOW-MELTING MACHINE. JOHN G. PFADT, Erie, Pa. Filed July 3, 1925. Serial No. 41,372. 4 Claims. (Cl. 126—343.5.)

1. In an apparatus of the class described, a tank, a perforated false bottom in said tank space above the bottom thereof, a spray tube above said false bottom, a

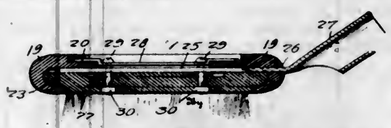
boiler, feed-water supply apparatus adapted to draw water from said tank and force it into said boiler, and a by-pass pipe connecting said feed water supply apparatus with said spray tube.

1,568,415. NON-HEAT-CONDUCTING COVERING. FREDERIC L. PILLIOD, Plainfield, N. J., assignor to Johns-Manville Incorporated, a Corporation of New York. Filed Aug. 9, 1924. Serial No. 731,198. 4 Claims. (Cl. 106—19.)

4. As a new article of manufacture a non-heat-conducting covering comprising a felted mass of long fibres of amosite interspersed with about an equal weight of short fibres of ordinary asbestos, said mass being impregnated with silicate of soda.



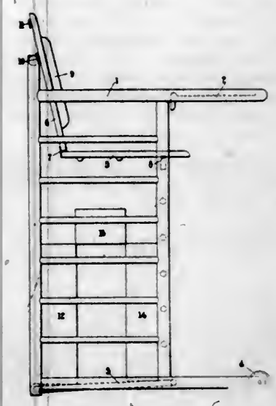
1,568,416. UNDERGARMENT. HARRIET LYONS REDMOND, Needham, Mass., assignor to The William Carter Company, Needham Heights, Mass., a Corporation of Massachusetts. Filed Oct. 25, 1924. Serial No. 745,842. 2 Claims. (Cl. 2—113.)



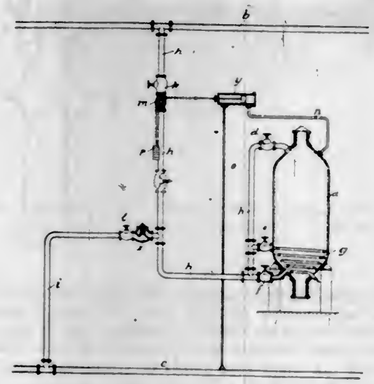
1. An undergarment of knitted fabric having the wales extending longitudinally thereof, said undergarment having an open neck portion, an edging strip of relatively smooth, glossy anti-friction material as compared with that of the garment proper superposed on and secured flatwise against the neck portion of the garment adjacent the edge thereof, and a bias, woven tape superposed upon said edging strip at the edge of the neck opening and effective to confine stretching of the neck portion beyond predetermined limits, said edging strip having an elasticity intermediate that of the fabric of the garment proper and that of said tape.

1,568,417. STEERING DEVICE. CHARLES H. RHENBOTTOM, Coldwater, Mich. Filed Jan. 14, 1925. Serial No. 2,374. 2 Claims. (Cl. 280—33.55.)

1. The combination with a propelling vehicle, of a trailer associated with the propelling vehicle and having an axle and wheels, a steering arm for controlling said wheels, an annulus rotatably mounted on said axle and having an arm connected to said steering rod, cables extending from said propelling vehicle and having connection with said annulus, means to stabilize the annulus and normally hold the same in a neutral position, and a draw bar connecting the propelling vehicle and the trailer.

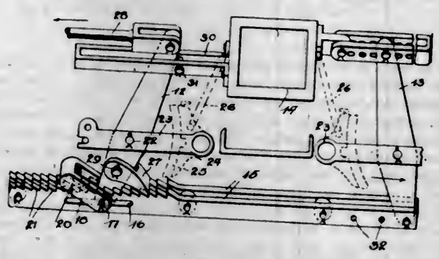


1,568,418. BRUSH HEAD. WILLIAM D. ROSE, Portland, Oreg. Filed Feb. 9, 1924. Serial No. 691,708. 4 Claims. (Cl. 15—175.)



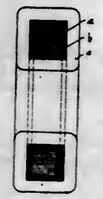
1. In combination with a brush head, a clincher member having an elastic marginal portion to engage the periphery of the brush head and be held thereon by its inherent resiliency, the clincher member including a portion to bear upon the upper surface of the brush head, a handle receiving socket, and means adapted to engage the portion of the clincher member overlying the back of said brush head and secured to said brush head for retaining the handle receiving socket on the brush head.

1,568,419. CONVERTIBLE CHAIR. GORDON ANGUS ROSSBOROUGH, Chadwell Heath, England. Filed Mar. 10, 1924. Serial No. 698,321. 2 Claims. (Cl. 155—44.)



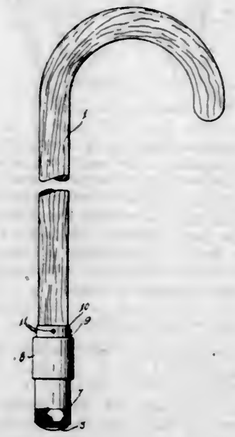
1. An article of furniture convertible at will into a baby's cot or a chair comprising a framework, a chair-seat member hinged at its front edge to said framework, a chair-back member hinged at its lower edge to the rear edge of said chair-seat member and means for supporting said members in alternative chair-functioning and cot-functioning positions, so that the desired conversions may be effected.

1,568,420. PLANT WHERE HEAT-CONSUMING APPARATUS COOPERATES WITH A NUMBER OF FEED CONDUITS. JOHANNES RUTHS, Djursholm, Sweden, KARL INGERÖ, Christiania, Norway, and HANS SCHRENK, Charlottenburg, Germany, assignors to Aktiebolaget Vaporackumulator, Stockholm, Sweden, a Corporation of Sweden. Filed Dec. 7, 1922. Serial No. 605,531. 16 Claims. (Cl. 92—7.)



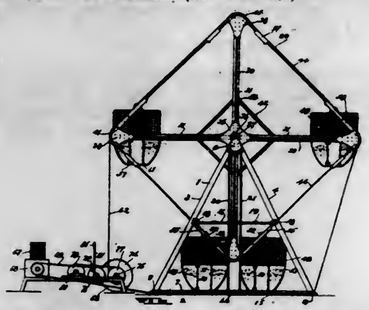
1. In combination, a digester, a high pressure conduit adapted to supply steam to said digester, a low pressure conduit adapted to supply steam to said digester, and automatic means to control the flow of steam from said high pressure conduit to said digester responsive to conditions in the digester and conditions in the low pressure conduit.

1,568,421. SLACK ADJUSTER. WILLIAM H. SAUVAGE, New York, N. Y., assignor, by mesne assignments, to The Gould Coupler Company, a Corporation of Maryland. Filed Apr. 24, 1922. Serial No. 556,201. 2 Claims. (Cl. 188—200.)



1. In a slack adjuster, in combination with a live lever and a compression member of brake rigging, said compression member comprising a plurality of bars in spaced relation, said live lever having its lower end disposed intermediate said bars, said bars adjacent the latter end having lateral slots therethrough, ratchet teeth on a lateral surface of said bars, a bifurcated pawl straddling said bars having its bridge constituting a tooth and engaging said ratchet teeth, a pin passing through said slots and pivotally connecting said live lever and pawl, and a pawl pivoted to the live lever at one side of the bars and engaging said ratchet teeth on the side of the live lever opposite to that of the first mentioned pawl.

1,568,422. SELF-INDUCTION COIL. EUGEN SCHÜHER, Cologne-Mulheim, Germany, assignor to Felten and Guilleaume Carlswerk Actien-Gesellschaft, Cologne-Mulheim, Germany. Filed Apr. 28, 1921. Serial No. 465,251. 1 Claim. (Cl. 178—46.)

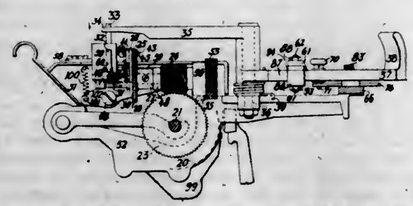


An improved self-induction coil comprising a magnetization core composed of an iron nickel alloy having 8 to 20 per cent nickel content and a carbon content of .06 to .09 per cent, in combination with an insulating jacket and a surrounding wire coil.

1,568,423. ADJUSTABLE TIP FOR CANES AND THE LIKE. CHARLES SIFFERLEN, Joliet, Ill. Filed Nov. 3, 1924. Serial No. 747,637. 2 Claims. (Cl. 135—53.)

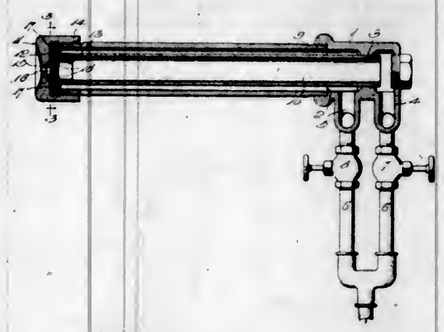
1. An adjustable tip construction for canes and the like, comprising a resilient tip member, means for securing said tip member to the bottom of the body portion of the cane, an externally threaded sleeve carried by said body portion, an internally threaded sleeve surrounding said tip and engaging the threaded sleeve on the body portion, said internally threaded sleeve being adjustable relative to the first named sleeve to expose more or less of the tip, as desired, and a cylindrical shield secured at its top to said body portion and arranged to extend over the upper end of said adjustable sleeve.

1,568,424. FERRIS WHEEL. JEHIEL P. SMITH, Winnipeg, Manitoba, Canada. Filed Feb. 12, 1925. Serial No. 8,777. 20 Claims. (Cl. 104—77.)



3. In a Ferris wheel, a carrier for the rider travelling with the wheel completely around the wheel axis and having an intermittent sliding movement under the action of gravity in the rotation of the wheel.

1,568,425. COPYHOLDER. VERNER CLINTON SMITH, Salina, Kans. Filed Oct. 23, 1924. Serial No. 745,461. 3 Claims. (Cl. 120—28.)



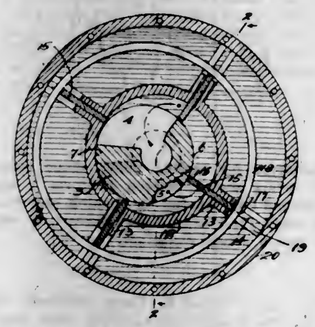
1. A copy holder comprising a base plate, a copy supporting plate hinged to the base plate and adapted to be swung to an inclined position, spaced, inwardly-directed integral, pointed clips arranged along the side edges of the supporting plate to overlie the front of said plate and receive the side edges of the pad or the back of the copy book, and a prop hinged to the rear edge of the base plate and provided with a connection with the back of the copy supporting plate.

1,568,426. TYPEWRITING MACHINE. BURNHAM C. STICKNEY, Rutherford, N. J., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Apr. 28, 1923, Serial No. 635,237. Renewed May 22, 1925. 44 Claims. (Cl. 197—114.)

1. In a typewriting machine, the combination with a platen, of line-spacing mechanism including means for effecting micrometer variations of the extent of a single line-space, and means settable to different predetermined stations for determining the number of line-spaces which the platen is to be moved at each line-spacing operation.

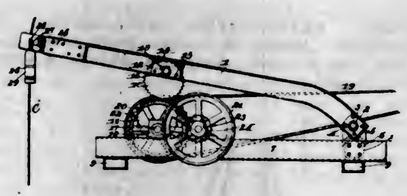
1,568,427. ATOMIZER. CHRISTOPHER STRACHAN, South Orange, N. J., and DAVID J. IRISH, New York, N. Y., assignors to Morse Drydock & Repair Co., New York, N. Y., a Corporation of New York. Filed Nov. 15, 1922. Serial No. 601,117. 6 Claims. (Cl. 158—73.)

5. A mechanically atomizing oil burner comprising a hollow body having an open end, an internal circumferential rib, and oil inlets at opposite sides of said rib, an outer tube connected at one end to the open end of said body, an inner tube received within and having a frictional engagement with said rib, a closure for the rear ends of said tubes attached to the inner tube for removal bodily therewith, said closure abutting the end of the outer tube and having ports communicating with both tubes, and a removable cap on said outer tube abutting said closure and holding the latter and the inner tube in place, said cap having a discharge orifice into which said ports discharge.



1,568,428. DISPLAY AND CLOTHES LINE. JOSEPH B. TUTTLE and MICHAEL H. TUTTLE, Cleburne, Tex. Filed Mar. 5, 1925. Serial No. 13,180. 1 Claim. (Cl. 68—3.)

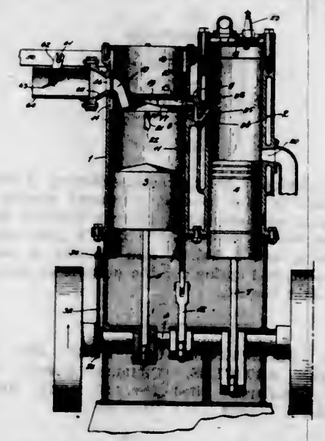
A line of the class described composed of a plurality of flexibly connected links each comprising a piece of heavy wire bent intermediate its ends and coiled to form a spring loop, the major portion of said wire being twisted to form article clamping members, said members having a receiving throat at one end with a coiled spring ring at the entrance thereof, one end of said wire being coiled to form a sleeve and the other bent inwardly to form an attaching loop and then forwardly bent to form a securing loop with the free end inserted in said sleeve, said loop operating to prevent the end from being withdrawn from the sleeve which protects the end.



1,568,429. ROTARY PISTON APPARATUS. BERT EBERT TYLER, South Gate Gardens, Calif. Filed Feb. 10, 1925. Serial No. 8,244. 6 Claims. (Cl. 103—121.)

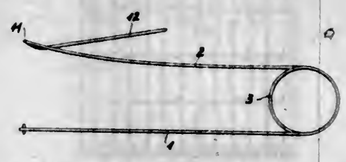
1. A machine of the class described having a casing and its head, a concentric axle for the casing and an eccentric, cylindrical, rigid body on the axle and fitting between the casing and its head, a cylinder rigid with the casing and having contact with one side of the said body and being concentric with the axle, a system of pocketed webs rigid with the cylinder and having sliding

piston blades radial to the axle and engaging the eccentric, and a blade retaining band on the outer edges of the blades.



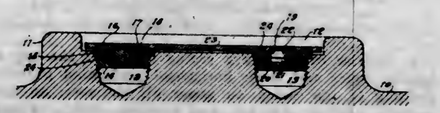
1,568,430. APPARATUS FOR SPUDDING, DRILLING, AND CLEANING OUT WATER AND OIL WELLS. CLYDE UHL, Bartlesville, Okla. Filed Nov. 6, 1922. Serial No. 599,298. 2 Claims. (Cl. 255—8.)

1. Spudding and drilling apparatus comprising a separable main frame, adapted to be mounted upon a vehicle to form part thereof, a beam carrying a spudding tool at one end, means by which the beam is pivotally mounted at the other end to said frame, a gear, a pin upon which the gear is eccentrically monnted substantially centrally of the beam, driving apparatus mounted on the frame including a shaft, a second gear eccentrically mounted upon said shaft meshing with the first gear and providing the medial support of the beam, means by which said apparatus is driven, and means including meshing gears and a fly wheel for equalizing the up and down motion of the beam in the operation of said driving apparatus and said eccentrically mounted gears.



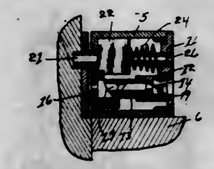
1,568,431. INTERNAL-COMBUSTION ENGINE. CHARLES J. WEBER, Cleveland, Ohio. Filed Apr. 26, 1924. Serial No. 709,092. 28 Claims. (Cl. 123—70.)

14. In an internal combustion engine including separate air-pump and combustion cylinders arranged side by side and pistons respectively therefor, the pump piston having a conical surface, in combination, means for injecting liquid fuel into said pump cylinder, counecting means for said cylinders provided with a transfer conduit, the pump cylinder head having a conical inner surface and a passage adapted to co-act with said transfer conduit, and control means for said conduit, whereby fresh air and fuel mixture are successively delivered to the combustion cylinder, the conicity of the pump-piston and



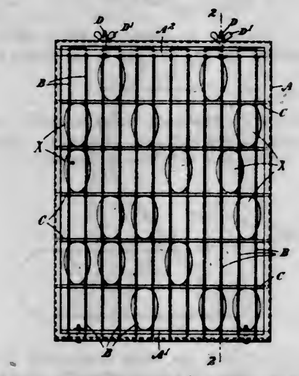
cylinder head, surfaces co-acting to direct the charge toward the opening for the passage in the pump cylinder head.

1,568,432. STRETCHER FOR BOOTS AND SHOES. WILLY WEISE, Berlin-Malchow, Germany. Filed Oct. 16, 1924. Serial No. 744,065. 3 Claims. (Cl. 12—128.2.)



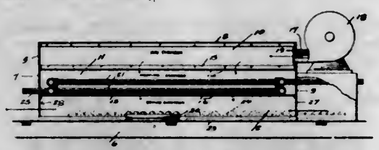
1. A stretcher of wire for shoes comprising in combination an elastic lower part approximately of the shape of the shoe, an elastic upper part designed to support the upper at the sides and at the top, elastic loops at the rear end connecting the upper part and the lower part and serving as support for the heel part of the shoe and as handle for the inserting and removing of the stretcher, elastic wire windings forming a toe part connecting the several windings which form the upper part, forming a part of the spring support of the upper part and being obliquely upwardly directed towards the rear part of the stretcher and serving as support for the toe and the top part of the upper of the shoe.

1,568,433. ANCHORAGE. WILLIAM H. WHEELER, Glen Ridge, and JUDSON C. LOGAN, Jersey City, N. J., assignors to Fedco Number Plate Corporation, New York, N. Y., a Corporation of Delaware. Filed Aug. 15, 1924. Serial No. 732,268. 10 Claims. (Cl. 40—22.)



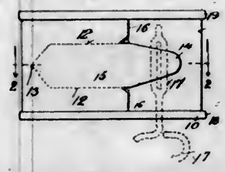
4. In an anchorage of the character described, a plate formed with a flange, a base formed with an aperture to receive the flange, and a lip at the mouth of the aperture formed with a cutting edge adapted to bite into the flange.

1,568,434. WINDOW LOCK. PATRICK H. WINTERSON, San Francisco, Calif. Filed Mar. 29, 1923. Serial No. 628,570. 2 Claims. (Cl. 292—169.)



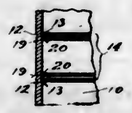
1. In a device of the character described, a housing, a bolt slidable in said housing, a squared portion formed on said bolt and adapted to prevent rotation thereof, a spring adapted to move said bolt to a point outside of said housing and a helical cam adapted to counteract the action of said spring for the purpose of moving said bolt into said housing.

1,568,435. RECEPTACLE FOR EGGS AND OTHER FRAGILE ARTICLES. CHARLES BURTON WINZER, London, England. Filed Dec. 12, 1924. Serial No. 755,503. 5 Claims. (Cl. 217—25.)



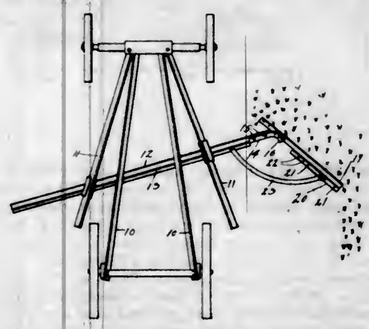
5. In a receptacle for eggs and fragile articles, the combination of an open frame furnished with ventilating openings in its side walls, a plurality of groups of parallel cords extending from end to end of the frame, fixed means for securing the cords at one end of the frame, a movable end member to which the cords are coupled at the other end of the frame, and means for adjusting the movable member.

1,568,436. DRIER. ELMER E. ANDERSON, La Grande, Oreg. Filed Apr. 10, 1925. Serial No. 22,098. 2 Claims. (Cl. 34—19.)



1. A drier comprising a casing closed at the top and having upper and lower horizontal perforated partitions forming in the casing an upper air chamber, an intermediate heating chamber, and a lower drying chamber, the air chamber having means to supply air thereto under pressure, the heating chamber having a heat radiator therein, and the drying chamber having an inlet at one end and an outlet at the other end, and means permitting the travel of article carriers thru the same.

1,568,437. SEALED VACUUM CONTAINER. NIELS P. BACH, Millburn, N. J., assignor to Thermokept Corporation, a Corporation of Delaware. Filed July 15, 1922. Serial No. 575,257. 8 Claims. Cl. 220—54.)

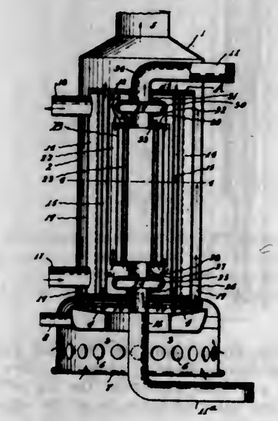


1. A container for sealing under vacuo comprising a body and covers sealed thereon to form a sealed container, a second body having an opening cooperating with said first body, and means for converting said sealed container into a safety container.

1,568,438. CAN. NIELS P. BACH, Millburn, N. J., assignor to Thermokept Corporation, New York, N. Y., a Corporation of Delaware. Filed Feb. 2, 1924. Serial No. 690,139. 10 Claims. (Cl. 220—54.)

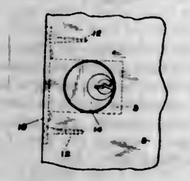
1. A sealed package comprising a can having parallel scorings within and without the can body whereby the package is opened.

1,568,439. GRASS-CUTTING ATTACHMENT FOR GRADERS. HECTOR M. BAXTER, Battle Creek, Iowa. Filed July 27, 1925. Serial No. 46,203. 4 Claims. (Cl. 37—155.)



1. In a grass cutting attachment for a road grader having an angularly disposed scraping blade, a bracket secured to the forward end of said blade, an auxiliary blade secured to said bracket, extending rearwardly and away from said scraping blade, and a brace secured between the said blades to maintain them in such relation.

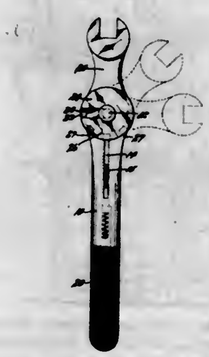
1,568,440. COMBINATION WATER HEATER. EMIL BEHRINGER, Brooklyn, N. Y. Filed Jan. 20, 1922. Serial No. 530,559. 4 Claims. (Cl. 122—82.)



4. In apparatus for heating water the combination of an outer casing, a pair of headers extending transversely of the casing and spaced apart, a convoluted side wall member connecting the headers for forming a chamber in the casing, open ended pipes extending longitudinally of said chamber and passing through the headers, a furnace at one end of said chamber for generating heat to pass

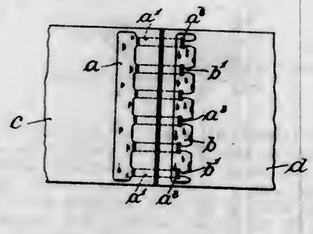
through said pipes, means for intake and for outlet passing through said headers for conveyance of heat derived from a source outside of the apparatus, a second pair of headers extending transversely of said chamber and spaced apart and supported by said intake and outlet means, a convoluted side wall member connected at its ends to the second pair of headers for forming a chamber within the first chamber, open ended pipes extending longitudinally of the second chamber and passing through the second pair of headers and communicating with the first chamber, means for supply of water to the first

chamber at one end thereof and means for outlet of heated water at the opposite end thereof, said exterior heat outlet having a transversely extending heat collecting portion adjacent to said means for water supply and said exterior-heat intake having a transversely extending heat collecting portion adjacent to said outlet for heated water, the water passing into the first chamber and through the open ended pipes of the second chamber and commingling at one end of the second chamber with the water of the first chamber for passage through the outlet of the first chamber for heated water.



1,568,441. MORTISE LOCK. FRANK ELLISON BEST, Seattle, Wash., assignor to Frank E. Best, Inc., Seattle, Wash., a Corporation of Washington. Filed June 7, 1923. Serial No. 643,962. 6 Claims. (Cl. 70—46.)

1. In a mortise lock, the secondary lock housing, a core case, a lock core arranged for removal from said core case and means accessible only when said core is removed for securing said core case to said secondary lock housing.

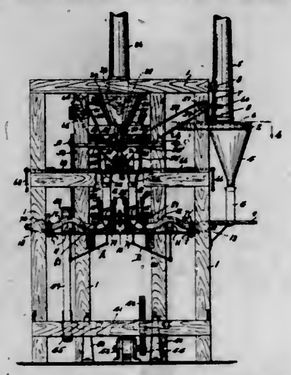


1,568,442. ADJUSTABLE ANGLE WRENCH. RAY C. CARVER, Grand Junction, Colo. Filed Jan. 29, 1925. Serial No. 5,514. 3 Claims. (Cl. 81—58.)

1. A wrench comprising a handle; a wrench seat formed at one end of said handle; a wrench post projecting from said seat, said post being provided with an annular groove; a wrench jaw arranged to be fitted over said post against said seat and means for securing said

wrench on said seat, said means comprising a washer having a radial slot the edges of which are adapted to engage in said annular groove in said post.

1,568,443. BELT FASTENER. WALTER DARGUE, Halifax, England, assignor of one-half to James Edward Carter and Sam Ayrton Wright, both of Halifax, England. Filed Mar. 10, 1925. Serial No. 14,528. 3 Claims. (Cl. 24—31.)

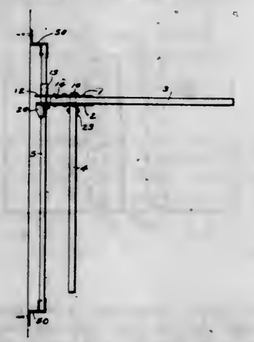


1. A belt fastener comprising a bar having a tine to extend through the two belt ends and provided with an enlargement, in combination with a plate having a slot to receive said tine when the plate is slid on the belt in the plane of the plate, and having a recess to receive said enlargement to prevent withdrawal of the tine from the plate and to prevent removal of the plate from the tine unless the enlargement is disengaged from said recess.

1,568,444. MACHINE FOR FILLING CONTAINERS. REINIER P. DE VRIES, Melrose, Mass. Filed Apr. 18, 1924. Serial No. 707,329. 11 Claims. (Cl. 249—59.)

1. In a machine for filling containers by weight, a pair of weighing scale mechanisms to receive containers to be filled, a transfer-pan, means actuated by operative movement of said weighing scale mechanism for oscillating said transfer-pan to alternately position the same in material delivering relation to one or the other of said weighing scale mechanisms, a material delivery funnel positioned to discharge into said transfer-pan, a material

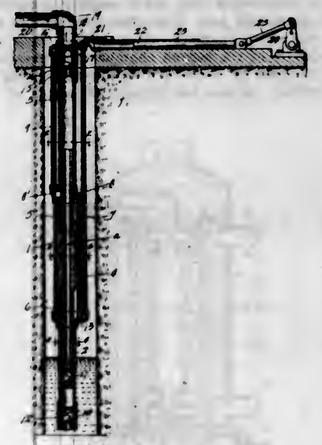
feeding conduit above said funnel, a receiving-disc within the upper open end of said funnel and alined beneath the outlet of said feeding conduit, means for rotating said



receiving-disc, and a stationary plow for deflecting the material from said receiving-disc for gravitation through said funnel into said transfer-pan.

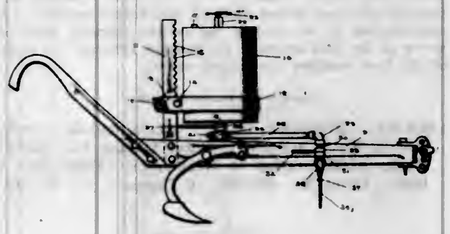
1,568,445. PLANT SPRAY. CHARLES F. DILLER, Lancaster, Pa. Filed Jan. 27, 1925. Serial No. 5,152. 12 Claims. (Cl. 252—1.)

1. A plant spray comprising a suspension of dried plant bacterial enzyme and chromatin granule products in a liquid medium.



1,568,446. CLOTHESRACK. GEORGE B. DOUGLAS, Seattle, Wash. Filed May 22, 1924. Serial No. 715,043. 3 Claims. (Cl. 68—34.)

1. A vertically adjustable clothes rack comprising a head having two vertically separated metal plates and clothes supporting arms secured by one end between said plates, a vertical suporting and guide bar, the upper plate of the head having a hole for the free passage of the guide bar, the lower plate having a notch in its rear edge for the guide bar, the rear edge of the hole in the upper plate and the front edge of the notch in the lower plate being positioned to bind upon the bar to support the head, and a controlling bar fixed to the head and depending therefrom.

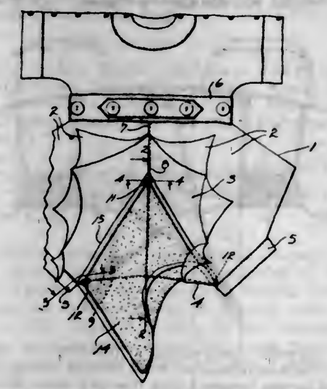


1,568,447. DEEP-WELL PUMP. VALORIS L. FORSYTH, Fort Worth, Tex. Filed Dec. 10, 1924. Serial No. 755,061. 7 Claims. (Cl. 103—46.)

1. A deep well pump comprising a casing having a plurality of members, unions joining said members together, a foot valve in the lower end of the bottom casing member, a piston adapted to operate in the central member and extending therefrom into the other two members, a bore in said piston, a check valve in the lower portion of the piston bore, a check valve at the top of the upper

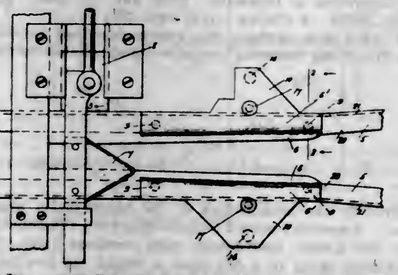
member, a pulsator, a pipe from the said pump to the bottom of the central member, an outlet above the upper member and a by-pass pipe from the top of the lower members to the point of juncture of the upper member and the outlet pipe.

1,568,448. INSECTICIDE-APPLYING MACHINE. WILLIAM A. FREEMAN, Sycamore, Ga. Filed June 20, 1923. Serial No. 646,648. 4 Claims. (Cl. 299—30.)



1. A device of the character described comprising a liquid tank, discharge means connected to and carried by the tank, a post to be secured to a plow beam or other support, a band embracing the tank and having means for clamping the tank therein, and means carried by the clamp to adjustably engage the post for the vertical adjustment of said band and tank.

1,568,449. CHILD'S GARMENT. FLORINDA GARDNER, Salt Lake City, Utah, assignor of one-half to Daniel Alexander, Salt Lake City, Utah. Filed Nov. 8, 1922. Serial No. 599,670. 3 Claims. (Cl. 128—288.)

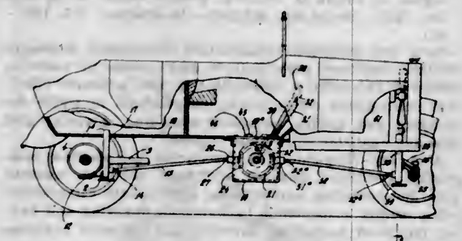


1. A child's garment comprising a pants section, a fastener device connected to and positioned at the vertical median of the inner face of said section at the back thereof and above the crotch of said section, a fastener device connected to and positioned at the vertical median of the inner face of said section at the front thereof and above the crotch of said section, a pair of fastener

devices connected to the inner face of the crotch of said section centrally thereof on opposite sides of and spaced form the vertical center of said section, and a sheet-like,

flexible, impervious protector of losenge contour having means at each corner thereof for connecting to said devices to detachably secure said protector in folded position against the inner face of said section.

1,568,450. HARVESTER. GEORGE H. GEHRKING, Elk Mound, Wis. Filed Oct. 1, 1924. Serial No. 740,986. 3 Claims. (Cl. 56—102.)

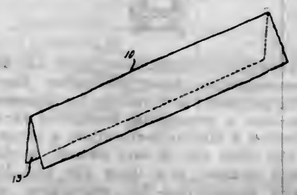


1. In a corn harvester, the combination, with a pair of guide bars for stalks and a pair of cutting blades mounted on the guide bars, of a pair of clamping devices for the cutting blades formed right and left hand, each clamping device comprising an upper plate arranged above the cutting blade and guide bar and provided with a clamping bolt hole and a laterally projecting lug, a plate arranged below the said guide bar and also provided with a clamping bolt hole and a laterally projecting lug, a distance piece arranged between the laterally projecting lugs, and a clamping bolt engaging with the clamping bolt holes and projecting through the space between the said distance piece and the guide bar.

1,568,451. COCK. HARRY GRAY, Houston, Tex. Filed July 24, 1923. Serial No. 653,448. 6 Claims. (Cl. 251—103.)

1. In a cock, a tubular casing one end of which is threaded for attachment within a container, a central chamber having an outlet opening on one side thereof, the opposite side being recessed, packing in said recessed portion, a hollow valve plug in said chamber having its wall thickened on one side whereby it is made eccentric within said chamber, there being an outlet opening in said thickened wall, packing between said plug and said casing above and below said eccentric portion and means to retain said valve plug removably in said casing.

1,568,452. VEHICLE JACK. JACOB GROSSMAN, Maspeth, N. Y. Filed Apr. 22, 1925. Serial No. 24,947. 13 Claims. (Cl. 254—86.)



2. The combination of a vehicle having a tube for a propeller shaft, with a lifting jack comprising a housing attached to said tube, a jack member including a foot extending transversely of the vehicle below said tube to engage the ground, spaced parallel racks secured to and extending upwardly from said foot, said racks being located on opposite sides of said tube, said housing guiding said racks, gears within the housing located between said racks and in mesh at their inner portions, said gears being respectively meshed at their outer portions with said racks, and means to rotate said gears to lower or raise the racks and foot.

1,568,453. END FASTENER FOR MUSIC-ROLL SHEETS. RUDOLPH SIMON HAASE, Houston, Tex. Filed Nov. 26, 1924. Serial No. 752,422. 1 Claim. (Cl. 84—162.)

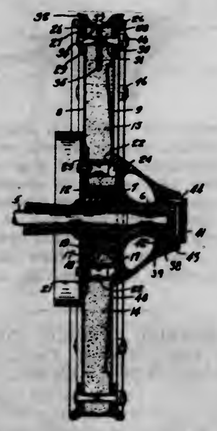
An end fastener for music roll sheets comprising a flexible body member having adhesive on its under side, outstanding longitudinally alined gage arms carried by the body member and adapted to contact with the end flanges of the music roll to center the body member, said arms having each a transverse row of perforations to facilitate tearing off the arms after centering the body member, and a tab extending from the body member and having an eyelet for connection to a roll for rewinding.

1,568,454. SLIPPING DEVICE FOR NECKTIES. THOMAS A. HART, Danbury, Conn. Filed July 10, 1925. Serial No. 42,660. 3 Claims. (Cl. 2—156.)

1. A device for facilitating the slipping of a necktie in a turned down collar, comprising a single integral strip of thin pliable paper of a width at least twice that of the necktie, folded along a longitudinal line and

adapted to receive the necktie between the folds thereof, said folded strip of paper having its inner walls glazed so that the necktie will slip readily therethrough and being adapted to be inserted, with the necktie therein and with the folded edge thereof directed upwardly, between the inner and outer walls of the collar.

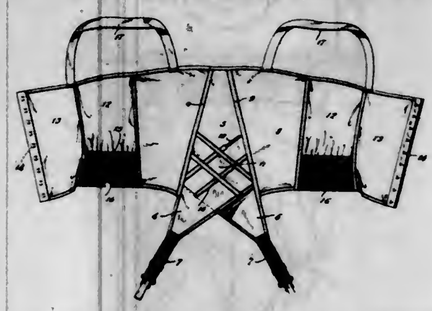
1,568,455. FUNGICIDE AND INSECTICIDE COMPOSITION. OSCAR F. HEDENBURG, Pittsburgh, Pa., assignor to Frank O. Moburg, Toledo, Ohio. Filed Feb. 14, 1921. Serial No. 445,026. 10 Claims. (Cl. 167—6.)



1. A dry fungicide composition comprising Bordeaux mixture together with dextrin and casein in amounts sufficient to secure a deflocculating and adhesive effect, said composition being readily suspendable in water for spraying and having improved spreading, covering and adhesive qualities when thus applied.

2. A dry fungicide and insecticide composition comprising Bordeaux mixture and lead arsenate together with deflocculating and sticking agents, said composition being readily suspendable in water for spraying and having improved spreading, covering and adhesive qualities when thus applied.

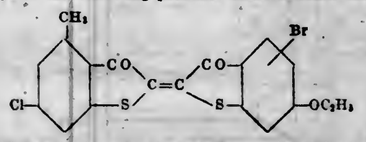
8. A dry fungicide composition comprising Bordeaux mixture with dextrin, casein and a soluble chromate in amounts sufficient to secure a deflocculating and adhesive effect, said composition being readily suspendable in water for spraying and having improved spreading, covering and adhesive qualities when thus applied.



9. A dry fungicide and insecticide composition comprising a Bordeaux mixture and lead arsenate together with dextrin, casein and a soluble chromate in amounts sufficient to secure a deflocculating and adhesive effect, said composition being readily suspendable in water for spraying and having improved spreading, covering and adhesive qualities when thus applied.

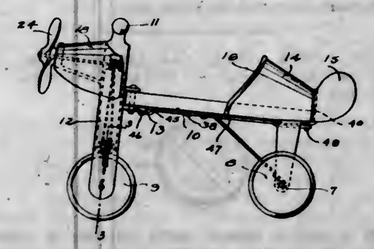
1,568,456. VEHICLE WHEEL. CLARENCE B. HOWARD, Oakland, Calif. Filed Aug. 23, 1921. Serial No. 494,662. 9 Claims. (Cl. 301—63.)

8. A vehicle-wheel comprising an inner hub element of polygonal cross-section, inner and outer discs having corresponding polygonal perforations for engagement with said hub element, a paper filler interposed between said discs and having a similar perforation, a thrust member formed on the inner end of said element, a plurality of studs on said member, said inner disc and filler being provided with perforations for engagement with said studs, an outer hub element engaging the exposed side of said outer discs, and a hub cap removably engaging said first hub element adapted to retain said second hub element in engagement with said outer disc.



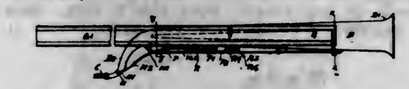
1,568,457. BRASSIÈRE. AUGUSTA S. JOHNSON, Brooklyn, N. Y., assignor to Model Brassiere Co., Inc., New York, N. Y., a Corporation of New York. Filed Feb. 21, 1923. Serial No. 620,420. 3 Claims. (Cl. 2—42.)

1. A brassière comprising a plurality of connected gores, a double overlapping front section connected therewith and having terminal tabs free and disconnected from each other, garters secured to the free ends of said terminal tabs and a plurality of bones in said double section intersecting each other in diagonal relations to form a diaphragm section.



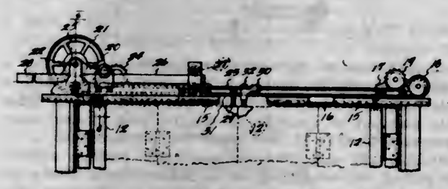
1,568,458. VAT DYES OF THE THIOINDIGO SERIES. ASA WILLARD JOYCE, Newark, N. J., assignor to The Chemical Foundation, Incorporated, New York, N. Y., a Corporation of Delaware. Filed Jan. 28, 1925. Serial No. 5,274. 8 Claims. (Cl. 260—53.)

8. As a new product, the herein described thioindigo vat dye of the following probable constitutional formula:



derived by the bromination of the condensation product from 4-methyl-6-chlor-2.3-diketo-dihydro-1-thionaphthene and its 2-keto equivalents with 6-ethoxy-3-oxy-1-thionaphthene being in a dry state a bright red powder, insoluble in water, alcohol and ether, soluble in nitrobenzene with a bluish-red color, soluble in concentrated sulfuric acid with a green color, forming with an alkaline hydrosulfite solution a yellow vat, from which animal and vegetable fibres are dyed bright bluish-red shades, fast to light, chlorine and washing.

1,568,459. TOY VEHICLE. FRANK KACIREK, Cleveland, Ohio, assignor to Alfred L. Hohlfelder, Cleveland, Ohio. Filed Dec. 8, 1924. Serial No. 754,493. 16 Claims. (Cl. 208—165.)



1. In a toy vehicle of the character described, the combination of a body supported by rear wheels, a front fork member pivotally connected to the body, a cowl structure carried by the fork member, a front dirigible wheel attached to and supporting the fork, a shaft mounted in the cowl structure, a pulley mounted on the fork and driven by said front wheel and flexible means drivingly connecting said pulley to the shaft.

1,568,460. REED WIND MUSICAL INSTRUMENT. EDWARD LEGLER, Jr., and ALEXANDER KOHL, Fresno, Calif.; said Kohl assignor to said Legler. Filed Oct. 27, 1920. Serial No. 419,826. 8 Claims. (Cl. 84—380.)

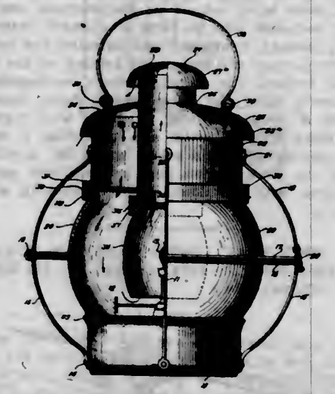
1. A musical instrument consisting of a tapering tube having a mouth piece with a reed, adapted to vibrate, means for varying the tones produced thereby consisting of an elongated slot, a slideway on the two sides of the slot, and a slide disposed to slide in said slideway and adapted to vary the sizes of the air space between the mouth piece and the open portion of the slot substantially as described.

1,568,461. SAFETY AUTOMATIC ELEVATOR-DOOR EQUIPMENT. OSCAR P. MCGEE, Dallas, Tex., assignor of one-half to W. A. Sedwick, Dallas, Tex. Filed May 26, 1924. Serial No. 715,866. 16 Claims. (Cl. 187—52.)

5. As a sub-combination in an elevator door operating apparatus, a longitudinally movable rack bar, an electric motor connected with said rack bar for operating the same, and a shoe carried by said rack bar for engaging a door opening and closing means.

1,568,462. FACEPLATE-ATTACHING MEANS FOR LOCKS. HAROLD K. MORITZ and FRANKLIN H. HARP, Seattle, Wash., assignors to Frank E. Best, Inc., Seattle, Wash., a Corporation of Washington. Filed Mar. 27, 1924. Serial No. 702,825. 1 Claim. (Cl. 70—46.)

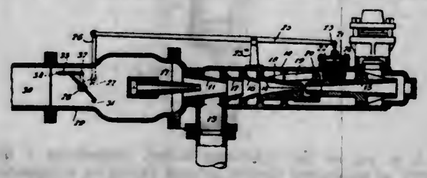
In a lock, a lock core, a projecting member on the end of said lock core, a face plate having a recess arranged to fit over said projecting member and a key plug having a head and arranged to be inserted through said lock core to secure said face plate to said lock core.



1,568,463. ARTICLE OF MANUFACTURE AND PROCESS OF MAKING THE SAME. WALDO G. MORSE, Yonkers, N. Y. Filed Apr. 10, 1924. Serial No. 705,521. 9 Claims. (Cl. 18—57.)

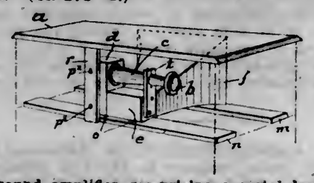
1. As an article of manufacture a sheet or film comprising magnesium carbonate in finely divided form and oil.

1,568,464. METHOD OF RECOVERING COPPER. JAMES W. NEILL, Pasadena, Calif., assignor to Goro Matsukata, Tokyo, Japan. Filed Apr. 20, 1925. Serial No. 24,676. 4 Claims. (Cl. 75—18.)



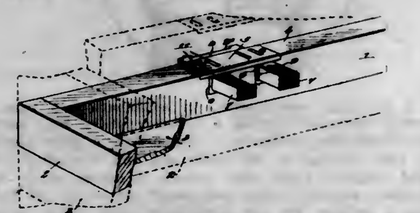
4. A method of recovering copper from ores and similar materials containing it, which comprises dissolving the copper in an acid solution, causing the solution to contact with an aggregate consisting of coke having iron distributed intimately therein and smelting the resulting product containing coke and copper derived from the solution.

1,568,465. LAMP CONSTRUCTION. ZACHARIAS OLSSON, Westport, Conn., assignor to James K. Wheten, New York, N. Y. Filed Oct. 12, 1923. Serial No. 668,090. 3 Claims. (Cl. 240—27.)



1. In lamp construction, in combination, a base, a burner mounted thereon, a chimney above said burner for discharging products of combustion, a globe secured to said chimney at its upper end and depending from said chimney above said burner, a casing about said chimney secured thereto and spaced therefrom and forming a passage for air thereabout, said casing having adjacent its top portion openings for the admission of air to said passage, a cover for said casing through which said chimney projects, said cover overhanging the top of said casing to protect said air openings from the effects of winds, a globe secured to said casing at its upper end and depending from said casing exterior of said first globe meeting said base member at its lower end and forming a continuation of said air passage to the lower end of said inner globe, and frame members forming a hinged connection between said casing and said base, permitting swinging of said two globes as a unit upwardly from about said burner.

1,568,466. INJECTOR. RUDOLF M. OSTERMANN, Evanston, Ill., assignor to The Superheater Company, New York, N. Y., a Corporation of Delaware. Filed Mar. 5, 1925. Serial No. 13,106. 8 Claims. (Cl. 162—1.)

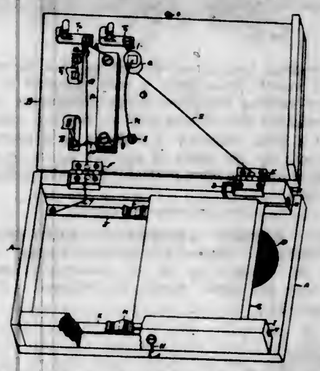


1. The combination with an exhaust steam injector of a thermostatically controlled valve for regulating the quantity of exhaust steam delivered to the injector in accordance with the temperature conditions prevailing adjacent to the delivery nozzle of the injector.

1,568,467. RADIOAMPLIFIER AND SUPPORT. EZRA J. PACKER, Philadelphia, Pa., assignor to The Pooley Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 24, 1925. Serial No. 4,368. 3 Claims. (Cl. 274—2.)

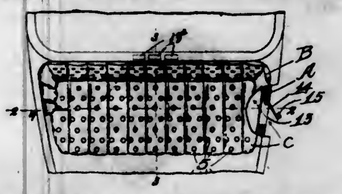
1. A sound amplifier comprising a metal horn, an intermediate wooden block and a wooden horn; the intermediate block being formed in two sections, one section being hollowed out to form a channel extending successively inward, downward and outward and providing a sound-entrance and sound-exit located on the same face of the section, the sound entrance communicating with the metal horn, the other section being hollowed out to form a chamber having a curved wall overhung and underhung by flat walls and providing a sound-entrance opening communicating with the sound-exit opening of the first section and a sound-exit opening communicating with the sound-entrance opening of the wooden horn.

1,568,468. UNIT TRAY. EDWIN HART PRATT, Corvallis, Oreg. Filed June 20, 1924. Serial No. 721,256. 6 Claims. (Cl. 211—28.)



4. A tray comprising a frame having end bars and side bars, handles slidably mounted in the end bars, means secured to the bottom of the tray and adapted to cooperate with the slidable handles of a tray positioned below the superimposed tray for locking said trays together.

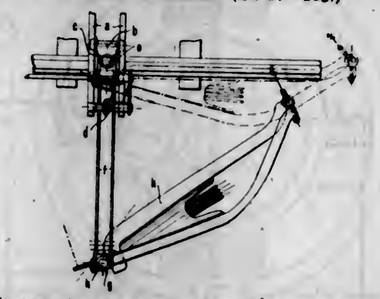
1,568,469. FIGURE TOY. HOBART DE LANCEY RAPSON, Philadelphia, Pa. Filed Mar. 9, 1922. Serial No. 542,242. 4 Claims. (Cl. 46—40.)



1. A toy of the character stated, comprising a plurality of separately formed printed sheets as independent objects with the same general irregular outline and wherein the sheets are printed throughout their front surfaces with the representation of animate objects and the bounding edges of the sheets are in all material respects the outer bounding lines of the printed objects depicted thereon, said sheets superposed with all of the printed surfaces facing in the same direction and detachably connected along their perimeters by cement so as to be normally retained in close contact but easily and successively separated by rupture of the cemented union to provide a plurality of disconnected similar objects having the same irregular outline.

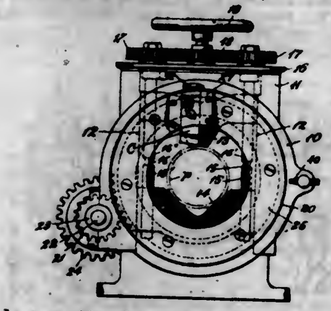
1,568,470. WIRELESS RECEIVING TUNER. ISAAC P. RODMAN, Newark, N. J., assignor, by mesne assignments, to Garod Corporation, Belleville, N. J., a Corporation of New Jersey. Filed Feb. 1, 1922. Serial No. 533,877. 4 Claims. (Cl. 171—119.)

1. A device of the character described comprising a support having an extended surface, flat coils thereon relatively movable laterally over the faces of each other into and out of overlapping relation and having areas compared to that of said supporting surface such as to maintain said coils in parallelism in each position without projecting beyond the edges of said support, means associated with said coils to maintain an electrical connection between the same in the different relative positions thereof, and a member associated with said support and adapted to enclose said coils; said support and said member constituting an enclosure serving, when in closed relation, to maintain said coils within the confines of said edges and prevent the removal thereof.



1,568,471. VENTILATED SEAT. MAX HOEMER, Lost Hills, Calif. Filed July 5, 1922. Serial No. 573,041. 1 Claim. (Cl. 98—22.)

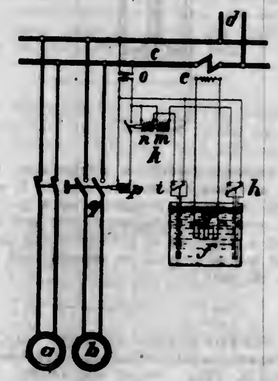
A ventilated seat comprising a frame including upright opposite side and back members, the former of which are provided with air inlets and the latter having an overhanging upper edge provided with an air outlet, a partition connected to the side and back members and disposed to one side of the air inlets, a perforated seat cushion between the side members and above the partition to form a compartment, a back cushion disposed between the seat cushion and the overhanging upper edge of the back member and secured thereby, said back cushion being disposed in spaced relation to the back member and cooperating with the latter to form a compartment having communication with said first named compartment, said back cushion having perforations



whereby free passage for the circulation of air is permitted between the said inlets and outlet and through said perforated cushions.

1,568,472. RAILROAD-TRACK-WEEDING MACHINE. AUGUSTE SCHEUCHZER, Renens, near Lausanne, Switzerland, assignor to Ferrodesherbeuse Scheuchzer Societe Anonyme, Renens, Switzerland. Filed July 31, 1923. Serial No. 654,938. 3 Claims. (Cl. 37—105.)

1. In a weeding machine, guide rails, a carriage mounted to travel between the guide rails, a parallel lever device adapted to swing in a vertical plane, a vertical pin on the carriage pivotally supporting the inner end of the lever device, and a plow connected with the outer end of the parallel lever device.

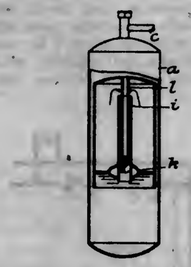


1,568,473. MACHINE FOR CUTTING OFF PIPE. CHARLES F. SCHMELZ, Bridgeport, Conn., assignor to The Curtis & Curtis Co., Bridgeport, Conn., a Corporation of Connecticut. Filed Dec. 30, 1924. Serial No. 758,809. 3 Claims. (Cl. 81—190.)

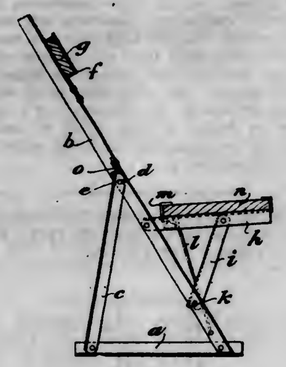
2. In a machine for cutting off pipe, the combination of the rotatable face plate, means for holding the pipe, a lug carried by said plate and cut away to form an opening, the L-shaped tool holder detachably secured within said opening, a feed screw stationary as to lengthwise movement and carried by said holder, a nut on said screw held as against independent rotation, a cutting tool removably carried by said nut, means for actuating said screw intermittently during successive rotations of said face plate, and a spider detachably secured to said plate and having a shouldered part along which said tool has a sliding contact and which resists the thrust of the tool during the operation of cutting off the pipe.

1,568,474. APPARATUS FOR EFFECTING THE AUTOMATIC CONNECTING AND DISCONNECTING OF ELECTRICAL MACHINE UNITS. FRITZ SCHMIDLIN, Baden, Switzerland, assignor to Aktiengesellschaft Brown, Boveri & Cie., Baden, Switzerland. Filed Aug. 7, 1922. Serial No. 580,263. 6 Claims. (Cl. 171—118.)

1. In an apparatus for effecting the automatic connecting and disconnecting of electrical machine units, the combination, with a network, bus-bars feeding said network, an electrical machine unit normally connected to said bus-bars, a relieving unit intended to be connected to help said normal machine when the network load exceeds a predetermined amount, and to be disconnected when the network load drops below a predetermined amount, leads connecting said relieving unit to said bus-bars, and a switch located in said leads, of two thermal relays means for exposing said relays to the heating effect of the network current, one relay controlling the closing and the other controlling the opening of the switch, and means connecting said thermal relays to said switch, whereby said relieving unit is connected to and disconnected from the network circuit, according as the network load exceeds or drops below a predetermined amount, the connecting in of said relieving unit being effected by the occurrence of a larger network current or higher heating effect of the network current than the corresponding limits at which said relieving unit is disconnected.



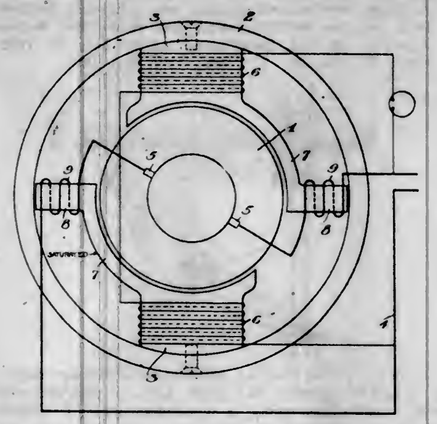
1,568,475. SLIDE RULE. RICHARD SCHWANDA, Hotting-Innsbruck, Austria. Filed Aug. 26, 1921. Serial No. 495,701. 5 Claims. (Cl. 235—70.)



1. A slide rule comprising in combination, two flat slidably engaged slides of substantially equal length, one slide being U-shaped in section and embracing one longitudinal edge and the adjacent portion of the faces of the other slide.

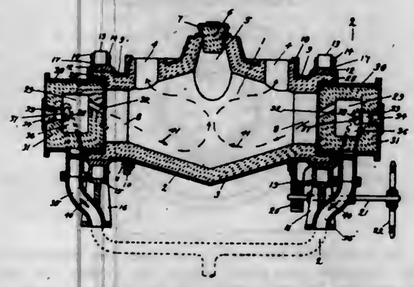
1,568,476. AMMONIA-ABSORPTION REFRIGERATOR. CARL SENSENBRENNER, Dusseldorf-Oberkassel, Germany. Filed Dec. 16, 1924. Serial No. 756,309. 4 Claims. (Cl. 62—118.)

1. In an ammonia-absorption refrigerator, the combination with a vessel adapted to contain a solution of ammonia and to serve alternately as a generator and an absorber, and a bell adapted to rise and fall within the vessel, of a pipe open at both ends and shorter than the bell, and means adapted to support said pipe vertically within the bell.



1,568,477. SUPPORT FOR SEATING ACCOMMODATION. FRANK SMALL, Winnipeg, Manitoba, Canada. Filed Feb. 18, 1925. Serial No. 10,060. 2 Claims. (Cl. 155—196.)

1. A support for seating accommodation comprising a main support pivoted upon a base, a brace pivoted upon the said base and adapted to engage upon the said support, a bracket securely mounted upon the upper part of the said support adapted to hold a back rest, a seat supporting arm pivoted upon the said main support with a brace pivoted upon the said arm which said brace has its end slotted for engagement upon a stud near the base of the said main support, and a brace rod connected from the said main support to a clamp adapted to be fastened to the back edge of a seat member supported on the said seat supporting arm.

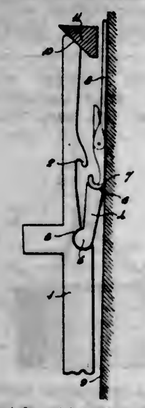


1,568,478. GENERATOR. ERASMUS D. SMITH, Rochester, N. Y. Filed Oct. 22, 1923. Serial No. 670,032. 10 Claims. (Cl. 171—227.)

1. A generator comprising a field including a frame and pole pieces, an armature, diverting means arranged to divert magnetism from the pole pieces around the armature instead of through it, and means acting automatically to vary the amount of magnetism so diverted in accordance with changes in the amount of generated current, said diverting means being so constructed that there is no substantial increase in diverted magnetism

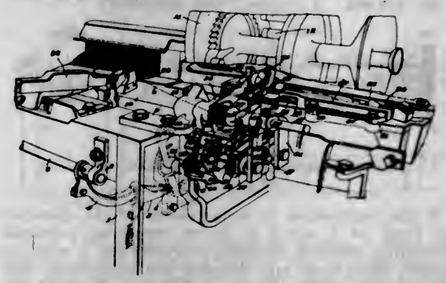
and no substantial decrease in the main field strength upon reversal of current when the generator acts as a motor, whereby the generator may safely operate as a motor without excessive speed.

1,568,479. OIL FURNACE. VLADIMIR B. SOUNITZA, New York, N. Y. Filed Feb. 25, 1925. Serial No. 11,473. 6 Claims. (Cl. 263—33.)



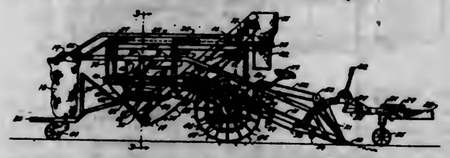
1. In an oil furnace, the combination with a combustion chamber, gas generating chambers at the opposite ends of said combustion chamber, wall separating said gas generating chambers from said combustion chambers, said walls being provided with apertures for the gases, said apertures being adapted to direct the gas flames towards the lower portion of said combustion chamber near its center, exhaust ports in said combustion chamber adapted to receive the products of combustion on their return path from the central portion of said combustion chamber, and means to introduce a liquid fuel into said gas producing chambers.

1,568,480. JACK OR SLIDER FOR USE IN CIRCULAR-KNITTING MACHINES. WILLIAM SPIERS, Leicester, England. Filed Dec. 24, 1923. Serial No. 682,568. 8 Claims. (Cl. 66—21.)



1. A slider for co-operation with a knitting machine needle, comprising a nose part adapted to engage the

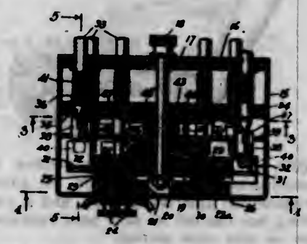
inside of the needle hook, and a shoulder part for engagement with the outside of the needle hook, one of said



parts having a socket in which the other part is mounted so as to have pivotal movement with respect to said socketed part.

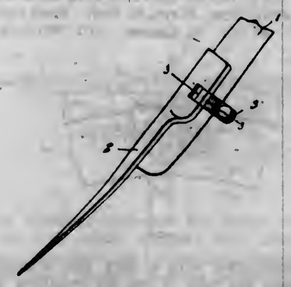
1,568,481. FILLING-END CONTROLLER. ALFRED E. STAFFORD, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed May 27, 1925. Serial No. 33,161. 14 Claims. (Cl. 139—256.)

1. In a filling replenishing loom, the combination of the lay, a shuttle box at the replenishing end of the lay having a front wall provided with an open slot extending downwardly through the lower edge of the wall in register with the feeler slot of the shuttle when in replenishing position and means engaging the spent filling at the feeler slot near the inner end of the shuttle and withdrawing it frontwardly across the lower edge of the wall about the cloth selvage as a center.



1,568,482. POTATO HARVESTER. JAMES THOMPSON, Greeley, Colo. Filed Feb. 4, 1924. Serial No. 690,482. 5 Claims. (Cl. 55—9.)

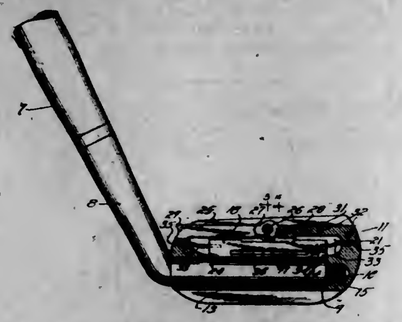
1. A potato harvester comprising the combination of a plow for digging the potatoes; an open bar chain for elevating the potatoes; rollers positioned each side of said plow for gathering the potato vines onto said chain and driving means for rotating said rollers in opposite directions.



3. The combination in a potato harvester of a plow for digging the potatoes; an elevating chain for receiving the potatoes and vines from said plow and sifting the clods therefrom; a second chain of a wider pitch for sifting the potatoes from said vines; a third chain of narrow pitch positioned to receive the potatoes as they drop through said second chain and carry them to the side of the harvester; an elevator chain positioned to receive the potatoes from said third chain and convey them forwardly and upwardly to the top of the harvester; an endless belt positioned on the top of the harvester over said elevating and said second chain and arranged to receive the potatoes from said elevator chain and convey them rearwardly and bag holders for the reception of the potatoes from said belt.

1,568,483. PERMUTATION SWITCH LOCK. JAMES J. TOLBERT, Los Angeles, Calif. Filed Dec. 13, 1923. Serial No. 680,571. 7 Claims. (Cl. 200—45.)

1. A permutation switch lock comprising a stationary contact, a movable member, a movable contact secured to the member, means for urging the member to a position in which the movable contact is out of engagement with the stationary contact, projections on the member, a plurality of plungers, certain of which have cams adapted to engage the projections for moving the member against the action of said urging means, means for normally urging the plungers to a projected position wherein the cams are out of engagement with the projections, said urging means being yieldable to permit the pushing of the plungers into retracted position to cause said cams to engage said projections, and means for latching the plungers in retracted position.

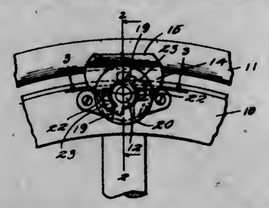


1,568,484. CULTIVATOR SHOVEL. GEORGE TOLMAN, Sheldon, Iowa. Filed May 12, 1923. Serial No. 638,601. 1 Claim. (Cl. 97—198.)

A cultivator shovel of the class described comprising a body in the form of a single piece of material including a relatively wide portion forming a blade, and a relatively narrow portion forming an attaching neck, said neck being substantially V-shaped in cross section, and being adapted for reception of a handle, the apex thereof to be spaced from said handle, said neck being provided with oppositely disposed openings, and clamping means

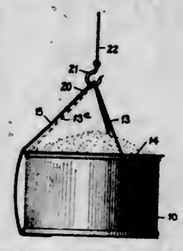
for connecting the neck to the handle, said clamping means comprising a pair of duplicate members formed at their free ends with laterally directed hooks for reception in said opening, curved intermediate their ends to conform to the contour of the handle, and provided with ears having openings for passage of a retaining bolt.

1,568,485. GOLF CLUB. LEE L. TURNEY, Milwaukee, Wis. Filed Mar. 6, 1925. Serial No. 13,445. 24 Claims. (Cl. 273—79.)



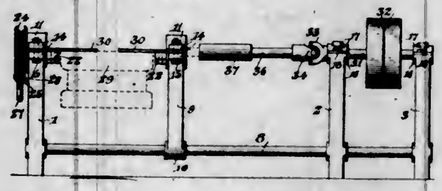
1. In a golf club, a shaft, a stem portion, a head rotatably mounted on said stem portion, for adjustment about the longitudinal axis of the head, and a vertically slidable locking bar carried by said head engaging locking shoulders on said stem portion.

1,568,486. BOAT. JULIUS VON WALDY, New York, N. Y. Filed Mar. 8, 1924. Serial No. 697,917. 11 Claims. (Cl. 9—2.)



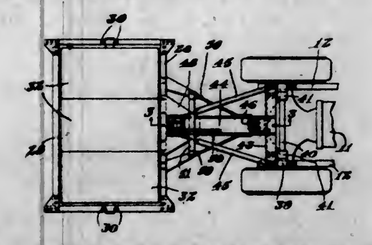
9. A hull for boats and the like comprising, in combination, a flexible inflatable bottom of vulcanized, reenforced fabric having reinforcing beads therein.

1,568,487. RETAINING DEVICE FOR RIM LUGS. ALBERT F. VUEPILLAT, Fargo, N. Dak. Filed July 21, 1925. Serial No. 45,074. 5 Claims. (Cl. 301—19.)



5. In combination with a felly and demountable rim mounted upon the felly, a lug for retaining the rim in position upon the felly, a bolt extending through the felly and lug, a nut engaging the bolt, a washer disposed between the nut and lug, said nut having projecting portions, said washer and lug each having an opening corresponding in shape to the shape of the nut whereby they are removable over the nut and means upon said washer limiting relative rotation of the nut and washer maintaining the projecting portions of the nut out of alignment with the corresponding portions of the openings of the washer during tightening of the nut, and aligning said projecting portions with the corresponding portions of the opening during loosening of the nut.

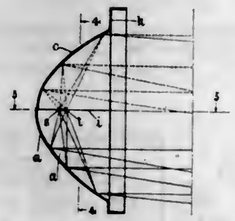
1,568,488. HOISTING BUCKET. FRANCIS H. WEEKS, New York, N. Y. Filed May 16, 1924. Serial No. 713,804. 3 Claims. (Cl. 294—73.)



1. A flat bottomed cylindrical hoisting bucket having a bail at the top hung off the centre of the bucket, a dumping line at the bottom arranged to extend over the side and top of the bucket to meet the bail and detachably connect with a hoisting hook, and means for attaching the dumping line in different places across the bucket bottom.

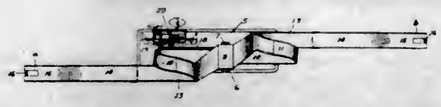
1,568,489. BURNING-IN STAND. LOUIE BEALE WHEELER, Memphis, Tenn. Filed July 24, 1924. Serial No. 727,988. 3 Claims. (Cl. 29—89.5.)

1. The combination in an apparatus of the character set forth, of a series of spaced supporting pedestals, connecting elements extending therebetween, a shiftable member slidable on said elements and cooperating with one of said pedestals for the support of an engine block, a revoluble bearing upon the top of said member and cooperating pedestal, means carried by each bearing to support an engine block at any desired angle upon revolution of one of said bearings, and means associated with one of said bearings for transmitting power thereto to revolve the same and the engine therewith.



1,568,490. ROAD-WORKING MACHINE. ROY J. WINSOR, Bucyrus, Ohio. Filed Nov. 14, 1924. Serial No. 749,860. 2 Claims. (Cl. 94—50.)

1. An improved roller for roads and the like, including, in combination, a rectangular framework, a roller mounted for rotative movement in said framework, a plurality of members pivotally attached to the front



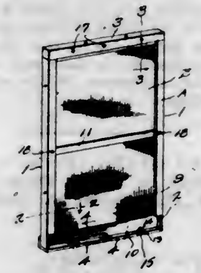
end of said framework, said members being adapted to be pivotally attached to a propelling mechanism, and means associated with the members and with the framework for preventing too great an angular movement of the framework with respect to the propelling mechanism.

1,568,491. PROJECTION LAMP. HAROLD WORKMAN, Glasgow, Scotland. Filed Dec. 16, 1922. Serial No. 607,328. 11 Claims. (Cl. 240—41.)

1. In a reflector for lamps projecting a beam of light, the combination of a substantially paraboloidal surface extending above the source of illumination of the lamp and having a focus substantially at the rear end of said source of illumination and a substantially paraboloidal surface extending below said source of illumination and having a focus at substantially the front end of said source of illumination, said paraboloidal surfaces being set with their axes in the horizontal plane but with an axis of said upper surface set at an angle to an axis of said lower surface.

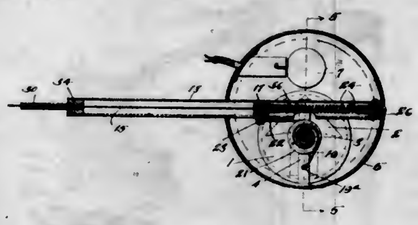
1,568,492. LOOP-THE-LOOP TOY. BRUNO ZABEL, Feura Bush, N. Y. Filed Apr. 29, 1925. Serial No. 26,634. 10 Claims. (Cl. 104—55.)

1. A mechanical toy comprising a base, a track supported above the base having a pair of loops therein, the track at each side of the two loops being inclined, car receiving terminals at each end of the track, and means for alternately raising each end of the track and alternately lowering the opposite end.



1,568,493. COMBINED TOBOGGAN AND SLED. GEORGE ALLEN, Hillman, Minn. Filed Jan. 17, 1925. Serial No. 3,164. 8 Claims. (Cl. 280—12.)

1. In a device of the class described, a frame, runners of unequal transverse dimensions, and means for pivoting the runners to the frame to permit the runners to lie horizontally, or stand vertically, thereby enabling the device to be used as a toboggan or as a sled, at the will of an operator.

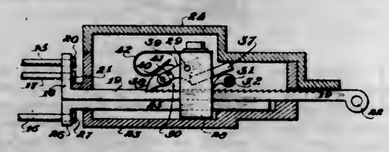


8. In a device of the class described, a frame, runners of unequal transverse dimensions, means for pivoting the runners to the frame to permit the runners to lie horizontally or stand vertically, thereby enabling the device to be used as a toboggan or as a sled, at the will of an operator, means under the control of an operator for moving the runners to cause them to assume horizontal and vertical positions; braces mounted to swing on the frame and cooperating with the runners when the runners lie horizontally, mechanism for operating all of the braces from a single point of force-application; a prow pivoted to the frame and cooperating with the runners, when the runners lie horizontally, to prevent the runners from digging into the snow, and means under the control of an occupant of the device for moving the prow to and from operative position with respect to the runners.

1,568,494. WINDOW SCREEN. GEORGE ANASTAS, Pocatello, Idaho. Filed Apr. 21, 1924. Serial No. 708,035. Renewed Oct. 19, 1925. 1 Claim. (Cl. 156—14.)

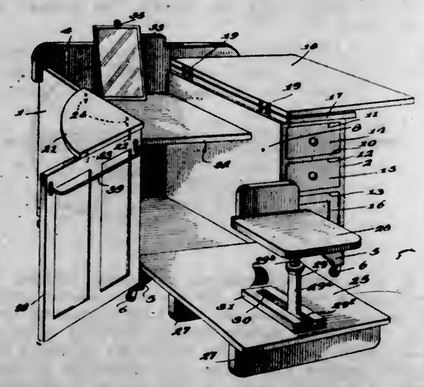
In combination, a frame formed of a plurality of rails having channels therein, the bottom rail being substantially L-shaped in cross section and the bottom portion thereof provided with a plurality of transversely extending slots countersunk on the under surface of the rail, a screen insertable in the rails, means for fixing the screen to the top and bottom rails, a plurality of L-shaped lugs attached to the lower edge of the screen, and bolts having their heads fitted in the countersunk recesses associated with the slots so that the shanks pass through the slot and pierce the lugs all in the manner and for the purpose specified.

1,568,495. DIRECTION INDICATOR FOR MOTOR VEHICLES. GEORGE E. BATES, Syracuse, N. Y. Filed July 7, 1922. Serial No. 573,272. 14 Claims. (Cl. 116—47.)



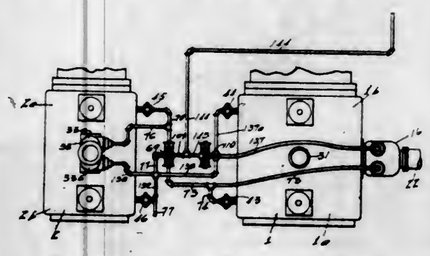
1. In a direction indicator for motor vehicles, the combination of a signal, movable from neutral position in opposite directions, and operating mechanism therefor, comprising a movable member connected to the signal, a prime mover movable in opposite directions from neutral position, and means for transmitting the movement of the prime mover of said member, comprising a pull element and means controlled by the prime mover, and connected to opposite ends of the pull element to pull the same in one direction or the other in accordance with the direction or movement of the prime mover from neutral position.

1,568,496. PENHOLDER. OTIS H. BURDETTE, Atlanta, Ga. Filed Mar. 28, 1922. Serial No. 547,437. 1 Claim. (Cl. 120—98.)



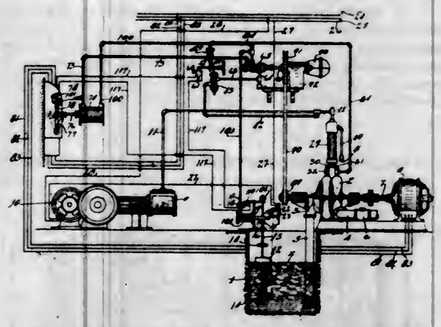
A penholder comprising a staff having a reduced end portion, a ferrule fitted on the reduced end of the staff, a sleeve encircling said reduced end portion of the staff within the ferrule, the ferrule projecting beyond the end of said sleeve, a finger integral with and extending from the end of the sleeve beyond the reduced end portion of the staff and arranged to receive between it and the wall of the ferrule the butt end of a pen point to be held, the said finger having a downwardly and forwardly rounded nose, and a yieldable resilient pen seating finger integral with and extending from the end of the sleeve below the first-mentioned finger and housed within the ferrule and having its free end rounded longitudinally and transversely to coact with the wall of the ferrule at a point in advance of the extremity of the first-mentioned finger.

1,568,497. BRAKE SYSTEM. EDWARD C. BURNS, Winona, Minn., assignor to John E. Burns, Winona, Minn. Filed Sept. 24, 1924. Serial No. 739,674. 7 Claims. (Cl. 74—110.)



1. The combination, with a brake and two relatively adjustable brake operating bars, of a ratchet and pawl connection between the two operating bars, whereby the two brake operating bars may be adjusted and locked with respect to each other.

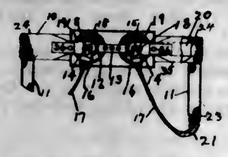
1,568,498. WORK CABINET. AMBROSE CALIVER, Nashville, Tenn. Filed Nov. 30, 1923. Serial No. 677,796. 2 Claims. (Cl. 45—38.)



1. A device of the character described comprising a case having a compartment open at the front and at its upper end, a panel supported upon the bottom wall of the compartment for movement to and from position within the compartment, a seat supported on said panel in position to be disposed upright, a substantially horizontal supporting member disposed in the upper part of said compartment, said supporting member constituting a combined shelf and second seat, and a swinging cover section for closing the compartment at its upper end, said cover section being adapted to be swung from position to close said compartment to horizontal position at one side of the compartment to support articles in position conveniently accessible to a person who is seated on said second named seat.

1,568,499. PUMP-CONTROLLING MECHANISM. RUDOLPH CONRADER, Erie, Pa. Filed Feb. 21, 1922. Serial No. 538,207. 36 Claims. (Cl. 230—24.)

1. In a pump, the combination of a low pressure cylinder; a high pressure cylinder; pistons in said cylinders pumping at both ends of said cylinders; unloaders for said cylinders, said unloaders operating to close the intakes of each end of said cylinders independently; and means controlling said unloaders to operate one unloader of the low pressure cylinder in unison with one unloader of the high pressure cylinder and independently of the other ends of said cylinders and to unload the remaining ends of said cylinders in unison subsequently to the unoading of the first-mentioned ends.

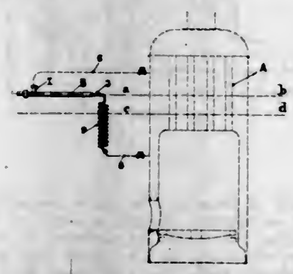


1,568,500. PUMP-CONTROLLING MECHANISM. RUDOLPH CONRADER, Erie, Pa. Filed Sept. 12, 1923. Serial No. 662,200. 44 Claims. (Cl. 103—113.)

1. In a pump controlling mechanism, the combination of a rotary pump; a motor driving said pump; mechanism controlling said motor; a suction priming means connected to the rotary pump; and means actuated by the suction pressure controlling said mechanism.

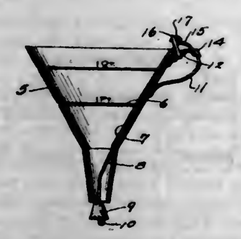
1,568,501. TRUSS. ALFRED C. COOKE, South Manchester, Conn. Filed Nov. 16, 1921. Serial No. 515,670. 7 Claims. (Cl. 128—101.)

1. A truss comprising a pad support, a belt, and a pair of pendant leg straps, the front ends of said belt and straps being connected to said pad support. the rear ends of said straps being connected individually to the opposite sides of said belt, and the structure con-



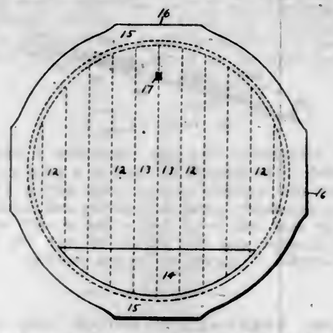
stituting the rear portion of said belt and the structures constituting the rear portions of said leg straps being all of longitudinally elastic character.

1,568,502. EXPLOSIVE. TENNEY L. DAVIS, Somerville, Mass. Filed Mar. 8, 1924. Serial No. 697,948. 2 Claims. (Cl. 260—142.) (Granted under the act of Mar. 3, 1883, 22 Stat. L., 625.)



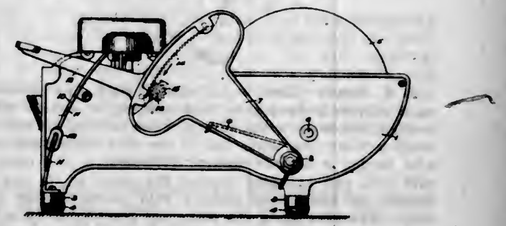
1. An explosive composition having as one of its elements hexanitrocarbanilide.

1,568,503. BOILER-SUPPLY SYSTEM. ROBERT LUCIEN D'ESPUJOLS, La Varenne, St.-Hilaire, France. Filed Apr. 4, 1923. Serial No. 629,945. 4 Claims. (Cl. 103—15.)



1. In a system for controlling the supply of liquid to a boiler feed pump a fluid operated prime mover therefor and a device for automatically controlling said fluid comprising an expansible container and a conduit connecting said container with the boiler above the normal liquid level therein and a second conduit comprising a heat radiating portion connecting said container with the boiler below the normal liquid level therein.

1,568,504. FUNNEL. GLEN R. DUGGAN, Binger, Okla. Filed Aug. 24, 1923. Serial No. 659,114. 1 Claim. (Cl. 226—36.)

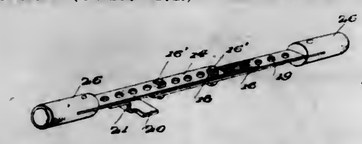


In combination with a funnel having a valve normally urged to closing position by a leaf spring attached to the funnel handle and to the valve rod, a spring manipulating and locking ring pivoted to the handle intermediate the valve rod and point of attachment of the spring to the funnel handle.

1,568,505. NONGLARE LENS AND LAMP THEREFOR. WALTER T. FISHLEIGH, Detroit, Mich. Filed Dec. 16, 1921. Serial No. 522,773. 4 Claims. (Cl. 240—48.4.)

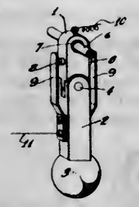
1. A lens of the character described having a series of vertical ribs disposed in vertical zones with the ribs of the center zone having a curvature different from the ribs on the side zones extending thereacross, and a single horisontal rib extending across said lens near only one edge thereof.

1,568,506. STRIP-SERVING MACHINE. TREVOR R. GAUTIER, Nashua, N. H., assignor to Nashua Gummed & Coated Paper Company, Nashua, N. H., a Corporation of Massachusetts. Filed May 20, 1924. Serial No. 714,592. 38 Claims. (Cl. 91—14.5.)



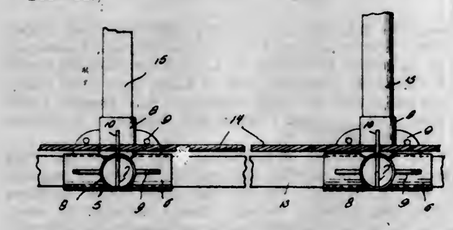
1. In a machine for serving strips of adhesive tape, a frame or housing having opposite side walls and with provisions for supporting a package of tape, tape feeding means, tape severing means, a reservoir having a rotatable moistener for the tape, a gear co-axial with the moistener, a gear 21 between the feeding means and the moistener gear to impart rotation to the latter, and supporting means for the gear 21 including a stud 22 provided with a flange 23 overlying the inner face of the gear 21, and means to support said stud 22 in position.

1,568,507. RAILROAD-TIE COMPOSITION AND PROCESS. HENRY GEORGE JAEGER, Rose Hill, Calif, assignor of one-fourth to Everett R. Lambertson and one-fourth to George P. Clements, both of Eagle Rock City, Calif., and one-fourth to Julius Schneider, Los Angeles, Calif. Filed Oct. 4, 1922. Serial No. 592,421. 3 Claims. (Cl. 106—29.)



3. In the process of preparing from plastic materials structural units such as railroad ties especially suitable for use in tropical climates the steps which comprise conditioning a loose fibrous organic material by saturating the same with a preservative comprising a phenol, drying the same, saturating the product with a solution of magnesium chloride, adding calcined magnesite thereto, separately preparing a mixture of finely powdered silica and finely powdered calcined magnesite, associating all the materials above referred to, and moistening the whole with sufficient of a solution of magnesium chloride to give the same a plastic consistency.

1,568,506. SWITCH ATTACHMENT. ELMER JOHNSON, Warren, Ariz. Filed May 27, 1922. Serial No. 564,152. 2 Claims. (Cl. 200—172.)

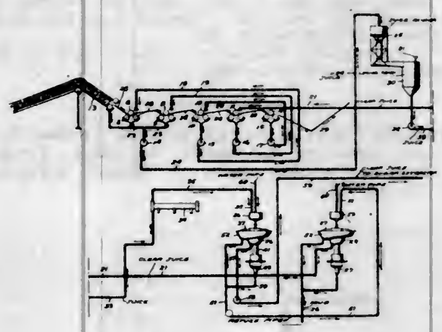


1. A wall switch structure comprising a switch member pivotally mounted in the wall at a point between the opposite side surfaces thereof, rods having overlapping sections adjustably connected together and movable in the wall, the said rods being located one at each side of the switch member and one section of each rod having a plate adapted to engage the switch member.

1,568,509. THEFT-ALARM SWITCH FOR AUTOMOBILES. CHARLES H. KOLLINO and REINHOLD PRIETZ, Jersey City, N. J., assignors of three-eighths to Oscar O. Lauckner, Hoboken, N. J., and three-eighths to Oscar A. Weissenborn, Jersey City, N. J. Filed Nov. 10, 1923. Serial No. 673,869. 2 Claims. (Cl. 200—52.)

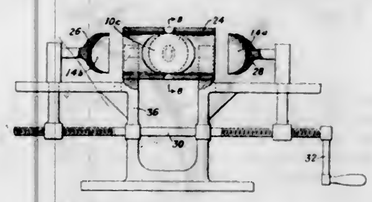
1. A circuit closer embodying a rigid link mounted on a relatively fixed pivot and carrying a contact intermediate its ends, a second rigid link pivoted to and extending below the lower end of the first named link and also having a contact secured intermediate the ends of said link and extended beyond the pivot of its link to engage the first-named contact, said contacts being normally separated when the links are gravitating in quiescent condition, but being adapted to engage one another and complete a circuit in which said contacts are adapted to be included when the quiescence of the rigid links is disturbed.

1,568,510. LONGÉRON AND STATION BRACE FOR AEROPLANE FUSELAGES. ROMAN S. KWASIGROCH, Cudahy, Wis. Continuation of application Serial No. 25,932, filed Apr. 25, 1925. This application filed June 29, 1925. Serial No. 40,293. 1 Claim. (Cl. 244—31.)



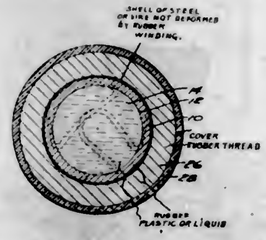
A device of the class described including a body having longitudinally aligned receptacles for receiving longéron sections, and separated by a partition, and a station receiving receptacles rectangularly disposed to the longéron section receptacles, fins connecting the receptacles and provided with apertures, one of said fins provided with an opening for receiving a pressure wire.

1,568,511. COMPENSATING THE COPYING INTENSITY OF CINEMATOGRAPHIC PICTURE FILMS. ERICH LEHMANN, Berlin-Charlottenburg, Germany. Filed June 27, 1924. Serial No. 722,865. 4 Claims. (Cl. 95—5.)



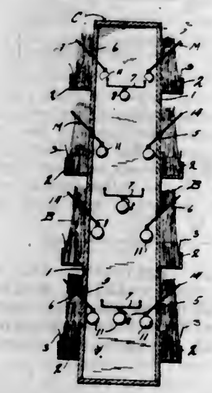
1. The process of compensating differences of density of cinematographic picture films, which consists in impregnating the gelatine conting of the film with a coloring agent incapable of yielding fast colorations therewith.

1,568,512. METHOD AND APPARATUS FOR THE MANUFACTURE OF SUGAR. ALBERT P. LEONARD, New York, N. Y. Filed July 26, 1921. Serial No. 487,693. 6 Claims. (Cl. 127—8.)



6. A method of manufacturing sugar comprising passing bagasse successively through a series of crushing mills, conveying juice from the foremost of said mills to separators, extracting the clear juices from said separators, separating sugar from the clear juice of one separator, introducing water into the residuum in another separator, returning the clear juice from the separators to an intermediate mill of the series, returning the juice from said intermediate mills to the foremost mills, returning the juice from the last mill of the series to a mill in advance of that receiving the liquid from the separators, and returning the juice from said advance mills to the foremost mill.

1,568,513. BALL. THOMAS A. LEWIS, New York, N. Y. Filed June 24, 1922. Serial No. 570,531. 10 Claims. (Cl. 154—17.)



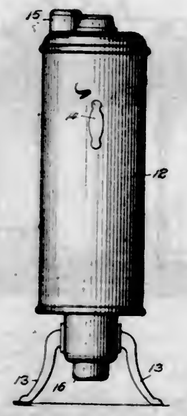
7. The process of making a ball, which consists in providing a core having a substantially undeformable metallic exterior and winding elastic thread, tape, cord or the like upon said core, the windings being applied under undiminished tension from the start.

1,568,514. PLAYING BALL. THOMAS A. LEWIS, New York, N. Y. Filed Dec. 22, 1923. Serial No. 682,197. 29 Claims. (Cl. 273—62.)

1. A playing ball having an interior shell formed in halves with their edges scalloped or serrated.

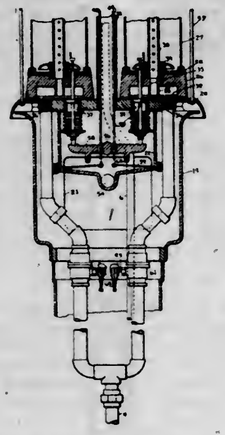
1,568,515. PAPER-BAG RACK. WILLIAM M. LIGON, Lynchburg, Va. Filed May 7, 1925. Serial No. 28,712. 2 Claims. (Cl. 211—2.)

1. A rack of the class described comprising a supporting wall, an outstanding shelf carried thereby, a pair of transversely spaced openings extending through the wall above the shelf, said openings being disposed on a downward and inward incline, a substantially rectangular clamping member having its side bars freely disposed through said openings in the wall, and a weighted member carried by the inner cross bar for constantly urging the outer cross bar toward the wall.



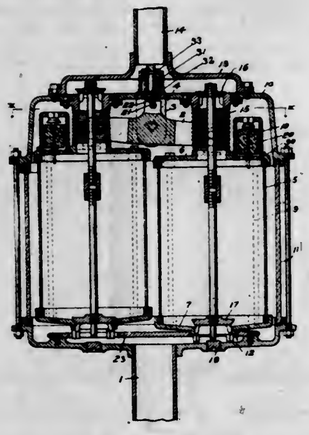
1,568,516. MACHINE FOR PUMPING FLUIDS FROM WELLS. ALVIN H. LOW, Los Angeles, Calif. Filed July 21, 1923. Serial No. 653,023. 1 Claim. (Cl. 103—188.)

The combination, in a machine for pumping fluids from wells, of a working-barrel, an upper valve, a lower valve, a hollow plunger, a head to the working-barrel, an anchor, a coupling trap for the upper valve, and a discharge tube:—when in the well, the working-barrel is located at any desired point; the lower valve located within and at the bottom of the working-barrel, the upper valve located within said coupling; the said head being attached to the upper end of the working-barrel and serving as guide to the said discharge tube and a bar to the removal of the plunger while within the well; said anchor being attached to the lower end of the working-barrel and extending down to the bottom of the well, and of sufficient weight to prevent the up stroke of the plunger from raising the working-barrel, yet light and free enough to be withdrawn from the well along with the other apparatus therein when desired; the lower end of said coupling being attached to the upper end of the plunger and its upper end being attached to the lower end of said discharge tube, said tube being slotted at its lower end and projecting into the coupling whereby a passage is provided about the valve when the latter is forced to its upper position



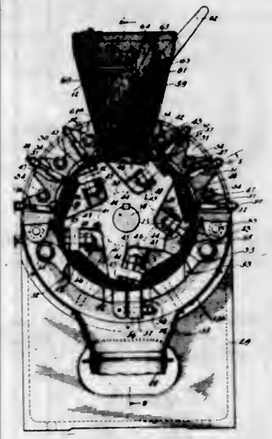
against the lower end of the tube, such tube performing the functions of discharge tube and sucker-rod, its lower end connected with the plunger by the said coupling, and its upper end protruding from the well above, and adjustable to any machinery adapted to give it the necessary up and down motion in the work of pumping; all substantially as, and for the purposes described, set forth and shown.

1,568,517. LIQUID-MEASURING APPARATUS. GEORGE W. MACKENZIE, Beaver, Pa. Filed Aug. 10, 1921. Serial No. 491,114. 8 Claims. (Cl. 73—28.)



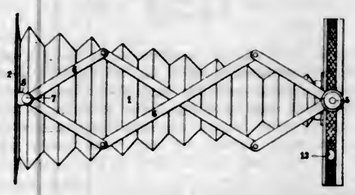
1. In liquid-measuring apparatus, the combination, with an oscillating liquid balance, including a bucket borne in counter-poise and having a bottom discharge, of a float in said bucket, and means for measuring the range of the movement of the float in its descent.

1,568,518. LIQUID-DISPENSING APPARATUS. GEORGE W. MACKENZIE, Springfield, Ill. Filed Oct. 24, 1922. Serial No. 596,586. 13 Claims. (Cl. 221—100.)



1. In liquid-dispensing apparatus a fixture including a platform, a perforate pipe secured to an orifice in and rising from said platform, a measuring chamber encircling said pipe and resting upon said platform and secured in position by a nut applied to said perforate pipe above, a source of liquid supply communicating by means of a valved passageway to and through the orifice in said platform and through said perforate pipe to said measuring chamber, means for exhausting air from said measuring chamber, and means for withdrawing liquid from said measuring chamber.

1,568,519. LIQUID-MEASURING APPARATUS. GEORGE W. MACKENZIE, Beaver, Pa. Filed Apr. 5, 1923. Serial No. 630,094. 8 Claims. (Cl. 73—28.)

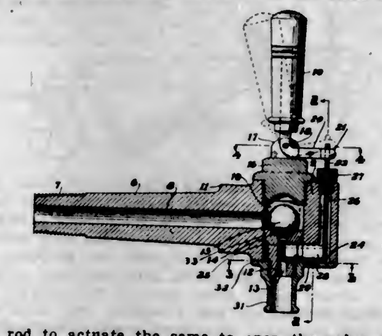


1. In liquid-dispensing apparatus the combination of a conduit for liquid, a liquid balance in communication with said conduit and including an oscillating beam and a pair of liquid containers borne in counter-poise by said beam, means opposing a yielding resistance to beam oscillation, and means for rendering the said liquid balance responsive to the hydrostatic pressure of a stream of liquid supplied through said conduit.

1,568,520. ROTARY CUTTING MACHINE. ALBERT L. MARTENS, Bellmore, N. Y., assignor of one-half to Frederick A. Conrad, Brooklyn, N. Y. Filed Aug. 1, 1923. Serial No. 654,972. 11 Claims. (Cl. 146—117.)

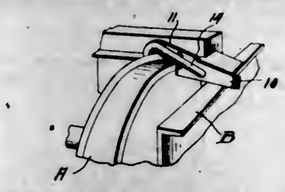
1. In a machine of the class described, a sectional rotor, knives extending longitudinally of the rotor in spaced relation, means to secure the knives to the rotor, the sections of the rotor having for each knife a plurality of alined undercut radial recesses for each knife into which the securing means for the knives extend, and a common guard gate for the recesses of each knife to box in the securing means.

1,568,521. SOUND AMPLIFYING AND REPRODUCING DEVICE FOR TALKING MACHINES AND OTHER SOUND-REPRODUCING INSTRUMENTS. ADOLPH MIDENCE, Paris, France. Filed Dec. 15, 1924. Serial No. 756,152. 4 Claims. (Cl. 181—27.)



1. A sound amplifying and reproducing device for sound reproducing instruments comprising a light flexible extensible and collapsible horn, a frame secured to the large end of said horn, a reproducing diaphragm secured to the small end of the horn, and means for causing the length of the horn to vary for varying the degree of amplification and the quality of sound, said means functioning to hold the horn in its various adjusted positions.

1,568,522. GAUGE COCK. WILLIAM MITTERREITER, Memphis, Tenn. Filed Nov. 22, 1924. Serial No. 751,626. 3 Claims. (Cl. 251—133.)

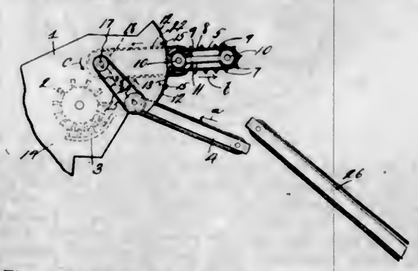


1. In a gauge cock, the combination of a valve chamber provided with an inlet and an outlet passageway, a valve in said chamber normally closing the outlet, the wall of said valve chamber having a bore substantially parallel to the outlet passageway with a slot connecting the bore to said passageway, a valve operating rod mounted for reciprocation in said bore with its inner end portion

turned laterally and extending through said bore and terminating in a return bent end engageable underneath the valve, means operatively connected to the outer end of

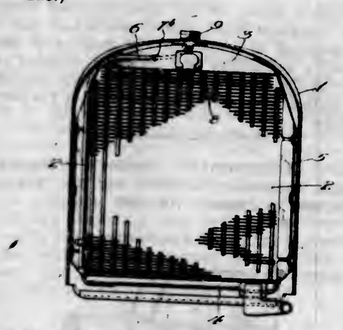
the rod to actuate the same to open the valve, and a packing gland surrounding said rod at the outer end of the bore to prevent leakage.

1,568,523. WHEEL-LOCKING DOG. EPHRIAM W. MORRIS, Rockwood, Tenn., assignor of one-third to Oliver H. Anderson, Oneida, Tenn. Filed Oct. 28, 1924. Serial No. 746,428. 3 Claims. (Cl. 188—60.)



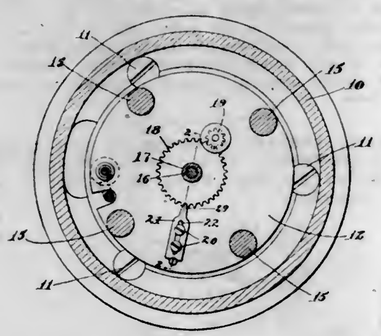
1. An emergency dog for locking railway car wheels comprising a straight body, an integral shank extending at a slight angle from the body and slightly offset with relation thereto to thereby provide a shoulder extending downward from the shank, the shank terminating in a hook, the bill of the hook extending from the body and the space between the shoulder and the bill of the hook being of sufficient depth to permit the hook to be disposed over the flange of the car wheel and extend inward of said flange to thereby permit the end of the body to bear against the edge of the wheel rim opposite the flange.

1,568,524. ADJUSTABLE BRUSH HANDLE. GEORGE NITZ, Omaha, Nebr., assignor to Frank Damato, Omaha, Nebr. Filed June 12, 1923. Serial No. 644,893. 1 Claim. (Cl. 306—17.)



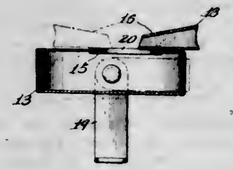
The combination with a relatively long brush head, of an adjustable handle carried thereby, said handle being secured centrally to a transversely disposed shaft, integral toothed discs carried by said shaft, toothed discs carried by the brush head at points spaced from its center, and through which discs the ends of the shaft extend, said toothed discs cooperating to hold the handle at various angles in relation to the brush head and nuts threaded on the outer ends of the shaft and flexible shafts connecting the brush carried discs to the brush, whereby during a handle adjusting operation the brush carried discs will spring outwardly in opposite directions.

1,568,525. FEEDING ATTACHMENT FOR THRASHING MACHINES. FRANK OSMERA, Wauneta, Nebr. Filed Oct. 22, 1924. Serial No. 745,182. 1 claim. (Cl. 198—161.)



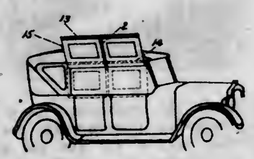
The combination with a thrashing machine having side boards, a conveyor drive shaft extending transversely therethrough, a fixed feeding conveyor, of an auxiliary conveyor above the feeding conveyor and adjustable towards and away from the feeding conveyor, driving connections between the feeding conveyors and the drive shaft, segmentally shaped brackets carried by the auxiliary conveyor, said segmentally shaped brackets engaging curved ends of the side boards concentric with the drive shaft and bolts extending through elongated slots of the segmentally shaped brackets and into the side boards.

1,568,526. RADIATOR. CHARLES WM. OWSTON, Detroit, Mich., assignor to McCord Radiator & Mfg. Co., Detroit, Mich., a Corporation of Maine. Filed July 14, 1924. Serial No. 725,790. 4 Claims. (Cl. 257—125.)



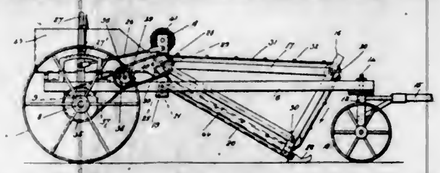
1. In a radiator, the combination of a tank and an overflow tube extending therethrough, the tank having one wall provided with a slit and the metal portions of the wall on opposite sides of the slit being respectively bent inwardly and outwardly from the plane of the wall to conjointly form an opening for receiving said overflow tube, and opposed bearing surfaces for the said tube, the diameter of the opening being substantially equal to the outside diameter of the tube and the bent bearing portions of the metal adjacent the opening extending in parallel planes at an angle inclined to the plane of the wall.

1,568,527. SAFETY-CLUTCH MECHANISM. CHARLES H. PEARSON, Brookline, Mass. Filed Jan. 14, 1925. Serial No. 2,425. 2 Claims. (Cl. 102—36.)



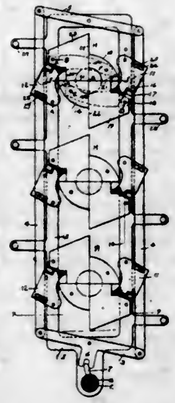
1. In a fuse, the combination of a rotatably mounted member, a gear secured thereto, a pivotally mounted pawl associated therewith and normally preventing rotation thereof, a longitudinally movable plunger associated with the pawl and normally preventing rotation thereof, and means associated with the plunger for permitting rotation of the pawl on the shock of firing only.

1,568,528. WHISTLE. EDWARD R. PETRIE, New York, N. Y. Filed May 24, 1924. Serial No. 715,520. 4 Claims. (Cl. 46—46.)



4. A whistle device of the class described comprising a hollow apertured body, and a mouthpiece part eccentrically mounted on said body and directed to said aperture, and a supporting ring pivotally mounted in connection with the opposite sides of said body and adapted when in inoperative position to extend about the periphery of said body.

1,568,529. AUTOMOBILE CURTAIN. BERNARD L. POLOSKIE, Lancaster, Pa. Filed Apr. 28, 1924. Serial No. 709,499. 5 Claims. (Cl. 296—138.)

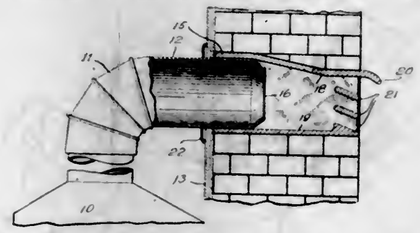


1. In a curtain structure, the combination of an anchor block, a vertical member hinged to said anchor block, a contractile spring, one end thereof being connected to said anchor block and the other end to said vertical member, and a roller between said block and said spring, said roller being free to roll on said anchor block and arranged to produce a tension in said spring.

1,568,530. HARVESTER FOR COTTON BOLLS. JORDAN L. PRICHARD, Canyon, Tex. Filed Apr. 8, 1924. Serial No. 703,882. 4 Claims. (Cl. 56—34.)

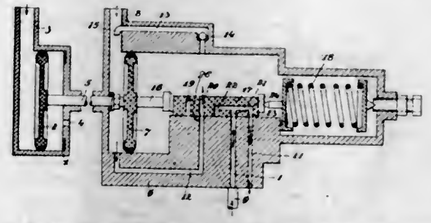
1. In a cotton harvester, a wheeled main frame provided with a pivot, uprights having their lower parts mounted on the said pivot, a triangular frame having its rear angle portion rigidly secured to the said uprights above their pivot, a series of teeth for stripping the cotton from the plants having their rear end portions rigidly secured to the lower parts of the uprights and projecting downwardly and forwardly, the lower side of the said triangular frame being arranged substantially parallel to the said teeth, a driving shaft journaled in the said uprights above their pivot, driving wheels secured on the said shaft, guide wheels journaled in the triangular frame at its front and lower angles, an endless conveyer carried by the said driving wheels and guide wheels and having its lower stretch arranged substantially parallel to the said teeth, and means which normally prevent the said uprights, triangular frame, teeth and conveyer from tilting on the said pivot.

1,568,531. CUT-OFF. ANITA S. REYNOLDS, Greenwich, Conn. Filed June 27, 1923. Serial No. 648,106. 26 Claims. (Cl. 49—14.)



25. Apparatus of the character described, comprising a bottomless mold, a device adapted to form the bottom of the mold, said device comprising a plurality of flat bodies each having right angle edges, each of said bodies engaging two of said other bodies on their right angle edges, and means for sliding all of the bodies toward the apex of each of them, said bodies being in close contact during the sliding operation, the engaging edges of the bodies being beveled.

1,568,532. HOOD FOR COOKING RANGES. BENJAMIN RIESNER, New York, N. Y. Filed May 31, 1924. Serial No. 716,924. 1 Claim. (Cl. 98—27.)

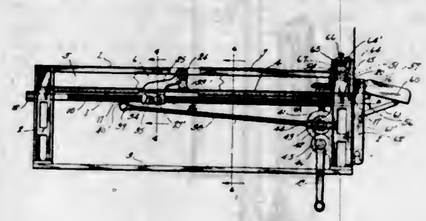


A ventilator comprising a metal box adapted to be positioned in a building wall in brick supporting relation thereto, the top wall of said box being inclined, the side walls of said box being outwardly flared to provide

a chamber therein, one end of said box having a constricted neck portion, a ventilator pipe extending through said neck portion to the interior of said box, the opposite end of said box being open at the outer face of the building wall and provided with a series of down-

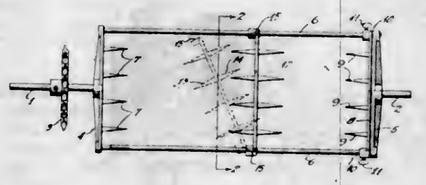
wardly inclined vertically spaced baffles extending between the side walls thereof, the lowermost baffle being formed integrally on the box bottom to provide a guard ridge, and a water shed member formed on the top of said box and extending outwardly therefrom over the open end thereof.

1,568,533. AIR-PRESSURE RAILWAY BRAKE. JOHANN RIHOSEK, Vienna, and RICHARD LUDWIG LEUCHTER, Weidlingau-Hadersdorf, Austria, assignors to the Firm Gebrüder Hardy, Maschinenfabrik und Giesserei A. G., Vienna, Austria. Filed May 20, 1925. Serial No. 31,665. 12 Claims. (Cl. 303—74.)



1. In a single chamber air pressure valve the combination of a train pipe, a casing, a piston working in such casing, a permanent connection from the train pipe to the casing, whereby one side of the piston is constantly under the action of the train pipe air pressure, means permanently acting with a substantially constant force on such piston in opposition to the train pipe air pressure, a brake control valve and a controlling element operatively connected to the said piston and adapted to control the connection between the escape side of the brake control valve and the atmosphere and simultaneously a connection between the two sides of the said piston.

1,568,534. ICE-CREAM CUTTER. WILLIAM H. RUTTLE, Seattle, Wash. Filed Nov. 14, 1922. Serial No. 600,940. 2 Claims. (Cl. 107—21.)

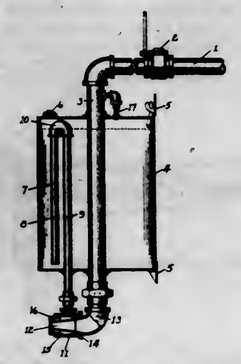


1. An ice cream cutter of the class described, comprising a frame including a guideway wherein ice cream bars may be advanced, a cutter frame removably fixed at one end of the guideway having blades therein against which the brick may be pressed to be divided lengthwise into strips, a blade rotatably supported and adapted to cut the strips transversely to form bars of equal size, a spreader plate mounted to spread the bars apart as they are advanced against it, a reciprocally mounted ratchet bar, a presser head for advancing the brick having ratchet connections with the bar whereby the brick will be advanced with each forward movement of the ratchet bar, means for reciprocating the bar and means synchronized therewith for revolving the transverse cutting blade.

2. In a machine of the class described, comprising a frame having a guideway therein for an ice cream brick, blades fixed at one end of the guideway against which the brick may be pressed to divide it into longitudinal strips and a revolving blade for cutting the strips transversely to form bars, of advancing means comprising a reciprocally movable ratchet bar, a presser head for the brick having a bracket slidable on the bar, a ratchet

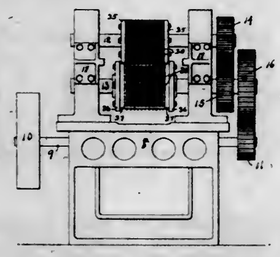
pin mounted in the bracket to engage the teeth of the bar to effect advancement of the brick with each advancing movement of the bar, a crank shaft, a wheel on the shaft, a connecting rod fixed at one end to the ratchet bar and at its other end eccentrically to the wheel, and means connected with the crank shaft for actuating the revolubly mounted blade so that it will sever the brick between its advancing movements.

1,568,535. ADJUSTABLE SPIT. MAX SCHEY, Brooklyn, N. Y. Filed Jan. 13, 1925. Serial No. 2,068. 1 Claim. (Cl. 53—5.)



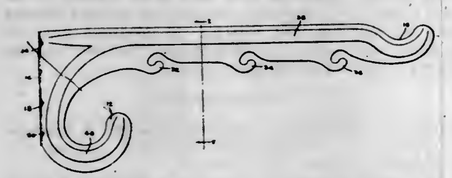
In a spit, a frame comprising a pair of brackets and parallel rods rigidly secured at their opposite ends to the brackets for spacing said brackets apart, in combination with trunnions associated with the brackets for mounting the spit for rotation, a plurality of prongs rigid with and carried by one of the brackets and projecting in the direction of the other, a follower mounted to slide on the rods and having prongs extending in the direction of the pronged bracket, whereby a roast may be gripped between the pronged bracket and the follower, a partition slidable on the rods between the follower and the pronged bracket and provided with rigid prongs projecting from both sides thereof to enable roasts to be supported between the pronged bracket and the partition and between the partition and the follower, and means for securing the follower against sliding when the roasts are in place.

1,568,536. FIRE EXTINGUISHER. SAMUEL S. SCHWAB, Toledo, Ohio. Filed Nov. 14, 1923. Serial No. 674,613. 1 Claim. (Cl. 169—15.)



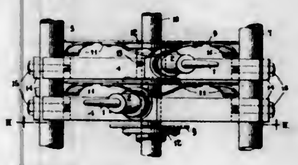
In a fire extinguishing apparatus, a container, a steam pipe connected with a source of supply of steam and extending through the container, a siphon located in the container extending through the bottom of the container, one end of the siphon terminating near the bottom of the container and within the container, and the other end terminating near the bottom of the container and on the outside of the container, a nozzle connected to said steam pipe, a shell surrounding the said nozzle, the

siphon connected to the said shell, the said shell having a ring forming an annular opening about the end of the nozzle for the said shell, the said ring extending a short



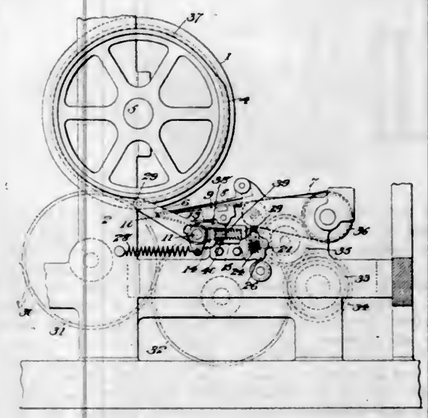
distance beyond the said nozzle and forming a spraying and suction means for drawing the material from the container, means for connecting the steam pipe with the top of the container.

1,568,537. RIBBING AND PERFORATING MACHINE. HENRY COLLIER SMITH, St. Marys, Ohio, assignor to The Quickwork Company, St. Marys, Ohio, a Corporation of Ohio. Filed May 16, 1924. Serial No. 713,722. 8 Claims. (Cl. 164—6.6.)



8. In a perforating and ribbing machine, a pair of rolls embodying ribbing and perforating dies alternating around the rolls and adapted to simultaneously rib and perforate a sheet of metal passing through between the rolls.

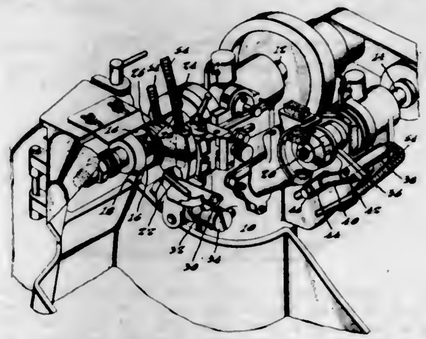
1,568,538. GARMENT-HANGER SUPPORT. MATTIE L. ARGO, Minneapolis, Minn. Filed Sept. 28, 1923. Serial No. 665,453. 2 Claims. (Cl. 45—13.)



1. A garment hanger support consisting of a single piece of sheet metal having a horizontal member provided with a depression at the front of its upper edge and provided on its lower edge with a number of hooks, a large hook formed by a downward extension at the rear of said horizontal member and means integral with the rear of said member whereby the device may be attached to a wall or similar support.

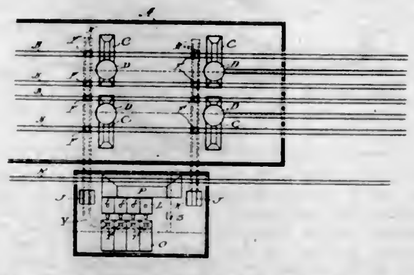
1,568,539. SPINDLE-DRIVING MECHANISM. EUGENE ATWOOD, Stonington, Conn., assignor to Atwood Machine Company, Stonington, Conn., a Corporation of New Jersey. Filed Apr. 6, 1922. Serial No. 550,148. 6 Claims. (Cl. 118—46.)

1. A rotary spindle driving disc, a spindle disposed radially with respect to the axis of rotation of said disc, the face of the disc being provided with one or more sectional surfaces positioned to frictionally engage the spindle whorl.



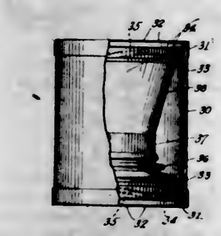
1,568,540. SHEET-FEED GUIDE MECHANISM. HOWARD M. BARBER, Stonington, Conn., assignor to C. B. Cottrell & Sons Company, Stonington, Conn., a Corporation of Delaware. Filed Jan. 17, 1924. Serial No. 686,796. 6 Claims. (Cl. 271—53.)

1. A sheet taking device and a sheet feed guide mechanism therefor comprising, a rock shaft, sheet stops carried thereby, and means for adjusting either one or both ends of the shaft to bring the shaft into parallelism and arranged to coact to bring the sheet stops into proper register with the sheet taking device.



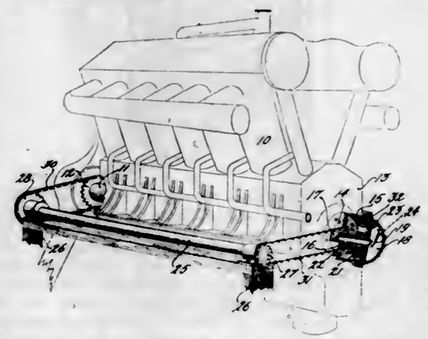
1,568,541. APPARATUS FOR OPERATING ON RUBBER ARTICLES. GEORGE L. BEAN, Quincy, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Jan. 19, 1925. Serial No. 3,420. 12 Claims. (Cl. 12—68.)

1. A machine comprising an instrumentality for operating upon an article of work made of, or including an element made of, rubber or a composition or substance having a frictional characteristic similar to that of rubber, a stationary metallic guiding member arranged to engage said frictional element to control the course of movement of the work while said instrumentality is operating thereon, and heating means arranged



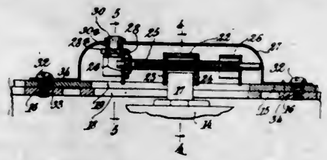
in thermal relation to said stationary guiding element to reduce the frictional resistance between the latter and said frictional element.

1,568,542. LOCOMOTIVE TERMINAL AND METHOD OF SALVAGING FIRE. JOHN J. BERNET, Cleveland, Ohio. Filed Mar. 11, 1925. Serial No. 14,625. 6 Claims. (Cl. 104—51.)



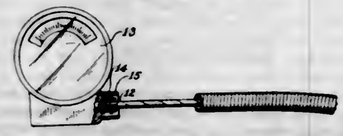
4. The improvement in the art of cleaning locomotives, which consists in salvaging the burning fuel from the fuel bed of a locomotive by discharging the fire box of the locomotive and transferring it while still in a state of ignition to another furnace.

1,568,543. SOUND-PRODUCING DEVICE. ERNEST BOCCHINO, Passaic, N. J., assignor to Up To Date Manufacturing Co., Inc., Jersey City, N. J. Filed Jan. 24, 1925. Serial No. 4,420. 3 Claims. (Cl. 46—46.)



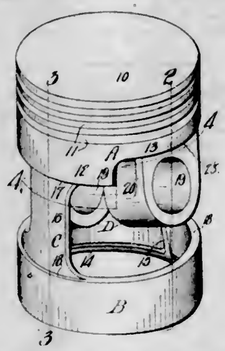
1. A sound producing device comprising a flat support band, a metallic disc carried interiorly of said band, said disc having a raised conic flange extending over the edge of said band and shaped to produce an angularly disposed socket near its center, a cone composed of air tight flexible fabric secured at its larger end between the flange of said disc and said band, a weighted head secured in the smaller end of said cone, and sound producing means carried in the socket of said disc, said means being rendered tonic by the passage of air from said cone.

1,568,544. TORSION METER. ROLAND CHILTON and FRANK A. HAYES, Keyport, N. J., assignors to Aeromarine Plane & Motor Company, a Corporation of New York. Filed Sept. 5, 1923. Serial No. 661,085. 13 Claims. (Cl. 265—4.)



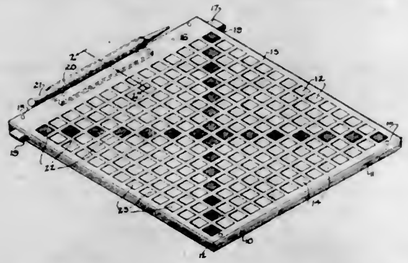
1. In apparatus of the class described, a casing, a pair of members mounted for rotation within the casing and for relative movement to each other, an illuminant within the casing, and means on said members for producing a spot of light for rotation with said members and for moving said spot radially in sympathy with relative motion between the members.

1,568,545. REGISTER CONSTANT-LOCK-OPERATING ATTACHMENT. LEONARD J. COLGAN, New York, N. Y., assignor to Tuttle & Bailey Manufacturing Company, Brooklyn, N. Y., a Corporation of New York. Filed Apr. 12, 1924. Serial No. 706,220. 7 Claims. (Cl. 98—49.)



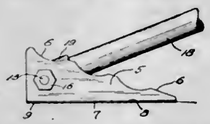
1. The combination with a register of the non-lock type, comprising valves and valve manipulating means, of an operating attachment of the constant-lock type, said attachment comprising a key-operated extension of said manipulating means and being readily attachable to and detachable from said register as a unit.

1,568,546. FLEXIBLE HIDE SHAFTING. HOWARD A. COOK, Southfield, Mass. Filed Nov. 8, 1924. Serial No. 748,600. 10 Claims. (Cl. 64—30.)



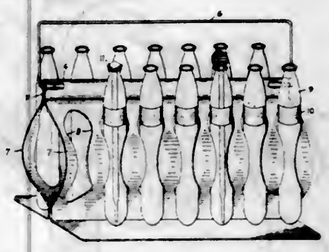
3. In a flexible shafting for transmitting rotary power, a casing, and a core within said casing, said core consisting of rawhide.

1,568,547. PISTON. WILLIAM R. DAY, Cleveland, Ohio, Filed Dec. 13, 1924. Serial No. 755,609. 3 Claims. (Cl. 74—108.)



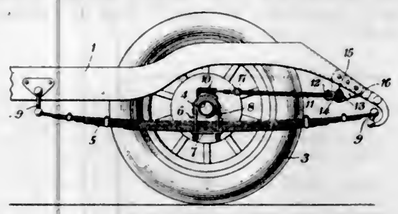
1. A piston comprising, an upper bearing portion, a lower bearing portion spaced from said upper bearing portion, two narrow portions connecting said upper and lower bearing portions, piston-pin bosses integral with said upper bearing portion, and said bosses free from said lower bearing portion to prevent the distortion of said lower bearing portion when said bosses are distorted by a piston-pin extending through said bosses out of alignment with elements co-operating with the piston-pin.

1,568,548. GAME CARD. LEON EDELSON, Baltimore, Md. Filed Feb. 26, 1925. Serial No. 11,820. 13 Claims. (Cl. 35—10.)



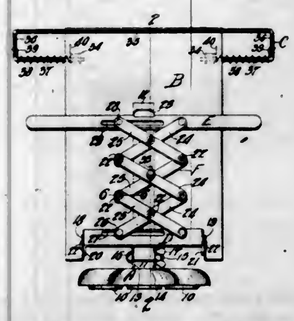
1. In a device of the class described, the combination with a relatively soft plastic base and means superimposed upon said base whereby upon the application of pressure thereto by an instrument inherently incapable of producing a mark, a mark will be caused to appear thereon in the zone of adherence of said means to said base, of a guide plate provided with a plurality of apertures.

1,568,549. BERMUDA-GRASS CUTTER. LOUIS FEY, Long Beach, Calif. Filed Jan. 26, 1925. Serial No. 4,821. 2 Claims. (Cl. 97—64.)



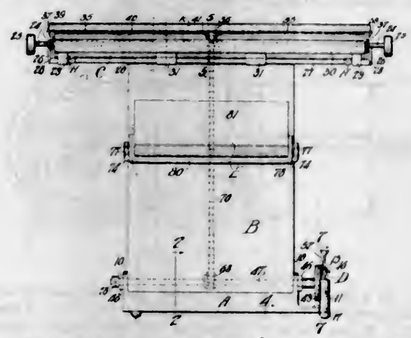
1. A device of the character described comprising; a plurality of longitudinally geniculate cutter plates forming triangular horizontal and vertical blades with rearwardly convergent cutting edges; a transverse bar upon which said cutters are fixed in spaced alignment; and an angularly adjustable handle centrally engaging said bar.

1,568,550. HOLDER. OSIAS M. GOTTESMAN and IRVIN ROSENFELD, New York, N. Y., assignors to Harvey Instrument Co., Inc., a Corporation of New York. Filed Oct. 3, 1922. Serial No. 592,018. 4 Claims. (Cl. 224—48.)



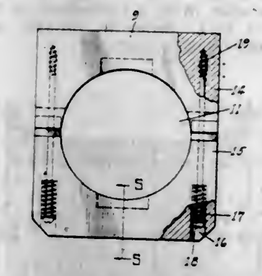
1. A carrying rack of the class described comprising a sheet of metal bent at the center providing support for a handle, then bent outwardly and oppositely and provided with openings, then straight outwardly and oppositely at the base.

1,568,551. SPRING SYSTEM FOR VEHICLES. WILLIAM E. GOYNE, Brooklyn, N. Y. Filed Feb. 10, 1921. Serial No. 443,957. 14 Claims. (Cl. 267—11.)



1. In a vehicle having a pair of wheels, an axle therefor and a chassis supported upon the axle by main springs, the combination of a plurality of resilient members, means independent of the main springs and movably mounted in the chassis to which one end of each of the members is connected and means associated with the free ends of the members and a part of the vehicle for causing resistance to flexure of the members when there is a substantially equal change in the normal relation between each wheel and the chassis of the vehicle.

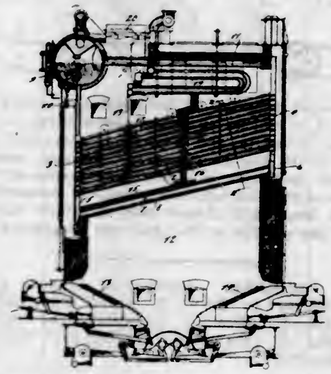
1,568,552. COPYHOLDER APPARATUS. PETER GRABLER, Rocky River, Ohio. Filed June 21, 1924. Serial No. 721,414. 6 Claims. (Cl. 120—33.)



1. A copy holder apparatus comprising, a base, a copy support plate mounted on said base and provided with a pair of ears projecting forwardly from this plate, an indicator means having a bracket mounted between said pair of ears and swivable thereon and in frictional engagement therewith to permit this bracket to be swiveled to desired positions and to remain in these desired positions.

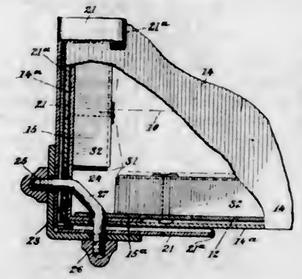
1,568,553. COPYHOLDER APPARATUS. PETER GRABLER, Rocky River, Ohio. Filed Oct. 17, 1924. Serial No. 744,176. 20 Claims. (Cl. 120—32.)

1. An apparatus of the character described comprising, a plate for supporting a copy, a roller shaft journaled at one end of said plate, rollers secured to said roller shaft to move the copy, a space between certain of said rollers, and means for rotating said roller shaft confined within said space between the rollers and back of said plate.



1,568,554. DUST GUARD. FRANK B. HARRISON, Toledo, Ohio. Filed Feb. 8, 1924. Serial No. 691,828. 1 Claim. (Cl. 286—6.)

A dust guard consisting of two wooden parts, each having approximately a semi-circular opening, a pair of bolts located within said parts, threaded end portions on said bolts having a diameter larger than the shank of the bolt, the bolt threaded into the upper of said parts, a spring located intermediate the head of the bolt and the lower of said parts for elastically drawing the parts together, the upper part having grooves, tongues on the lower part extending into said grooves, and a metallic bearing member in each part located in diametrically opposite relation, said members being inserted in said parts with the outer surfaces substantially flush with the edges of said openings.



1,568,555. WATER-TUBE BOILER. ISAAC HARTER, JR., Dongan Hills, N. Y., assignor to The Babcock & Wilcox Company, Bayonne, N. J., a Corporation of New Jersey. Filed May 29, 1918, Serial No. 237,234. Renewed Dec. 31, 1923. Serial No. 594,201. 7 Claims. (Cl. 122—299.)

1. The combination with a water-tube boiler having a main bank of horizontally extending inclined water tubes connecting water compartments at the front and rear, the rows of water tubes in said bank being staggered relatively to each other, of a plurality of rows of water tubes below said bank and exposed to the radiant heat of the furnace for the major portion of their length, the tubes in the lowermost row being placed under the corresponding tubes of the next row above them, a roof baffle extending longitudinally of the water tubes above the lower water tubes and having at its inner end portion an upwardly extending baffle arranged to give the gases an upward transverse pass across the water

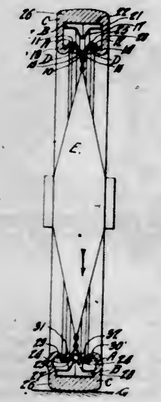
tubes of the main bank, the spacing, diameters and arrangement of the tubes being such as to give less resistance to the flow of the gases per unit of length of pass along the tubes in passing from the furnace to above the lowermost lines of tubes than the resistance to the flow of the gases in the first upward pass among the tubes of the main bank, whereby slagging of the lower water tubes is reduced, and a furnace below the lower superposed water tubes having firing apparatus of the type which causes slag particles to rise with the gases entering the water tubes.

1,568,556. BOILER JACKET. FRANK B. HOWELL, Buffalo, N. Y., assignor to American Radiator Company, Chicago, Ill., a Corporation of New Jersey. Filed Jan. 17, 1921. Serial No. 438,054. 3 Claims. (Cl. 122—494.)

3. A boiler jacket comprising a sheet metal top member and side members, insulating members substantially co-extensive in outline with said jacket members and secured thereto, flanges on said side members overlapping the edges of the adjacent side members, and flanges extending from said top member and overlapping the upper edges of said side members, angular edge members each embracing the contiguous edges of said side members, angular edge members embracing the edges of the contiguous top and side members, and securing members each having one end extending through one side member of said jacket and one part of said angular edge mem-

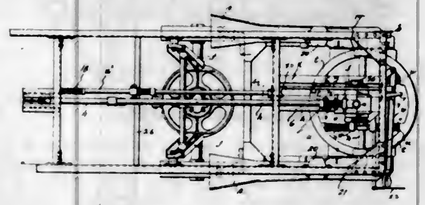
ber, and its other end extending through one of the adjacent side members, the other part of said angular edge member and the flange of one of said contiguous side members, substantially as specified.

1,568,557. BUMPER. HERBERT S. JANDUS, Detroit, Mich., assignor to The C. G. Spring & Bumper Company, Detroit, Mich., a Corporation of Delaware. Filed Mar. 31, 1924. Serial No. 703,026. 10 Claims. (Cl. 293—55.)



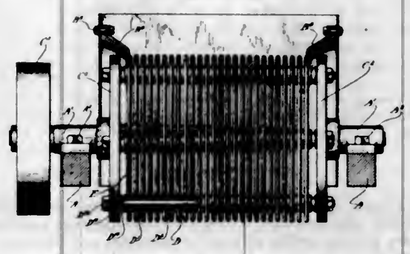
1. A bumper comprising a bar adapted to extend across the rear of a vehicle, an upper and a lower bar each secured at an end to, and respectively above and below, each end of the first-mentioned bar, the said upper and lower bars projecting inwardly and rearwardly from such ends of the first bar, and a resilient connection between the inner ends of each pair of second and third bars and the portion of the first bar adjacent thereto.

1,568,558. BUMPER. HERBERT S. JANDUS, Detroit, Mich., assignor to The C. G. Spring & Bumper Company, Detroit, Mich., a Corporation of Delaware. Filed Mar. 31, 1924. Serial No. 703,027. 11 Claims. (Cl. 293—55.)



1. A bumper comprising a bar adapted to extend across the rear of the vehicle, resilient loop members connected to the ends of said bar, a bar connected to the rear end of each of said loop members and extending inwardly therefrom, and means connecting the inner ends of the last-mentioned bars to the first-mentioned bar at points spaced from the center of the first mentioned bar.

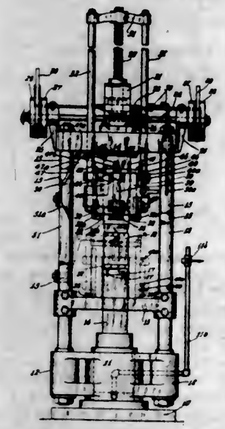
1,568,559. TIRE. WILLIAM E. KELLY, Cleveland, Ohio. Filed Feb. 26, 1923. Serial No. 621,482. 18 Claims. (Cl. 152—8.)



2. In a resilient tire, the combination of, an outer rim provided with an inwardly extending V-shaped flange, an inner rim provided with a V-shaped groove adapted to said flange, a casing over both of said rims, said flange adapted to enter said groove to limit and to gradually decrease the sidewise movement of said outer rim in relation to said inner rim as the load on said tire increases, and the sides of said flange adapted to seat themselves upon the sides of said groove when said tire is overloaded.

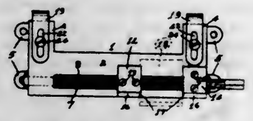
1,568,560. SEMITRAILER. CHARLES H. LAND, Jr., Detroit, Mich. Filed Feb. 8, 1924. Serial No. 691,342. 34 Claims. (Cl. 280—33.1.)

1. In a truck and a semi-trailer, the combination of a truck provided with inclined tracks at the back, a semi-trailer frame, rollers supported on the trailer frame adapted to run up the tracks, lock bars on the truck having rollers at the ends, and U brackets depending from the trailer frame arranged to engage the rollers on the ends of the locking bars to slightly raise the trailer with respect to the truck when the truck backs clear into the trailer for the purpose of causing the rollers to clear the track.



1,568,561. ROTARY GRIZZLY. HERMAN LITTLEWOOD, Nacozari, Mexico, assignor to Smith Engineering Works, Milwaukee, Wis., a Corporation of Wisconsin. Filed Dec. 22, 1924. Serial No. 757,323. 12 Claims. (Cl. 209—285.)

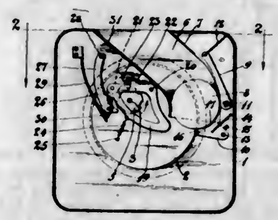
1. In a rotary grizzly, a shaft and means for rotating it, a drum mounted upon said shaft, comprising a plurality of drum ends spaced therealong and rods connecting said drum ends, one of said drum ends being keyed to said shaft at a point off-set from the point at which the other is keyed thereto, the connecting rods being thereby distorted from parallelism with the axis of the drum.



1,568,562. METHOD AND APPARATUS FOR SHAPING PLASTIC MATERIAL. FRANK J. MACDONALD, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Mar. 5, 1924. Serial No. 697,009. 46 Claims. (Cl. 18—55.)

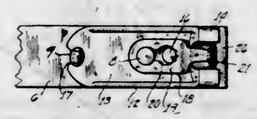
1. The method of shaping an article of plastic material which comprises so pressing a mass of stock against a shaping member as to cause said stock to extend itself as a relatively thin and extensive layer lying against and substantially within the limits of said shaping member while causing another shaping member to move in the same direction with said layer in confining relation

thereto and at a speed such as to lessen frictional resistance of the stock as compared with the action of a one-piece plunger mold, as said layer is so extended.



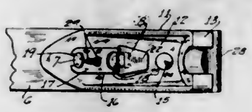
1,568,563. VISE. ALYS MADER, Pittsburgh, Pa. Filed Feb. 26, 1925. Serial No. 11,727. 1 Claim. (Cl. 81—33.)

In a scraper blade vise, the combination of a sheet metal body portion including a pair of integrally formed depending end walls, said body portion provided with a rearwardly sloping top, the latter being formed with a longitudinally extending slot disposed adjacent to the front thereof, an adjustment screw rotatably mounted in said end walls and disposed parallel to and directly beneath said slot, a guide block threadedly engaged by said screw and provided with a neck extending upwardly through said slot, a shiftable jaw detachably secured to said neck and mounted on said top, a jaw fixedly mounted on said top, said jaws disposed at an inclination on said sloped top and provided with beveled forward ends, the opposed side edges of said jaws being formed with longitudinally extending parallel disposed grooves, said top provided at each end with a rearwardly disposed extension, and means adjustably connected with said extensions for attaching said body portion to a support, substantially as described and for the purpose set forth.



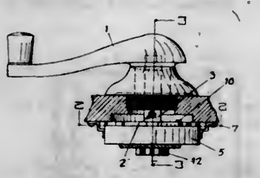
1,568,564. COIN-CONTROLLED CLOCK. CHARLES MALOUF and NICHOLAS MALOUF, Chicago, Ill. Filed Nov. 25, 1921. Serial No. 517,575. 1 Claim. (Cl. 194—61.)

The combination with a clock having a winding stem, said stem rotating in a reverse direction to said winding direction when said clock is unwinding, of a toothed wheel carried by said stem, a casing, a sector pivotally carried by said casing, a pawl carried by said sector and normally engaging said wheel for preventing said steam from rotating to wind said clock, a coin chute carried by said casing, a movable stop member for stopping a coin, a manually operated arm adapted to move said coin into engagement with said sector, whereby said sector is swung and releases said pawl from said wheel, a second pawl adapted to lock said sector after said



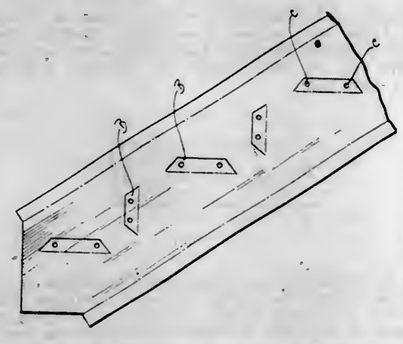
sector has been swung by the coin, and a second toothed wheel carried by said second named pawl and being adapted to disengage said second named pawl from said sector when said stem is rotating in the reverse direction.

1,568,565. TRANSMISSION BAND. FRED A. MILLER, St. Louis, Mo., assignor of one-half to David E. Parks and one-half to Walter T. Bohne, both of St. Louis, Mo. Filed July 28, 1924. Serial No. 728,606. 3 Claims. (Cl. 188—249.)



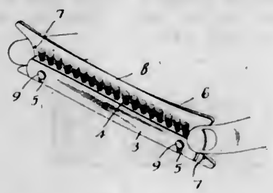
2. An automobile transmission-band comprising, in combination, a split ring, an ear having an apertured shank arcuated to conform to the curvature of the ring and adapted at its shank to removably fit upon the ring, a stud upon the band projecting through the aperture of the shank, and a locking-member for removably securing the ear to and upon the band, said locking member being adapted for slidable engagement over said shank with said stud and having a yielding extension adapted for sprung engagement with the ear.

1,568,566. TRANSMISSION BAND. FRED A. MILLER, St. Louis, Mo., assignor of one-half to David E. Parks and one-half to Walter T. Bohne, both of St. Louis, Mo. Filed July 28, 1924. Serial No. 728,607. 7 Claims. (Cl. 188—249.)



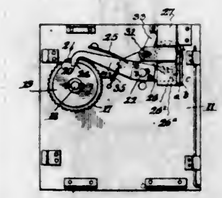
5. An automobile transmission-band comprising, in combination, a split ring, an ear having an apertured shank arcuated to conform to the curvature of the ring and adapted at its shank to removably fit upon the ring, an annularly grooved stud upon the band projecting through the aperture of the shank, and a locking-member adapted over the shank both for releasable engagement with the stud at its groove and sprung hook-engagement with the stud at its head for detachably securing the ear to and upon the band.

1,568,567. CLUTCH DEVICE. HUBERT A. MYERS, Toledo, Ohio. Filed June 17, 1925. Serial No. 37,645. 5 Claims. (Cl. 192—8.)



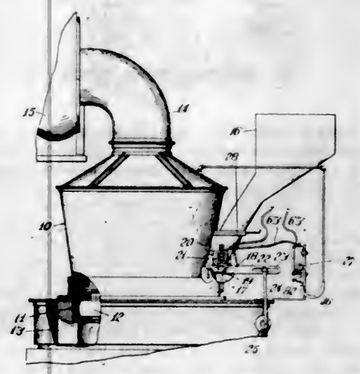
1. In a clutch device, a rotative cam, a member having a cylindrical surface, a rotative member connected to the cam for limited movements relative to the cam, a strip located between the cam and the cylindrical surface and having a re-entrant part engaged by the cam for forcing the outermost part of the strip against the cylindrical surface.

1,568,568. STAIR CONSTRUCTION. HARRY NAGIN, Brooklyn, N. Y. Filed Dec. 4, 1924. Serial No. 753,769. 3 Claims. (Cl. 189—43.)



1. A stair girder made of a single sheet of metal, having trapezoidal members integrally formed therein at equal intervals to serve as supports for a series of risers and treads, said trapezoidal members being successively at right angles to each other.

1,568,569. NAILBRUSH. ALEXANDER M. PASNIK, Norwich, Conn. Filed Mar. 7, 1925. Serial No. 13,672. 1 Claim. (Cl. 15—167.)

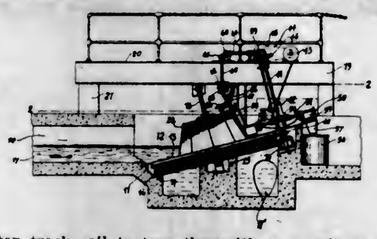


A nail-brush comprising a guide-bar having spaced headed studs projecting from one face thereof, a brush member comprising a thin back having bristles mounted on one edge thereof, said back being provided with a plurality of slots having their entrances for the studs disposed oppositely from the bristles, said back being arranged flat against said guide-bar with the bristles terminating adjacent the edge of the guide-bar and with the lugs frictionally engaged in said slots for detachably retaining the brush member in operative relation to the guide-bar.

1,568,570. COIN-CONTROLLED MECHANISM. RAYMOND H. PEASE, Chicago, Ill., assignor to Charles Malouf, Chicago, Ill. Filed Aug. 20, 1921. Serial No. 493,895. 1 Claim. (Cl. 194—61.)

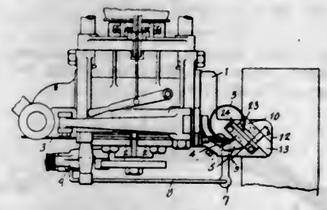
The combination with a casing having a removable closure and a clock having a winding arbor provided with a pinion, of a coin controlled locking and releasing mechanism including a locking gear carried bodily by the closure and operably connected to the pinion, a locking disk carried by the gear, a locking detent carried by the closure and having its free end engaging the locking disk, a coin receiving finger carried by the detent, a coin chute encasing said finger, and a manually operated coin engaging finger adapted to be projected into the chute to engage a coin when held against egress by the first finger to form a stop.

1,568,571. FEED REGULATOR. FRED I. RAYMOND, River Forest, Ill., assignor to The Raymond Brothers Impact Pulverizer Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 24, 1925. Serial No. 25,561. 10 Claims. (Cl. 83—44.)



1. In combination with a mill, means for feeding material into the mill, and means for exhausting air and pulverized material from the mill; a feed regulating mechanism comprising a pneumatic device, an electrically actuated device for controlling the operation of the feeding means, and a circuit making and breaking device for said electrically atuated device comprising a vessel having a pair of spaced contacts and containing a conducting fluid, and means operated by said pneumatic device for imparting rocking movements to said vessel.

1,568,572. APPARATUS FOR SCREENING SEWAGE AND OTHER MIXTURES OF LIQUIDS AND SOLIDS. DAVID J. SHAW, New York, N. Y. Filed June 13, 1923. Serial No. 645,095. 9 Claims. (Cl. 210—196.)



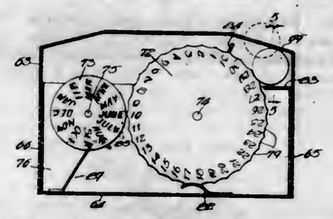
1. In sewage treatment apparatus, the combination with a basin, formed with an inclined interior support,

of a pair of circular track rails having antifriction rollers therebetween, the lower one of said rails being arranged upon said support, a screen structure supported upon

the top track rail to turn therewith as a unitary structure, and means for imparting rotary movement to said screen structure.

1,568,573. WIRE-SPRING-MAKING MACHINE. STANLEY G. SMITH, Detroit, Mich., assignor to L. A. Young Industries, Inc., Detroit, Mich. Filed Mar. 14, 1925. Serial No. 15,564. 5 Claims. (Cl. 140—78.)

1. In a structure of the class described, the combination of a wire feed means, a coiler block operatively associated therewith, a pitch block operatively associated with said coiler block, means for actuating said pitch block comprising a cam, a cutter operatively mounted on said pitch block, and a coacting shear bar, said cam being provided with a lift adapted to actuate said cutter to sever the formed spring.

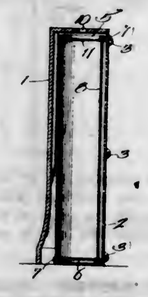


1,568,574. BANK. ZENO M. SPEER, Wauwatosa, Wis., assignor, by direct and mesne assignments, to Speer-Rosefelt Calendar Bank, Incorporated, Milwaukee, Wis., a Corporation of Wisconsin. Filed Dec. 24, 1919. Serial No. 347,061. 2 Claims. (Cl. 194—84.)

1. In a coin controlled transmission, in combination, coaxial driving and driven members axially separated and slotted to receive a coin for bridging the separation and coupling said members together, the periphery of one of said members being cut in to expose part of the coin when in coupling position, and a resilient member rubbing on the periphery of said cut in member and positioned to register with the cut in portion thereof and follow into the same to engage the coin and limit rotation of the parts.

1,568,575. BANK. ZENO M. SPEER, Wauwatosa, Wis., assignor to Speer-Rosefelt Calendar Bank, Incorporated, Milwaukee, Wis., a Corporation of Wisconsin. Filed Aug. 23, 1920. Serial No. 405,291. 1 Claim. (Cl. 194—94.)

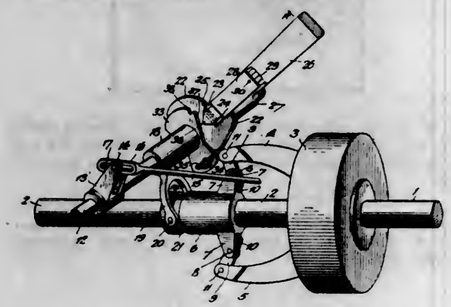
In a device of the class described, in combination, a casing, a wall subdividing a relatively narrow compartment along one face, a slot in the casing aligned with said compartment, a registering wheel in said compartment positioned for direct engagement with the edge of an inserted coin, a second slot opening over the other portion of the casing, resilient means engaging a coin inserted through said first slot and tensioned by insertion thereof for deflecting said coin laterally into the portion



of the casing under said second slot, and a biasing spring for said registering wheel whereby the load on the coin is suddenly released to permit said deflecting means to act.

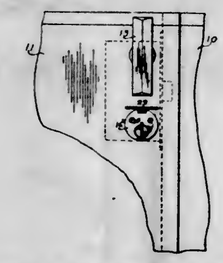
1,568,576. GAME APPARATUS. EARLE B. STOUT, Gary, Ind. Filed Feb. 10, 1925. Serial No. 8,248. 6 Claims. (Cl. 35—2.)

1. In a game apparatus having a plurality of consecutively numbered blocks adapted to be arranged in a plurality of vertical and horizontal layers to form a cube; a construction card having divisions thereon corresponding in number with the number of blocks in a layer of said cube; said card having indicia in each division, and having a vertical row of openings opposite each horizontal row of divisions, and having a horizontal row of openings opposite each vertical row of divisions; a slide movably mounted behind the vertical row of openings; and a slide movably mounted behind the horizontal row of openings; each slide bearing indicia thereon adapted to be displayed through its related openings.



1,568,577. SAVINGS BANK. CHARLES J. SYKES, Chicago, Ill. Filed Nov. 24, 1924. Serial No. 751,794. 8 Claims. (Cl. 232—4.)

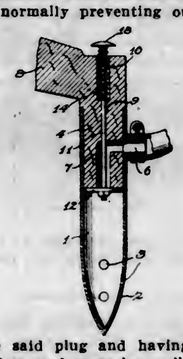
1. In a savings bank, the combination with a container having a coin slot; of a coin receiver removably received within said container and having a coin slot that is in register with the aforesaid coin slot when the receiver is within the container, one of the aforesaid elements having a spring wall portion that presses upon the other



element to promote the assembly of both elements; and a tongue upon one of the aforesaid elements engaging the other element to further hold said elements in assembly.

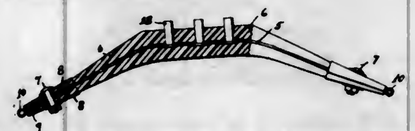
1,568,578. REVERSE GEAR AND CLUTCH OPERATING MECHANISM. WALTER L. WEEKS, Paterson, N. J., assignor to Wright Aeronautical Corporation, a Corporation of New York. Filed May 6, 1925. Serial No. 28,364. 24 Claims. (Cl. 74—39.)

1. In a reverse gear and clutch device, an oscillating element connected to and operating said clutch device and having a notch therein, a second element for controlling said reverse gear, a common operating element oscillatable about the axis of oscillation of said first element and having a latch engageable with said notch, whereby said first element and common element may be coupled for concomitant oscillation or uncoupled, a relatively stationary cam disposed in the path of travel of said latch for disengaging the latch from said first element when said common element is shifted in an unclutching direction beyond a desired extent, said second element having an abutment in the path of and engaged by said common element when the latter is moved further in an unclutching direction after being uncoupled from said first element, whereby said second element may be operated independently of the first element.



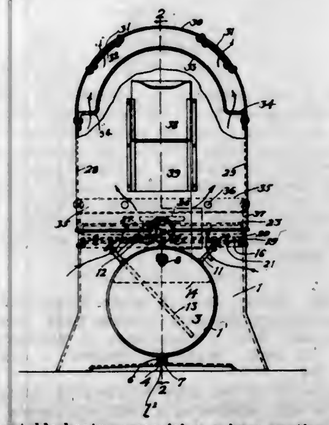
1,568,579. LOCK. VICTOR H. WHITING, New Haven, Conn., assignor to Sargent & Company, New Haven, Conn. Filed June 20, 1923. Serial No. 646,581. 13 Claims. (Cl. 70—46.)

1. A cylinder lock adapted to be mounted in a door, said lock having a case provided with a recess, and a member inserted through the edge of the door and entering said recess to secure the lock in position.



1,568,580. PLANT SETTER. SAMUEL P. WRIGHT, Franklin, Ky. Filed July 21, 1924. Serial No. 727,275. 2 Claims. (Cl. 47—49.)

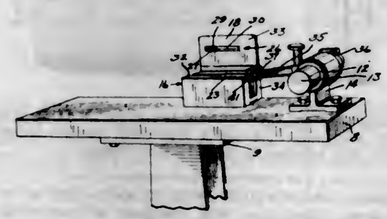
1. An implement for forming plant-receiving openings and supplying moisture thereto, the same comprising a tubular body pointed at its lower end and having discharge openings in the sides of the point, and having a lateral inlet in a side near its upper end, a plug fitted within the upper portion of the body and having a passage in communication with the said inlet, a valve within the body and normally preventing outflow through the



passage of the said plug and having its stem passing through the plug, and a spring coiled about the stem of the valve and seated within the plug and normally holding the valve in closed position.

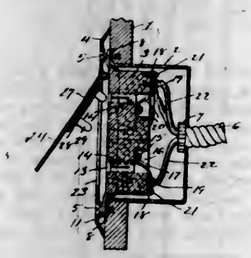
1,568,581. TIRE ARMOR. JOSEPH A. ALBERT, Springfield, Mass. Filed Aug. 30, 1924. Serial No. 735,065. 2 Claims. (Cl. 152—14.)

1. A tire armor, comprising a transversely arranged series of armor units, each unit including a metal strip, link carriers consisting each of a split shank straddling the ends of the metal strip and a tubular head projecting beyond the strip end and disposed transversely thereof, means fastening the link carriers to the armor units, and links fastened within said tubular heads of the link carriers and connected to each other circumferentially of the tire.



1,568,582. PORTABLE OIL HEATER. HAROLD K. ALLEN, Springfield, Mass. Filed Jan. 26, 1924, Serial No. 688,683. Renewed Oct. 30, 1925. 6 Claims. (Cl. 126—116.)

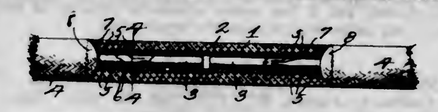
1. A portable heater comprising a base portion and an upper or radiating portion, the base portion having two end members which are formed with openings, a tank for



containing fuel located in the openings, the bacs portion being slitted to permit the insertion of the tank, and means for clamping the tank in place, a burner located on the base portion, a suitable pipe connection between the tank and the burner.

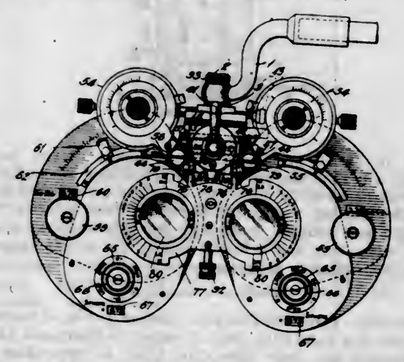
1,568,583. TESTER FOR CONNECTING-ROD ASSEMBLIES. DAVID A. ANDERSON, Faribault, Minn. Filed Sept. 10, 1924. Serial No. 736,912. 8 Claims. (Cl. 33—180.)

1. A tester for connecting rod assemblies comprising a bed, an arbor mounted on the bed, and an aligning block mounted on the bed for adjustment radially toward or from the axis of the arbor, and having vertical and horizontal testing surfaces for the wrist pin of a connecting rod mounted on the arbor, said block having at one side a flange perpendicular to the arbor and affording a testing surface for a piston mounted on the wrist pin.



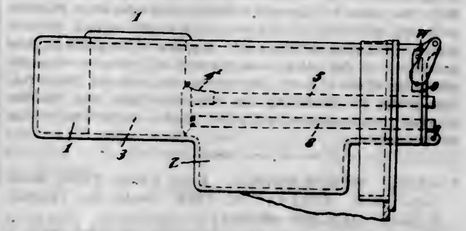
1,568,584. ATTACHMENT PLUG. JOHN CLARKE BLANKENSHIP, Austin, Tex. Filed July 16, 1924. Serial No. 726,312. 2 Claims. (Cl. 173—330.)

1. A three-way attachment receptacle comprising a casing adapted for mounting in the base board of a room, a block member positioned and housed in said casing, three contacts mounted in staggered relation in said block for receiving connection from a three wire circuit, said block being adapted to receive a plug adapted for removable connection therewith having three contacts for engagement with the contacts of said block for interposing desired attachments in the three-way circuit, and means for converting the three-way circuit connected with the contacts of the block into a two-way circuit, said means being adapted for engagement with the contacts of said block when the plug is detached therefrom.



1,568,585. ELECTRIC WIRE CONNECTER. LOUIS J. BRUNE, Sr., Algiers, La. Filed Sept. 11, 1924. Serial No. 737,119. 1 Claim. (Cl. 173—263.)

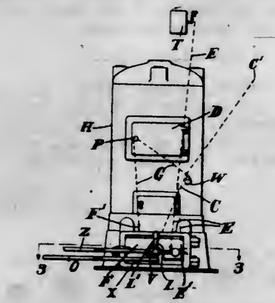
The combination with the adjacent ends of conductor wires, of a connecter, said connecter comprising a sleeve in the opposite ends of which the conductor wire ends are disposed, said sleeve adjacent its ends being provided on opposite sides with oppositely disposed relatively wide struck out spring members extending towards the center of the sleeve, said struck out members having



their inner ends provided with arcuately arranged teeth extending into the chamber of the sleeve and arcuately imbedded in the conductor wire ends.

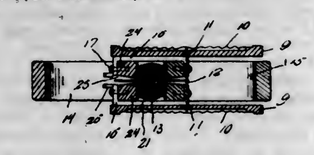
1,568,586. OPTICAL INSTRUMENT. HANS CLEMENT, New York, and BERNARD M. BARRON, Mount Vernon, N. Y., assignors to General Optical Company, Inc., a Corporation of New York. Filed Aug. 9, 1922. Serial No. 580,796. 8 Claims. (Cl. 88—22.)

1. In an optical instrument, a support, an elongated head member carried by said support, a plurality of parallel rack bars carried by said head member in spaced pairs and extending transversely thereof, said bars being slidable endwise of themselves thereon, each pair extending from opposite sides of the head, a shaft rotatably carried by the head and extending transversely of the bars, pinions carried in spaced relation by said shaft and meshing with the rack bars to cause simultaneous movements of the bars, and eye examination units carried by said bars to be separated or brought together by operation of the shaft and rack bars.



1,568,587. OIL BURNER. CHARLES C. CUSHMAN, Auburn, Me. Filed Feb. 19, 1925. Serial No. 10,178. 5 Claims. (Cl. 158—92.)

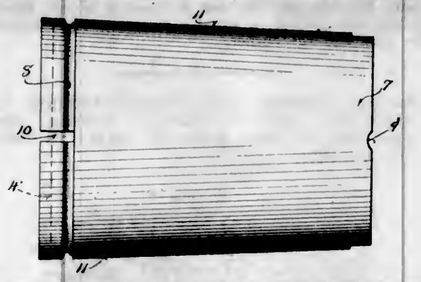
3. In an oil burning apparatus for domestic heaters, an intake chamber projected within the fire door of the heater and having a gravity controlled draft door for said chamber, a burner bowl set in said chamber and projecting through the top thereof and having lateral upwardly inclined intake draft pipes leading from the chamber to within the walls of the bowl to supply air



centrally of the burner, said bowl wall having a plurality of smaller draft openings above said draft pipes for supplying air peripherally of the bowl and adjacent the lip thereof, and a fuel nozzle adjustable radially of the bowl and projecting between the draft pipes.

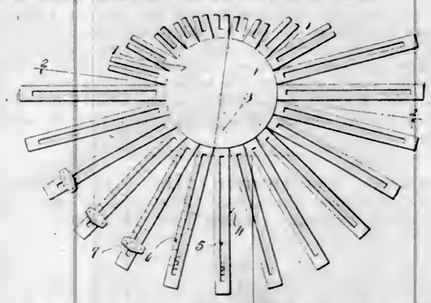
1,568,588. FUEL-BURNER CONTROL. CHARLES C. CUSHMAN, Auburn, Me. Filed Apr. 11, 1925. Serial No. 22,301. 4 Claims. (Cl. 158—42.1.)

1. In an oil burning system, a supply control valve lever, a flexible lanyard attached at one end to said lever and anchored at its other end, a weight between the ends of the lanyard, a flexible support attached adjacent the weight and adapted to support the weight raised above the valve lever and a fusible link in the weight support and disposed in a danger zone.



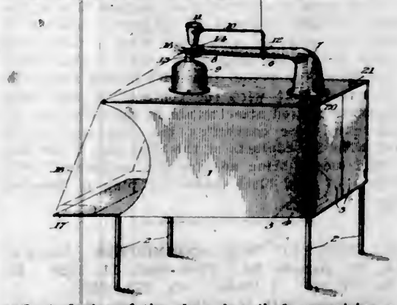
1,568,589. LOUD SPEAKER. GEORGE DOUGLAS EDDINGTON, Salt Lake City, Utah, assignor to Eddington Loud Speaker Inc., Salt Lake City, Utah, a Corporation of Utah. Filed Nov. 25, 1924. Serial No. 752,196. 3 Claims. (Cl. 179—116.)

1. A device of the class described comprising a pair of spaced parallel diaphragms, a rod connecting the central portions of said diaphragms, an armature connected at one end to said rod and hingedly mounted at its central portion for oscillating movement, a pair of independent ring shaped permanent magnets arranged with the poles in opposed relation and operative relation with opposite ends of the armature plate, and an electromagnet arranged between said permanent magnets in close proximity to the poles thereof energizable for varying the magnetic effect of both permanent magnets on the armature plate, for operating the armature plate and the diaphragm in accordance with the current variations of the electromagnet.



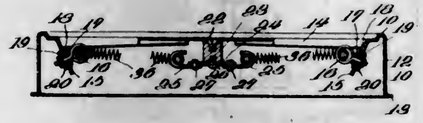
1,568,590. MOTOR SHIELD. PAUL HENRY ESCH, Manitowoc, Wis. Filed Oct. 31, 1924. Serial No. 747,053. 1 Claim. (Cl. 180—69.01.)

The combination of an automobile provided with a cowl, a water trough in front of said cowl, a radiator provided with a rearwardly extending portion, and a hinged hood; and a removable shield curved to fit beneath the hood and beneath the rearwardly extending portion of the radiator and having depending sides terminating in outwardly projecting gutters contacting with the sides of said hood to securely hold the shield in place while allowing the gutters to function as gutters, said shield having a notched rear portion cooperating with



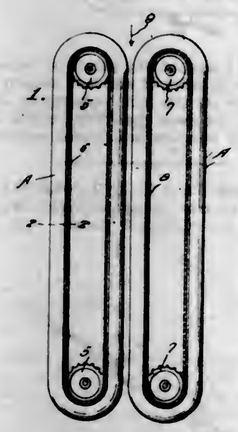
the hinges of said hood to hold the shield against lateral motion, said shield having a depressed channel adjacent its rear end adapted to fit into said trough.

1,568,591. DOILY-STRETCHER FRAME. REINHOLD M. FECHNER, Milwaukee, Wis., assignor of one-fourth to Martin Fechner, Milwaukee, Wis. Filed Nov. 10, 1924. Serial No. 748,987. 3 Claims. (Cl. 45—24.)



1. A dolly stretcher frame comprising a pair of semicircular plates, a plurality of radially extending arms having tapered inner ends positioned between said plates and having slotted outwardly extending portions, a plurality of heads slidably positioned upon said outwardly extending portions and each having means for engaging the marginal portion of the dolly, and a plurality of clamping bolts secured to said heads and projecting through the slots and having thumb nuts on their lower ends for clamping said heads to the arms.

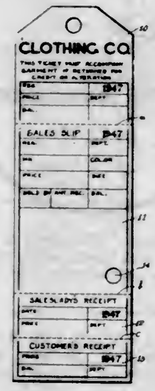
1,568,592. LINEN-CUTTING MACHINE. HARRY J. FELLMAN, Hastings, Nebr. Filed Sept. 25, 1923. Serial No. 664,805. 5 Claims. (Cl. 164—60.)



2. A device of the class described comprising a cutter, cloth supporting means located adjacent the cutter, illuminating means under the cutting means and magnifying means located above the cutter.

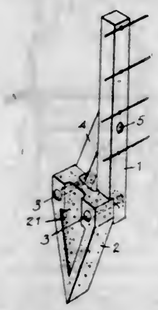
1,568,593. ELECTRIC GRILL. MAURICE F. FITZGERALD, Winsted, Conn., assignor to The Fitzgerald Manufacturing Company, Winsted, Conn., a Corporation of Connecticut. Filed Aug. 13, 1925. Serial No. 50,018. 4 Claims. (Cl. 219—37.)

1. In an electric grill, a top plate having radial members and a circumferential rim defining sector-shaped apertures, the arcuate portion of the rim between two of the radial members being curled downwardly to form an ear, an eye-bolt supported upon such ear and insulated from the frame, an insulating disk carried beneath the center of the top plate and insulated therefrom, holding clips carried by said disk, terminals insulated from said plate and carried thereby, and a heating element led in zig-zag fashion from one terminal to the other and passing alternately over the holding clips and the eye-bolts.



1,568,594. CONVEYING MECHANISM. GEORGE B. FLINT, Kaysville, Utah. Filed July 18, 1925. Serial No. 44,485. 3 Claims. (Cl. 198—162.)

1. In a conveying mechanism, of the class described, a pair of endless members formed of pneumatic tubing and trained to provide parallel adjacent runs movable in the same direction.

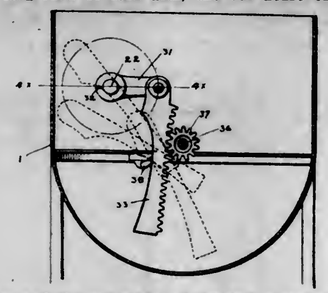


1,568,595. IDENTIFICATION AND SALES TAG. NORMAN FREEMAN, Cambridge, Mass. Filed Apr. 24, 1923. Serial No. 634,342. 2 Claims. (Cl. 283—18.)

1. A combined identification tag and sales slip comprising a portion constituting an identification tag for attachment to an article on sale and bearing on its face certain information respecting said article, and a portion detachably secured to said first mentioned portion and to be removed therefrom at the time of the sale to constitute a sales slip and bearing duplicate information concerning the article and captions indicating the character of information to be entered thereon when the

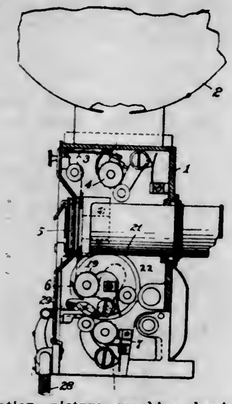
article is sold, said sales slip having a ledger form on its reverse side for use as a record of the buyer's account when the sale is made on credit.

1,568,596. FENCEPOST. WILLIAM FROST, Fulton, Mich. Filed Dec. 29, 1924. Serial No. 758,742. 3 Claims. (Cl. 72—84.)



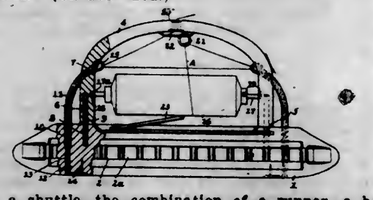
1. In a fence post structure, the combination of a concrete base of wedge form with point down and board end up above the surface and transverse to the line of the fence, with concave sides and transverse perforations at the top, a transverse reinforcing bar through the heavy top portion of said structure with downwardly turned ends embracing the attaching bolt, a fence post secured with cross bolt through its bottom to the said base, a diagonal brace therefor with bolt therethrough securing it to the said base and to said post, coacting as specified.

1,568,597. WASHING MACHINE. CHARLES W. GORMLEY, Mount Morris, N. Y. Filed Dec. 18, 1922. Serial No. 607,713. 1 Claim. (Cl. 74—14.)



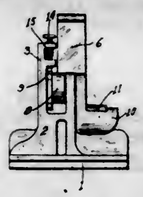
A driving mechanism, for a washing machine comprising a crank, an arm pivoted on said crank, said arm having a cam surface provided on one side thereof and a rack on the other side thereof, said rack being curved at the inner end thereof, a stationary fulcrum for said arm to slide over and rock thereon, a pinion mounted

to rotate opposite said stationary fulcrum and mesh with said rack of said arm, the curvature of said cam



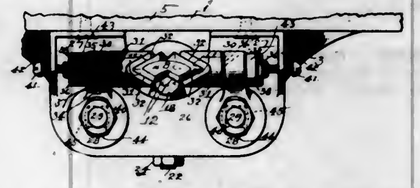
surface and the curvature of the end of said rack being adapted to keep said rack continuously in mesh with said pinion while sliding and rocking over said stationary fulcrum.

1,568,598. FRAMING DEVICE FOR MOTION-PICTURE MACHINES. MORRIS M. GRUBER, Brooklyn, N. Y., assignor to The Burwood Corporation, Scranton, Pa., a Corporation of New York. Filed Mar. 24, 1920, Serial No. 368,245. Renewed May 5, 1925. 8 Claims. (Cl. 88—17.)



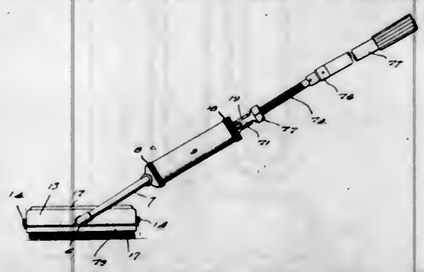
1. In a motion picture machine having a vertical web provided with a recess opening to an edge of said web, an intermittent motion device, and a casing for said intermittent motion device, said casing having intermediate its ends a tongue and groove connection with the recess in said web, whereby when the casing is fitted laterally into said recess from the edge of the web the tongue and groove connection will lock said casing against vibration.

1,568,599. BOW SHUTTLE. OTTO HACKENBERG, Paterson, N. J. Filed July 1, 1925. Serial No. 40,785. 7 Claims. (Cl. 139—201.)



1. In a shuttle, the combination of a runner, a bow having its ends adjoining the runner, and a dowel fitted at one end in the runner and having its other end bent off and fitted in an end portion of the bow.

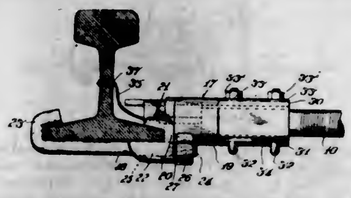
1,568,600. RAIL-ELEVATING JACK. FREDERICK HACKMANN, Chicago, Ill. Filed Jan. 21, 1924. Serial No. 687,463. 4 Claims. (Cl. 254—121.)



1. In a rail elevating jack having an upstanding bifurcated support, a lever having upon one side thereof a ratchet wheel journalled on said support with said ratchet wheel positioned in said bifurcation, said lever having a laterally offset arm on the other side of said lever from said ratchet wheel, a roller journalled in said arm adapted to engage a rail and means engaging said ratchet wheel to hold said lever in adjusted position.

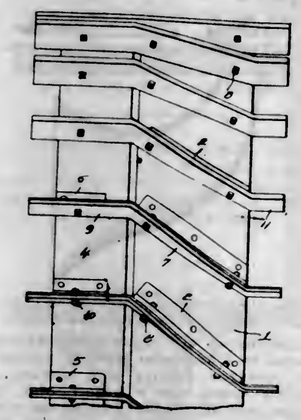
1,568,601. MOLD. MANDUS HANSON, Muskegon, Mich. Filed Jan. 28, 1925. Serial No. 5,254. 14 Claims. (Cl. 22—110.)

1. In a mold: a part having parallely disposed guiding bars; a part having pairs of members slidably guided on the opposite side of the bars respectively and axially movable toward and away therefrom; means for moving and securing said members in adjusted positions.



1,568,602. FLOOR WAXING AND POLISHING BRUSH. ELMER EARL HARRIS, Memphis, Tenn. Filed Apr. 4, 1925. Serial No. 20,690. 3 Claims. (Cl. 91—43.)

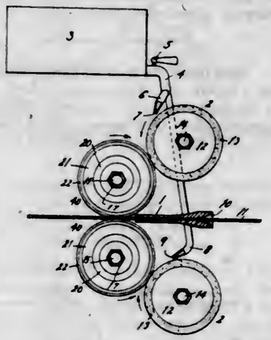
1. In a floor brush, a head, a yoke connected to said head, and a handle connected to said yoke, said handle including a cylinder for containing a floor treating substance and a portion of the handle being formed to provide an operating stem, and a plunger reciprocable in said cylinder, said stem being connected with said plunger.



1,568,603. ATTACHING DEVICE FOR ELECTRIC CABLES. CHRISTIAN E. HARTVIG, El Reno, Okla. Filed Mar. 3, 1922. Serial No. 540,766. 11 Claims. (Cl. 173—278.)

11. In a railway track circuit, the combination with an electric cable, of means for attaching the cable to a railroad rail comprising a housing for the end of the cable, means for clamping the cable to the housing, insulating sleeve members intervening between the housing and cable, and means for clamping said housing to said rail, comprising a clamping member extending under the

rail and formed with a jaw to engage with the opposite edge of the rail base; said housing being formed with downwardly projecting flanges to protect said cable and with a chamber to receive the end of the cable and to contain a material to seal the end of the cable and insulate the same from the housing.

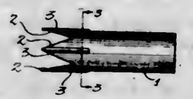


1,568,604. STALK CUTTER. WILLIAM HENRICKS, Pharr, Tex. Filed Nov. 21, 1924. Serial No. 751,316. 1 Claim. (Cl. 55—61.)

In combination with a tractor wheel and the usual traction lugs secured on the rim thereof, said lugs being disposed diagonally on said rim, of an extension wheel adapted to be secured on one side of the tractor wheel, the rim of the extension wheel being flush with the aforementioned rim, lugs secured on the rim of the extension wheel, said lugs being arranged transversely on the rim and adapted for cooperation with the adjacent lugs of the first mentioned rim, and cutter blades extending across the rims and secured to said lugs, whereby the portion of each blade disposed across the rim of the tractor wheel will extend diagonally thereon, while the portion of each blade disposed across the rim of the extension wheel will extend transversely.

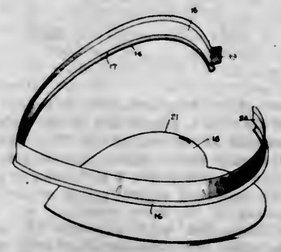
1,568,605. METHOD OF AND MEANS FOR COLOR STRIPING WOOD STRIPS. AZEL C. HOUGH, Janesville, Wis., assignor to Hough Shade Corporation, Janesville, Wis., a Corporation of Connecticut. Filed Nov. 14, 1924. Serial No. 749,920. 10 Claims. (Cl. 91—12.)

10. In means for color striping wood strips, one pair of printing wheels adapted to receive a wood strip between them, said printing wheels comprising felt discs which are spaced apart, and another pair of printing wheels adapted to receive between them such strip, said



last-named printing wheels comprising felt discs each of which is wider than the corresponding space between two of the discs in said first named wheels.

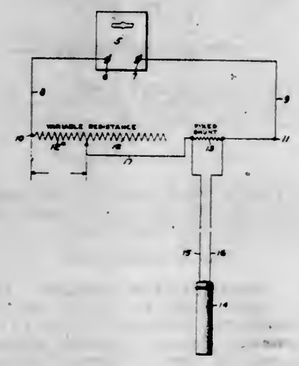
1,568,606. COMPOUND FOR GREASE. ASBURY B. HUTTON, Indian Head, Pa. Filed Apr. 18, 1922. Serial No. 555,241. 2 Claims. (Cl. 87—9.)



1. A lubricating compound comprising petroleum jelly, white lead, graphite, sulphur, linseed oil and tallow, as and for the purpose specified.

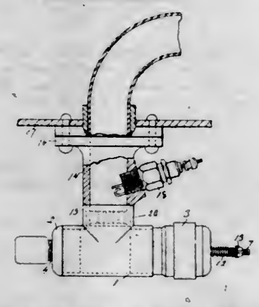
1,568,607. LIMB-SECURING DEVICE FOR CHRISTMAS TREES. JOHN JUNKUNC, Chicago, Ill. Filed Sept. 11, 1924. Serial No. 737,024. 1 Claim. (Cl. 248—37.)

A limb securing device comprising a cylindrical member adapted to receive limbs therein and a plurality of prongs on one end of said member and ridges integral with said prongs for reinforcing the same.



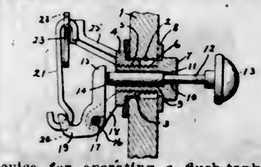
1,568,608. BOX CONSTRUCTION. ADOLPH KLEIN, New York, N. Y. Filed Mar. 9, 1925. Serial No. 14,041. 4 Claims. (Cl. 229—5.5.)

1. The process of forming a paper box construction having an extension end wall, which comprises the step or steps of simultaneously forming in the strip which is to serve as the side wall of the box, a flange projecting from its outer face and a groove on its inner face, positioning said strip about the end wall member to have the strip form a continuous outer wall about the end wall



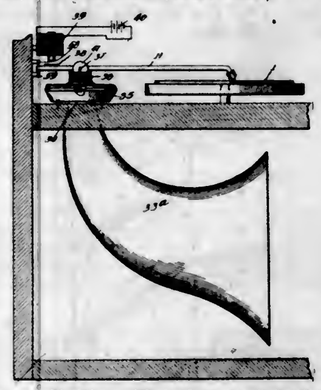
member with the edge of the latter received in the groove of the former, and forcing the opposite surfaces of the groove down upon the opposite faces of the edge of the end wall member to cause the two to be secured together thereby along said edge.

1,568,609. METHOD FOR TESTING BLASTING MACHINES. DAVID M. MCFARLAND, West Chester, Pa., assignor to Atlas Powder Company, Wilmington, Del., a Corporation of Delaware. Filed Nov. 7, 1924. Serial No. 748,378. 1 Claim. (Cl. 175—183.)



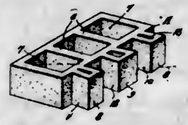
The herein described method of testing and rating blasting machines which consists of arranging a variable resistance and a blasting cap in series with the blasting machine and shunting a fixed resistance of determined value across a portion of the circuit which includes only the blasting cap.

1,568,610. GAS HEATER. FREDERICK M. MINER, Madison, Wis. Filed Oct. 30, 1924. Serial No. 746,879. 1 Claim. (Cl. 122—24.)



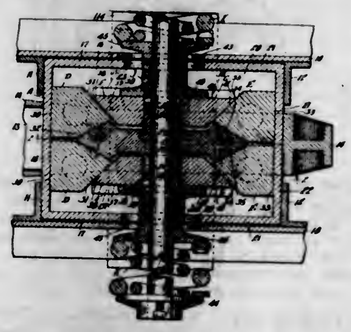
In a device of the kind described, a boiler, a coil of pipe disposed therein, a pipe fitting in the form of a T, a head at one end of the top of the T, a sleeve at the opposite end of said top, a valve stem slidably mounted centrally within the top of the T by means of perforated bridges in the head and sleeve, valves at both ends of the stem opening in the same direction, one end being adapted for connection with a source of combustible fluid, and the other end communicating with the atmosphere, a tubular member secured to the stem of the T, a perforated bridge adjacent one end of said member and means at the opposite end connecting it to said coil of pipe, an exhaust fan connected to the other end of the coil, a safety valve interposed between the coil and fan, and means for igniting a combustible mixture supplied through said T before it enters the coil.

1,568,611. PUSH LEVER FOR OPERATING CLOSET-TANK VALVES. RALPH S. MORGAN, Elkhart, Ind., assignor to Northern Indiana Brass Company, Elkhart, Ind., a Corporation of Indiana. Filed July 2, 1925. Serial No. 41,175. 4 Claims. (Cl. 4—67.)



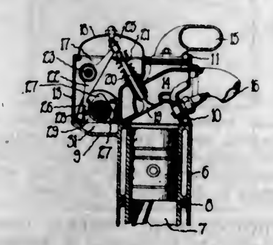
1. In a device for operating a flush-tank valve, the combination of a bracket element non-rotatably mounted in an opening in a flush-tank wall; a bell-crank lever carried by said bracket; a pivotally mounted flush-valve lever carried within the tank; a link connecting said valve lever with one arm of the bell-crank; and a push-pin extending through said bracket element into operative relation with said bell-crank, whereby sliding movement of said push-pin causes rocking movement of said bell-crank and flush-valve lever.

1,568,612. STYLUS-OPERATING MEANS. RALPH W. MORRISON, Omaha, Nebr. Filed Nov. 1, 1920. Serial No. 421,061. 3 Claims. (Cl. 274—26.)



3. The combination with a phonograph having a sound box supported in a horizontal position, provided with a diaphragm arranged working face upward,. rotatable record-carrying means, and a magnet, of a stylus bar support above said diaphragm, a stylus bar arranged on said support to freely oscillate both horizontally and vertically, means to permit a slight vertical movement bodily of the stylus bar on the support and to positively stop the same at the point of its working connection with the diaphragm, one end of the bar provided with record needle carrying means and the other end provided with an armature below said magnet, and a connecting member between said diaphragm and stylus bar.

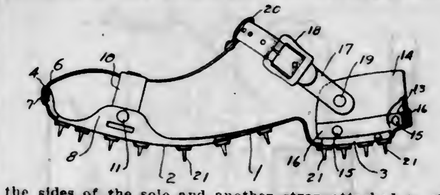
1,568,613. BUILDING BLOCK. LUTHER S. MUNSON, Washington, D. C. Filed Oct. 18, 1922. Serial No. 595,317. 4 Claims. (Cl. 72—38.)



1. A building block including a body equipped with an intermediate and terminal projections on one face, said intermediate projection having the opposite sides thereof tapered and said terminal projections having their inner faces straight and their outer faces tapered.

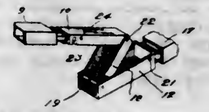
1,568,614. FRICTION SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed Apr. 25, 1928, Serial No. 634,424. Renewed May 25, 1925. 12 Claims. (Cl. 213—38.)

1. In a friction shock absorbing mechanism, the combination with end followers movable relatively toward each other; of end wedges movable with the respective followers; a central friction element having wedge faces at the front and rear ends thereof and friction faces extending transversely of the mechanism; a plurality of wedge friction shoes co-acting with said wedges, said friction shoes being transversely slidable on the friction faces of said central element; and spring elements arranged to resist movement of said shoes.



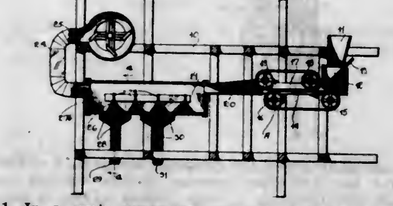
1,568,615. OVERHEAD CAM SHAFT AND VALVE GEAR. VICTOR C. PARKER, Waterloo, Iowa, assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Feb. 19, 1920. Serial No. 359,925. 5 Claims. (Cl. 123—59.)

2. In an internal combustion engine, a cylinder open at its upper end; a hollow head for closing the open upper end of said cylinder; a valve carried by said head for controlling a port therein; a rocking lever supported within said head for operating said valve; and a cam shaft supported by said cylinder above the upper end thereof and having a cam adapted to engage and operate said lever.



1,568,616. SPIKE SANDAL. LAWRENCE PARR, Seattle, Wash. Filed Aug. 18, 1924. Serial No. 732,622. 1 Claim. (Cl. 36—63.)

In a spike sandal, a solid metallic plate, bent to conform to the lowest surface of a shoe or the like, said plate having a clamp bent upward at the rear to hold the rear, ears bent upward at the sides about midway of the forward portion of the foot and an ear bent upward at the front, spikes extending downward from heel and sole portion, section attached to the flange at the heel and extending upward to protect the heel, a strap attached to the forward edges of the said heel protecting sections, another strap attached to the ears at

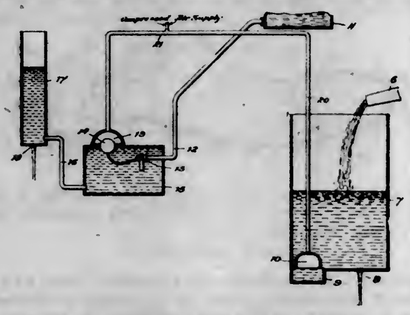


the sides of the sole and another strap attached to the ear at the front and also another strap connecting the heel protecting section.

1,568,617. EXTENSION ATTACHMENT FOR FLEXIBLE BRACELETS. CHARLES H. PATTEN, Providence, R. I., assignor to Rex Manufacturing Co., Providence, R. I., a Corporation of Rhode Island. Filed Mar. 5, 1925. Serial No. 13,125. 7 Claims. (Cl. 59—80.)

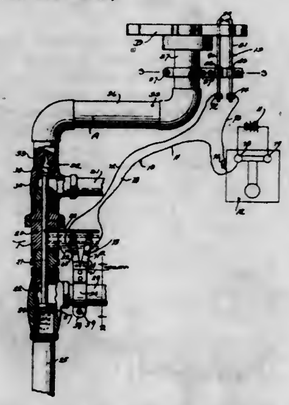
3. In a link bracelet, an extendible member comprising a plurality of members arranged to normally nest one within the other and movable to an end to end extended position to temporarily lengthen the bracelet, and cooperating frictional detent and recess means in the walls of said members for releasably retaining them in nested position.

1,568,618. GRAIN CLEANER. HENRY ERNEST PFORR, Hamberg, N. Dak. Filed Apr. 8, 1924. Serial No. 705,055. 4 Claims. (Cl. 209—145.)



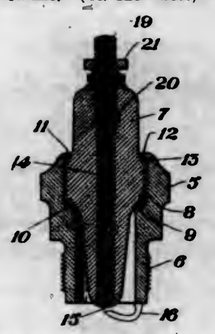
1. In a grain separator, conveyer belts arranged in proximity to each other and coacting to carry grain between them, to project the same into a separating chamber means for driving the belts in unison and at uniform speed, a converging grain guide in position to receive grain from the belts, a separating chamber into which the grain guide discharges, an air supplying means at the opposite end of the said separating chamber for forcing air against the grain entering the separating chamber, a plurality of spaced grain collecting means at the bottom of the said separating chamber and discharge chutes connected with pairs of the grain collecting means, substantially as described.

1,568,619. PROPORTIONAL-FLOW DEVICE. EARLE BERNARD PHELPS, Ridgewood, N. J. Filed Aug. 7, 1922. Serial No. 580,230. 5 Claims. (Cl. 137—78.)



1. The combination of two liquid-flow measuring orifices whose flow rates are similar functions of the respective effective hydraulic heads on said orifices; independent sources of liquid for the two orifices, said sources being characterized by independent variations of hydraulic head; a closed regulative chamber associated

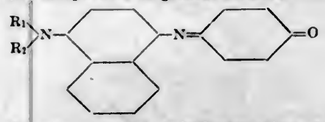
with the second orifice and partly filled with liquid flowing to said second orifice; means for exerting pneumatic pressure on the surface of said liquid to increase



the effective head on the second orifice; and controlling means for said pneumatic pressure subject to the head on said first orifice.

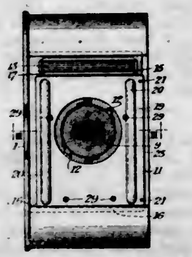
1,568,620. AUTOMATIC IGNITION DEVICE FOR GAS BURNERS. WILLIAM E. POTTEIGER, Harrisburg, Pa. Filed July 5, 1923. Serial No. 649,737. 1 Claim. (Cl. 175—115.)

In an apparatus of the character described, a conduit, a valve for controlling passage of fluid through said conduit and including a body portion having a longitudinally extending slot and a valve stem sliding longitudinally in the body portion, a burner and electrically operated igniting means including a circuit, sparking means in the circuit adjacent said burner and a switch comprising clamping arms, a strip of insulation secured between the upper end portions of said clamping arms, means for drawing the clamping arms into binding engagement with a support adjacent said valve, said strips of insulation extending above said clamping arms and having fingers extending in diverging relation to each other and upon opposite sides of said clamping arms, resilient contact strips secured to said fingers and extending upwardly therefrom, said strips having portions bowed outwardly in opposite directions and at the upper ends of the bowed portions having upwardly extending crimped end portions, terminals carried by the bowed portions, and a bridging rod extending from said valve stem through said slot and positioned above the crimped portions of the contact strips when the valve is closed and moving downwardly between the crimped portions to a point between the bowed portions when the valve is opened and engaging with crimped portions while passing between the same to complete the circuit and permit operation of the sparking means.



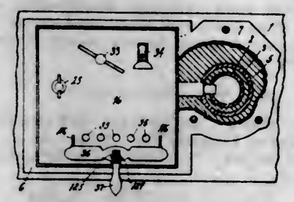
1,568,621. NONMETALLIC ELECTRODE FOR SPARK PLUGS. HECTOR RABEZZANA, Flint, Mich., assignor to A C Spark Plug Company, Flint, Mich., a Corporation of Michigan. Filed July 6, 1920. Serial No. 394,304. 4 Claims. (Cl. 123—169.)

1. In a spark plug of the class described, an insulating member having a longitudinally extending passage; an inner electrode formed from non-metallic plastic material molded in place within and extending along said passage and the inner end of which is disposed in sparking relation to the external or grounded electrode of the plug; and means whereby a leading-in conductor may be electrically connected with said inner electrode and through which conductor a current of electricity may be supplied to the plug.



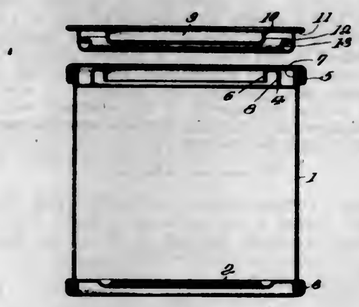
1,568,622. GREEN SULPHURIZED DYESTUFF AND PROCESS OF MAKING SAME. EMIL REBER and JAROSLAV FRÖHLICH, Basel, Switzerland, assignors to Society of Chemical Industry in Basle, Basel, Switzerland. Filed July 9, 1923. Serial No. 650,480. 4 Claims. (Cl. 260—19.)

1. The herein described new process for the manufacture of new green sulfurized dyestuffs consisting in treating the indophenols of general formula



wherein R^1 may represent a hydrogen atom, and alkyl and aralkyl radical, and R_2 an alkyl and aralkyl radical, with salts of sulfurous acid and then treating the sulfonated leuco-derivatives thus obtained with alkali metal polysulfides in the presence of copper.

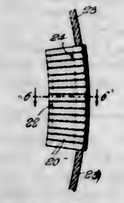
1,568,623. PHOTOGRAPHIC CAMERA. GARSHOM A. RIGGS, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Oct. 17, 1921. Serial No. 508,212. 11 Claims. (Cl. 95—31.)



2. In a camera, a film positioning plate having film pressing ribs formed thereupon adapted to hold a film flat.

1,568,624. COMBINATION LOCK. DARIO ROBERTI, Springfield, Mass. Filed Feb. 26, 1925. Serial No. 11,630. 13 Claims. (Cl. 70—54.)

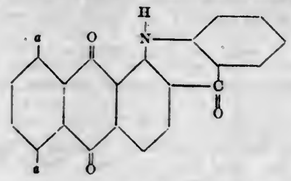
1. The combination, in a lock of the class described, with a box, of a lock case provided with steering-post- and box-engaging bolts, and with a box-engaging latch, said case being receivable in said box, means to lock and release said bolts, and means to withdraw said box-engaging bolts from locking engagement from said box, the construction and arrangement of parts being such that, when the box-engaging bolts are withdrawn, said latch normally retains said case in place in said box.



1,568,625. FRICTION TOP CAN. DANIEL P. ROBINSON, Baltimore, Md., assignor to Continental Can Company, Syracuse, N. Y., a Corporation of New York. Filed Apr. 26, 1921. Serial No. 464,583. 2 Claims. (Cl. 220—42.)

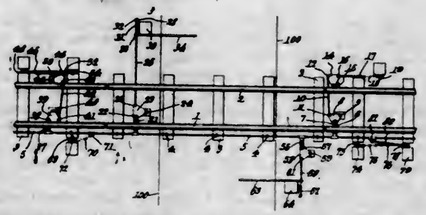
1. A friction top can consisting of a body portion, a top secured thereto, and a cover adapted to frictionally engage said top portion, said cover having a central depressed portion forming a substantially vertical frictional wall, and an outer depending portion rolled at its lower edge so as to form two separate spaced friction walls, said can top having an annular depression therein adjacent the vertical wall of the can body thus forming inner and outer substantially vertical frictional walls adapted to engage the friction walls formed by rolling of the depending portion, the outer friction wall on the top being substantially in alinement with the vertical wall of the can body, said top at its inner edge being curved downwardly to form a friction wall adapted to cooperate with the friction wall formed by the central depression in the cover.

1,568,626. HAT BRIM AND METHOD OF MAKING. WILLIAM H. ROBSON, Baltimore, Md., assignor to Brigham-Hopkins Company, Baltimore, Md., a Corporation of Maryland. Filed June 13, 1925. Serial No. 36,881. 3 Claims. (Cl. 2—178.)



1. A laminated straw hat brim having as an insert between the marginal edges the superimposed edges of a strip of material composed of transversely extending, laterally overlapped straw braid sections connected together and folded along substantially the longitudinal middle line of the strip and infolding a cord within said

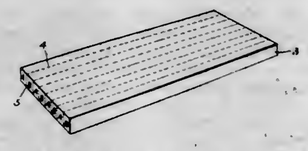
fold, said strip being so related to the laminated edges as to maintain the fold at a position at all points radially without the laminated margin.



1,568,627. CONDENSATION PRODUCT OF THE ANTHRAQUINONE SERIES AND PROCESS OF MAKING SAME. PAUL SCHETELIG, Basel, Switzerland, assignor to the Firm Society of Chemical Industry in Basle, Basel, Switzerland. Filed May 4, 1925. Serial No. 28,021. 11 Claims. (Cl. 260—27.)

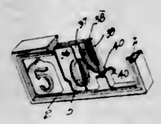
1. The herein described process for the manufacture of condensation products of the anthraquinone series by causing nucleal halogen derivatives of the 1,3.5-triazine to react on compounds of the general formula

wherein one of the letters *a* stands for the amino group and the other for a hydrogen atom.



1,568,628. SIGNAL. JOHN H. SCHROEDER, Charleston, S. C. Filed Sept. 21, 1925. Serial No. 57,649. 2 Claims. (Cl. 246—293.)

1. The combination with a track including rails, and a highway crossing the track, of a support disposed along the highway at one side of the track, a semaphore mounted intermediate its ends on the support to swing vertically, a first bell crank fulcrumed on the support to swing vertically, second, third and fourth bell cranks fulcrumed between the rails to swing horizontally, fifth and sixth bell cranks fulcrumed to swing horizontally and outwardly of one of the rails, a connection between the third and sixth bell cranks, a connection between the fourth and fifth bell cranks, a rigid operating member mounted for right-line sliding movement in a direction parallel to the track and located outwardly of the other of the rails, rigid arms projecting inwardly from the operating member beneath said other rail, the arms being slidably engaged, respectively, with the second, third and fourth bell cranks, first and second car-operated actuating levers fulcrumed intermediate their ends for vertical swinging movement and disposed on opposite

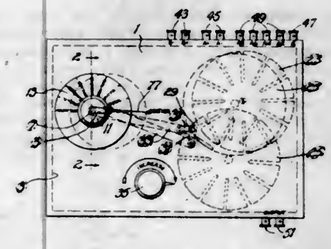


sides of the highway outwardly of said one rail, a connection between the lower end of the first car-operated lever and the sixth bell crank, an intermediate lever mounted between its ends for vertical swinging movement, a connection between the upper end of the third lever and the lower end of the second car-operated lever, and a connection between the lower end of the intermediate lever and the fifth bell crank.

1,568,629. PROCESS FOR MAKING PARTS FOR OPHTHALMIC MOUNTINGS. ELMER L. SCHUMACHER, Southbridge, and WILLIAM H. BOUTELLE, Sturbridge, Mass., assignors to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Original application filed Feb. 23, 1922, Serial No. 538,635. Divided and this application filed May 26, 1923. Serial No. 641,583. 6 Claims. (Cl. 18—59.)

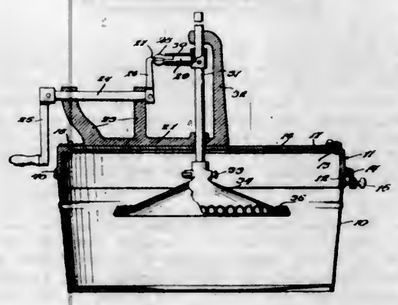
1. The process of producing a temple for an ophthalmic mounting, consisting in cutting a temple blank from sheet material, splitting the blank into separated complementary portions, forming a metal receiving groove in each of said portions, inserting a metal member within the groove, uniting the two portions, and subsequently shaping the united parts into final form.

1,568,630. HOUSE NUMBER. GEORGE T. SHEARES, Atlanta, Ga. Filed Sept. 18, 1924. Serial No. 738,444. 3 Claims. (Cl. 40—132.)



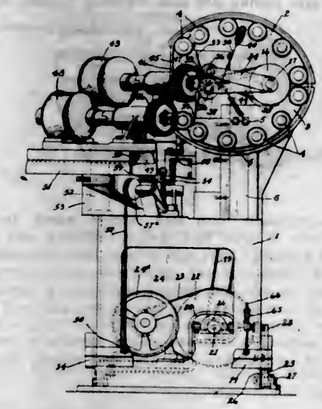
1. A house number box comprising in combination a substantially rectangular housing having its front side open, illuminating means carried within said housing, a front plate for closing the front side of said housing and having an edge portion bent to fit around the edge of said housing, and a plurality of box-like frame members carried by said plate, and a plurality of plate members carried by each of said box-like frame members, said members comprising a diffusing panel, an art panel and a stencil plate contrasting in color with respect to said art panel with characters formed by said stencil plate, and means integral with each of said box-like frame members for securing said plates in position whereby said characters are normally visible in daylight and become equally visible at night when said illuminating means becomes effective.

1,568,631. CANTILEVER BRIDGE. LOUIS H. SHOEMAKER, New York, N. Y. Filed Aug. 27, 1924. Serial No. 734,433. 5 Claims. (Cl. 14—7.)



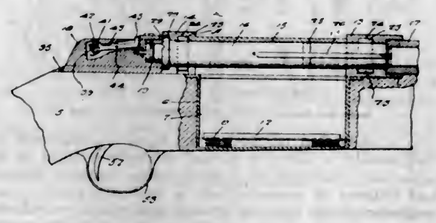
1. In a cantilever bridge, in combination, auxiliary anchor arm trusses extending from the anchorage to the pier, auxiliary cantilever arm trusses connected to said auxiliary anchor arm trusses extending from the pier outward and main cantilever arm trusses extending outward from the ends of said auxiliary cantilever arm trusses, said auxiliary cantilever arm trusses serving to support said main cantilever arm trusses, and stays extending from the latter to elevated points of support over the pier and thence further inward to the auxiliary anchor arm trusses.

1,568,632. RADIO RECEIVING APPARATUS. LLOYD Q. SLOCUMB, Ferguson, Mo. Filed Jan. 2, 1924. Serial No. 683,887. 7 Claims. (Cl. 250—14.)



1. A compound radio adjustment comprising a fixed coil, a movable coil positioned in operative relation thereto, means movable substantially parallel to a panel for mounting thereof adapted to move said movable coil with respect to said fixed coil, a variable condenser, said means being movable substantially parallel to said panel to operate said condenser, one movement of said first means varying the capacity of the condenser only, and another movement of said first means affecting only the position of said movable coil.

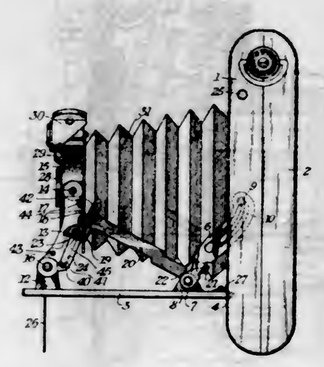
1,568,633. OPERATING ATTACHMENT FOR WASH-TUBS. HARRY A. SMITH, Mondovi, Wash. Filed Aug. 9, 1924. Serial No. 731,122. 1 Claim. (Cl. 68—15.)



An operating attachment for wash tubs comprising an annulus fitting the top edge of the tub, a plunger suspended in the tub from the annulus, upstanding resilient clothes-retaining clips around the outer periphery of the plunger each consisting of straight side portions secured at their lower ends to the plunger and arcuate portions connecting the upper ends of the side portions, the clothes being clamped by and between the opposed straight side portions of adjacent clips, and means on the annulus to operate the plunger.

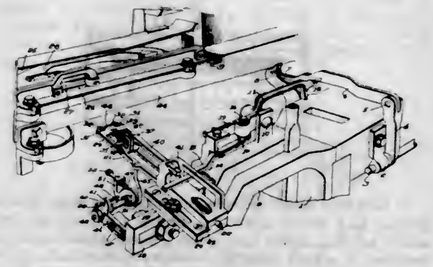
1,568,634. BEAD-BUFFING MACHINE. ROBERT W. SNYDER, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Sept. 30, 1920. Serial No. 413,689. 13 Claims. (Cl. 15—40.)

1. A machine for buffing tire beads comprising means for supporting and rotating an annular bead, means for maintaining the bead under constant tension and means for buffing the entire surface of the bead.



1,568,635. STRAIGHT-PULL BOLT-ACTION RIFLE. WILLIAM CLINTON SPEER, Quinault, Wash. Filed July 21, 1925. Serial No. 45,041. 3 Claims. (Cl. 42—16.)

2. In combination, a bolt, a sleeve associated with the bolt, a cocking piece associated with the bolt and movable in the sleeve, said cocking piece including a shoulder and a notch, a trigger mechanism associated with the shoulder, a shaft rotatable in the sleeve and including a crank engageable with the notch for holding said cocking piece locked, means on the sleeve for rotating the bolt and sliding the bolt and sleeve.

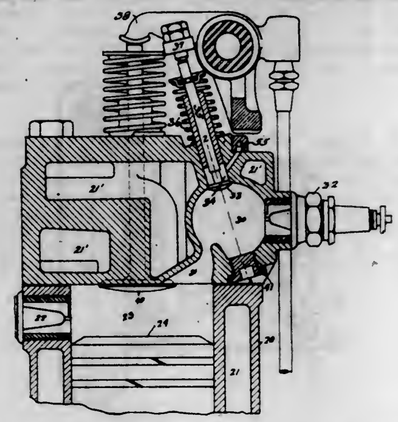


1,568,636. SELF-ERECTING-FRONT CAMERA. CHARLES F. SPEIDEL, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Dec. 28, 1923. Serial No. 683,113. 7 Claims. (Cl. 95—40.)

1. In a folding camera, the combination with a body, a bed hinged thereto, a folding lens mount and folding means on the bed pivotally and swingingly supporting the lens mount and provided with guides, of a folding erecting link, pivoted to the pivotally mounted lens mount

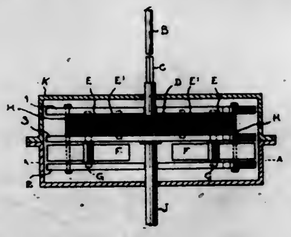
support and cooperating with the swinging lens mount support for positioning the lens mount in unfolding the camera.

1,568,637. FEELER MECHANISM FOR LOOMS. MELVIN L. STONE, Lawrence, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed June 10, 1925. Serial No. 36,088. 12 Claims. (Cl. 139—271.)



1. In a feeler mechanism for looms, the combination of the lay, filling detecting mechanism mounted in front of the lay, means for moving the detecting mechanism frontwardly at a lower speed than the approaching lay on a detecting beat that the filling may be engaged by the detecting mechanism with noninjurious contact, and means for changing the loom operation when the detecting mechanism detects substantial exhaustion of filling.

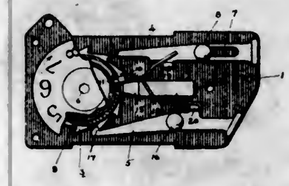
1,568,638. INTERNAL-COMBUSTION ENGINE. CALEB E. SUMMERS, Dayton, Ohio, assignor to General Motors Research Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Oct. 27, 1921. Serial No. 510,880. 10 Claims. (Cl. 123—191.)



1. The method of operating an internal combustion engine which comprises supplying to each of the cyl-

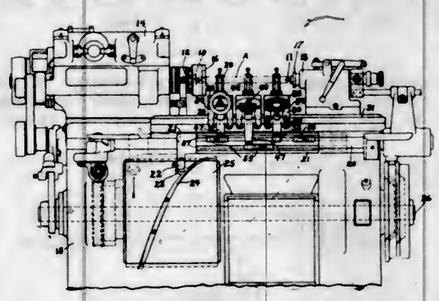
inders thereof at one portion, a charge varying from air, at and under about eighth load to an efficient fuel

air mixture at full load, while simultaneously supplying to another portion of the cylinders an efficient fuel air mixture, and igniting the latter.



1,568,639. VARIABLE-VELOCITY-RATIO GEARING. WILLIAM BASIL SWART, Johannesburg, Transvaal, South Africa, assignor of one-half to Ernest Stansfield Ratcliffe, Cape Town, South Africa. Filed May 17, 1922. Serial No. 561,781. 3 Claims. (Cl. 74—34.)

1. Variable speed gearing, comprising axially alining driving and driven shafts; a pinion fixed to the drive shaft; an open frame embodying a set of plates connected together in spaced, parallel relation and fixed to the driven shaft; a spindle journaled in said frame plates to rotate therewith and also to rotate about its own axis; a planet pinion fixed to said spindle and gearing with the first-named pinion; and a vane fixed to said spindle to be constantly subjected to the action of a fluid and thereby resist the rotation of the spindle and its planet pinion.

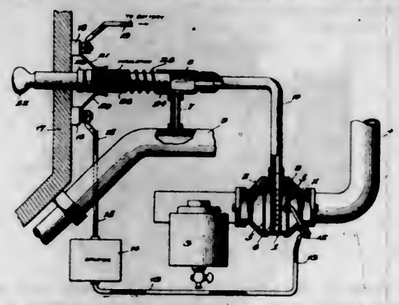


1,568,640. STROKE COUNTER. FRANCIS B. SWEENEY, Rochester, N. Y. Filed Mar. 20, 1925. Serial No. 16,969. 2 Claims. (Cl. 235—91.)

2. In a stroke counter, the combination of a base plate, a casing mounted on said base plate, a ratchet wheel mounted to rotate on said base plate within said casing, a spiral spring attached to said ratchet wheel and adapted to rotate said ratchet wheel in one direction, a sliding dog adapted to engage the teeth of said ratchet wheel on one side thereof and advance said wheel step by step, a release lever mounted to rock on said base plate and engage the teeth of said ratchet wheel on the opposite side thereof and prevent its rotation in the return direction, a lug carried on said base plate intermediate of said sliding dog and said release lever, a stop pin projecting from said ratchet wheel and engaging said lug at the end of a complete revolution in either one or the other direction, a leaf spring carried by said lug and having its ends projecting from either side thereof, one end of said leaf spring engaging said sliding dog and normally holding said dog

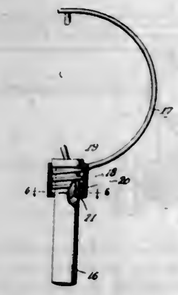
out of engagement with said ratchet wheel, the other of said ends of said leaf spring engaging said release lever and normally hold said release lever in engagement with said ratchet wheel, said base plate overhanging said casing at one end thereof, said casing having slots at one end thru which said sliding dog and said release lever can project for the operation thereof, said overhanging section of said base plate forming a guard for the end of said sliding dog and said release lever.

1,568,641. ATTACHMENT FOR AUTOMATIC LATHES. JOHN J. THACHER, Wethersfield, Conn., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed Apr. 8, 1922. Serial No. 550,582. 14 Claims. (Cl. 82—21.)



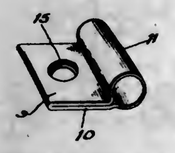
1. A cross feed mechanism for a lathe, comprising in combination, a plurality of tool carriages adapted to be adjustably positioned on a lathe, slides mounted thereon and adapted to support tools in operative position, an oscillatory lever on each of said tool carriages and engaging its slides so that oscillation of said levers moves each of said tool slides, and a reciprocatory slide having cams fixed thereon adapted to engage and oscillate said lever.

1,568,642. AUTOMOBILE INTAKE HEATER. HENRY R. THOMPSON, Falls Church, Va., assignor of one-half to Harry F. Lowe, Washington, D. C. Filed Mar. 17, 1922. Serial No. 544,606. 8 Claims. (Cl. 123—119.)



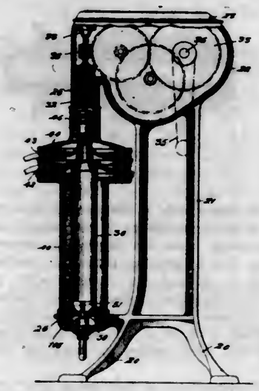
1. In combination with the exhaust and intake manifolds and the carbureter of an automobile, a heater connected to the carbureter and intake manifold and having electrical heating means therein, a T-member having its leg connected to the exhaust manifold, means to connect one end of the leg to the heater, a pair of terminals which with the heater and the electrical heating means are in the electric circuit of the automobile, a spring finger connected to each terminal, and a plunger slidable in the horizontal part of the T-member and having a conductor to engage each spring finger and

thereby close the circuit through the heater in one position of the plunger and having a non-conductor which in a second position of the plunger maintains the circuit through the heater open, and a valve on the plunger to



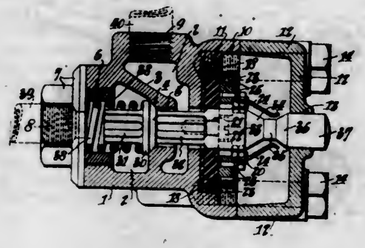
close the communication between the exhaust manifold and the heater when the plunger is in said first named position and to open such connection when the plunger is in the second named position thereof.

1,568,643. TIRE-CHAIN TOOL. HOLGER VARDER, New York, N. Y. Filed Jan. 24, 1925. Serial No. 4,632. 4 Claims. (Cl. 152—14.)



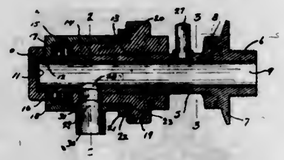
1. In a tire-chain tool, a bowed body-portion having an outwardly projecting handle at one end of said bowed body-portion, said handle being of substantial dimensions to enable it to be grasped by the hand of the user to support the tool and chain attached thereto, and chain supporting-pins projecting inwardly from opposite sides of the tool.

1,568,644. TERMINAL CONNECTER. EINAR WALLER, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Oct. 28, 1921. Serial No. 511,057. 3 Claims. (Cl. 173—269.)



1. A terminal connecter comprising a tubular cable end receiving portion closed at one end by an imperforate wall which is integral with the side wall of the socket thus formed; and a flat connecting portion extending laterally from said tubular portion and comprising two plates in contact with one another, and which plates are integral with the side wall of said tubular portion or socket.

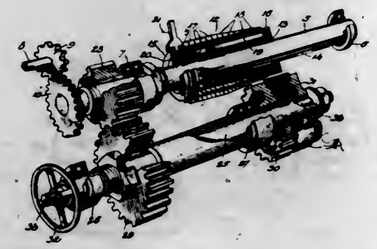
1,568,645. CREAM SEPARATOR. ROBERT WARNOCK, West Chester, Pa. Filed May 22, 1922. Serial No. 562,858. 16 Claims. (Cl. 233—21.)



10. For use in a cream separator, a bowl having at one end an opening for the entrance of milk and at the other end converging, a hollow neck extending from the converging end of said bowl, a dividing wall having a tubular portion adapted to fit the inside of said hollow neck and having a flaring portion adapted to lie parallel to the converging inner surface of said bowl, and a coupling bolt extending through said neck and provided with a head arranged to cooperate with the end of the said dividing wall and hold the latter in position.

1,568,646. FORESTALLING APPARATUS. JEAN F. WEBB, Jr., New York, N. Y., assignor to The International Signal Co., a Corporation of Arizona. Filed Feb. 14, 1925. Serial No. 9,189. 7 Claims. (Cl. 246—181.)

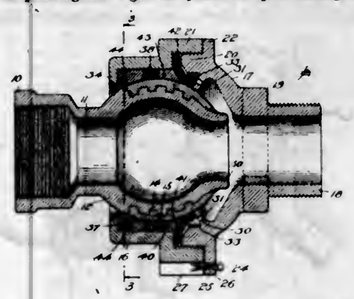
4. A forestalling device comprising a casing having a chamber provided with a partition having a valve seat passage dividing the chamber into two compartments, an inlet to one compartment and an outlet from the other compartment, said casing also having a cup chamber and a cover for the same, a combined valve and circuit closer unit including a valve proper to cooperate with said valve seat passage and a contact member, the latter projecting through said cup chamber and cap, a handle mounted on the cap with a portion to engage said combined valve and circuit closer unit to move the same in one direction, means to move the same in the opposite direction, insulated circuit contacts in said cup chamber cooperating with said combined valve and circuit closer unit to close an electric circuit upon opening of the valve seat passage substantially as shown and described.



1,568,647. FAUCET. LEO WERTHEIMER, Buffalo, N. Y. Filed Apr. 27, 1925. Serial No. 26,039. 4 Claims. (Cl. 251—95.)

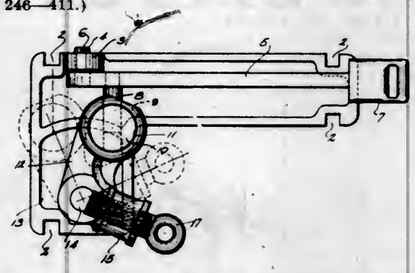
1. A faucet comprising a dispensing tube formed with an external, tapered periphery, a stationary sleeve carried by the dispensing tube an operating sleeve rotatably mounted upon the dispensing tube and having a portion of its periphery in bearing contact with the interior surface of the stationary sleeve, the operating sleeve having an exposed flange portion, packing means between the flange portion of the operating sleeve and the stationary sleeve, and means for rotating the operating sleeve.

3. A faucet comprising a dispensing tube provided with a tapered exterior periphery, and being formed with a centrally arranged aperture extending entirely through the tube, a cap for closing the outer end of the tube, a stationary sleeve carried by the tube, having its body part in spaced relation with the dispensing tube, an operating sleeve carried by the dispensing tube and disposed between this tube and the stationary sleeve, and a spring disposed in the space between the dispensing tube and stationary sleeve, and bearing against the end of the operating sleeve, whereby the operating sleeve will be held firmly upon its tapered bearing seat.



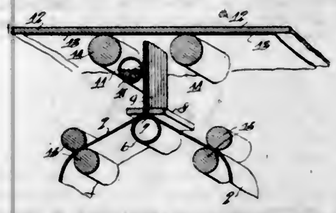
1,568,648. MANUFACTURE OF GEARS. JOHN W. WHITE, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Dec. 1, 1920. Serial No. 427,597. 15 Claims. (Cl. 80—16.)

1. In gear forming apparatus, a tooth-forming element, means for continuously supporting a blank in predetermined relation to said element, mechanism for causing relative movement of said element and said means whereby teeth may be impressed in said blank, and mechanism for producing relative movement of said element and said means transversely of the blank whereby the element is caused to travel laterally across the face of the blank.



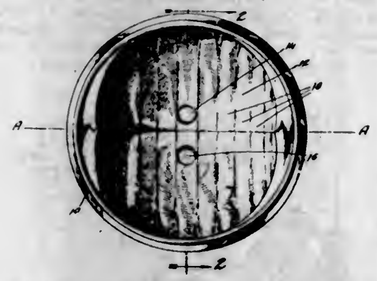
1,568,649. BALL JOINT. LEONIDAS D. WOODRUFF, St. Louis, Mo. Filed June 8, 1921. Serial No. 475,848. 4 Claims. (Cl. 285—95.)

1. In a ball joint, a body section and a ball section, a retaining gasket on one side of the center of the ball, and a floating gasket on the opposite side of the center of the ball, and means adapted to be placed under pressure by steam passing through the joint for preventing access



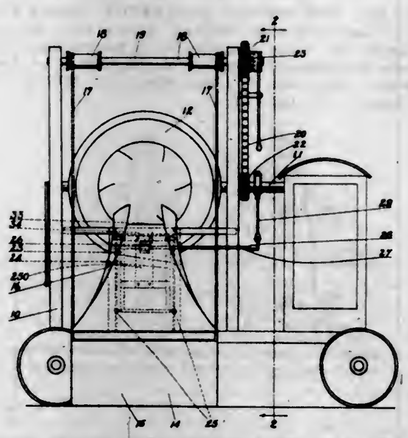
of steam to the space between said gaskets, said additional gasket being free to move in any direction in the absence of steam pressure.

1,568,650. SWITCH-THROW MECHANISM. ROBERT E. YOLTON, Birmingham, Ala., assignor to Kilby Frog & Switch Company, a Corporation of Alabama. Filed Mar. 30, 1925. Serial No. 19,208. 5 Claims. (Cl. 246—411.)



1. A switch throw mechanism comprising a stand, a lever mounted on said stand for movement parallel with the track, a horizontally movable rocker mounted on the stand and having one end adapted for connection to the switch and the other end carrying an upright cylinder, a piston in said cylinder, and an operating connection from the lever to the piston, there being a slot in the cylinder through which said connection is free to move with the lever.

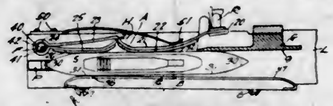
1,568,651. COLOR-PRINTING DEVICE. ROBERT BRYSON, Vancouver, British Columbia, Canada. Filed Apr. 17, 1925. Serial No. 23,922. 5 Claims. (Cl. 101—115.)



1. A means for reproducing colored posters or the like, said means comprising a screen of permeable material such as gauze, the interstices of which gauze have been rendered impermeable to air in parts, and means whereby the air permeable portions of the screen may be applied to control air sprays of liquid color on the surface of the poster paper.

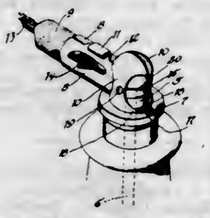
1,568,652. HEADLAMP REFLECTOR. FRANK L. BURKE, Connersville, Ind., assignor, by direct and mesne assignments, of one-half to Indiana Lamp Corporation, Connersville, Ind., a Corporation of Delaware, and one-half to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Feb. 16, 1924. Serial No. 693,300. 3 Claims. (Cl. 240—41.)

3. A headlamp reflector having two parabolic sections arranged one above the other and meeting in a horizontal plane beneath the vertex of the upper section and above the vertex of the lower section, each section having means for supporting a lamp bulb in the axis of the curve, and each section being formed of a series of narrow flat parallel zones meeting in vertical planes at a distinct angle.



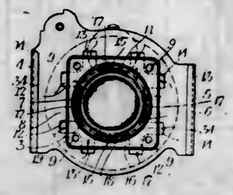
1,568,653. CONCRETE MIXER. HARRY G. BUTLER and ALBERT F. TEICHMAN, Cincinnati, Ohio, and EDWARD CARR, Ludlow, Ky. Filed Aug. 1, 1924. Serial No. 729,624. 8 Claims. (Cl. 83—73.)

1. In a device of the class described the combination of a frame, a mixing vessel supported by the frame, means for actuating the mixing vessel, a vibrating lug carried by the frame, and actuated from the vessel actuating means, and a bucket for movement relative to said mixing vessel, and arranged for engagement by the vibrating lug for expediting discharge of the bucket into the mixing vessel.



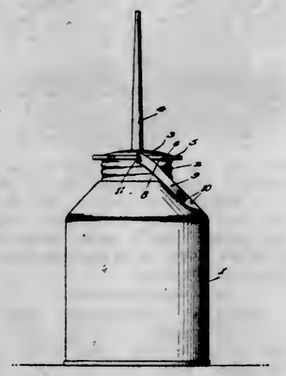
1,568,654. SHUTTLE CHECK. SAMUEL CHALMERS, North Andover, and FREDERICK J. FOLEY, Methuen, Mass., assignors of one-third to Hiram C. Straker, Methuen, Mass. Filed June 16, 1924. Serial No. 720,334. 6 Claims. (Cl. 139—185.)

1. The combination in a loom having a lay, a picker, an adjustable front binder and a protector rod finger at the back; of an adjustable pivot stud; with a shuttle binder formed of a strip of spring metal having a loop pivotal on the pivot stud and extending along the lay between the front binder and the protector rod finger having a padded short arm which swells out to a point where it will engage the shuttle at the base of its point,



and a padded long arm which extends behind the short arm at a distance from the end thereof and thence swells out to a slightly less distance than the swell of the short arm and back to a tip which engages the protector rod finger; and a back spring which so engages the shuttle binder as to keep the long arm normally in the path of the shuttle.

1,568,655. TERMINAL CONNECTER FOR SPARK PLUGS. ALBERT CHAMPION, Flint, Mich., assignor to A C Spark Plug Company, Flint, Mich., a Corporation of Michigan. Filed Oct. 28, 1921. Serial No. 511,130. 3 Claims. (Cl. 173—269.)

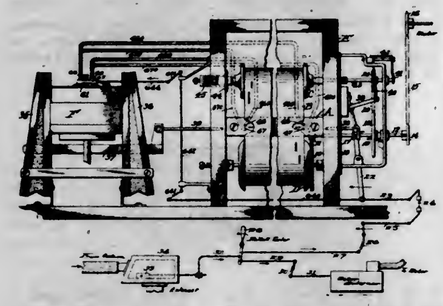


1. In combination with a terminal to which electricity is to be supplied, a connecter having a body portion whereby it may be secured to an electrical supply conductor, and a hollow socket portion adapted to receive the terminal with which the connecter is to be connected; said socket portion having a bottom opening of a size sufficient to permit the terminal to pass thereinto, a side opening communicating with said bottom opening and of a size such that the terminal may pass therethrough as the connecter is disconnected from the terminal, and two oppositely disposed projections between said openings and extending toward one another, and the extremities of which determine the width of the passage whereby said two openings are placed in communication with one another.

1,568,656. CAMERA BELLOWS CONSTRUCTION. JOHN CHRISTIE, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Mar. 12, 1925. Serial No. 14,919. 12 Claims. (Cl. 95—11.)

1. In a photographic camera having bellows and a shutter, the combination with an apertured bellows supporting plate, and an apertured lens board upon which the bellows supporting plate is carried, a plurality of lugs extending from the periphery of the lens board aperture for guiding and supporting the shutter, said lugs being spaced to provide a passage way for air through the two apertured members.

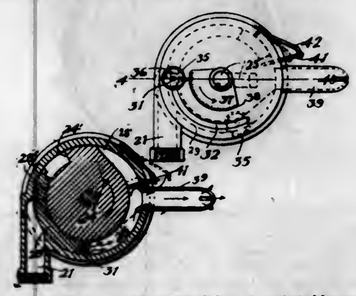
1,568,657. OIL CAN. WILLIS A. COE, Trenton, Nebr. Filed Dec. 29, 1924. Serial No. 758,707. 4 Claims. (Cl. 221—56.)



1. The combination with an oil can having a spout cap threaded into its mouth, of a flange upon the cap surrounding the same and provided with a series of abutments, and a resilient volute detent finger secured at one end to the can and extending circumferentially of the can with its other end in engagement with the flange for coaction with the abutments thereon.

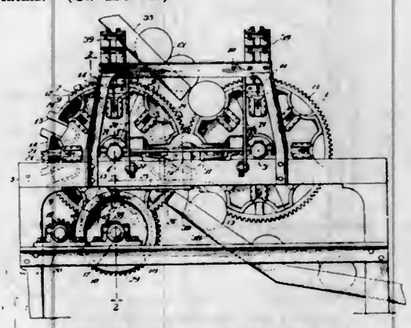
1,568,658. PRESERVATIVE FOR MOTION-PICTURE FILMS. JOHN I. CRABTREE, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Mar. 3, 1925. Serial No. 13,002. 8 Claims. (Cl. 91—69.)

1. A preservative for motion picture film comprising glycerine and ethylene glycol.



6. The method of treating motion picture film to maintain its flexibility that comprises submitting the film to a bath comprising glycerine and ethylene glycol.

1,568,659. TRACKING MECHANISM FOR MUSIC SHEETS. THOMAS DANQUARD, Newark, N. J., assignor to Auto Pneumatic Action Company, New York, N. Y., a Corporation of New York. Original application filed Nov. 4, 1921. Serial No. 512,886. Divided and this application filed July 25, 1923. Serial No. 653,686. 4 Claims. (Cl. 84—140.)

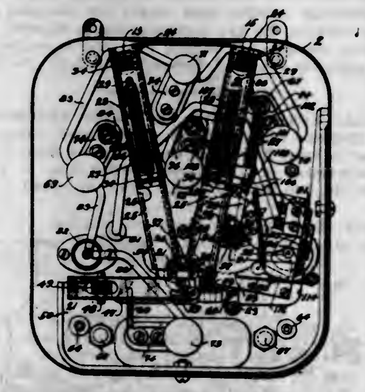


1. The combination of an apertured tracker bar, means for drawing a perforated music sheet from the music spool over the tracker bar for playing, means for rotating the music spool for rewinding, an automatic tracking mechanism for maintaining the music sheet in proper lateral position on the tracker while tracking forward consisting of two opposed shifter pneumatics, valves for controlling the same, guide openings controlled by the music sheet, connections therefrom to said valves, and means for closing the communication between the guide openings and the valves during the rewinding action.

1,568,660. DEVICE FOR DELIVERING A MEASURED QUANTITY OF ICE CREAM. GEORGE A. DUMAS, Springfield, Mass., assignor of one-half to Herbert L. Handy, sr., Springfield, Mass. Filed Dec. 9, 1924. Serial No. 754,732. 6 Claims. (Cl. 221—103.)

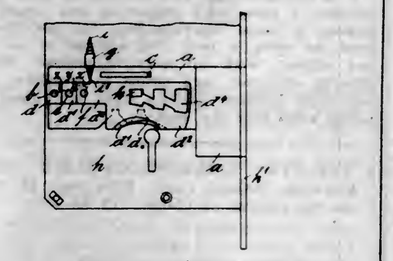
1. A measuring device comprising a rotatable member which is formed with a groove in its edge to receive the material, means for rotating the grooved member, adjustable piston means in the groove for varying the volume of the groove portion into which the material is forced, and means for permitting the escape of the material from the grooved portion.

1,568,661. EAR-FEEDING APPARATUS. GEORGE ELLIOTT and HAROLD M. WALKER, Kansas City, Mo., assignors, by mesne assignments, to International Patents Development Company, a Corporation of Delaware. Filed Aug. 9, 1924. Serial No. 731,046. 28 Claims. (Cl. 113—1.)



1. An apparatus for feeding pail ears to an ear manipulating machine, comprising a chute having an open lower end through which the ears would normally discharge by gravity, yieldable means engaging the lowermost ear to hold the ears within the chute, and means for positively forcing this ear from the chute past the first mentioned means, the yieldable means then engaging the next succeeding ear.

1,568,662. COMBINATION SIGNAL DEVICE FOR VEHICLES. JACOB G. FRIEMAN, St. Paul, Minn., and WILLIAM A. RANKIN, Oak Park, Ill.; said Rankin assignor to said Frieman. Filed Jan. 15, 1923. Serial No. 612,861. 15 Claims. (Cl. 116—36.)

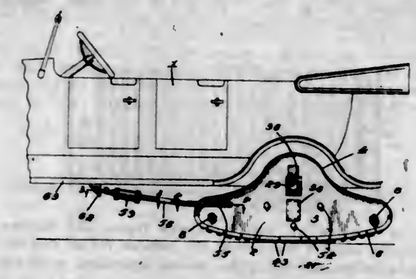


1. A signal device of the character described, including a sign, a shutter for the sign, and means for actuating

the shutter including a member disposed at the axis of the shutter and having a spiral portion in combination

with another element having a sliding engagement with the said spiral portion whereby rotary motion is produced to swing the shutter.

1,568,663. LOCK WITH SEVERAL TUMBLERS. MAXIMILIAN FÜBER, Lubeck, Germany. Filed May 26, 1923. Serial No. 641,652. 2 Claims. (Cl. 70—75.)



1. A lock with several tumblers controlled by a common spring comprising in combination a key plate, a pivot pin fixed on said key plate at the inner end of the same, a guide pin fixed on said key plate at about the middle of the same, a hook fixed on said key plate above said guide pin, a bolt guided on said pins, a set of tumblers on said bolt the lowermost of said tumblers being pivotally mounted at its inner end on said pivot pin and having in proximity to said pivot pin a pivot pin for the next following tumbler each following tumbler having a pivot pin for the succeeding tumbler, and a tumbler spring attached with one end to the uppermost tumbler and with the other end to said hook of the key plate.

1,568,664. PREPARING STRAW BRAID FOR BLEACHING. EDGAR W. GEISLER, Brooklyn, N. Y., assignor to R. H. Comey Brooklyn Company, Brooklyn, N. Y., a Corporation of New York. Filed June 15, 1925. Serial No. 37,326. 6 Claims. (Cl. 8—2.)

1. The process of treating straw braid vegetable fibers having their original form and general physical characteristics, comprising the preliminary step of subjecting them while moist to chlorine gas whereby said fibers may be subsequently readily penetrated by a bleaching agent, and the step of subjecting them to the action of a bleaching agent other than chlorine.

1,568,665. PROPULSION DEVICE. EVANS GELLY, Quebec, Quebec, Canada. Filed Jan. 25, 1924. Serial No. 688,566. 2 Claims. (Cl. 305—3.)

2. A propulsion device comprising a frame including side plates, track members supported by said plates, shafts mounted in the frame, sprocket wheels mounted on the shafts, a tread member passed around said wheels, and provided at its ends with roller wheels adapted to travel in said tracks, and means for actuating said member from the driving axle.

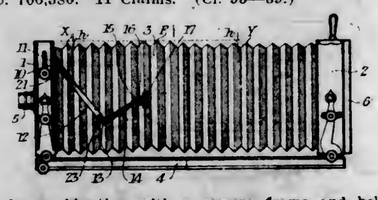
1,568,666. CONNECTER SLEEVE. CHARLES E. GODLEY, Detroit, Mich., assignor to Edmunds & Jones Corporation, Detroit, Mich., a Corporation of New York. Filed Aug. 3, 1922. Serial No. 579,357. 4 Claims. (Cl. 173—328.)

1. A cylindrical connecter sleeve having perforated ears at its ends and inwardly turned and a connecter within the sleeve secured in position by said lips.

1,568,667. CARBOCYANINE DYES AND PROCESS OF MAKING SAME. GURNEY O. GUTEKUNST, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Sept. 29, 1921. Serial No. 504,207. 5 Claims. (Cl. 260—40.)

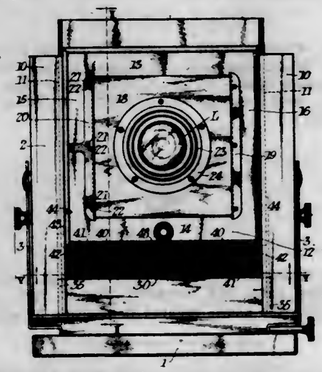
1. A dye of the carbocyanine type produced by the condensation on itself of a naphtho-quinaldine alkylhalide.

1,568,668. THUMB-SUCKING PREVENTER. ADRIA L. HARRISON, Oakland, Calif. Filed Feb. 25, 1924. Serial No. 694,965. 4 Claims. (Cl. 128—133.)



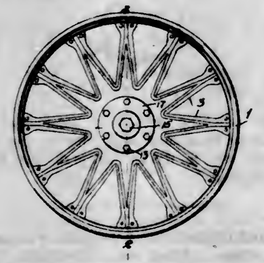
2. A thumb sucking preventer comprising a flexible tube, and means to secure said tube to the side of the finger whereby air is drawn through the tube in the sucking of the finger.

1,568,669. SOLDERING SOLUTION. CLOICE B. HULL, Cleveland, Ohio. Filed Oct. 17, 1924. Serial No. 744,255. 3 Claims. (Cl. 148—23.)



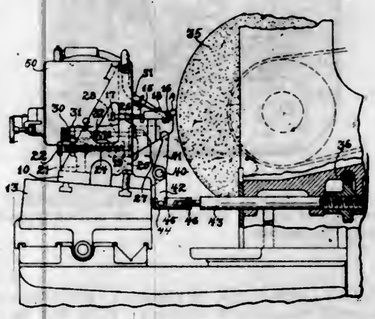
1. A solution of the above character containing antimony trioxide, zinc chloride and glycerine.

1,568,670. BELLOWS SUPPORT FOR CAMERAS. CHARLES E. HUTCHINGS, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Apr. 14, 1924. Serial No. 706,580. 11 Claims. (Cl. 95—39.)



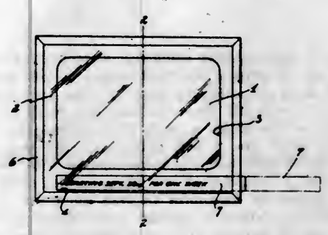
1. In combination with a camera frame and bellows, a bellows support connecting the camera frame and bellows including pivoted links, means associated with the links for resisting bellows sag.

1,568,671. RISING FRONT FOR CAMERAS. CHARLES E. HUTCHINGS, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Apr. 14, 1924. Serial No. 706,582. 11 Claims. (Cl. 95—51.)



1. In a photographic camera, the combination with a camera front adapted to move in a slideway, of a frame adjacent the slideway, and a guard plate adapted to move relative to the frame, said plate being engaged and moved by the camera front as the front is moved in its slideway, whereby light is prevented from entering between the camera front and frame.

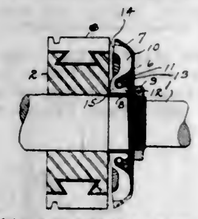
1,568,672. VEHICLE WHEEL. EDWARD E. KELLOGG, Norwalk, Calif., assignor of one-half to A. T. Smith, Los Angeles, Calif. Filed May 23, 1922. Serial No. 562,994. 1 Claim. (Cl. 301—64.)



In a wheel, a hub having a flange near its inner end, a sleeve on the hub having a flange adapted to be secured to the former flange, a member slidable on the sleeve having a flange thereon in opposing relation to the second flange, rim sustaining members diverging from the rim toward the hub secured to the opposing flanges in confronting relation, and means for changing the spacing between the two opposing flanges whereby the sustaining members are radially expanded or contracted for engagement with or disengagement from the rim.

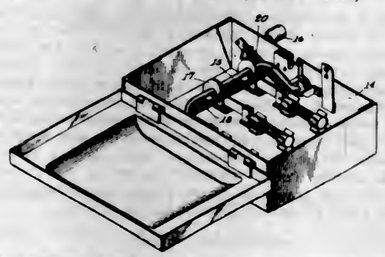
1,568,673. SPRING BACK REST FOR AUTOMATIC GRINDERS. CARROLL KNOWLES, Hartford, Conn., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed Aug. 7, 1922. Serial No. 580,263. 21 Claims. (Cl. 51—238.)

1. A cylindrical grinding machine comprising in combination, a base, work supporting and rotating means thereon, a wheel carrying slide movable toward and from the work, a back rest adapted to contact with and support work in operative position during the grinding operation, and means to withdraw the back rest from operative position when said wheel slide is moved away from the work.



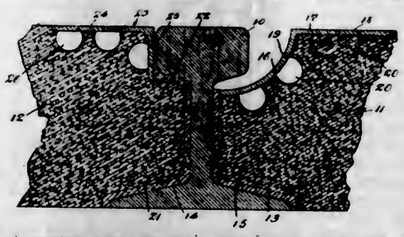
1,568,674. STEREOPTICON SLIDE. THOMAS B. KNOWLES, Oakland, Calif. Filed Sept. 19, 1923. Serial No. 663,622. 1 Claim. (Cl. 88—26.)

An improved stereopticon slide comprising a picture slide, a mat placed over said slide having an opening therein for the picture, a piece of glass placed over said mat and an auxiliary slide adapted to be inserted within a slot in the mat and between the picture slide and the glass.



1,568,675. SHORT CIRCUITER FOR ELECTRIC MOTORS. EVERETT P. LARSH, Dayton, Ohio. Filed Oct. 20, 1923. Serial No. 669,716. 21 Claims. (Cl. 172—279.)

1. In a short circuiting device for motors, an annular series of radially disposed centrifugally actuated weights arranged circumferentially of the motor shaft, a bearing point adjacent the inner end of each weight about which the weight is capable of lateral oscillatory movement to and from the motor commutator, and an annular contractile band circumferentially engaging portions of said weights against the yielding resistance of



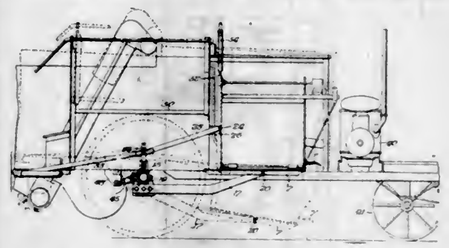
which the weights are movable about their bearing points under centrifugal influence to effect the short circuiting of the motor commutator.

1,568,676. KNIFE-BLADE SWITCH. HENRY E. LEPPERT, New Britain, Conn., assignor to The Trumbull Electric Manufacturing Company, Plainville, Conn., a Corporation of Connecticut. Filed Oct. 6, 1924. Serial No. 741,787. 9 Claims. (Cl. 200—171.)

1. A knife switch contact including spaced contact jaws, a stop block member and link means loosely connecting said block member with said jaws to retain said block member in fixed position adjacent said jaws but entirely outside of the space between said spaced jaws.

1,568,677. STREET-RAILWAY CONSTRUCTION. WILLIAM F. MCCANLESS, Charlotte, N. C. Filed Oct. 9, 1923. Serial No. 667,573. 2 Claims. (Cl. 94—15.)

1. A paving block for use with street railway tracks having a protecting shoulder for the corner thereof disposed adjacent the rails of the track, said protective shoulder comprising a pair of angularly disposed flanges, each of said flanges being provided with a plurality of gripping lugs embedded in the body of the block.

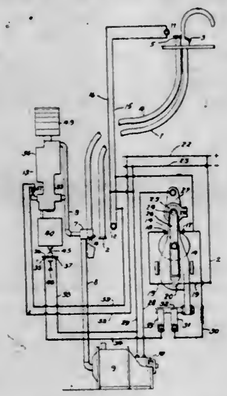


1,568,678. CAR COUPLING. PATRICK MCDONALD, Westville, Ill. Filed May 26, 1923. Serial No. 641,788. 1 Claim. (Cl. 213—185.)

A coupler comprising a housing, a draw bar mounted in said housing and adapted to move longitudinally thereof, said draw bar being provided with a longitudinal slot, a rigid pin secured in said housing and passing through said slot and adapted to cooperate with said slot to limit the movement of said draw bar, an operating shaft connected to said draw bar by suitable crank and link mechanism, so that rotation of said shaft will move said draw bar longitudinally relative to said housing, fixed bearings for said shaft, a coil spring mounted on said shaft and having its one end secured to said shaft and its other end secured to one of said fixed bearings, so that rotation of said shaft to move said draw

bar out of said housing into coupling position will tension said spring sufficiently to cause an automatic return of said draw bar and shaft when said draw bar is released from coupling position, and an upwardly projecting latching head on the forward end of said draw bar, said latching head having a downwardly inclined or beveled forward face so as to cause said head to be forced under and to automatically engage with the latch bar of a mating coupler when said draw bar is moved forward so as to project beyond the forward end of its housing.

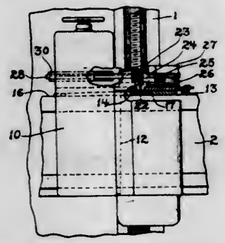
1,568,679. COMBINATION HARVESTER THRASHER. WALLACE F. MACGREGOR, Racine, Wis., assignor to J. I. Case Threshing Machine Company, Racine, Wis., a Corporation. Filed June 19, 1922, Serial No. 569,293. Renewed Aug. 22, 1925. 24 Claims. (Cl. 56—125.)



1. In a combined harvester-thrasher, a supporting wheel for said thrasher, a grain wheel for said harvester, a continuous axle mounted in said wheels, and means connecting said harvester and axle by which the latter may be rocked upon the vertical movement of said harvester.

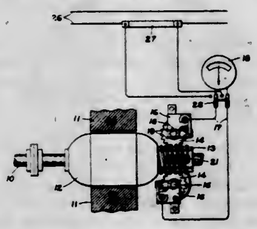
24. In a machine of the class described, a harvester, a thrasher, supporting wheels for said elements, a continuous rocking axle connecting said wheels, means for connecting said harvester and axle for vertically moving said harvester, and means for connecting said thrasher and axle for vertically moving said thrasher when said axle is rocked.

1,568,680. PNEUMATIC-DISPATCH APPARATUS. JAMES G. MACLAREN, Mamaroneck, N. Y., assignor, by mesne assignments, to The Lamson Company, a Corporation of Massachusetts. Filed Feb. 12, 1921, Serial No. 444,592. Renewed July 2, 1925. 28 Claims. (Cl. 243—9.)



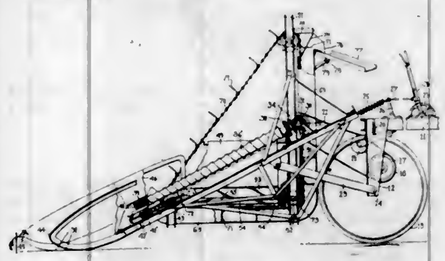
10. Power control apparatus for a pneumatic dispatch system having a transmission tube and means for creating a carrier impelling air flow through the tube, said apparatus comprising a pressure actuated pneumatic which begins to move in a given direction upon introduction of a carrier into the transmission tube, said pneumatic, upon completion of its normal range of movement, causing cessation of the carrier propelling air

flow, a second pressure actuated pneumatic moving more rapidly than the first when a carrier is introduced into the tube, and means operable by the second pneumatic



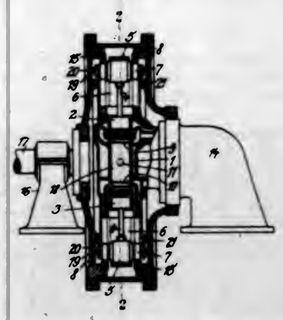
to prevent completion of the movement of the first pneumatic in said direction until the carrier has emerged from the tube.

1,568,681. ADJUSTING AND CLAMPING GIB. NICHOLAS MARCALUS, Plainfield, N. J. assignor to Niles-Bement-Pond Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 20, 1923. Serial No. 681,782. 5 Claims. (Cl. 308—3.)



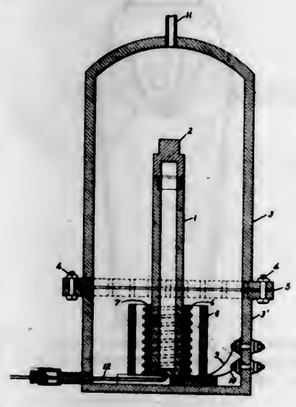
1. A combined adjusting and clamping gib comprising two adjacent taper elements for cooperating with two relatively movable members, one of the elements being movable for relatively adjusting the two members, and the other element being movable to clamp and unclamp the two members.

1,568,682. COMMUTATION. FREDRICK S. MARCELLUS, Amsterdam, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Oct. 9, 1923. Serial No. 667,575. 5 Claims. (Cl. 171—321.)



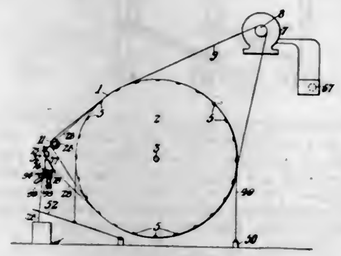
1. A commutating arrangement for dynamo electric machines comprising a circumferentially grooved commutator and brushes bearing thereon cut to fit said grooves, said brushes having relatively movable sections fitting into the same groove and resilient means for causing said sections to press against opposite sides of said groove.

1,568,683. CORN HARVESTER. JOHN M. MEYERS, Janesville, Wis., assignor to Durant Engineering Corporation, New York, N. Y., a Corporation of Delaware. Filed Feb. 9, 1920. Serial No. 357,492. 7 Claims. (Cl. 56—18.)



2. In a corn picker the combination of a traveling frame, a picker frame supported in part thereby and connected thereto by means permitting said picker frame to swing vertically relatively to said traveling frame, additional supporting means on said picker frame adapted to travel in contact with the ground surface, and spring means interposed between said frames adapted to restrain yieldingly the downward swinging movement of said picker frame, the connections being such as to permit the picker frame normally to swing freely relatively to said traveling frame under the influence of gravity while restrained by said spring means.

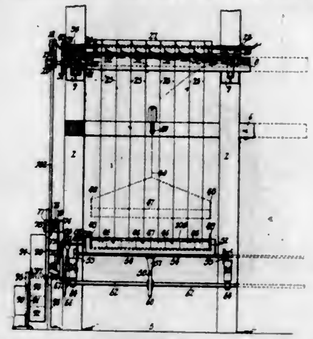
1,568,684. ENGINE, AND PARTICULARLY INTERNAL-COMBUSTION ENGINE. HERMANN MICHEL, Voorde, Germany. Filed Oct. 27, 1923. Serial No. 671,193. 3 Claims. (Cl. 123—51.)



2. An engine comprising stationary cylinders, pistons reciprocating therein, a rotary fly-wheel provided with a main cam track, main operating rollers connected with the pistons and engaging said cam track to rotate the fly-wheel, auxiliary rollers likewise connected with said pistons, said fly-wheel also having an auxiliary cam track for cooperation with said auxiliary rollers during the starting operation and while the engine is coming to a stop, those portions of the main cam track which are operative during the second half of the inward piston stroke being so constructed that the distance between the two cam tracks is sufficient to keep the auxiliary rollers out of contact with the auxiliary track when the main operating rollers are in engagement with the main track.

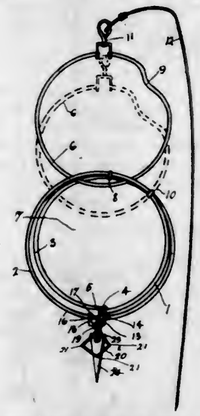
1,568,685. PURIFICATION OF HIGHLY-OXIDIZABLE METALS. ROY W. MOORE, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Mar. 2, 1923. Serial No. 622,240. 4 Claims. (Cl. 75—17.)

1. The process of separating uranium from a less fusible oxide which consists in fusing said metal under inert conditions and withdrawing the fused metal from the less fusible oxygenous material.



1,568,686. FILAMENT-DRYING APPARATUS. SAMUEL A. NEIDICH, Edgewater Park, N. J. Filed July 29, 1925. Serial No. 46,822. 13 Claims. (Cl. 34—48.)

1. In filament drying apparatus; the combination with an open reel; of means arranged to rotate said reel; means arranged to direct a wet filament upon said reel, at one end thereof; and means arranged to withdraw a separate dry filament from said reel; whereby separate filaments may be successively wound upon said reel, and unwound therefrom; such winding and unwinding being intermittently and contemporaneously effected, to spontaneously dry said filament during such winding and unwinding.

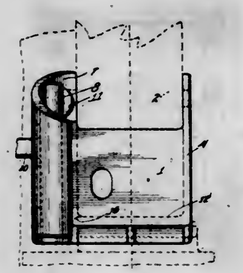


1,568,687. APPARATUS FOR TREATING FILAMENTS FORMED FROM VISCOSE. SAMUEL A. NEIDICH, Edgewater Park, N. J. Filed July 30, 1925. Serial No. 46,952. 7 Claims. (Cl. 18—8.)

7. Means arranged to store a filament of partially coagulated viscose, including a tray, supported in a substantially horizontal plane; means arranged to progressively lower said filament, substantially vertically with respect to said tray; and means arranged to relatively move said filament and tray, arranged to drop said filament into said tray in convolutions which are transversely and longitudinally successive with reference to the length of the tray, in which the filament is

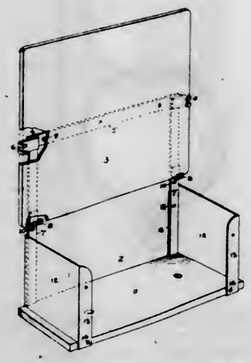
thus progressively distributed and received; whereby said filament is so stored in said tray that it may be progressively withdrawn therefrom without tangling.

1,568,688. TRAP. OLOF ALBIN NORD, Vavenby, British Columbia, Canada. Filed Feb. 2, 1925. Serial No. 6,431. 4 Claims. (Cl. 43—89.)



1. A trap comprising a double ring the coils of which are spaced apart, a single ring provided at its upper end with a swivel and a wire attached to the swivel freely connected to said double ring and movable across the opening of the same, a U-shaped bracket secured to the bottom of the double ring provided with a swivel and a spike freely connected to said swivel, a link pivoted at one end to the double ring between the legs of the said bracket having its upper end adapted to bear in trip-fashion on the bottom end of the single ring when the latter is placed in registration with the double one, and an arm pivoted at its inner end to the said link adapted under pressure on its outer end when horizontal to trip the link clear of the single ring.

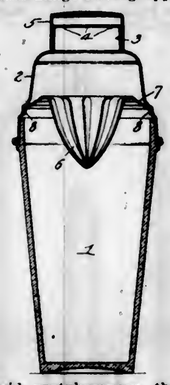
1,568,689. BOLT MOUNTING AND SHOE FOR CAR-DOOR POSTS. KARL F. NYSTROM, Chicago, Ill., assignor to Camel Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 10, 1924. Serial No. 748,873. 7 Claims. (Cl. 212—42.)



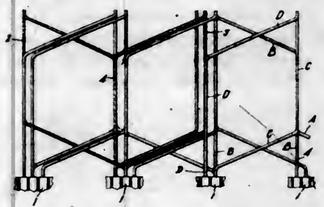
1. A combined post shoe and bolt socket for door posts comprising a housing adapted to receive the end of a post, and a bolt socket integral therewith, adapted to

receive a bolt for locking the shoe with its contained post, in position relatively to a structure in which the post is used; said socket having its sinner side open to

the post to admit the bolt laterally thereto and said housing supporting the post with the face thereof in position to close the rear side of the socket.



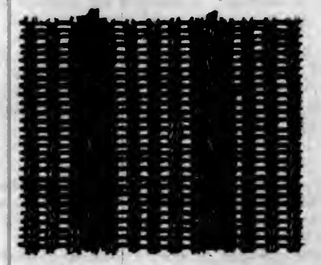
1,568,690. COMBINATION MIRROR AND TOWEL RACK. PHILIP D. PARSONS, Philadelphia, Pa., assignor to Scott Paper Company, a Corporation of Pennsylvania. Filed Dec. 14, 1922. Serial No. 606,779. 4 Claims. (Cl. 45—52.)



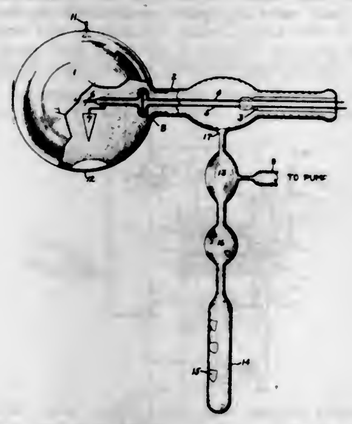
1. In a device of the character stated, the combination of a collapsible towel-rack having hinged end portions, a metallic frame to which the towel-rack is detachably secured and extending upwardly therefrom for suspending the towel-rack in open operable condition, and mechanical connections between the metallic frame and the towel-rack for holding the hinged end portions in spaced relation and, whereby the rack and frame may be separated to permit the towel-rack to be collapsed for shipment.

1,568,691. COMBINED SQUEEZER AND BEVERAGE SHAKER. JAMES R. PIERSON, New York, N. Y. Filed June 29, 1925. Serial No. 40,215. 3 Claims. (Cl. 146—3.)

1. The combination with a beverage shaker having a removable hood of a squeezer element comprising a fluted dome and a flange surrounding said dome, said flange being snugly and removably insertable in said hood, the wall of said hood being provided with inward protuberances, and said flange having opposed peripheral recesses to pass said protuberances, thereby enabling the flange to engage behind said protuberances in a partial turn of the squeezer element.

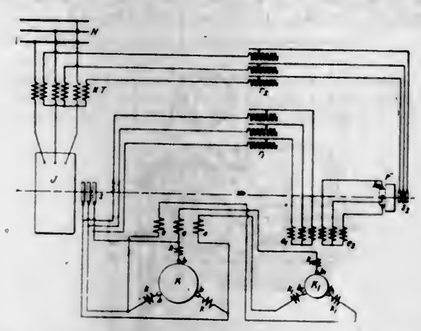


1,568,692. DYNAMO-ELECTRIC MACHINE. ALAN ADAIR POLLOCK, Leamington Spa, England, assignor to General Electric Company, a Corporation of New York. Filed Mar. 19, 1925. Serial No. 16,652. 4 Claims. (Cl. 171—206.)



1. A dynamo electric machine of the commutating type having an armature winding comprising coils, each coil comprising a plurality of conductors, two of said conductors of each coil being located substantially 360 electrical degrees apart and another of said conductors of each coil being located substantially 180 electrical degrees from each of said first mentioned conductors.

1,568,693. KNIT FABRIC. ROBERT ROTHMAN, Brooklyn, N. Y. Filed Dec. 26, 1924. Serial No. 757,994. 7 Claims. (Cl. 66—4.)



1. In a knit fabric, a wale of multiple threads in each successive loop, such wale being interposed between wales, in which each group of three adjacent course threads on each side are brought together to form a series of successive multiple thread loops in the form of a knit wale.

1,568,694. PHOTO-ELECTRIC DEVICE. WILLIAM A. RUGGLES, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Apr. 16, 1921. Serial No. 462,052. 9 Claims. (Cl. 250—34.)

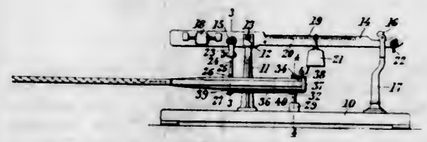
1. The method of preparing a light sensitive device which consists in depositing metal upon the inner surface of an evacuated container, and depositing a photo-sensitive material upon said surface while maintaining said vacuum.

1,568,695. CASCADE INDUCTION-MOTOR REGULATION. WALTER SEIZ, Baden, Switzerland, assignor to General Electric Company, a Corporation of New York. Filed Aug. 21, 1922. Serial No. 583,112. 4 Claims. (Cl. 172—274.)

1. A regulating system for induction motors comprising a wound rotor induction motor, a commutator machine connected in cascade with said motor, an exciter for said commutator machine, means for exciting said exciter with a current derived from the primary circuit of said motor and proportional to the primary current and the slip of said motor and means for causing said exciting current to have a frequency varying with the slip frequency of the induction motor.

1,568,696. PIE PLATE. RICHARD M. SMYTHE, Brooklyn, N. Y., assignor to Henry M. Black, New York, N. Y. Filed Aug. 2, 1923. Serial No. 655,238. 1 Claim. (Cl. 53—6.)

A pie plate comprising a circular bottom a downwardly and inwardly sloping side wall, an upwardly and outwardly inclined border flange or brim extending from the upper portion of said side wall and an upwardly and outwardly flaring rim at the outer edge of said flange or brim, said inclined flange or brim merging into said side

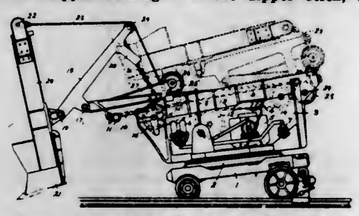


wall on a downwardly slanting convexly curved juncture zone, and said flange or brim and said rim being run together by means of a distant fillet.

1,568,697. SHOCK ABSORBER. WILLIAM G. STRUTHERS, Oakland, Calif. Filed Aug. 4, 1924. Serial No. 729,941. 7 Claims. (Cl. 267—10.)

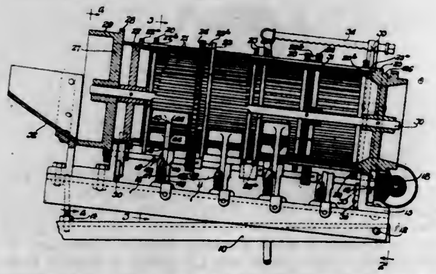
1. In a shock absorber, a stationery drum provided with an arbor extension, a yoke mounted upon said arbor extension, a jaw element integral with and protruding from one side of said yoke, a second jaw element separate from said yoke, a drum gripping member interposed between both of said jaws and the drum, a flexible member wound about said jaws to actuate the drum gripping member, and a spring connected to said yoke and tending to prevent the unwinding of said flexible member with respect to the jaws.

1,568,698. APPARATUS FOR OBTAINING THE LEVERAGE WEIGHT OF ATHLETIC IMPLEMENTS. PEMBROKE A. VAILE and FRANCIS V. ROY, Chicago, Ill., assignors to E. and T. Fairbanks and Company, St. Johnsbury, Vt., a Corporation of Vermont. Filed May 27, 1925. Serial No. 33,188. 6 Claims. (Cl. 265—49.)



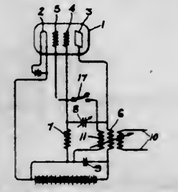
1. The combination with a weigh-beam, of a load member pivoted to swing in a fixed path, a fulcrum member pivoted to swing in a path at right angles to said load member, and means connecting the two members for maintaining a fixed distance therebetween.

1,568,699. MECHANICAL SHOVEL. ERICK VON MEHREN, Duluth, Minn., assignor to Hear Shovel Company, Duluth, Minn., a Corporation of Minnesota. Filed Oct. 12, 1925. Serial No. 62,005. 4 Claims. (Cl. 214—134.)



1. In combination a tram car having a turntable thereupon, a power containing superstructure pivotally carried upon the turntable, a carriage reciprocably carried within the superstructure, an auxiliary dipper stick pivotally carried upon the carriage, a dipper and dipper

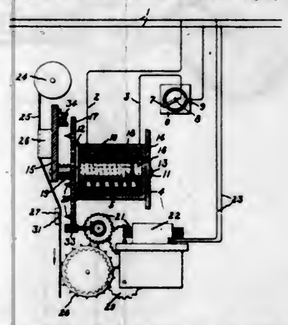
stick proper pivotally carried upon the auxiliary dipper stick, a dipper manipulating line attached to the free end of the dipper leading over the dipper stick, down-



wardly about a sheave in the rear end of the carriage and thence to the power mechanism within the superstructure.

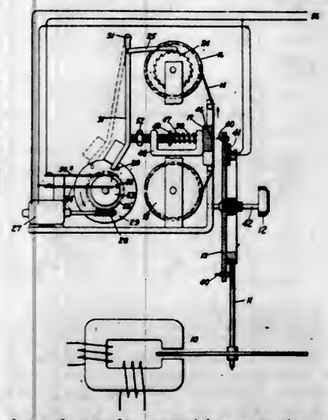
1,568,700. APPARATUS AND PROCESS FOR STEMMING FRUIT. WILLIAM E. URSCHEL, Valparaiso, Ind. Filed Apr. 22, 1925. Serial No. 25,028. 14 Claims. (Cl. 146—55.)

1. In a fruit stemmer, a movable perforate member having openings permitting of fruit stems projecting therethrough, a member mounted against rotation adapted to engage fruit stems projecting through said openings in said member, and means for causing fruit to move upon said perforate member.



1,568,701. ELECTRON-DISCHARGE APPARATUS. JOHN C. WARNER, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Mar. 5, 1925. Serial No. 13,042. 6 Claims. (Cl. 250—36.)

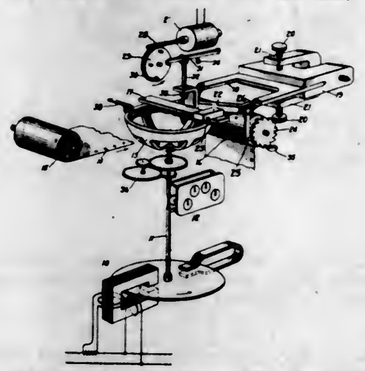
1. The combination with an electron discharge device having an electron emitting cathode, an anode and two grids interposed between cathode and anode, one of said grids being nearer the anode than the other, of means for producing oscillations comprising an oscillating circuit connected to the anode and one of the grids and a coupling between the oscillating circuit and a circuit of the other grid.



1,568,702. GRAPHIC INTEGRATING RECORDER. HENRY E. WARREN, Ashland, Mass., assignor to General Electric Company, a Corporation of New York. Filed Jan. 4, 1922. Serial No. 527,011. 8 Claims. (Cl. 234—5.5.)

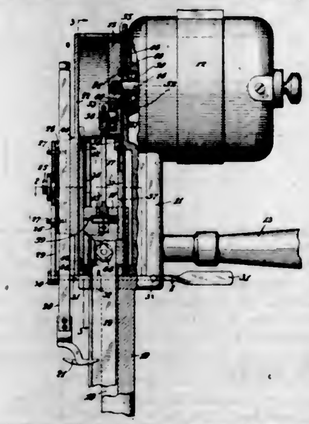
8. In combination a source of alternating current an instrument for recording the integrated value thereof comprising a record sheet, means for advancing said sheet at a substantially uniform rate, a wheel provided with a plurality of equally spaced concentrically arranged styli on one side thereof, a synchronous motor connected to said source for rotating said wheel and advancing said sheet at speeds proportional to the frequency of said source, means for guiding said sheet in a radial direction adjacent a sector of said wheel and opposite the path of movement of said styli, means for

momentarily moving said wheel in an axial direction to cause the stylus or styli adjacent said sheet to make contact therewith to establish a record and a chronometer for causing said last mentioned means to operate at constant predetermined time intervals, said time intervals being such as to cause the records made by the successive styli to fall in a line parallel to the path of movement of said record sheet when the frequency is constant at normal value.



1,568,703. DEMAND RECORDER. HENRY E. WARREN, Ashland, Mass., assignor to General Electric Company, a Corporation of New York. Filed Mar. 21, 1924. Serial No. 700,947. 11 Claims. (Cl. 234—5.5.)

10. A demand recorder comprising a marker arranged to be moved in a continuous path at a speed proportional to the demand to be recorded, a record sheet arranged for movement adjacent to and transversely to the path of movement of said marker, a platen for momentarily establishing contact between said marker and record sheet when they are adjacent, a timing motor, means for starting said timing motor when said marker passes a definite point with respect to said record sheet, means actuated by said motor after a predetermined operating period for actuating said platen whereby a measurement of the distance moved by said marker during the said interval is recorded on said record sheet,

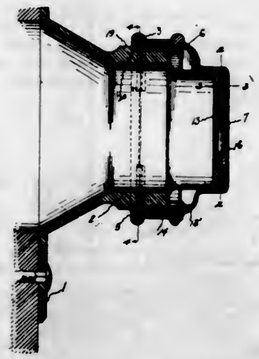


means operated by said motor for advancing said record sheet before each recording operation, means operated by said motor for stopping the latter immediately after each recording operation and means set into operation by said motor for tightening up said record sheet immediately after each recording operation.

1,568,704. DEMAND RECORDER. HENRY E. WARREN, Ashland, Mass., assignor to General Electric Company, a Corporation of New York. Filed Mar. 21, 1924. Serial No. 700,948. 11 Claims. (Cl. 234—5.5.)

9. In an integrating type meter, a recording member having a circular band driven from said meter through reduction gearing, a record sheet of less width than the diameter of said band arranged to be advanced in a radial direction adjacent to one periphery of said band, a platen for momentarily pressing said record sheet against said band, an inking device carried by said platen, and a device for intermittently actuating said platen, said inking device being so positioned that it deposits a small drop of ink on said band as it approaches the record sheet when said platen is actuated.

1,568,705. CLOTH-CUTTING MACHINE. MARTIN ZAWISTOWSKI, Brooklyn, N. Y. Filed Jan. 9, 1922. Serial No. 527,833. 11 Claims. (Cl. 164—75.)

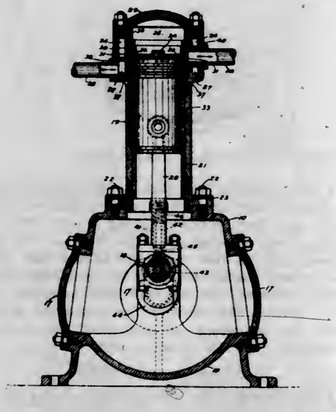


1. A cloth cutting machine having a vertically movable presser foot carrier, a guide for preventing lateral movement thereof, and a pair of vertically movable wedges in engagement with opposite sides of said carrier and movable in opposite directions for clamping the latter, and means for operating said wedges simultaneously.

1,568,706. TOE PROTECTOR. ROY H. ANDERSON, Allentown, Pa., assignor of one-half to H. Gibson Hastings, Allentown, Pa., and A. Harlan Elliott, Philadelphia, Pa. Filed June 24, 1924. Serial No. 722,050. 2 Claims. (Cl. 36—73.)

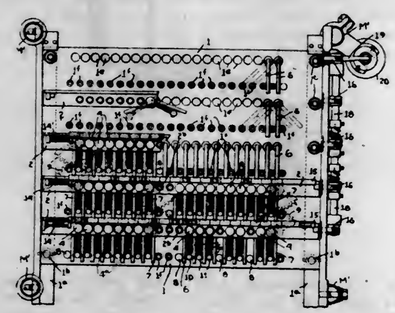
1. A toe protector for shoe soles consisting of a metallic member having a base portion adapted to underlie the sole, said base portion having a slot formed therein extending from a point near the front of the base to a point inwardly of the rear edge of the base thereby to provide a web portion between the rear edge of the base and the adjacent end of said slot adapted to be cut away to permit the sides of the protector to be moved together for purposes of adjusting the protector to sizes smaller than its original side.

1,568,707. HUB-CAP-ATTACHING MEANS. FREDERICK H. AULD, Columbus, Ohio, assignor to The D. L. Auld Company, Columbus, Ohio. Filed Sept. 8, 1924. Serial No. 736,494. 4 Claims. (Cl. 301—108.)



2. The combination with a hub collar, of a pair of ribs carried by the collar and having spaced ends constituting stops, a cap having flanges for co-operative engagement with the ribs, a shell mounted in the cap and provided with wings for interlocking engagement with the stops to prevent rotation of the shell during rotation of the cap, and means for exerting endwise movement of the cap and shell in opposite directions to cause the flanges to tightly engage the ribs and the shell to seat upon the rim of the hub collar.

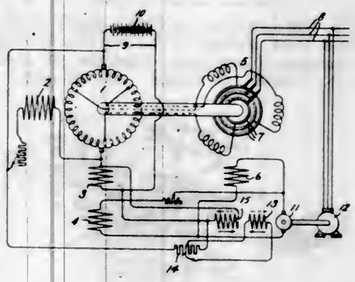
1,568,708. ELASTIC-FLUID COMPRESSOR. CHESTER A. BAKER, Omaha, Nebr. Filed May 10, 1924. Serial No. 712,332. 7 Claims. (Cl. 230—27.)



1. In an elastic-fluid compressor, a cylinder having in the walls thereof inlet ports and discharge ports spaced apart longitudinally, a reciprocating piston, a valve-sleeve fitting slidably within the cylinder and about the piston, said sleeve having a head inclosing the space above the piston and having lateral ports communicating with said piston-space and adapted to register with the cylinder-ports to connect the same with the piston-space,

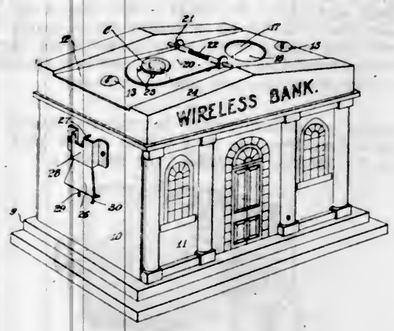
means supplying elastic fluid pressure above the sleeve-head tending to move the sleeve downwardly in the cylinder, and means for limiting the downward move-

ment of the sleeve and for lifting the same against the head-pressure while the piston is substantially at the end of its suction stroke.



1,568,709. INTERLOCKING MECHANISM FOR VOTING MACHINES. JOHN S. BAKER, Los Angeles, Calif. Filed July 21, 1924. Serial No. 727,376. 43 Claims. (Cl. 235—54.)

1. In an interlocking system for vote registering machines, a series of cam members and a series of intermediate members, the cam members acting at angles to the intermediate members, and the intermediate members being freely mounted at their ends and the cam members being freely mounted at their sides so that all of said members may swivel in their bearings during interlocking operation.

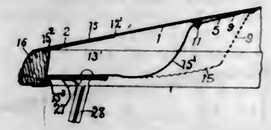


1,568,710. VOLTAGE-REGULATING SYSTEM. THEOPHILUS F. BARTON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Mar. 30, 1923. Serial No. 628,885. 7 Claims. (Cl. 171—123.)

1. In combination, an alternating current supply circuit, a direct current distribution circuit, a synchronous converter connected between said circuits, a booster electrically connected in series between said supply circuit and said converter, and means whereby such booster operates differentially with respect to the output of said converter comprising means for controlling the excitation

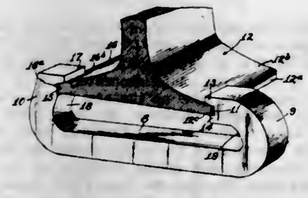
of said booster in accordance with the magnitude and direction of the power flowing between said converter and one of said circuits.

1,568,711. MECHANISM FOR DEPOSITING COINS OR OTHER OBJECTS. CHRISTIAN BERGER, New York, N. Y., assignor to Frederick L. Sawyer, Evanstown, Ill. Filed June 9, 1922. Serial No. 567,070. 4 Claims. (Cl. 46—86.)



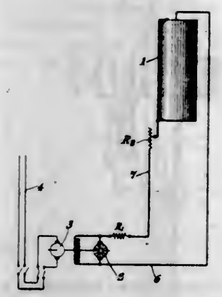
4. In combination, a receptacle for coins or other objects, a depositor for causing the deposit of the objects in the receptacle, the same arranged with an actuating spring, a restraining magnet for holding the depositor in set position in opposition to said spring, and means controllable from a distance, comprising an acoustic detector associated with an electric circuit for causing said magnet to release said restraining element and thereby actuate the depositor.

1,568,712. POCKET IN AUTOMOBILE TOPS. GEORGE E. BISHOP, Cleveland, Ohio. Filed Oct. 12, 1923. Serial No. 668,208. 8 Claims. (Cl. 296—140.)



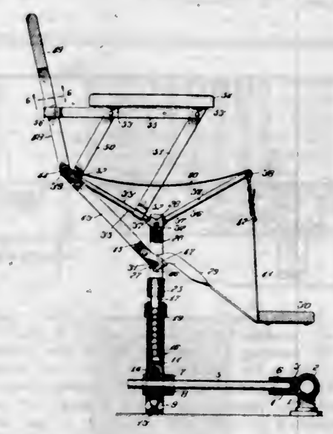
1. The combination with an automobile top deck; of a flexible member secured adjacent opposite edges under and to said deck, the points of attachment being spaced apart a distance less than the distance between said edges, so

as to provide a pocket between the deck and said member, the latter being also detachably secured intermediate



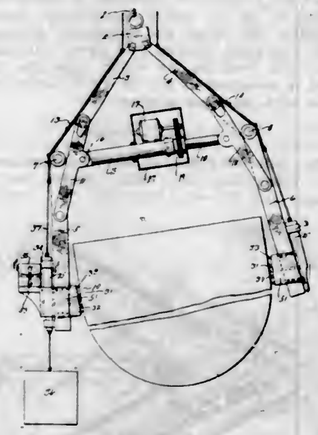
said edges to the deck, whereby the pocket can be opened and closed and a supported platform is provided to receive and hold the filler when the pocket is open.

1,568,713. RAIL ANCHOR. ROLANDIS A. BLAIR, Fort Wayne, Ind., assignor to The P & M Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 20, 1924. Serial No. 744,545. 30 Claims. (Cl. 238—330.)



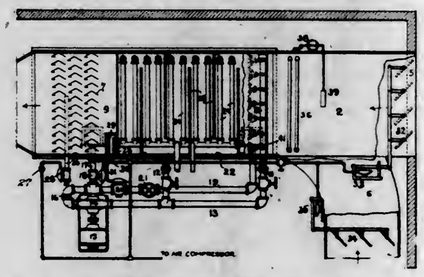
30. A rail anchor comprising means adapted to extend transversely under a rail base and having inwardly extending arms adapted to be distorted into gripping engagement with the vertical edges of said base at opposite sides of the rail, said arms being so arranged that the anchor, when in its normal applied position on a rail, is subjected to substantially its maximum distortion.

1,568,714. PREVENTION OF SCALING AND ENCRUSTATION. CHARLES E. BONINE, Melrose Park, Pa., assignor to Antiscale Corporation, Philadelphia, Pa., a Corporation of Delaware. Filed Aug. 26, 1925. Serial No. 52,589. 7 Claims. (Cl. 204—25.)



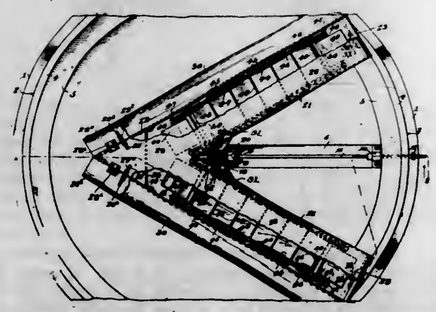
1. In apparatus for the protection of the surface of a metallic body against scaling and encrustation, a dynamo-electric machine, electrical conductors respectively extending from the terminals of said machine to spaced points of the body of which the surface is to be protected and thereby forming a closed circuit, a resistance unit of relatively large capacity connected in the circuit so formed, and an adjustable resistance also connected in the circuit so formed, whereby sufficient current may be passed through the body to protect the surface thereof, at a suitably low voltage.

1,568,715. FOLDING CHAIR. MORRIS BORISOF, Chicago, Ill. Filed Aug. 17, 1923. Serial No. 657,878. 15 Claims. (Cl. 155—10.)



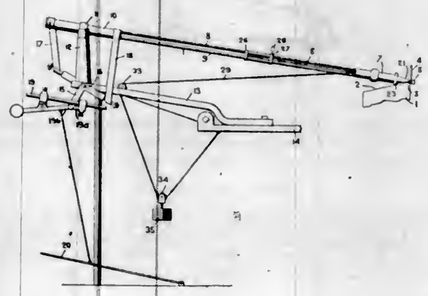
1. A folding chair comprising a sub-structure, an upright pivotally connected with the sub-structure, a collapsible seat structure pivotally secured to the upright, a back rest and arm rests, said back rest and arm rests being pivotally mounted on the seat structure.

1,568,716. GRAPPLE. GEORGE E. BOULTON, Detroit, Mich. Filed June 12, 1924. Serial No. 719,488. 4 Claims. (Cl. 294—66.)



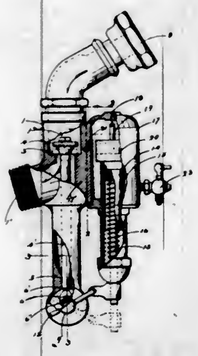
1. A grapple for salvaging wrecked vessels and other objects in deep water consisting of a pair of arms, a block to which the arms are pivoted at an angle one to the other and a second pair of arms pivotally connected with the lower end of the first pair and extending in substantially parallel relation one with the other, said second pair of arms being provided with electro-magnets, a series of pins adapted to be driven into the object to be raised, means for driving the pins operable from the surface, and means for drawing the arms together into engagement with the object while driving the pins.

1,568,717. AIR-CONDITIONING APPARATUS. WILLIAM G. R. BRAEMER, Cranston, R. I., assignor to American Moistening Company, a Corporation of Maine. Filed Sept. 10, 1923. Serial No. 661,793. 5 Claims. (Cl. 236—44.)



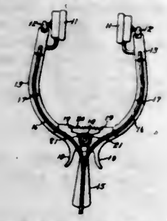
1. In an air conditioning apparatus, the combination of an air passage for supplying air to a place of use, means for causing a current of air to flow through the passage, means for spraying water into the passage for substantially saturating the air passing therethrough with moisture, eliminators in the passage for removing the suspended or entrained moisture in the air after subjection to the water sprays, means for varying the temperature of the spray water before being sprayed to compensate inversely for variations in temperature of the air being treated whereby the air temperature may be maintained substantially constant, and thermostatic means for controlling the temperature changing means for the temperature of the spray water, the same including a thermostat arranged in the air passage between the spraying means and the eliminators and subjected to water having the temperature of the sprayed moisture suspended or entrained in the air before removal by the eliminators, and wherein further, the thermostat in the air passage between the spraying means and the eliminators comprises a suspended water vessel open at its top, and a thermostatic element arranged within the vessel and constantly submerged in the water contained therein, said vessel surrounded by moist air and receiving its water from the moisture suspended or entrained in the air which passes over and in contact with its upper surface.

1,568,718. AIR MOTOR. CLARA G. BRATTLAND, Ada, Minn. Filed July 13, 1925. Serial No. 43,312. 8 Claims. (Cl. 170—6.)



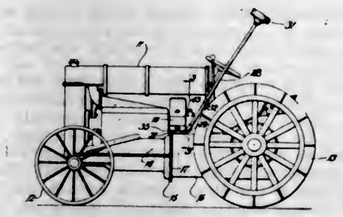
1. An air motor of the character set forth comprising, a vertical power shaft, a pair of elongated casings mounted in divergent relation upon the upper end of said shaft to swing thereabout, said casings having open tops, wind operable power elements movable longitudinally of each casing, and means for imparting power developed by said elements to said shaft.

1,568,719. FEEDING MECHANISM FOR NAIL, TACK, AND SIMILAR MACHINES. ALBERT H. BRIGHAM, Whitman, Mass. Filed Nov. 5, 1923. Serial No. 672,761. 11 Claims. (Cl. 10—171.)



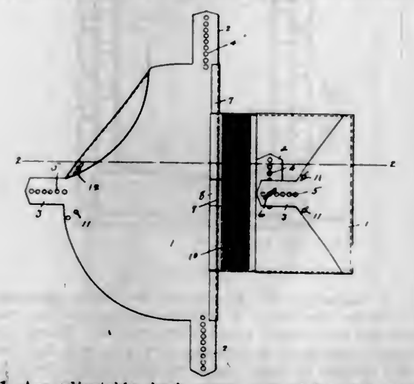
1. A plate feeding mechanism comprising a guide arm, a nose piece secured to the forward end of the guide arm and having a flat passage longitudinally therethrough to guide the plate accurately as it is fed, a carriage mounted to slide on the arm in the rear of the nose piece, the space between the nose piece and the carriage when retracted being laterally open to permit the lateral insertion of the plate, means for feeding the carriage forwardly, and means mounted on the carriage to feed the plate through the nose piece passage on the forward movement of the carriage and to push the rear end of the plate well within the passage upon the conclusion of the forward movement of the carriage.

1,568,720. AUTOMATIC FLUID CONTROL. GUADALUPE BUELNA, Santa Barbara, Calif. Filed Aug. 25, 1924. Serial No. 733,921. 3 Claims. (Cl. 137—139.)



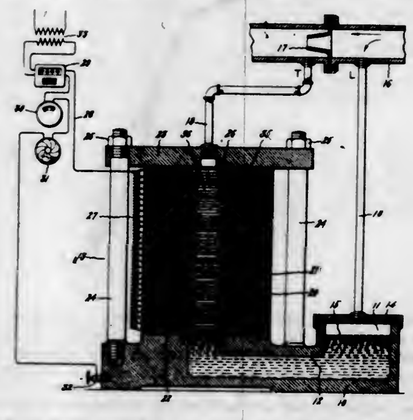
1. An automatic fluid control comprising a hollow body having a fluid inlet and an outlet, a valve to control said outlet, means holding said valve normally unseated, a chamber associated with said hollow body and provided with a duct for conveying a portion of the fluid from said hollow body to said chamber and with a vent, a piston operable in said chamber and connected with said valve holding means, a valve within said chamber to seal the vent therein thereby to cause the fluid pressure therein to operate said piston and permit the valve in said body to seat and shut off the flow of fluid, and means for regulating the flow of fluid from said body to said chamber.

1,568,721. TELEPHONE HEAD SET. JOHN HENRY BUTCHER, Rugby, and ARTHUR PRIMROSE YOUNG, Kenilworth, England, assignors to General Electric Company, a Corporation of New York. Filed Dec. 11, 1923. Serial No. 679,973. 2 Claims. (Cl. 179—156.)



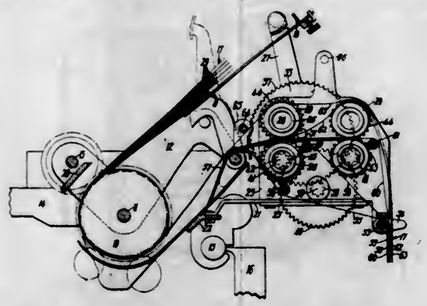
1. In a telephone head set, a handle, a pair of levers pivotally mounted on said handle and normally biased toward each other, a pair of ear pieces mounted on said levers, and means secured to said levers whereby said ear pieces may be moved away from each other.

1,568,722. CLEAN-AIR LEAD FOR TRACTOR FUEL SYSTEMS. ROBERT P. CAMPBELL, Attica, Kans. Filed Feb. 16, 1925. Serial No. 9,699. 9 Claims. (Cl. 180—64.)



1. A device for supplying clean air to the air washer of a tractor comprising a sealing part arrangeable between and conforming to the shape of the bottom of the air washer and the tractor frame parts therebeneath and adapted to seal the air inlet in the bottom of said washer from the surrounding atmosphere, and an air supply pipe leading upwardly from said sealing part and adapted to supply air to said inlet from a height above the dust zone about the tractor.

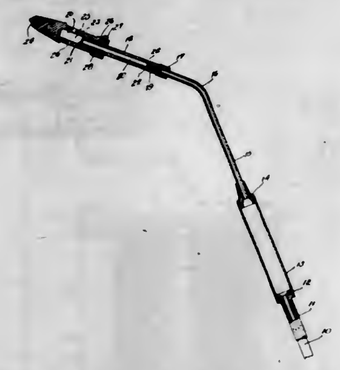
1,568,723. ADJUSTABLE BOOK COVER. ADA COLEMAN and ISADORE A. COLEMAN, Baltimore, Md. Filed May 20, 1925. Serial No. 31,492. 3 Claims. (Cl. 281—34.)



1. An adjustable book cover comprising two sides formed of flexible material and each having its inner edge folded over and a tab at each end of said folded edge and a tab on the edge opposite the folded edge and each of said tabs being provided with a row of apertures adapted to be brought into vertical alignment when the said tabs are folded over each other, and a flexible piece secured to both of said folded edges and having its ends free to be folded back to accommodate books of various lengths.

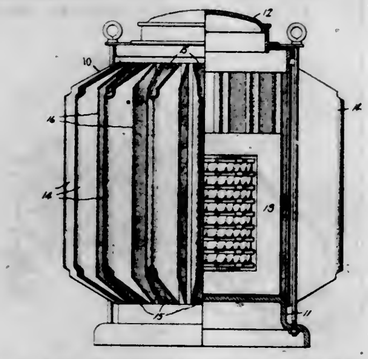
1,568,724. PRESSURE-RESPONSIVE INSTRUMENT FOR FLOW METERS AND THE LIKE. FRANK P. COX, Lynn, Mass., assignor to General Electric Company, a Corporation of New York. Filed Mar. 3, 1923. Serial No. 622,688. 3 Claims. (Cl. 200—152.)

1. A device of the character described, comprising a wall which defines a chamber, and a conducting liquid in the chamber, at least a portion of said wall comprising a plurality of conducting and non-conducting elements stacked one on another, said elements having inner and outer edges, only a portion of the inner edges of the conducting elements being exposed to the inner surface of said wall, and such exposed portions being staggered relatively to each other.



1,568,725. TYPEWRITING MACHINE. CLARENCE M. CREWS, Brooklyn, N. Y., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Jan. 19, 1924. Serial No. 687,318. 6 Claims. (Cl. 197—126.)

1. In a continuous billing typewriting machine, the combination with a revoluble platen, of a platen-displacing swing-frame movable to lift the platen to permit the work-webs and carbons to be straightened beneath it, a plurality of carbon-rolls adjacent the platen, arranged to yield up carbon to the platen as typing proceeds, and a crank-driven train of multiplying gearing for rotating



all of the carbon-rolls in unison when the platen is displaced to rewind the carbons and thereby withdraw the carbons relatively to the stationary work-webs.

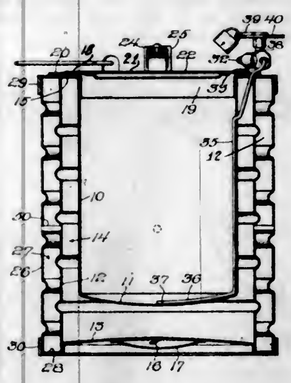
1,568,726. TORCH. EARL M. EVLETH, St. Paul, Minn., assignor to St. Paul Welding & Manufacturing Company, St. Paul, Minn., a Corporation of Minnesota. Filed Aug. 24, 1922. Serial No. 584.005. 1 Claim. (Cl. 158—26.)

A convertible torch and soldering iron, comprising a tip provided at its rear end with an internal and forwardly directed nozzle, there being air inlet openings in the tip adjacent the discharge of the nozzle, a soldering tool having a longitudinal bore terminating short of the front end of the tool and intersecting the rear end thereof, the rear end of the bore being counterbored, the discharge of the tip being tapered and extending through the counterbore and into snug engagement with the bore of the tool, and a set-screw detachably securing the tool to the tip, the tool having outlet openings located between the discharge end of the tip and the closed end of the bore in the tool.

1,568,727. CORRUGATED SHEET-METAL CASING. JOHN J. FRANK, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed Feb. 2, 1925. Serial No. 6,180. 5 Claims. (Cl. 257—191.)

1. A casing for electrical apparatus, the wall of said casing being formed of corrugations, and heat conducting fins disposed in the spaces between the sides of said corrugations and between the general inner and outer contours of said corrugated wall, said fins each having an edge connected to said casing wall by a joint having good heat conductivity.

1,568,728. PROCESS FOR PROTECTION OF METALLIC SURFACES. GEORGE C. FREEMAN, Philadelphia, Pa., assignor to Antiscale Corporation, Philadelphia, Pa., a Corporation of Delaware. Filed Apr. 13, 1925. Serial No. 22,879. 5 Claims. (Cl. 204—25.)

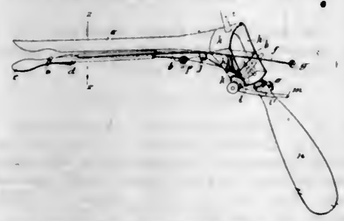


1. The process of protecting a fluid-contacting surface of a metallic body against encrustation of scaling which comprises so connecting the terminals of a source of electric current to spaced points of said body that current is caused by said source of current to flow in said body in the said direction as the inherent current in said body.

1,568,729. POST-CARD CABINET. KATHRYNE GEARON, Camden, N. J. Filed Feb. 5, 1925. Serial No. 6,942. 1 Claim. (Cl. 211—7.)

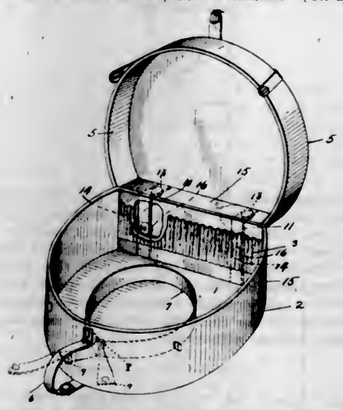
In a post-card cabinet, a stand having vertical end walls and a series of superimposed horizontal partitions secured between said walls, tiers of vertically and horizontally aligned receptacles fixedly secured between said partitions, the said receptacles having their front end portions extending beyond the front edges of said partitions and a flanged closure for each receptacle comprising a door, hinged at its upper edge to the upper outer edge of said receptacle so that in open position each door lies in the same plane with the top of a receptacle and adapted to drop by gravity into closed position and side and bottom flanges on said door for completely closing the front of said receptacle.

1,568,730. MINNOW BUCKET. C. ROY GLEASON, Chicago, Ill. Filed Feb. 1, 1924. Serial No. 689,880. 5 Claims. (Cl. 43—57.)



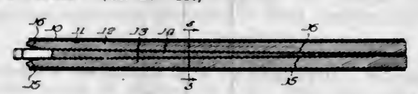
1. A receptacle for the purpose set forth comprising a container for water, a tank for compressed air, both connected for support as a unitary device, a filling valve having a casing which communicates with said tank, said casing having an inlet and a separate minute bore conduit leading from said casing to said container, and a controlling valve in said casing between its connection to said tank and said conduit.

1,568,731. SHAFT BEARING. MARVIN C. GRIFFIN, Lynn, Mass., and DWIGHT L. BERKEY, Philadelphia, Pa., assignors to General Electric Company, a Corporation of New York. Filed Feb. 19, 1924. Serial No. 693,893. 3 Claims. (Cl. 308—240.)



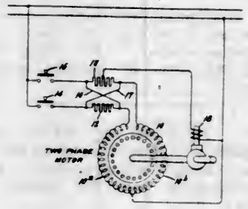
1. A shaft bearing provided with an annular groove in its inner face at one or each of its ends, a dam in each groove, and one or more discharge passages communicating with each groove.

1,568,732. AUTOMATICALLY-SUPPORTED DEVICE FOR THE DIRECT EXAMINATION OF THE LARYNX. FRANZ HASLINGER, Vienna, Austria. Filed Aug. 28, 1923. Serial No. 659,762. 7 Claims. (Cl. 128—17.)



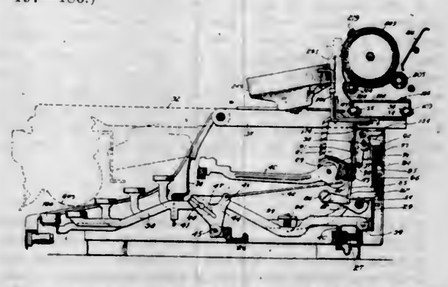
1. An instrument for direct examination of the larynx comprising two pivotally connected members adapted to be inserted into a patient's mouth, one thereof being adapted to overlie the tongue, the other thereof being extensible to the posterior wall of the pharynx, whereby separation of the members will make the larynx visible through the mouth, and an adjustable support carried at the end of said extensible member and adapted to rest against said posterior wall.

1,568,733. HAT BOX. LEOPOLD HAUSER, New York, N. Y., assignor to Hauser & Weil, Copartners Leopold Hauser and Simon Weil, New York, N. Y. Filed Aug. 11, 1924. Serial No. 731,266. 4 Claims. (Cl. 206—8.)



1. In combination, a hat box, a strap, both ends of which are secured to the interior of the box to form a loop, and a link on said strap for varying the size of the loop to accommodate hats of various sizes.

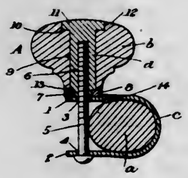
1,568,734. METHOD OF MAKING SAUSAGE CASINGS. ADOLPH C. HELLEMAN, Chicago, Ill., assignor to Wolf, Sayer & Heller, Chicago, Ill., a Corporation of Delaware. Filed June 25, 1925. Serial No. 39,523. 2 Claims. (Cl. 17—45.)



1. The method of forming large size, straight sausage casings of uniform diameter from end to end thereof, which consists in telescoping two small, tapered intestines, then inserting a mandril therein, then expanding the mandril from the small end of the intestines until the small ends are approximately the same diameter as the large ends, then drying the assembled intestines until the contacting surfaces adhere, then slitting the adhering intestines, then sewing along both edges, and then turning the so-formed tube inside out.

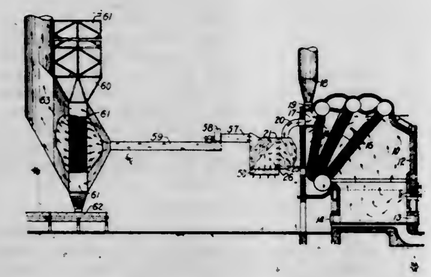
1,568,735. MOTOR CONTROLLER. JOHN A. HEPPERLEN, East Orange, N. J., assignor to General Electric Company, a New York Corporation. Filed Oct. 9, 1922. Serial No. 593,221. 2 Claims. (Cl. 172—279.)

1. A system of control for operating a polyphase alternating current motor in the forward and reverse direction from a single-phase source of supply, comprising phase modifying means connected to the phase windings of the motor, reversing switch mechanism, an electromagnet brake, and connections whereby the said phase modifying means is excluded from one of the motor phase windings by the said switch mechanism depending on the desired direction of rotation of the motor, substantially equal potential is applied to the said electromagnet brake for each direction of motor operation and the brake magnet serves as a phase displacement device for the motor phase windings.



1,568,736. TYPEWRITER. OTTO A. HOKANSON, Woodstock, Ill., assignor to Woodstock Typewriter Company, Woodstock, Ill., a Corporation of Illinois. Filed June 6, 1924. Serial No. 718,264. 31 Claims. (Cl. 197—186.)

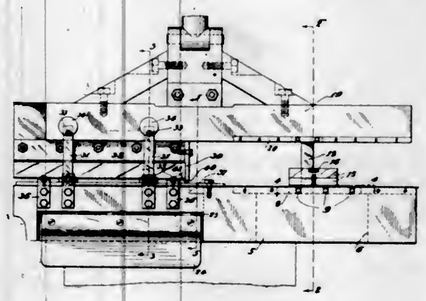
1. In a typewriting machine, a main frame, a platen carriage frame mounted on said main frame and movable into and out of operative position, a rock shaft journaled on a fixed axis in said main frame, operative



mechanism mounted on said platen carriage frame, and means fixed on said rock shaft and operated thereby for cooperating with said operative mechanism to actuate the same when said platen carriage frame is in operative position but disconnectible therefrom when said platen carriage frame is moved to inoperative position.

1,568,737. ATTACHMENT FOR STEERING WHEELS AND THE LIKE. OTTO K. ISENSEE, El Monte, Calif. Filed June 1, 1925. Serial No. 33,958. 7 Claims. (Cl. 74—33.)

1. A knob attachment for steering wheels, comprising a clamp adapted to embrace the rim of the steering wheel, and means common to the clamp and the knob for securing the same in working relation to the steering wheel.

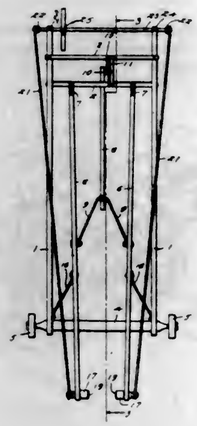


1,568,738. PROCESS OF DRYING MATERIALS. MICHAEL DOLAND JONES, Allentown, Pa., assignor to Fuller Fuel Company, a Corporation of Pennsylvania. Filed Mar. 18, 1924. Serial No. 700,174. 12 Claims. (Cl. 34—24.)

3. The process of drying combustible materials, which comprises mixing waste gases of combustion carrying moisture at high vapor tension and containing sensible heat from the combustion of fuel with other gases, and passing the mixture through the materials to be dried while so regulating the mixing operation that a portion of the sensible heat of the waste gases is used to heat the other gases and another portion of the sensible heat is used to evaporate moisture in the materials to be dried.

1,568,739. MACHINE FOR PRODUCING FRAME PARTS. DAVID KARRON, Brooklyn, N. Y. Filed July 5, 1924. Serial No. 724,522. 7 Claims. (Cl. 153—2.)

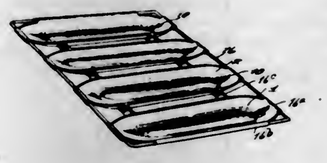
1. In a machine for making hand bag frames, guide means for a sheet metal strip including a movable clamping member, means for cutting the sheet metal strip at spaced points during periods of rest to form integrally connected ears therein, additional means for cutting the strip transversely between previously formed ears therein to sever a section of the strip having an ear at each of its ends, and means operated simultaneously with said cutting means to actuate said movable guide member and fixedly clamp the strip against movement during the cutting operations.



1,568,740. BURGLARPROOF AUXILIARY LOCK. EUGENE C. KINNEAR, Evanston, Ill., assignor to Anakin Lock & Alarm Co., Chicago, Ill., a Partnership composed of John H. Taft, John A. Taft, and Adrian S. Ailes. Filed Mar. 17, 1923. Serial No. 625,711. 9 Claims. (Cl. 109—3.)

1. The combination of a vault door or the like, having main locking bolt mechanism thereon, means on the door for controlling said mechanism, and an auxiliary locking device operable by disturbance of said controlling means or by burning through the door, said device comprising a separate bolt projectable into locking position, and separate means movable relatively to said separate bolt for engaging and locking said main bolt mechanism against withdrawal.

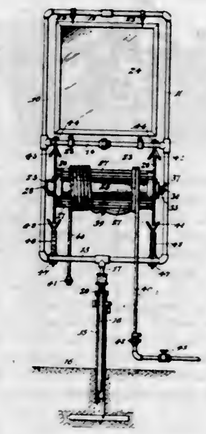
1,568,741. POST OR STAKE PULLER. WILLIAM E. JOSLIN, Sarcoxie, Mo. Filed Oct. 22, 1925. Serial No. 64,218. 3 Claims. (Cl. 254—132.)



1. In a post puller, a frame, a wheeled axle supporting said frame and located adjacent to one end thereof and

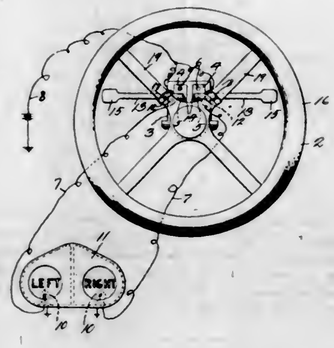
serving as a fulcrum for the frame, arms pivotally mounted on said frame, jaws rotatably mounted on said arms,

means to move the free ends of said arms towards and away from one another, and means to rotate said jaws.



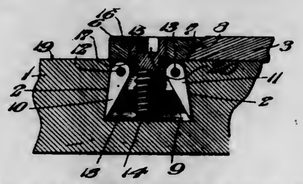
1,568,742. RYE-BREAD-BAKING UTENSIL. HENRY JUNG, Ladysmith, Wis. Filed Mar. 25, 1924. Serial No. 701,754. 2 Claims. (Cl. 53—6.)

2. As an article of manufacture, a rye bread baking pan having a substantial length and width and constructed of imperforate sheet metal and being dished, the dished portion consisting of a flat bottom, the flat bottom at its outer annular terminal portion merging into a marginal arcuate rise which gradually curves and slopes outwardly and upwardly from a point lying in a vertical plane spaced inwardly from the marginal lateral edge of the pan a distance substantially equal to its own height, whereby the heat may follow the exterior of the rise and return down over the free edge, the width of the flat bottom being substantially equal to twice the height of the rise, whereby the heat in returning over the free edge may find its way under a body of rye bread dough, causing it to draw and expand upward in a round formation.



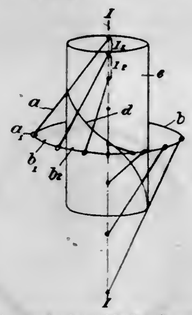
1,568,743. AUTOMATIC HOSE-WINDING REEL. THOMAS J. KITTO, Wichita Falls, Tex. Filed May 18, 1925. Serial No. 31,137. 3 Claims. (Cl. 242—86.)

1. A device of the class described comprising a supporting frame, a reel device mounted for rotation relative to said frame and including terminal disks, and



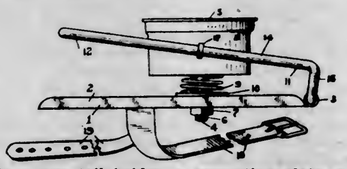
guard devices connected to said frame and including forked portions for receiving the edges of said disks.

1,568,744. AUTOMOBILE SIGNAL SWITCH. CARL H. KRONEWITTER, Mishawaka, Ind. Filed Nov. 23, 1922. Serial No. 602,853. 1 Claim. (Cl. 200—59.)



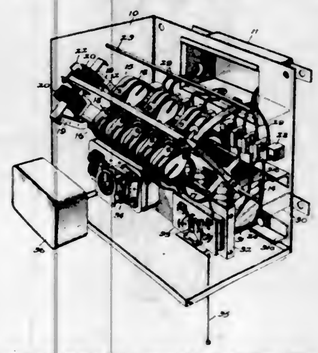
The combination with an automobile steering column, a steering wheel mounted on the column and having radially disposed spokes, a casing mounted on the steering column below and adjacent the steering wheel, a circuit maker and breaker carried by the casing and comprising double push button switches having their circuit making buttons arcuately disposed in relation to the center of the steering wheel, the circuit breaking buttons being arcuately disposed in relation to the center of the steering wheel, pivoted manually operated levers carried by the casing and extending under the wheel, said circuit making buttons being disposed adjacent the steering column, of downwardly extending brackets carried by the spokes of the wheel in the path of the circuit breaking buttons and movable angularly across the manually operated levers, thereby allowing a complete rotation of the wheel.

1,568,745. PRINTER'S CLAMP. JOHN KYLE, Philadelphia, Pa. Filed Sept. 28, 1925. Serial No. 58,997. 12 Claims. (Cl. 101—387.)



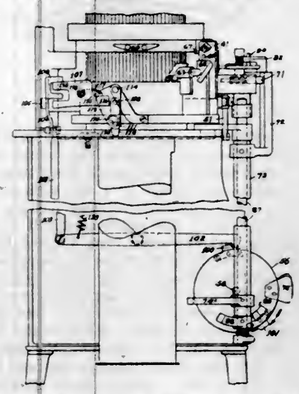
11. In a printer's clamp of the character stated, a slide block, a transverse recess in said slide block, a pair of opposed clamping leaves yieldably mounted in said recess adapted to move transversely of said slide block, a wedge block operatively interposed between said clamping leaves adapted to force the same apart when said wedge block is drawn therebetween, an operating screw threadedly engaging said wedge block, adapted thereby to raise and lower the same, and an outer, upper clamping plate carried by said slide block, at an angle of forty five degrees to the longitudinal edges thereof, said clamping plate having an inwardly bevelled clamping jaw along a longitudinal edge thereof.

1,568,746. METHOD OF PRODUCING BLADE FACES FOR WATER TURBINES, PUMPS, AND OTHER CENTRIFUGAL MACHINES. FRANZ LAWACZECK, Enzianhof, Pocking, Germany. Filed Aug. 11, 1925. Serial No. 49,640. 9 Claims. (Cl. 22—1.)



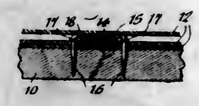
1. Method of producing blade faces for water turbines, pumps and other centrifugal machines which comprises arranging a helical like guide-element changing in its pitch on each of two co-axial cylinders, and moving a member representing the generatrix of the blade faces along said guide elements.

1,568,747. COW-TAIL HOLDER. HENRY LAWRANCE, Birtle, Manitoba, Canada. Filed Sept. 2, 1925. Serial No. 54,092. 6 Claims. (Cl. 119—105.)



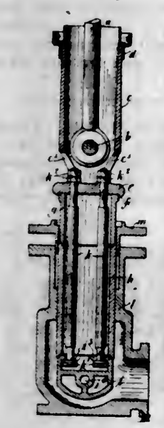
5. In a cow tail holder, a supporting plate, a shank rising therefrom, a flat rigid jaw carried by said shank, an inverted cup-shaped jaw encircling said shank for movement to and from said rigid jaw, a coil spring encircling said shank and bearing against said movable jaw, and a lever comprising a substantially U-shaped rod having its ends bent inwardly and fulcrumed in the aforesaid plate, the arms of said lever being pivoted to opposing sides of said movable jaw medially of their length.

1,568,748. SWITCH ASSEMBLY. GEORGE S. LEDDICK, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed July 13, 1925. Serial No. 43,209. 9 Claims. (Cl. 172—179.)



4. A switch assembly comprising a pivotally mounted support, an electromagnetic switch mounted on each side of said support, a casing for said switches having a front opening and a rear conduit outlet opening, the said support being mounted within the casing so that with the support in its normal position one of said switches faces the front opening of the casing and the second of said switches faces the rear conduit outlet opening of the casing, the second of said switches being accessible for inspection by tilting the said support toward the front opening.

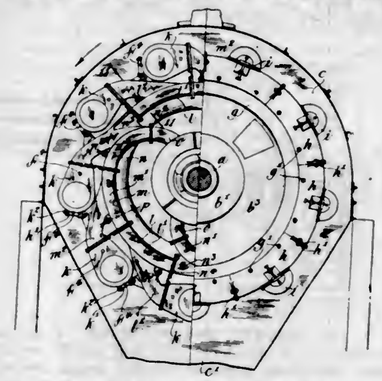
1,568,749. DROP-STITCH MECHANISM FOR KNITTING MACHINES. WILLIAM L. LENGEL, Reading, Pa., assignor to The Nolde & Horst Co., Reading, Pa., a Corporation of Pennsylvania. Filed Nov. 3, 1921. Serial No. 512,482. 11 Claims. (Cl. 66—21.)



1. In a circular knitting machine, a needle cylinder provided with certain specially-butted needles, and needle operating mechanism comprising needle lowering means effective operative upon said specially-butted needles only, pattern-controlled means for preliminarily setting said lowering means, and cylinder-carried means for completing the operative movement of said lowering means.

1,568,750. ROOFING CONSTRUCTION. FELIX E. LIETZ, Buffalo, N. Y. Filed Oct. 5, 1925. Serial No. 60,401. 1 Claim. (Cl. 108—8.)

In a roof construction, a plurality of shingles laid diagonally in overlying courses, each shingle having a turned-under flap at its lower corner and a locking-extension carried by said flap, and a fastening device including a tie-bar extending across the side corners of adjacent shingles and terminating at its ends in depending prongs for securing such portions of the shingles to the roof, the prongs being provided near their upper ends with downwardly-facing shoulders, whereby a space is formed between said tie-bar and the adjacent portions of underlying shingles for receiving the locking-extension of an overlying shingle.

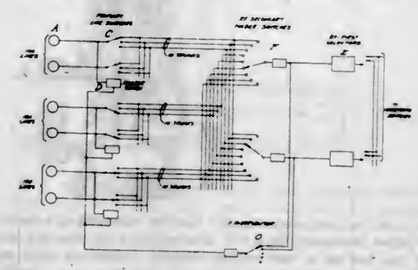


1,568,751. PUMP. POUL T. LINDHARD, Brooklyn, N. Y., assignor to F. L. Smidth & Co., New York, N. Y., a Corporation of New Jersey. Filed June 6, 1924. Serial No. 718,214. 3 Claims. (Cl. 74—108.)

1. A plunger for a plunger pump comprising a central, removable wear portion, an upper portion, a lower portion having a bridge piece with a slotted retainer, said upper portion and said lower portion being fitted to the central portion, and a bolt engaged at one end with the slotted retainer of the lower portion and in operative engagement with the upper portion at its other end to hold the three portions together.

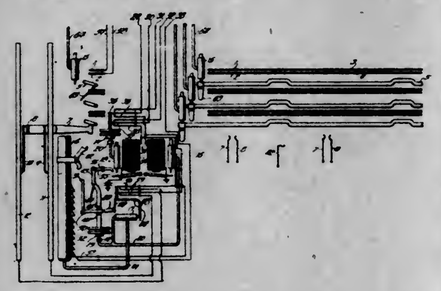
1,568,752. BALL-GRINDING MILL. POUL T. LINDHARD, Brooklyn, N. Y., assignor to F. L. Smidth & Co., New York, N. Y., a Corporation of New Jersey. Filed Sept. 20, 1924. Serial No. 738,767. 11 Claims. (Cl. 83—9.)

1. In a grinding mill, the combination of a grinding drum, a series of tubular screens disposed about the periphery of the grinding drum and supported thereby to revolve therewith, means to deliver ground material from the drum to the screens at one end thereof, and means at the other end of the screens to return the tailings from the screens to the drum, such means including a



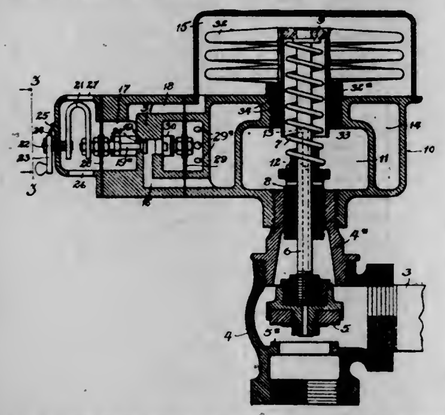
common collecting tube for a group of screens, a connection from each screen of the group to the collecting tube and a connection from the collecting tube to the interior of the drum.

1,568,753. PAINT AND VARNISH REMOVER AND PROCESS FOR MAKING THE SAME. EDWIN R. LITTMANN, Terre Haute, Ind., assignor to Commercial Solvents Corporation, Terre Haute, Ind., a Corporation of Maryland. Filed Mar. 13, 1925. Serial No. 15,362. 9 Claims. (Cl. 87—5.)



5. A paint and varnish remover comprising a saturated aqueous solution of sodium nitrophthalate, acetone, ethyl alcohol, benzol, and toluol.

1,568,754. AUTOMATIC TELEPHONE SYSTEM. CLARENCE E. LOMAX, Chicago, Ill., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed June 25, 1923. Serial No. 647,425. 14 Claims. (Cl. 179—18.)



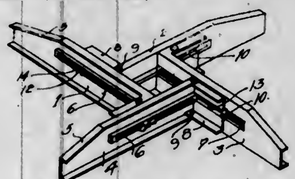
1. In a telephone trunking system, a plurality of groups of individual line switches, groups of trunk lines accessible to said groups of line switches, there being one group of trunk lines for each group of line switches, a group of first selecting switches comprising a greater number of switches than there are trunk lines in any of said groups, the number of switches being, however, less than the total number of such trunk lines, finder switches inserted in the system between the said trunk lines and first selectors, each finder being directly connected to a particular first selector and having access to all of said trunk lines, means for operating a line switch and a finder switch to connect a calling subscriber's line with an idle first selector, and means in such selector controlled over the calling line for maintaining the operated line and finder switches in operated position.

1,568,755. AUTOMATIC TELEPHONE SYSTEM. FRANK A. LUNDQUIST and JOHN A. KROPF, Chicago, Ill., assignors to Henry S. Conrad, trustee, Kansas City, Mo. Filed Dec. 3, 1921. Serial No. 519,767. 30 Claims. (Cl. 179—18.)

1. In an automatic telephone system, a switch, a pneumatic motor associated with said switch, switch retaining mechanism governed by said motor, means for automatically seizing said switch and a valve operated incident to seizing said switch for causing compressed air to be supplied to said motor.

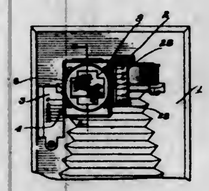
1,568,756. CONTROLLING DEVICE FOR HEATERS. JAMES MCALEAR and ERNEST W. RIESBECK, Chicago, Ill., assignors to The McAlear Mfg. Co., Chicago, Ill., a Corporation of Illinois. Filed June 18, 1917. Serial No. 175,393. 8 Claims. (Cl. 236—37.)

1. A regulating device for heaters comprising a casing, a valve for controlling the admission of the heating fluid to the heater, a controlling element connected with said valve for moving it to its closed position, a controlling chamber in said casing containing said controlling element, a power chamber containing expansible fluid, means for heating said expansible fluid by means of a portion of said heating fluid, a connection between said power chamber and said controlling chamber, a valve for controlling said connection and a thermostat for operating said valve, said thermostat responsive to variations in temperature in the apartment to be heated.



1,568,757. THERAPEUTIC LEG AND FOOT WRAP. EDITH A. MCINTYRE, New York, N. Y. Filed Oct. 26, 1922. Serial No. 597,197. 1 Claim. (Cl. 128—254.)

In a therapeutic foot and leg wrap, a flexible element formed of separate plies and comprising a sole portion and an upper extending around the sides and rear of said sole portion but open at its front, a flap attached along its center line to the rear portion of said upper and

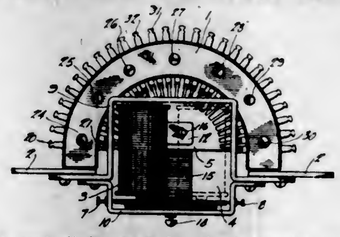


adapted to be wrapped around the leg only, and electrical heating means disposed between the plies of said flexible element.

1,568,758. TREE HOLDER. JAMES D. MALCOLM, Spokane, Wash. Filed Apr. 11, 1925. Serial No. 22,314. 2 Claims. (Cl. 248—38.)

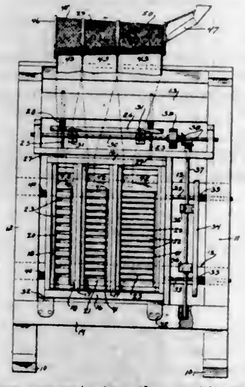
2. A tree holder comprising four angularly disposed plates, each having a hinged arm, said plates having grooves and slots, said arms having complementary ribs and bolt holes, and a bolt for each plate having a head and clamp nut.

1,568,759. DISTANCE FINDER. JACOB G. MAGIN and ANDREW WOLLENSAK, Rochester, N. Y., assignors to Wollensak Optical Company, Rochester, N. Y., a Corporation of New York. Filed May 27, 1922. Serial No. 564,266. 5 Claims. (Cl. 88—2.3.)



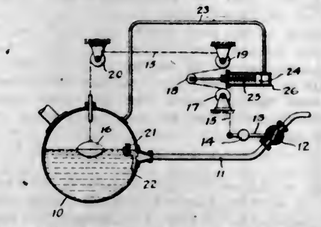
1. In combination with a view finder, sighting means through which may be located in the finder, a point in the horizontal surface on which the user of the finder is standing directly beneath the object to be viewed, and means for indicating the distance of the finder from such object controlled by the position of such finder determined by such sighting means, said means comprising an indicator, a pivotally mounted weight connected to the indicator, and means for adjusting the axis of turning of the weight to vary the reading of the indicator to correspond with the height the view finder is situated above the horizontal surface.

1,568,760. ELECTROMAGNETIC RELAY. TALBOT G. MARTIN, Chicago, Ill., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 9, 1920. Serial No. 429,547. 6 Claims. (Cl. 200—104.)



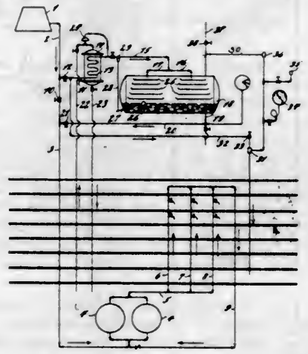
1. In an electro-magnetic relay, a plurality of fixed contacts, said contacts being insulated from each other,

a plurality of independent flexible movable contacts, said movable contacts being punched from a single sheet of material and left attached thereto, and electro-mag-



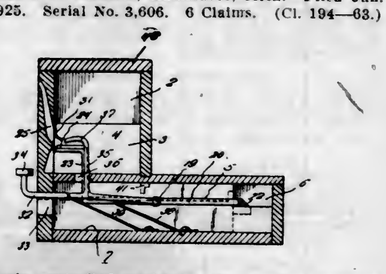
netically controlled means for simultaneously bringing all said movable contacts into electrical contact with said stationary contacts.

1,568,761. ORE CONCENTRATOR. WALTER E. MENDENHALL, Lake City, Colo., assignor to The Union Metals Extraction Company, Lake City, Colo., a Corporation of Colorado. Filed Dec. 31, 1923. Serial No. 683,806. 14 Claims. (Cl. 209—44.)



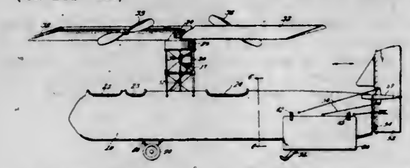
1. In an ore concentrator, the combination of a bank of riffles set at an inclination and having transverse channels, frames in which the riffles are mounted, the riffles being spaced from the frames at one side to provide a slot at the side of each riffle through which the concentrate is discharged, means for adjusting the inclination of the riffles in accordance with the material being treated so that the latter will barely flow down the inclination unaided, and means for jarring the riffles while the material flows over the same.

1,568,762. BOILER WATER-LEVEL CONTROL. FRIEDRICH MUNZINGER, Berlin, Germany. Original application filed June 19, 1923, Serial No. 646,431. Divided and this application filed Sept. 11, 1925. Serial No. 55,731. 5 Claims. (Cl. 122—451.1.)



1. The method of controlling the water level in a steam boiler which consists in establishing a range of control at all times by boiler pressure, and, within that range, controlling the supply of feed water in response to changes in water level.

1,568,763. SYSTEM FOR RENDERING LIQUIDS NON-CORROSIVE. JOSEPH F. MUSSELMAN, Bronxville, N. Y., assignor, by mesne assignments, to Elliott Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Mar. 27, 1920. Serial No. 369,364. 5 Claims. (Cl. 183—2.5.)

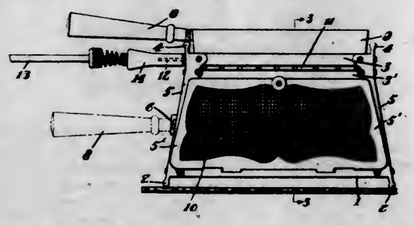


1. A system for rendering liquids non-corrosive, which comprises a de-aerating tank provided with means for agitating and separating the liquid supplied thereto into small particles, automatically regulated heating means adapted to heat the liquid to and maintain the same at a temperature a few degrees below the boiling point corresponding to the pressure in said tank, means for regulating the pressure in said tank, and means for drawing off the liquid from said tank after agitation.

1,568,764. COIN-CONTROLLED VENDING MACHINE. EFTHIMIOS P. NIZAMIS, Kalamazoo, Mich. Filed Jan. 20, 1925. Serial No. 3,606. 6 Claims. (Cl. 194—63.)

1. A coin controlled mechanism for vending machines comprising a cabinet, an ejector adapted for slidable movement therein, a lever pivotally supported intermediate its ends in said cabinet, a latch associated with the rear end thereof, a keeper on the rear end of the ejector cooperating with the latch for normally holding the ejector in a locked position within the cabinet, the forward end of said lever being disposed upwardly and then forwardly, the forward end of the forwardly disposed portion terminating at a point adjacent the front wall of the cabinet and below the lower end of a coin chute formed in the front wall, a ledge formed on the forwardly extending portion of the lever, a coacting ledge supported on the rear face of the front wall of the cabinet whereby a coin will be disposed on said coacting ledges after the same has descended by gravity through the coin chute, means adapted for engagement with the coin whereby said lever is adapted to swing on its pivot to disengage the latch from the keeper, an additional means for sliding the ejector outwardly when said latch is released.

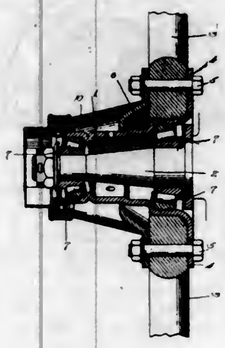
1,568,765. HELICOPTER. LEO ORTEGO, Alexandria, La. Filed Feb. 16, 1925. Serial No. 9,524. 12 Claims. (Cl. 244—19.)



1. A flying machine of the class described comprising a fuselage having a pilot's seat in the rear thereof, a supporting frame extending upwardly from the fuselage, removable wings journalled to the support, propellers carried by said wings, means for driving said propellers, a vertical rudder at the forward end of the fuselage for controlling the lateral stability of the machine, a member longitudinally movable in said fuselage for varying the pitch of the machine, and vertical side rudders adjacent the forward end of the fuselage for maintaining the latter stationary relative to the wings when the machine is in flight.

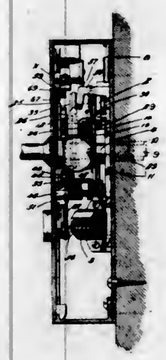
1,568,766. COMBINATION AUTO TABLE AND TRUNK. AUGUSTUS J. PEPIN, Grand Forks, N. Dak. Filed Apr. 21, 1925. Serial No. 24,844. 5 Claims. (Cl. 190—12.)

2. An apparatus of the class described having panels, means detachably connecting said panels, and pivotally connecting them to permit use thereof in a plurality of articles, one of said articles being a table, brackets on said panels having keeper portions adapted for abutment in the table form, and latches on the brackets coacting with the keepers.



1,568,767. ELECTRICAL APPLIANCE. WALTER PROULX, Norridgewock, Me. Filed May 7, 1924. Serial No. 711,599. 8 Claims. (Cl. 53—4.)

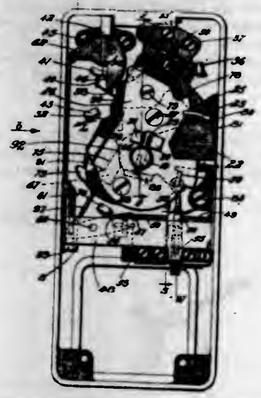
7. A device of the class described, comprising a wire mesh receptacle, a frame therefor, and an uncovered resistance heating unit mounted in said frame and parallel to one face of the receptacle and freely spaced therefrom in heat diffusing relation thereto.



1,568,768. HUB AND CLOSURE STRUCTURE. JAMES S. REID, Cleveland, Ohio, assignor to The Easy-On Cap Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 23, 1921. Serial No. 524,395. 5 Claims. (Cl. 301—105.)

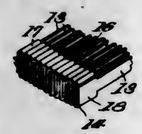
1. In combination with the hub of a wheel, a shell member or container provided with spaced recesses and cam portions, and a cap member having a base and skirt, said skirt having secured thereto and spaced from said base a locking means comprising a securing portion and finger portions, said finger portions being bent

radially inwardly and outwardly and having foot portions adapted to enter said shell recesses and engage said cam portions upon relative rotative movement of said members.



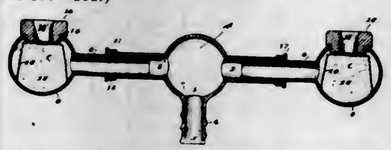
1,568,769. COIN-CONTROLLED LOCKING MECHANISM. FRANK J. ROWSE, Pawtucket, R. I. Filed May 20, 1921. Serial No. 471,172. 26 Claims. (Cl. 194—83.)

1. In a coin lock, the combination with a coin carrier and an oscillatory shaft therefor, of a plate fixed with relation to the coin carrier and shaft and located between the sides of the carrier, a cam plate free upon the shaft, and means for locking the cam plate to the fixed plate by a placed coin, the coin being interposed between said locking means and the coin carrier and acting directly to propel the cam plate when the coin carrier is moved.



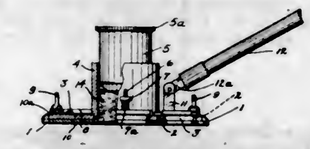
1,568,770. COIN-CONTROL SERVICE APPARATUS. FRANK J. ROWSE, Pawtucket, R. I. Filed June 15, 1923. Serial No. 645,655. 14 Claims. (Cl. 194—83.)

12. In a coin controlled apparatus, the combination with the side plates of the coin carrier, one of said plates being formed with obstructions to prevent the passage of a coin, of a lever carried by the opposite side plate with an arm to encounter and hold the coin



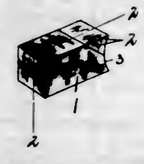
to the aforesaid obstructions, means to station the lever for encounter by the coin and means to withdraw the lever and permit discharge of said coin.

1,568,771. GRID FOR GAS BURNERS. JOSEPH ROY, Cleveland, Ohio, assignor to American Stove Company, St. Louis, Mo., a Corporation of New Jersey. Filed June 30, 1925. Serial No. 40,523. 10 Claims. (Cl. 158—116.)



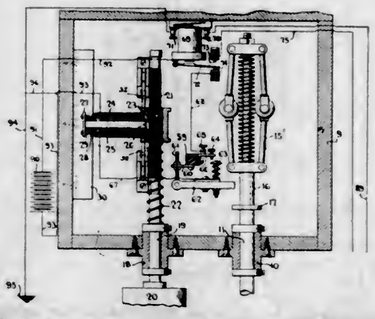
10. An improved grid for gas burners comprising a plurality of vertical parallel bars connected by integral strips passing between the said bars, the upper ends of the strips bent closely to and integrally formed with the upper parts of the bars and the lower ends of the strips extending considerably below the said bars and doubled upward with their ends connected with the lower parts of adjacent bars for the purpose described.

1,568,772. ADJUSTABLE HOT AND COLD WATER MIXER, WITH FILTER AND DELIVERY NOZZLE, FOR SINKS, ETC. HYMAN RUBIN, New York, N. Y. Filed Apr. 19, 1921. Serial No. 462,518. 2 Claims. (Cl. 137—111.)



1. A device of the class described, comprising a central T shaped three-way pipe member, having a delivery nozzle, provided with screw threads at the ends of the horizontal head portion; a water inlet member carried at each end of the horizontal head portion and adjustable longitudinally; a screw-gland member for securing the same in any desired position to such head portion with a water tight joint, and means at the outer ends of the inlet members for securing one to a hot-water and the other to a cold-water supply faucet with a water-tight joint; each inlet member having an enlarged body portion forming a filter-bulb and a filter member located in each filter-bulb comprising an inverted perforated thimble, having a suitable filling of granular replaceable filtering material.

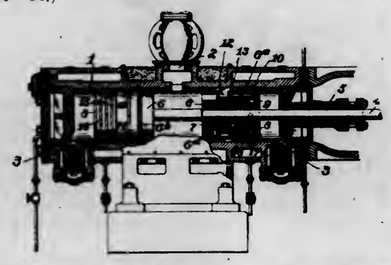
1,568,773. FLOOR WAXER AND POLISHER. FREDERICK J. SCHECH, Minneapolis, Minn. Filed Apr. 19, 1924. Serial No. 707,655. 6 Claims. (Cl. 91—43.)



1. A floor waxing and polishing device comprising a sheet of comparatively soft material, a container carried above said sheet and having an open lower end extending therethrough, a wax receiving and applying means disposed beneath said container and sheet, means for pressing semi-solid material downward through said container, into contact with said means, and means for holding said wax receiving and applying means in position.

1,568,774. BRUSH. THEODORE J. SCOFIELD, Jackson, Mich., assignor to The Sparks-Withington Company, Jackson, Mich., a Corporation of Ohio. Filed May 17, 1923. Serial No. 639,638. 3 Claims. (Cl. 171—325.)

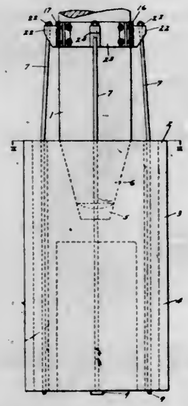
1. A commutator brush consisting of wire gauze material and having a concave contact surface at its front end, a portion of said brush being impregnated with a lubricating metallic alloy, such impregnated portion constituting the complete width of the contact surface of the brush when in use, approximately one-half of the area of said contact surface and a portion only of the length of the brush.



1,568,775. AUTOMATIC MOVING-VEHICLE CONTROL. PAUL JOHN SIMMEN, Buffalo, N. Y. Original application filed Apr. 14, 1908, Serial No. 427,080, now Patent No. 1,150,308, dated Aug. 17, 1915. Divided and this application filed May 5, 1915. Serial No. 26,084. 35 Claims. (Cl. 246—180.)

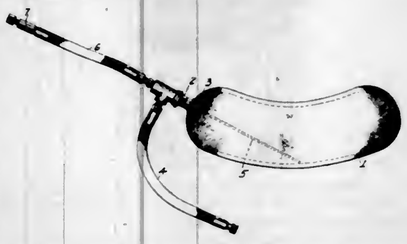
10. In apparatus of the character described, the combination with a vehicle and traffic controlling means, of a normally inactive controller for the traffic controlling

means, an actuating device for the controller, means for operating the actuating device at a predetermined speed independently of the movement of the vehicle, and mechanism for causing a mechanical engagement between the controller and the actuating device to effect the operation of the former by the latter.



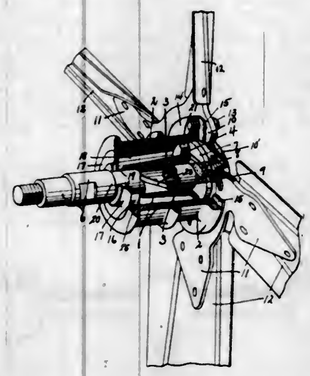
1,568,776. COMPRESSOR. DAVID FRANKLIN SMITH, Washington, D. C. Filed Sept. 28, 1918, Serial No. 256,117. Renewed June 18, 1925. 19 Claims. (Cl. 230—34.)

1. In combination with a cylinder, a piston having a central body portion with an outer shell spaced apart from the body portion and connected therewith, a valve having a cylindric body portion sliding on the body portion of the piston and arranged in the annular recess between the body portion and shell, said valve having an annular head to seat itself against annular seats on the shell and body portion of the piston, substantially as described.



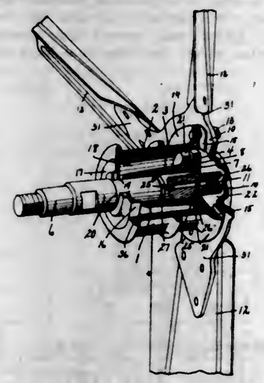
10. In combination a cylinder, a piston having passage ways longitudinally through it with a seat at one end, an annular valve having a portion adapted to seat to close or open the passageway, retarding means for the valve arranged exterior to the piston and between it and the cylinder and bearing on the latter, said piston having an opening and the said exterior retarding means being connected with the valve through the said opening, substantially as described.

1,568,777. DEVICE FOR SETTING AND REPLACING POLES. JEFFERSON G. SMITH, McDonough, Ga. Filed Feb. 26, 1923. Serial No. 621,415. 4 Claims. (Cl. 72—84.)



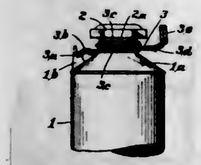
1. In a device of the class described, a base adapted to be sunk into the ground and having integrally formed therein a socket adapted to receive the butt of a pole, a collar adapted to be secured to the pole above the base, and brace rods separably secured to the base and connected to the collar to unite the pole and base, said base being provided with a plurality of channels extending downwardly therein around said socket, the channels being elongated in cross section, elongated enlargements on said rods adapted to fit into said channels in one position and adapted to interlock with the base outside the channels when the rods are turned in said channels.

1,568,778. VULCANIZING APPARATUS. RALPH W. SOHL, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Dec. 7, 1923. Serial No. 679,124. 5 Claims. (Cl. 18—45.)



5. A pneumatic core for vulcanizing purposes comprising an inflatable bag member and unitary means inserted at one end of said member comprising a fluid inlet tube and a relatively smaller tube disposed within said inlet tube but not in communication therewith extending into the central portion of said bag and adapted to permit the escape of the fluid therefrom.

1,568,779. FAN. WILLIAM SPARKS, Jackson, Mich., assignor to The Sparks-Withington Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 4, 1921. Serial No. 505,339. 12 Claims. (Cl. 308—109.)



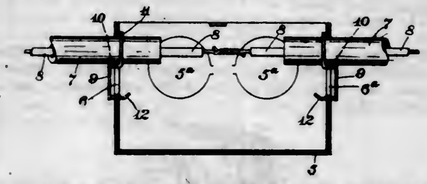
1. A fan structure comprising a shaft, an elongated bearing mounted thereon, a casing enclosing the bearing and extending beyond the bearing at its front end, a cross wall connecting the bearing to the casing at the forward end of the bearing thereby forming an annular oil chamber between the bearing and the casing, said cross-wall provided with an opening for the passage of lubricant, a thrust washer mounted on said shaft and having its thrust surface in contact with said cross wall, and a fan spider secured to the forward end of said casing and forming a second lubricant chamber between the fan spider and the thrust washer.

1,568,780. FAN. WILLIAM SPARKS, Jackson, Mich., assignor to The Sparks-Withington Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 4, 1921. Serial No. 505,340. 7 Claims. (Cl. 308—109.)

1. A fan structure comprising a shaft, an elongated bearing mounted thereon, a casing enclosing the bearing and extending beyond the bearing at its front end, a cross wall connecting the bearing to the casing at the forward end of the bearing thereby forming an annular oil chamber between the bearing and the casing, said cross-wall provided with an opening for the passage of lubricant, a thrust washer mounted on said shaft and having its thrust surface in contact with said cross wall, a fan spider secured to the forward end of said casing and forming a second lubricant chamber between the fan spider and the thrust washer, said thrust washer having a recess in its periphery and a groove in its thrust surface leading to the shaft, said shaft having a longitudinally extending conduit and radially extending conduits extending from the longitudinal conduit to the periphery of the shaft.

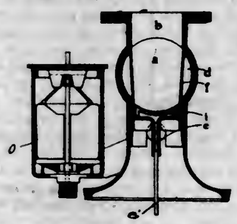
1,568,781. CLOSURE FOR PASTE TUBES AND THE LIKE. CHESTER A. SPOTZ, Greenwich, Conn. Filed Apr. 18, 1925. Serial No. 24,208. 6 Claims. (Cl. 221—60.)

1. In a device of the class described, the combination with a tube having a threaded nozzle and a screw cap therefor provided with a peripheral flange, of hinge means for pivotally and rotatably connecting the cap to the container, comprising members lying on opposite sides of the cap and having slots which receive the flange of the cap.



1,568,782. KNUCKLE BEARING. PATRICK F. SWAYNE, Jacksonville, Oreg. Filed Nov. 2, 1923. Serial No. 672,449. 2 Claims. (Cl. 280—96.1.)

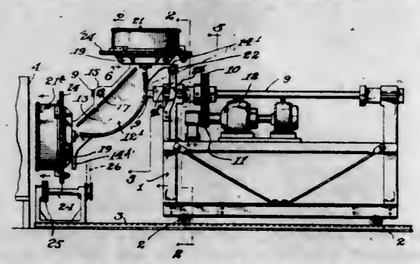
1. A steering axle knuckle comprising, in combination with the axle fork, a body element carrying the stub shaft for the steering wheel, a pivot bolt spanning the arms of the fork and passing longitudinally through the body member, anti-friction elements interposed between the bolt and the body member and between the upper and lower ends of the latter and the arms of the fork, thrust plates disposed respectively above and below the body member, and caps enclosing the thrust plates, the anti-friction elements at the top and bottom of the body element being interposed between said caps and



said thrust plates, the upper cap having an interlocking engagement with the adjacent fork arm and the lower cap an interlocking engagement with the lower end of the body member.

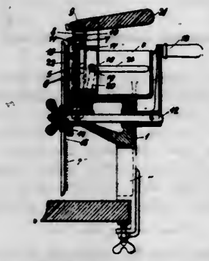
1,568,783. LOOM LOCK. RALPH D. THOMPSON, Toledo, Ohio, assignor of one-half to Perry B. Clark, Columbus, Ohio. Filed Aug. 27, 1923. Serial No. 659,575. 2 Claims. (Cl. 247—25.)

1. A loom lock consisting of a body portion to lie at one side of a perforated wall and substantially parallel thereto, a spur on the body portion to engage the loom, a pair of fingers flanking the spur and projecting from said body portion and straddling the loom to engage the opposite side of the wall and a snap tongue projecting from the edge of the body portion opposite said fingers to engage the edge of the wall at the perforation.



1,568,784. CARBURETOR FOR INTERNAL-COMBUSTION ENGINES. HENRY WESLAKE, Exeter, England, assignor of one-half to Henry John Weslake, Exeter, England. Filed Nov. 5, 1919. Serial No. 335,849. 1 Claim. (Cl. 261—41.)

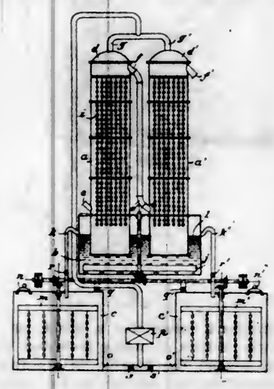
In a carburetor for internal combustion engines, the combination with a mixing tube of a throttle valve in the form of a drum having a mixture passageway therethrough, said throttle valve having a cylindrical periphery, a nozzle through which the volatile liquid issues, the said nozzle having a cap, the orifice of which nozzle has the form of a continuous slot and extends diametrically across the mixing tube from side to side with its plane at right angles to the axis of the said throttle



valve, the said nozzle having a concave face formed to a radius substantially the same as that of the periphery of the throttle valve, and adjacent thereto substantially as described.

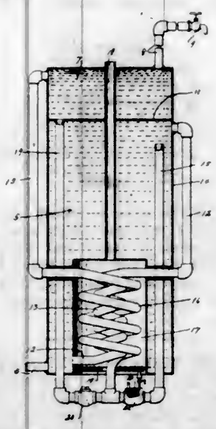
1,568,785. POT AND KILN CONSTRUCTION. WILLIAM WESTBURY, Canastota, N. Y. Filed Sept. 23, 1924. Serial No. 739,367. 15 Claims. (Cl. 49—53.)

1. In glass drawing apparatus, a pair of drawing pots, a rotary shaft, a connecting member between the pots, a pivotal connection between the shaft and connecting member adapting, said member to rotate with the shaft and to swing thereon in its rotating motion, and a plurality of grouped rollers loose on the shaft and at different distances from the pivotal connection with which the connecting member contacts on its swinging motion.



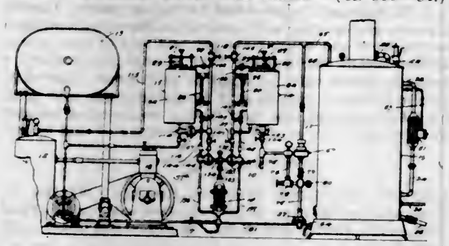
1,568,786. MACHINE FOR CUTTING FRUIT INTO CUBES. ROBERT WICKOP, Leuthen, Germany. Filed Jan. 22, 1925. Serial No. 3,909. 2 Claims. (Cl. 146—115.)

1. A machine for cutting fruit in cubes, comprising in combination a cast iron frame, feet of said frame designed to be fixed by screws on a table, a charging cylinder having an annular groove, a toothed crown loosely mounted in said annular groove so that its teeth project from the groove, a knife cross in said toothed crown, a driving shaft mounted in said cast iron frame and driving said knife cross frame, a cutting disk on the driving shaft, two rows of furrow knives on said cutting disk standing perpendicular to the surface of the disk and displaced of 180° the one to the other, these knives being of such a height that they move closely along the plane of said toothed crown, a cutting knife radially mounted in said cutting disk at an angle to the plane of said cutting disk, and a pressing plug in said charging cylinder designed to press the fruit against said cutting disk.



1,568,787. APPARATUS FOR PRODUCTION OF HYPOCHLORITES AND CHLORATES. MEYER WILDERMAN, London, England. Filed Apr. 13, 1921. Serial No. 461,167. 9 Claims. (Cl. 23—283.)

1. In the manufacture of chemicals by the interaction between a solution containing a solid in suspension and a gas, an apparatus adapted for the circulation therethrough of the solution containing the solid in suspension, said apparatus comprising a vessel for circulated solution, an open bottomed absorption tower dipping into said vessel and adapted to form a gas enclosing chamber with the fluid in the vessel, a mixer communicating with the tower, means for admitting gas into the tower, said tower being provided with means for spreading the circulated solution within the same to a large surface of

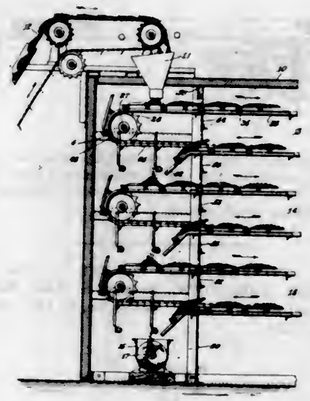


contact between the solution and the gas, these being so arranged that the solid in suspension in the solution coming down the tower does not or cannot settle within the tower, and the vessel below the tower and the mixer being provided with stirring means preventing the solid in suspension in the solution from settling in any part of the same, which would interfere with the uninterrupted work of the process.

1,568,788. WATER-HEATING SYSTEM. ELMER R. WILLIAMS, Springfield, Mo., assignor of one-eighth to George A. Messick, one-eighth to Clyde Gault, and one-eighth to Thomas H. Browns, all of Springfield, Mo. Filed Dec. 24, 1923. Serial No. 682,515. 5 Claims. (Cl. 122—16.)

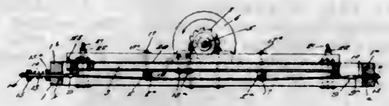
1. In a water heating apparatus, a lower reservoir, an upper reservoir located thereabove, an inlet pipe leading into the bottom of the lower reservoir, a chamber within the lower portion of the lower reservoir having an outlet flue extending through the upper reservoir, heating means at the bottom of the chamber, a coil located within said chamber and having one end communicating with the lower reservoir at the bottom thereof and its other end communicating with the upper portion of the lower reservoir, a pipe within the lower reservoir communicating at one end with the bottom of the upper reservoir and having its other end opening into the lower reservoir near the top thereof, and a coil connected with said second named pipe and extending about the first named coil and communicating with the top of the upper reservoir.

1,568,789. WASHING APPARATUS. ELMER R. WILLIAMS, Springfield, Mo., assignor of three-sixteenths to Albert E. Morelock, three-sixteenths to Stephen B. Campbell, both of St. Louis, Mo., and two-sixteenths to George A. Messick, Springfield, Mo. Filed June 16, 1925. Serial No. 37,491. 12 Claims. (Cl. 299—84.)



1. In apparatus for producing a mixture of oil and saponified water for treating finely painted surfaces, means for heating and saponifying water, means for emulsifying oil, each of said means including a liquid treating chamber adapted to contain the element with which the liquid is to be treated, means for delivering the liquid to the chamber, means for likewise delivering a fluid under pressure to the chamber for agitating the liquid in the presence of the substance with which it is to be treated, means for controlling the withdrawal of liquid from the chamber regulated by the pressure of said fluid and a mixing chamber receiving the treated liquids from the last named means and intimately mingling the same.

1,568,790. PAPER AND LIKE MATERIAL CONTAINER. WILBUR L. WRIGHT, Fulton, N. Y., assignor to Oswego Falls Corporation, Fulton, N. Y., a Corporation of New York. Filed Apr. 26, 1924. Serial No. 709,246. 3 Claims. (Cl. 229—5.6.)

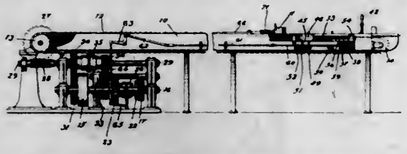


1. A thin sheet paper material barrel having a liquid tight permanent inset end closure embodying a flanged imperforate major disk and a correspondingly flanged inner disk enclosing at least the inner end of the major disk and an annular longitudinally and radially compressed locked crimp securing both disks to and in the barrel, said end closure consisting essentially of said major disk drawn from sheet material, and said inner disk drawn from thin flexible sheet paper material tightly fitting and facing the inner surface of the major disk and having its annular flange throughout its length concealed and compressed between the major disk flange and surrounding inner surface of the barrel and thereby holding the inner disk as a permanent part of the end closure and sealing the annular joint between the inner surface of the barrel and the major disk against liquid seepage along the major disk flange to the lock crimp.

1,568,791. SOAP DRIER. CHARLES W. AIKEN, Brooklyn, N. Y. Filed July 21, 1923. Serial No. 652,925. 7 Claims. (Cl. 34—12.)

2. In a soap drier, a casing having inlet means for the soap chips at the top and discharge means at the bottom, movable conveyers arranged in the casing between the inlet and the discharge means, a heater arranged along one side of the casing with baffle plates above and below the same, means for admitting air beneath the heater and deflecting it through the lower part of the conveyer and through the heater, circulating means within the casing adjacent the upper part of the conveyer and means for drawing air through the casing.

1,568,792. SCREEN. RANDALL P. AKINS, JOHN W. BUCHER, and FREDERICK D. GROSS, Denver, Colo. Filed Mar. 31, 1924. Serial No. 703,230. 2 Claims. (Cl. 209—347.)

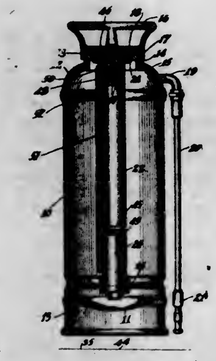


1. A vibrating screen comprising a stationary main frame, flexible members held in tension thereby, a movable frame attached to and supported by said flexible elements at points materially and equidistantly removed from the transverse center line of the movable frame, means acting against said movable frame at said center line for repeatedly rapidly depressing the movable frame against the supporting action of the flexible members, and suddenly releasing the downward pressure, and stops equidistantly spaced on each side of said center line to suddenly arrest the upward movement of the movable frame.

1,568,793. WIRE-DRAWING MACHINE. CLARENCE E. ATKINS, East Providence, R. I., assignor, by mesne assignments, to The Waterbury Farrel Foundry and Machine Co., Waterbury, Conn., a Corporation of Connecticut. Filed Nov. 18, 1924. Serial No. 750,648. 24 Claims. (Cl. 205—16.)

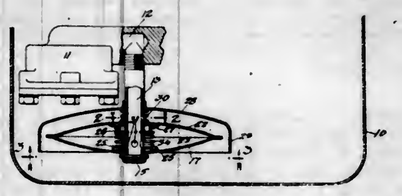
9. In a draw bench, longitudinally-traveling wire-engaging members, a relatively slow driving clutch, a relatively fast friction driven clutch, means for operating through said first clutch to impart a relatively slow initial draft motion to said members, automatically

abifting means subsequently operating through said second clutch to yieldingly increase said initial draft speed, means for returning said members, and tripper mecha-



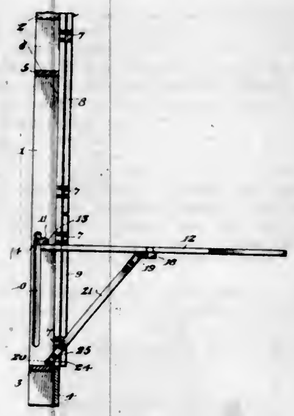
nism operated by said return stroke adjacent the end thereof for releasing the fast driving clutch and engaging the slow clutch to impart a slow initial motion to the next succeeding draft stroke.

1,568,794. CONVERTIBLE SAFETY RAZOR, HAIR TRIMMER, AND COMB. SAMUEL S. BAER, Baltimore, Md. Filed Apr. 15, 1925. Serial No. 23,438. 6 Claims. (Cl. 30—12.)



1. A safety razor including two blade clamping elements, one of the blade clamping elements including a razor edge guard, the other of said clamping elements including a comb, a razor blade, and means cooperative with the clamping elements for holding the razor blade in cooperative relation with the razor edge guard and for also holding the razor edge in cooperative relation with said comb, for the purposes specified.

1,568,795. FIRE-EXTINGUISHING APPARATUS. FREDERICK C. BARGAR, Columbus, Ohio, assignor to Nu-Ex-Fire Appliance Company, Columbus, Ohio, a Corporation of Delaware. Filed Apr. 8, 1921. Serial No. 459,573. 35 Claims. (Cl. 169—32.)

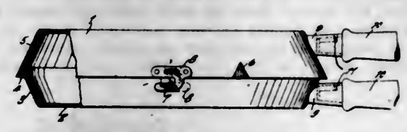


1. Fire extinguishing apparatus comprising containing means holding fire extinguishing charge, a gas generator comprising a movable cartridge containing non-liquid gas producing material adapted to be set off by impact due to cartridge movement on gravity actuation.

1,568,796. OIL FILTER. CARL BEER, Detroit, Mich., assignor to Chrysler Corporation, Highland Park, Mich., a Corporation of Delaware. Filed Mar. 9, 1925. Serial No. 14,051. 7 Claims. (Cl. 210—170.)

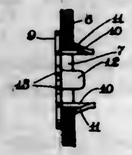
1. In combination, a conduit having an opening therein, a screen surrounding said opening, an imperforate member spaced from and housing the top and side of said screen, suction means for drawing fluid through the conduit, a normally closed valve adjacent to said screen adapted to permit access of fluid to said conduit through said opening when unseated, and said suction means being adapted to open said valve in the event of clogging of said screen.

1,568,797. FOLDING IRONING BOARD. WARREN W. BROOKS and ROBERT E. ROUGH, Burbank, Calif. Filed May 21, 1925. Serial No. 31,872. 1 Claim. (Cl. 68—10.)



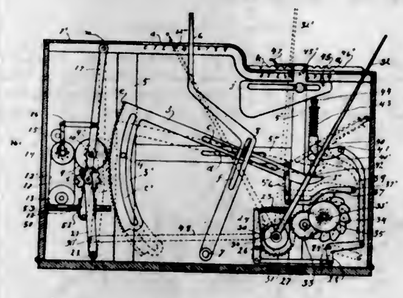
In an ironing board of the character described, a pair of spaced upright side members having longitudinally extending parallel grooves in their opposed faces, each merging with a lateral groove located adjacent its upper end, an ironing board, a brace member pivotally supporting said board, a pair of elongated elements extending across the rear of said board and having their ends positioned to work in said grooves, one member being secured to said board, and end connecting members pivotally secured to the ends of said elements so that the other member is free to swing toward and from the board about the fixed element as its axis, said secured element being adapted to locate in said lateral groove, when the board is set up for use, with the attached other element positioned therebehind to lock the board in the set up position.

1,568,798. SKILLET. WILLIAM H. CAVER, Boonville, Miss. Filed Jan. 16, 1925. Serial No. 2,856. 5 Claims. (Cl. 53—7.)



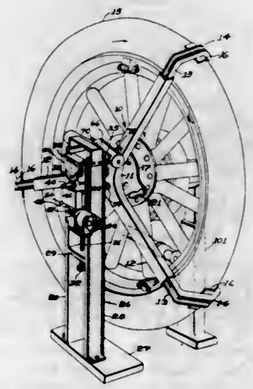
1. A skillet comprising a pan and a cover engaging one another rotatively along their rims, a handle on and

projecting radially from each of said parts, and locking elements on one of said parts adapted to cooperate with



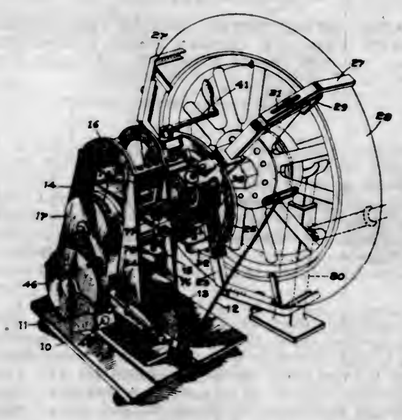
elements on the other of said parts only when the handles thereon are brought into alinement in order to lock said parts together in sealed relation.

1,568,799. LOOM LOCK. PERRY B. CLARK, Columbus, Ohio. Filed Mar. 17, 1924. Serial No. 699,730. 3 Claims. (Cl. 247—25.)



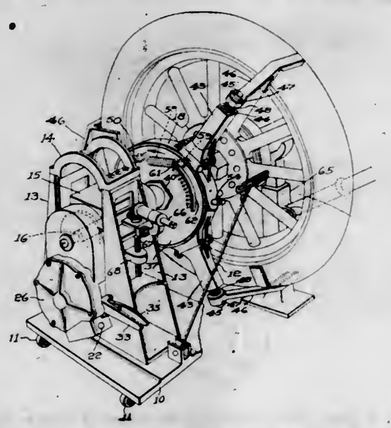
1. A loom lock consisting of a rigid body portion of flat U-form and a spring tongue extending from each of the legs of said flat U-form portion at an angle thereto, said spring tongue having a return hook.

1,568,800. COMPUTING OR MULTIPLYING MACHINE. CLARE C. COSS, Grand Rapids, Mich., assignor of one-half to Howard R. James, Lake City, Mich. Filed Aug. 6, 1924. Serial No. 730,514. 8 Claims. (Cl. 235—61.)



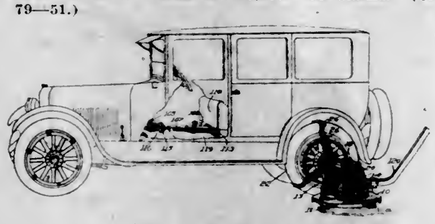
1. In a computing machine, an enclosing case, a shaft mounted crosswise of the case, operating arms mounted on said shaft and having slots therein, one of said arms passing upwardly through the cover of the case forming an actuating lever, partitions in the case having horizontally disposed slots therein, operating levers each having curved heads thereon and gear teeth on said heads, the levers and the heads each having slots therethrough, a bar passing through the slots in the partition, in the operating arms, and in the operating levers for supporting and adjusting the operating levers, a shaft near the back end of the machine, a segmental gear wheel on said shaft, a lever for operating said shaft, cams revolubly mounted in the case back of the said lever in position to be operated by the segmental gear wheel, levers and links connected to operate the operating levers from said cams, arms swingingly mounted in the case, shafts mounted in the free ends of said arms, and discs and gear wheels mounted on said shafts in position to be made to revolve by temporary engagement with the heads on the operating levers.

1,568,801. BRAKE-TESTING DEVICE FOR AUTOMOBILES. CHARLES F. COWDREY, Fitchburg, Mass. Filed Dec. 15, 1923. Serial No. 680,962. 8 Claims. (Cl. 265—25.)



1. A brake tester for testing the action of a brake upon a wheel of an automobile, comprising in combination, means for imparting an initial rotative movement to a wheel, separate means for continuing the rotation of the wheel while the brake is applied, mechanism common to both means for driving them and means for indicating the force required to maintain the rotative movement of the wheel under brake resistance.

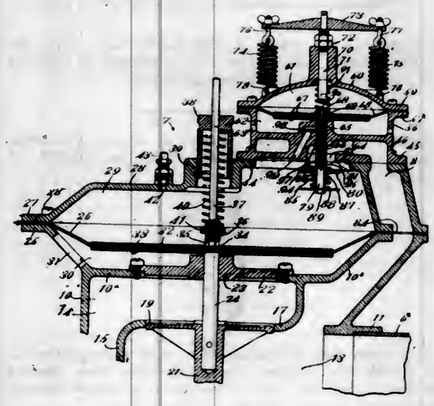
1,568,802. BRAKE-TESTING DEVICE FOR AUTOMOBILES. CHARLES F. COWDREY, Fitchburg, Mass. Filed May 24, 1924. Serial No. 715,576. 8 Claims. (Cl. 265—25.)



1. A brake tester for testing the action of the brakes upon the wheels of an automobile, comprising in combination, a supporting frame, a wheel engaging device for turning an automobile wheel, a pair of rotative elements mounted upon said frame to rotate about a common axis and one of which elements is in driving engagement with said wheel engaging device, a yielding driving connection between said elements for imparting rotative movement of one element in either a right-hand or left-hand direction to the other, and an indicator operable by the yielding movement of the driving connection in either direction to indicate the force required to rotate the wheel under brake resistance.

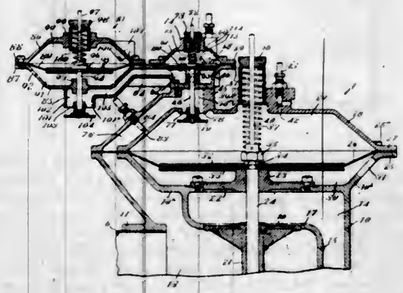
1,568,803. BRAKE-TESTING DEVICE FOR AUTOMOBILES. CHARLES F. COWDREY, Fitchburg, Mass. Filed June 21, 1924. Serial No. 721,421. 19 Claims. (Cl. 265—25.)

1. A brake tester for testing the action of a brake upon a wheel of an automobile, comprising in combination, a head engageable with a wheel of an automobile to rotate the wheel under brake resistance and consisting of a hub portion and a wheel engaging portion rotatable upon the hub portion, means for rotating the hub portion and operable to turn an automobile wheel when the brake is applied bard, a spring for yieldingly imparting the rotative movement of the hub portion to the wheel engaging portion, and an indicator actuated by the movement of one of said portions relative to the other to indicate the rotative force applied to the wheel.



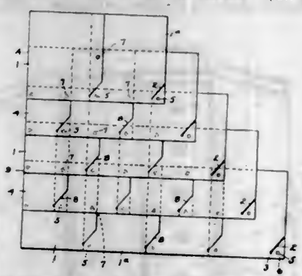
1,568,804. BRAKE-TESTING DEVICE FOR AUTOMOBILES. CHARLES F. COWDREY, Fitchburg, Mass. Filed Mar. 16, 1925. Serial No. 15,867. 54 Claims. (Cl. 79—51.)

1. A brake tester for testing the action of a brake upon a wheel of an automobile, comprising in combination, a head engageable with a wheel of an automobile to rotate it under brake resistance and provided with a hub constructed to be driven by a shaft, a supporting frame, a rotating shaft upon the frame and each end of which is constructed to be placed in driving engagement with said hub, means for rotating said shaft, and means for indicating the turning force applied to said head.



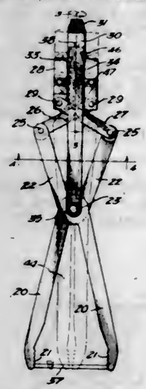
1,568,805. POWER-CONTROL DEVICE. JAMES T. COWLEY, Syracuse, N. Y. Filed Apr. 8, 1925. Serial No. 21,719. 21 Claims. (Cl. 243—12.)

1. Pneumatic despatch apparatus having a transmission tube, an exhauster connected therewith and a main valve for controlling the flow of air through the transmission tube, a minimum flow of air through the tube being permitted when the valve is in closed position, and a pneumatic motor for operating the main valve, said motor responding to slight drop in pressure in the transmission tube incident to insertion of a carrier in the tube to open the main valve, and means for determining subsequent pressure conditions in the main motor comprising an auxiliary pneumatic responsive to pressure change in the transmission tube, and means



actuable thereby for cutting off communication between the main motor and the transmission tube when the main valve opens and for immediately re-establishing such communication, said auxiliary pneumatic subsequently responding to change in pressure in the transmission tube incident to delivery of the carrier therefrom again to cut off such communication.

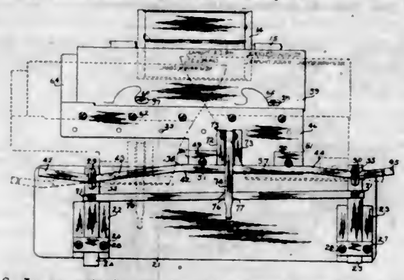
1,568,806. POWER-CONTROL APPARATUS. JAMES T. COWLEY, Syracuse, N. Y., assignor to The Lamson Company, Syracuse, N. Y., a Corporation of Massachusetts. Filed Apr. 8, 1925. Serial No. 21,721. 16 Claims. (Cl. 243—9.)



1. Power control apparatus for a pneumatic despatch system having a transmission tube comprising a main valve for controlling carrier propelling air flow through the tube, a main pneumatic motor for operating the main valve, said motor having a pressure actuated element normally exposed to the pressure obtaining in the transmission tube, controlling means responsive to a predetermined pressure in the transmission tube for cutting off communication between the main, motor and the transmission tube, and means to terminate response of said controlling means to said predetermined pressure.

1,568,807. ROOF AND METHOD OF LAYING THE SAME. PAUL J. DARM, Fort Wayne, Ind. Filed June 12, 1925. Serial No. 36,632. 2 Claims. (Cl. 108—8.)

1. A roof including a base and shingles laid thereon in horizontal rows, each of said shingles being of uniform size and rectangular contour, the shingles being laid with their bottom edges horizontal and their side edges vertical the bottom edges of the shingles in each row being horizontally alined, each shingle having a single diagonal slit extending from a point on one side edge adjacent the bottom edge downwardly and inwardly of the shingle, the remaining side edge of each shingle being continuous and being inserted in the slit of the laterally adjacent shingle with the part below the slit underlying the inserted edge.



1,568,808. FISHING TOOL. WILLIAM E. DAVISON and WILLIAM B. MARSHALL, Fellows, Calif. Filed Sept. 5, 1923. Serial No. 661,003. 7 Claims. (Cl. 294—115.)

1. In a fishing tool, the combination of: jaw members; pivot means hinging said jaw members together at an intermediate point; a head equipped with suspension means and having slide grooves in the sides thereof; links connecting between said head and the upper ends of said jaw members; and vertical slide bars arranged between said head and said jaw members for aligning said head and said jaw members, said bars being received in said slide grooves and joined to said pivot means.

1,568,809. DEVICE FOR TRANSFERRING RECORDS. WILLIAM H. DAY, East Haven, Conn., assignor to Index Visible, Inc., New Haven, Conn. Filed Dec. 21, 1923. Serial No. 682,048. 35 Claims. (Cl. 101—47.)

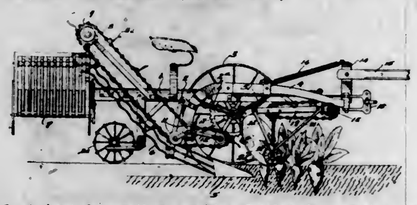
1. An attachment for the purpose described comprising a base plate, a record member carrier, means slidingly connecting said carrier to said base plate, said means adapted to cause said carrier to move toward and away from said base plate when said means is shifted longitudinally of said base plate, and means mounted upon said base plate associated with said connecting means arranged to allow perpendicular adjustment of said connecting means relatively to said base plate.

8. In an attachment for the purpose described, a base plate, a record member carrier provided with a detachable camming member and perpendicularly adjustable means slidingly engaging said camming member mounted upon said base plate.

30. In an attachment of the character described, a base plate, a card carrier, a movement controlling member for said carrier, said controlling members consisting of a bar having a straight portion intermediate its ends, and the ends thereof bent at an angle therefrom in different directions, and means mounted upon the base plate to slidingly receive the ends of said member.

1,568,810. BEET HARVESTER. ADOLPH F., DJUBERG, Minneapolis, Minn., assignor of one-eighth to William Berg and one-eighth to Carl Lindquist, both of Minneapolis, Minn. Filed May 26, 1923. Serial No. 641,621. 21 Claims. (Cl. 55—107.)

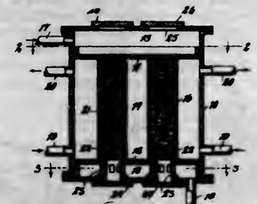
2. A beet harvesting machine comprising a vertically movable dish-shaped cutting disk disposed in an inclined upstanding position so that it can move in between closely adjacent beets, means moving over said beets comprising a chain driven sprocket wheel having its lowest point substantially in line with the lowest point of said disk and in fixed relation thereto, whereby the position of said disk is controlled by the position of said wheel.



8. A beet harvester having in combination, a frame, a driven shaft extending transversely thereof adjacent its front end, a gear on said shaft, spaced members pivoted at their upper ends on said shaft and extending downwardly and rearwardly therefrom, a bearing on said members adjacent their lower ends, a dish-shaped disk member having a stem projecting from its concave side and journaled in said bearing, a shaft having a gear on its upper end meshing with the gear on said shaft and extending downwardly therefrom and a universal joint connecting the lower end of said shaft and said stem.

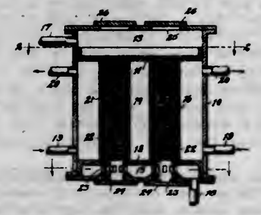
12. A beet harvester having in combination a dish-shaped disk for severing the tops of the beets, means for controlling said disk to sever the tops at uniform points relative to the bodies of the beets and a rotating means disposed adjacent the surface of said disk for discharging the severed tops therefrom.

19. A beet harvester comprising a dish-shaped disk having its central portion formed on the arc of a circle



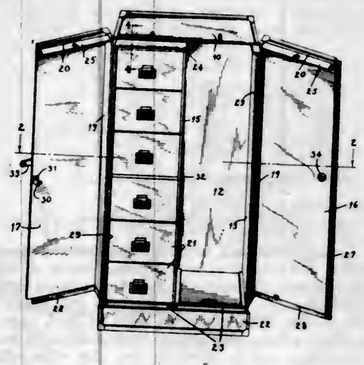
and its edge portion formed on a curve of much smaller radius than said circle, said disk being mounted for vertical movement and having its central axis disposed at less than 45 degrees with the horizontal.

1,568,811. BEET TOPPER. ADOLPH F. DJUBERG, Minneapolis, Minn. Filed May 19, 1924. Serial No. 714,386. 18 Claims. (Cl. 55—107.)



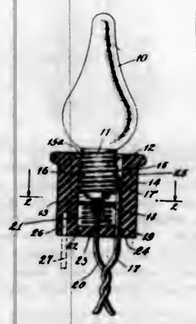
1. A beet harvesting machine having in combination, a dish-shaped cutter having its axis disposed at an angle of 45 degrees or less to the horizontal, a frame carrying said cutter and a pair of spaced rollers carried by said frame disposed in front of said cutter adapted to ride over the beet tops and to raise and lower said frame and cutter.

1,568,812. METHOD FOR TREATMENT OF LOW-BOILING HYDROCARBONS. WILLIAM F. DOWNS, Chatham, N. J.; Mary Gardner Downs administratrix of said William F. Downs, deceased. Filed May 6, 1922. Serial No. 558,850. 6 Claims. (Cl. 196—196.)



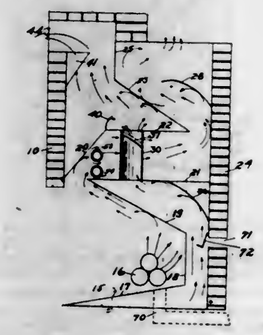
1. The process of increasing the yield and improving the quality of gasoline from vapors of hydrocarbon oils having a boiling point below 500° F., and in which the component parts vary as to their ratios of hydrogen to carbon, and as to their condition of saturation, said process consisting in condensing said vapors in the presence of a porous mass containing anhydrous metallic chlorides and continuously withdrawing the liquid condensate from contact with the said chloride.

1,568,813. PROCESS FOR PURIFYING HYDROCARBON LIQUIDS. WILLIAM F. DOWNS, Chatham, N. J.; Mary Gardner Downs administratrix of said William F. Downs, deceased. Filed May 6, 1922. Serial No. 558,851. 7 Claims. (Cl. 196—78.)



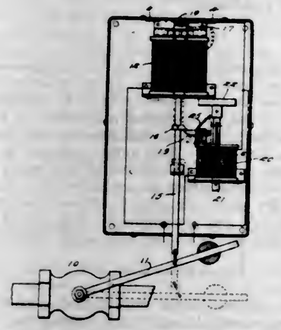
1. The process of purifying hydrocarbons, consisting in passing them in liquid form through a filter bed containing metallic chloride maintained in a heated condition, but below the boiling point of the hydrocarbon and below the vaporizing point of the chloride.

1,568,814. WARDROBE TRUNK. ALBERT L. DUFF and JAMES W. MATHESON, Brooklyn, N. Y.; said Duff assignor to said Matheson. Filed Feb. 9, 1924. Serial No. 691,540. 4 Claims. (Cl. 190—13.)



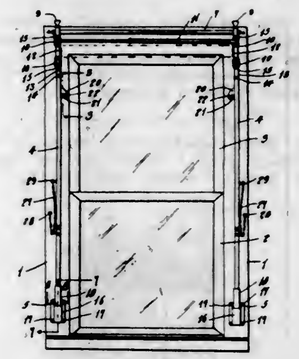
1. The herein described wardrobe trunk comprising a body having a base section for storage, side walls at the sides of the base section, a partition intermediate of and parallel to the side walls and extending forward to the front of the base, a space being provided between the partition and one of the walls for the hanging of garments, a vertical series of movable containers located between the partition and the other wall, the side walls being narrower than the partition from front to rear, and a pair of doors hinged to the side walls entirely above the base section and co-operating with each other at the front edge of the partition, one of the doors serving thus to hold said movable containers in closed position while access is provided to the garment hanging space, the doors being provided with side extensions corresponding to the difference in width between the side walls and the partition.

1,568,815. ELECTRIC-LAMP SOCKET. REUBEN ECKSTEIN, New York, N. Y. Filed Mar. 16, 1922. Serial No. 544,111. 2 Claims. (Cl. 173—358.)



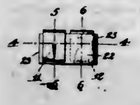
1. An electric lamp socket comprising a body portion having a recess, a screw contact shell fitted into said recess, a contact member carried on a movable disc beneath the shell, and a spring housed in said recess beneath said disc adapted to urge said disc and member toward the shell, said disc normally spacing the contact member from said shell and serving to engage said shell for retaining said member within the recess below said shell.

1,568,816. FIREPLACE. HARRY A. ELSON, Los Angeles, Calif., assignor, by mesne assignments, to Frederick W. Slingerland, Los Angeles, Calif. Filed Feb. 26, 1923. Serial No. 621,133. 6 Claims. (Cl. 126—121.)



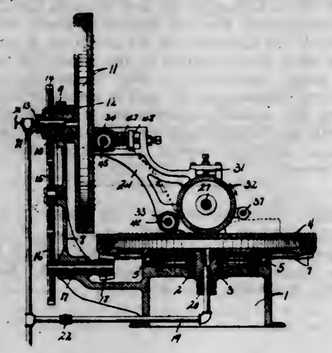
1. A fireplace structure having a fire chamber, and a front brick wall, a flue at the top of the fire chamber and extended through said fireplace structure, an air passageway adjacent to said fire chamber and having a fresh air inlet, said air passageway increasing in area from the inlet thereto, pipes extending across said flue, an air passageway and expansion chamber directly above said pipes, said pipes communicating with said fresh air inlet, said front wall having openings therein through which the hot air discharges, the top of said fire chamber being inclined toward the front of the fireplace, said inclined part being made of sheet metal whereby it may be heated to thus heat the air passing over the other side thereof.

1,568,817. AUTOMATIC VALVE CUT-OFF. OSCAR FALKENWALDE, Baltimore, Md., assignor to Robert H. Lyon, Baltimore, Md. Filed Nov. 11, 1924. Serial No. 749,240. 1 Claim. (Cl. 137—139.)



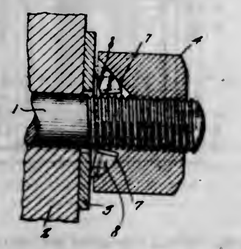
Controlling means of the class described comprising a first solenoid and a second solenoid, each solenoid having a movable armature, means to urge movement of each armature when the respective solenoids are deenergized and in the direction opposite to the direction in which they are moved by the solenoids, a control member movable by the armature of the first solenoid, both solenoids being adapted for connection in electric circuit means for simultaneous energization, a switch to cut out the first solenoid while the second solenoid remains energized and through the movement of the armature of the first solenoid by the latter, means to normally prevent movement of the armature of the first solenoid when the latter is deenergized, the last mentioned means being controllable by the movement of the armature of the second solenoid upon deenergization of the latter, the last mentioned means comprising a trip, means pivoting said trip to the second solenoid, and a detent coacting with said trip and normally maintaining it in detaining relation with the armature of the first solenoid, and said trip being directly operable by the armature of the second solenoid.

1,568,818. CURTAIN-POLE, DRAPERY-ROD, AND SHADE-ROLLER SUPPORT. THOMAS E. FARMER, Stockett, Mont., assignor of one-half to Italo Chelotti, Black Eagle, Mont. Filed May 7, 1925. Serial No. 28,685. 8 Claims. (Cl. 156—23.)



1. A holder of the character set forth, comprising, in combination with a support, a pair of arms, means slidably and pivotally connecting the arms to the support, headed elements carried by the support, and plates carried by the arms and notched to receive the elements.

1,568,819. FASTENER FOR BARBERS' HAIR CLOTHS AND THE LIKE. JOSEPH FAVATA, Jr., Buffalo, N. Y. Filed July 21, 1923. Serial No. 652,926. 7 Claims. (Cl. 24—81.)

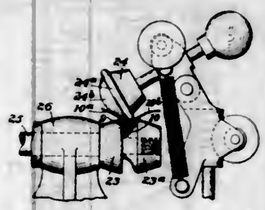


1. A fastener of the kind described, comprising a body portion and two resilient flaps extending from one edge of said body portion, said flaps being directed transversely and having prongs extending inwardly at a right angle therefrom.

1,568,820. APPARATUS FOR FORMING ANNULAR BLANKS FOR THE MANUFACTURE OF RUBBER TUBES. CHARLES F. FENLASON, Jr., Malone, N. Y., assignor of one-fourth to Harry C. Wilder and one-fourth to Lewis F. Lehr, both of Malone, N. Y. Filed Oct. 20, 1924. Serial No. 744,792. 12 Claims. (Cl. 18—9.)

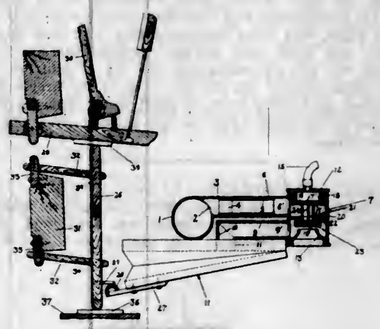
1. An apparatus of the character described comprising means for rolling a curved strip upon a plate, means for picking up the curved strip from the plate, and means for rolling the same upon a second plate to form an annular blank of desired thickness.

1,568,821. SELF-LOCKING NUT. EUGENE A. FLORENCE, San Simeon, Calif. Filed Aug. 19, 1925. Serial No. 51,241. 1 Claim. (Cl. 151—23.)



A means for locking a nut on a bolt in which said bolt is passed through a super-structure, said nut having its inner face provided with oppositely arranged pockets whose inner side walls are parallel but whose outer side walls are beveled away from each other and whose inner walls are arranged at an inclination, a dog adapted to be received in each pocket, each of said dogs having an inner rounded edge, a lower beveled edge and an outer edge which is arranged at an outward angle from the beveled edge, the rounded edge of the dog designed to be fulcrumed on the inner inclined walls of the pocket and whereby the pointed corner between the last mentioned and rounded edge of the dogs will be projected through the pockets when the nut is screwed on the bolt and will be contacted by the superstructure and canted to bring the beveled edge of the dogs into biting engagement with the threads of the bolt when the nut is fully screwed home.

1,568,822. RAIL STEEL. HOWARD J. FORCE, Scranton, Pa. Filed July 17, 1925. Serial No. 44,371. 2 Claims. (Cl. 238—150.)



1. A railway rail made of steel containing carbon, from .30 to .85%; manganese, from 1.15 to 1.90%; phosphorus, not to exceed .05%; and silicon, not to exceed .30%.

1,568,823. STRAIGHT-SIDE BEAD FLAPPING MACHINE. FRED D. FOWLER, Watertown, Mass., assignor to Hood Rubber Company, Watertown, Mass., a Corporation of Massachusetts. Filed Jan. 19, 1924. Serial No. 687,396. 5 Claims. (Cl. 154—9.)

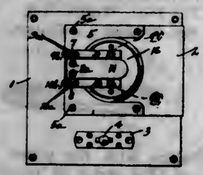
3. In a machine of the class described, a roll comprising a main member having a face perpendicular to the axis of the roll and a threaded axial extension, and an auxiliary member having a threaded bore engaging said extension and having an annular reduced face forming with said perpendicular wall a bead receiving groove.

1,568,824. ACTION FOR PLAYER PIANOS. GUILLERMO FREUND, Lima, Peru. Filed Nov. 12, 1924. Serial No. 749,524. 5 Claims. (Cl. 84—50.)

1. In a pneumatic action for player pianos and the like, the combination, with an action chest having a set of short tubes secured laterally to it at regularly-spaced intervals, of a set of operating units, one for each tube, readily attachable and detachable bodily and individually to and from said chest; each unit comprising a valve box and a striker pneumatic, the valve box being provided with a pair of tubes which project laterally one above the other from the same side of the box, one tube of the pair being removably and telescopically engaged with an action chest tube, and the other tube being connected to the pneumatic.

1,568,825. AUTOMOBILE STEERING GEAR. HARDY A. FRIEND, Marshalltown, Iowa. Filed Apr. 1, 1925. Serial No. 19,961. 2 Claims. (Cl. 74—79.)

1. In a steering mechanism, a body member provided with attaching means and formed to provide an elongated bearing member and a laterally extending trunnion, a steering shaft journaled through said bearing member, a pinion secured on said shaft, a bar arm adapted for connection with the steering rod of a vehicle and formed with a hub portion rotatably engaged upon the trunnion, and a ring gear on said hub portion meshing with said pinion, said ring gear being formed integrally upon the bar arm, said bar arm being formed with an outstanding

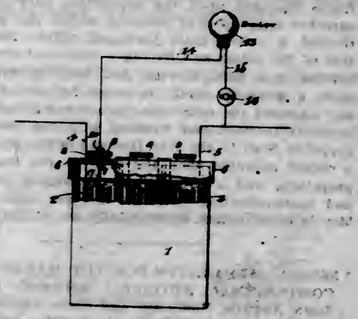


flange, and said body being formed with a circular flange concentric with the trunnion and co-operating with said first named flange to define a housing for said gear.

1,568,826. GARMENT. SADIE E. GALLEMORE, Casper, Wyo. Filed May 23, 1924. Serial No. 715,448. 2 Claims. (Cl. 2—51.)

1. A garment of the character described having tie strings secured thereto, provided with tie string receiving pockets arranged near the top on opposite sides thereof, each of said pockets being relatively deep vertically and relatively narrow horizontally and being closed at the top, bottom and inner side, the outer side of each pocket being closed at its lower portion and open at its upper portion, the tie strings being secured within the said pockets.

1,568,827. APPARATUS FOR TESTING TELEPHONE RECEIVERS. WILLIAM H. GEARS, East Orange, N. J., assignor, by mesne assignments, to Brandes Laboratories, Inc., Newark, N. J., a Corporation of New Jersey. Filed June 21, 1924. Serial No. 721,462. 4 Claims. (Cl. 179—175.)



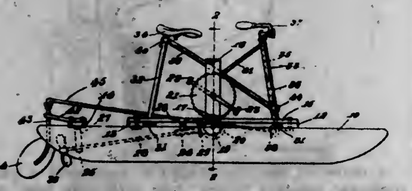
1. A test board unit for telephone receivers, comprising in combination an apertured panel, a standard telephone receiver adapted to be fixedly secured in a position where sound vibrations may be delivered or received through said apertured panel, a guide block for telephone receivers whose properties are to be determined mounted on the opposite side of said apertured panel concentric with the mounting of said standard telephone receiver, and a pair of resilient leaf springs positioned at one side of said guide block whereby a telephone receiver to be tested may be slipped into said guide block and connections simultaneously established between the terminals of the telephone receiver to be tested and said resilient leaf springs, whereby sound vibrations from said telephone receiver to be tested may be delivered or received through said apertured panel.

1,568,828. CAN OPENER AND STOPPER. JOHN A. GIBSON, Washington, D. C. Filed Apr. 18, 1925. Serial No. 24,185. 1 Claim. (Cl. 220—51.)

A device of the class described, comprising a pair of telescopic members having their outer ends bent downwardly, a disk formed on each outer end, a cone-shaped projection on the under face of each disk, the inner member having a groove therein and a lip on the outer member engaging the groove.

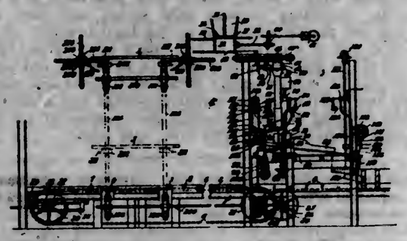
1,568,829. BATTERY INDICATOR. WETSEL GOFF, Weston, W. Va. Filed Sept. 9, 1924. Serial No. 736,729. 3 Claims. (Cl. 136—185.)

2. In combination, a conductor adapted to lead to an indicating element, an electrode adapted to extend into a battery and consisting of a stem and a head, said head provided with a socket spaced from said stem, said conductor extending through said socket and into said stem and further embedded in the head inwardly of the socket and in a portion of the length of the stem, and a covering of insulation, said covering having an end terminal portion thereof snugly fitting said socket and enclosing that portion of the conductor within said socket and said covering further enclosing that portion of the conductor projecting outwardly from said head.



1,568,830. WASTE-OIL PAN. HERBERT GUNDERSON, Stanley, Wis. Filed Aug. 1, 1924. Serial No. 729,600. 3 Claims. (Cl. 220—1.)

1. A device for the purpose indicated, comprising a pan having a guard wall on its top side near one end and provided with a central opening, the opposite trans-



verse edge portions of said wall having upstanding flanges between which any suitable tools may be disposed, resting upon the guard wall, and a handle member connecting the upstanding guard flanges, the handle acting as means to prevent displacement of said tools.

1,568,831. HYDROCYCLE. RICHARD F. HAMME, Jr., Wilmington, N. C. Filed June 30, 1925. Serial No. 40,663. 1 Claim. (Cl. 115—24.)

A hydrocycle of the character described comprising a pair of pontoons having spacing plates secured to the upper sides thereof, longitudinally disposed supporting bars arranged upon the upper sides of and intermediate the length of the spacing plates, a bicycle construction mounted upon the upper sides of the pontoons and directly over the supporting bars, a substantially U-shaped frame mounted upon the supporting bars and having a sprocket arm and gear mounted within the upper portion thereof, a driven shaft journaled within the lower portion of the frame and having a combined small gear and beveled gear fixed thereon and meshing with the large gear, a propeller shaft mounted between the pontoons and adjacent the rear ends thereof and including a pinion upon its forward end meshing with the beveled gear, a propeller fixed to the rear free end of the propelled shaft, a rudder mounted upon and between the rear end of the propellers, and a connecting rod secured to the rudder and communicating with the steering apparatus of the bicycle construction substantially as set forth.

1,568,832. APPARATUS FOR THE MANUFACTURE OF COMPOSITION BUILDING SHEETS OR SLABS. JOHN ARTHUR HARRISON and OTTO ANTON WASCHATA, West Richmond, Victoria, Australia. Filed Sept. 12, 1923. Serial No. 567,780. 19 Claims. (Cl. 25—42.)

1. In apparatus for the manufacture of composition building sheets or slabs, a feed hopper for powdered plaster having delivery orifices in the bottom thereof, a platform beneath said hopper, measuring bins slidable on said platform, cut-off plates on said bins to register with said hopper orifices, a screw conveyor, a telescopic chute, a sieve mounted on said chute, means imparting intermittent reciprocatory movement to said bins, means for continuously rotating said conveyor, and means for imparting oscillatory movement to said sieve.

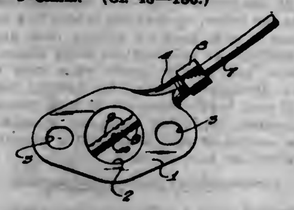
1,568,833. PISTON PIN. VERNON J. HARRIS, Cleveland, Ohio. Filed Oct. 1, 1925. Serial No. 59,833. 5 Claims. (Cl. 74—108.)

1. In a pin having radially expansible end portions, a tubular body having semi-tubular end extensions provided with inner faces inclined to the axis of the body, complementary semi-tubular end parts provided with inclined meeting faces and being movably disposed on said end extensions, and a spring extending through the tubular body connecting said movably disposed end parts holding them in place on the end extensions under constraint to travel over the inclined faces of the extensions to increase the diameter of the end portions of the pin.

1,568,834. ICE-CREAM-CONE PACKAGE. OSCAR HAUGN and WILLIAM A. ENGLAND, San Francisco, Calif., assignors to Parent Cone Company, San Francisco, Calif., a Corporation of California. Filed Apr. 10, 1924. Serial No. 705,530. 2 Claims. (Cl. 206—65.)

1. An ice cream cone package comprising a flat sheet of corrugated board having corrugations on its upper surface, two flat strips of corrugated board spaced apart on and positioned vertically with respect to the sheet, said strips being corrugated on their adjacent surfaces, the corrugations in the sheet and strips being in alinement, a second sheet corrugated on its under side and forming with the first sheet and the strips, an enclosure and a nest of ice cream cones in the enclosure with the bases of the cones disposed in the valleys in the sheets and strips.

1,568,835. INTERNAL-COMBUSTION ENGINE. JOHN B. HAWLEY, Jr., Fort Worth, Tex. Filed Mar. 13, 1924. Serial No. 698,886. 2 Claims. (Cl. 74—108.)

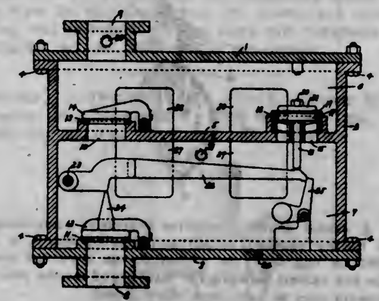


1. The combination with the piston of an internal combustion engine, of a series of relatively thin metal plates of substantially uniform thickness suitably formed to present a plurality of projections extending from their body portions substantially at right angles, and means attaching said body portions to the piston head, whereby there are established a plurality of projections of substantially uniform thinness reaching outwardly from the piston head substantially at right angles, and separated from each other by grooves of substantially equal thickness, and whereby the heating and cooling of said projections is of substantially equal rate at all points throughout the projecting portions, substantially as described.

1,568,836. WELL-PUMPING MACHINE. JOHN B. HAWLEY, Jr., Fort Worth, Tex. Filed May 6, 1924. Serial No. 711,851. 11 Claims. (Cl. 103—118.)

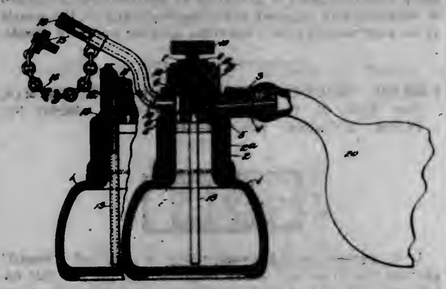
1. A well pumping unit comprising in combination a cylindrical casing, a motor element in the upper portion thereof, a pumping element within the casing beneath the motor element, a driving connection between the motor and pumping elements, an intake pipe reaching downwardly from the pumping element to a point below the casing, a vertically adjustable abutment on the lower end of the intake pipe, a circular collar of rubber or the like on said abutment and surrounding the intake pipe and adapted when expanded to constitute a gasket for sealing the well casing at a point around the intake connection, the discharge passage from the pumping element communicating solely with the interior of the cylindrical casing below the pumping element, a plunger slidably mounted within the lower portion of the cylindrical casing beneath said discharge passage and having a tapered lower portion adapted to enter the collar aforesaid when the plunger is forced down to thereby expand said collar into sealing engagement with the well casing, there being a series of discharge openings in the cylindrical casing at a point below the position normally occupied by the upper end of the plunger aforesaid, whereby said plunger is forced downwards by the pressure of liquid discharged by the pump to expand the collar into sealing engagement with the well casing and whereby the liquid may be discharged through said openings into the well casing above the collar, only when the plunger is forced down, substantially as described.

1,568,837. AUXILIARY ATTACHMENT FOR INTERNAL-COMBUSTION ENGINES. JACK S. HAYWOOD, Petersburg, Ill. Filed July 23, 1923. Serial No. 653,302. 1 Claim. (Cl. 48—180.)



An attachment for internal combustion engines comprising a body plate having a transverse opening, a nipple formed on one edge thereof, said nipple and body drilled to provide a diagonal bore and a recess aligning with the bore, a nozzle extending through said bore and having its inner end seated in said recess, said nozzle extending diagonally across said transverse opening and being provided with a plurality of perforations arranged in diametrically opposed rows longitudinally of the nozzle at its bore within said transverse opening and said nozzle.

1,568,838. GARTER PACKAGE. HENRY B. HEYMAN, New York, N. Y. Filed July 29, 1925. Serial No. 46,904. 2 Claims. (Cl. 206—44.)

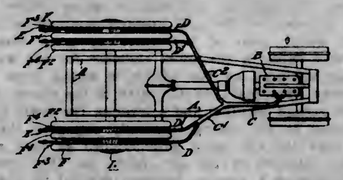


1. A garter package comprising a pair of "round" garters free from any sharp bend throughout the full extent of each garter and each garter being in the form of an elliptical band having a flattened side portion intermediate the ends of its major diameter, in combination with a flat card-mount arranged at right angles to the elliptical configuration of said garters and with said garters out-standing from the face of said card-mount and being positioned substantially in free outside and inside display, said mount having two pairs of tabs, the tabs of each pair being spaced apart materially less than the major diameter of the elliptical contour of said garter and gripping only said flattened portion of said garter to said mount and holding the whole garter free from sharp bends in outstanding display.

1,568,839. DRY-PIPE VALVE. WILLIS K. HODGMAN and WILLIS K. HODGMAN, Jr., Taunton, Mass.; Emma A. Hodgman executrix of said Willis K. Hodgman, deceased. Filed Feb. 2, 1920. Serial No. 355,598. 5 Claims. (Cl. 169—21.)

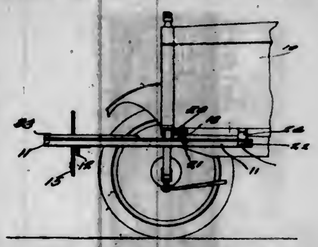
1. A dry pipe valve comprising a casing, a partition dividing the casing into upper and lower chambers, the said casing having an inlet opening into the lower chamber, an outlet opening from the upper chamber, a waterway opening through the partition all aligned to present a straight waterway through the casing, and a second opening through the partition, a water valve in the lower chamber for the inlet opening mounted on the casing to swing clear of the waterway when opening, a waterway valve in the upper chamber for the waterway opening mounted on the casing to swing clear of the waterway when open, an air valve in the upper chamber for the second opening, and a lever in the lower chamber fulcrumed to the casing, normally engaging the water valve and the air valve, proportioned so that a given pressure exerted by the air valve on the lever will counterbalance a greater pressure exerted by the water valve on the lever, and acting when released by movement of the air valve to free the water valve and allow it to swing to the open position.

1,568,840. NEBULIZER. THOMAS J. HOLMES, Boston, Mass. Filed June 17, 1922. Serial No. 569,148. 3 Claims. (Cl. 299—39.)



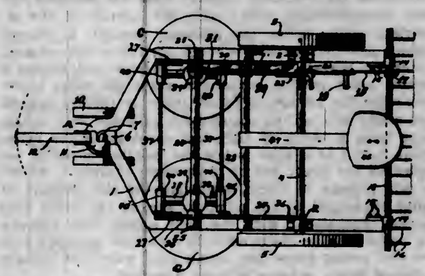
1. A liquid nebulizer embracing in its construction a stopper forming a closure for a liquid container provided with a downwardly discharged liquid-atomizing chamber having a conical wall affording a valve seat, and having a compressed air duct discharging through said conical wall, a rotatably axially adjustable valve plug having a tapered surface adapted to tightly engage said wall and seal the air-discharging passage, a liquid supply tube whose intake end is submerged in the liquid in the container and which communicates at its other end with the atomizing chamber through said valve plug, substantially as described.

1,568,841. CHARACTER-READING DEVICE. MABEL G. HORN and BERNICE B. B. BERENS, Philadelphia, Pa. Filed Mar. 26, 1925. Serial No. 18,549. 3 Claims. (Cl. 213—161.)



1. A device of the character described comprising a book having opposed covers and printed leaves, a key carried by one cover in a position to have the shank of the key extend between the leaves, and means whereby the covers may be held detachably closed.

1,568,842. SCRAPER. ARTHUR STANLEY HOWARD, Golton South, via Luveck, Victoria, Australia. Filed June 30, 1925. Serial No. 40,705. 10 Claims. (Cl. 280—158.)

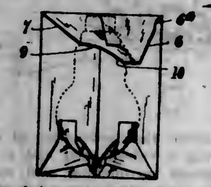


1. In a vehicle, the combination with a wheel thereof, of a scraper acting against said wheel, and means for heating said scraper.

1,568,843. SAW ATTACHMENT FOR VEHICLES. FRANK COSURN RUSSARD, Dennis, Tex. Filed Aug. 5, 1925. Serial No. 48,411. 2 Claims. (Cl. 143—43.)

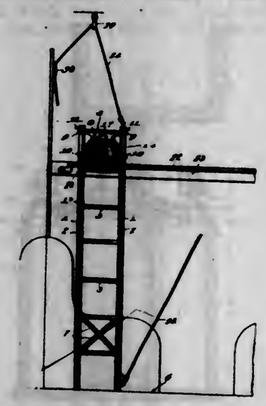
1. A saw attachment for use upon motor vehicles comprising a pair of angle bars having elongated longitudinally disposed slots upon their inner ends including a cross bar secured to the inner sides and adjacent the forward ends thereof, offset plates secured to the outer sides of the vehicle side bars and receiving the slotted portions of the angle bars thereon, angle brackets secured to the upper sides and adjacent the inner ends of the angle bars and engaging the under sides of the vehicle fender brackets, substantially L-shaped bolts secured to the upper sides of the angle bars and engaging the upper sides of the fender brackets, a saw shaft journaled upon the upper side of the cross bar, and a stub shaft arranged within the vehicle fan pulley and having its outer end connected to the saw shaft for imparting a source of momentum thereto.

1,568,844. PINTO-BEAN-HARVESTING MACHINE. WELLMAN K. HUFF, Guy, N. Mex. Filed May 14, 1923. Serial No. 638,837. 3 Claims. (Cl. 55—107.)



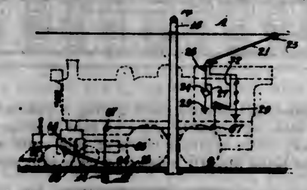
1. In a machine of the class described the combination with a wheel supported frame, of a frame pivotally mounted therein, means for adjusting said frame angularly upwardly and downwardly about its pivot and relative to the wheel supported frame, opposed heads formed in sections and movable with the frame, means for holding one of the sections of each head against rotation relative to the frame, cooperating interfitting means upon the sections of each head for holding them against relative rotation, one of said sections being adjustable about the common axis of the heads when said interfitting means are disengaged, means for holding together the sections of each head subsequent to their relative adjustment, a housing depending from and movable with the adjustable section of each head, and a rotatable cutting disk supported by each housing.

1,568,845. BOX OR CARTON FOR ELECTRIC LAMPS. ROWLAND HUNT, London, England. Filed June 6, 1924. Serial No. 718,374. 1 Claim. (Cl. 229—37.)



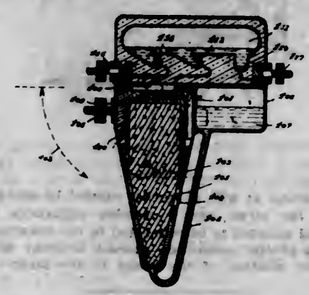
A carton for holding an electric lamp and having a plurality of flat sides the adjacent ends of at least three

of which at one end of the box have extensions of tapered form one side of which is longer than the other and provided with a curved part extending from the outer end of the shorter side to the extremity of the said extensions



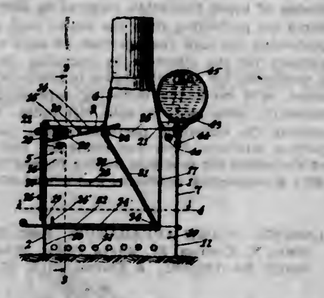
said curved part being arranged to effect a grip on both the cap of an electric lamp and the glass adjacent the cap; the other end of the box having any suitable means for holding the other end of the lamp.

1,568,846. SLEEPING-CAR LADDER. HILTON IRA JONES and FLORA M. PINKERTON, Wilmette, Ill. Filed Mar. 14, 1925. Serial No. 15,624. 6 Claims. (Cl. 228—36.)



1. A ladder of the character described, comprising a pair of parallel elongated frame members, a plate having cooperative guiding and retaining lugs engaging with the frame members to retain said frame members in lengthwise sliding contact with the outer face of the plate, a second plate, means pivotally attaching the first plate to the second plate so that the first plate can turn in its plane on the second plate, and rollers carried by the second plate for movably supporting it and the parts which are connected therewith on a horizontal rail.

1,568,847. AUTOMATIC TRAIN-CONTROL SYSTEM. WALTER KASSE, Baltic, Ohio. Filed Aug. 16, 1924. Serial No. 732,525. 3 Claims. (Cl. 246—63.)

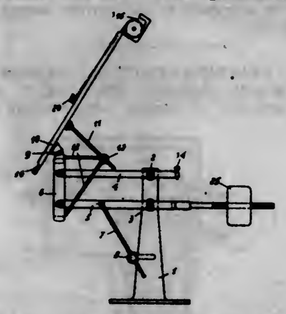


3. In a train control apparatus, a track instrument consisting of an electro-magnet, a plurality of the electro-magnets being mounted along the trackway, means on a train for energizing said electro-magnets successively as the train passes by them, a switch device on the train, an arm movably mounted on the train and terminating in an armature adapted to be attracted by the electro-magnets, and electro-magnetic means mounted on the locomotive for releasing the throttle lever and engineer's brake valve, and means connected with said last means and adapted to be energized by the current output from another locomotive.

1,568,848. STARTING SWITCH. RICHARD KELLENDORFER, Munich, Germany. Filed Oct. 5, 1923. Serial No. 666,799. 10 Claims. (Cl. 201—57.)

10. An electric starting switch comprising a casing rockable about a horizontal axis and having an electricity conducting portion adapted to be connected to one pole of an electric circuit, a solid resistance arranged fixedly within the casing and spaced from the electricity conducting portion of the latter, means for connecting said resistance to the other pole of said circuit, a chamber fixed to said casing and containing a conducting liquid only, and a conduit arranged exteriorly of said casing and connecting said chamber to the lower end of said casing, whereby when the casing, resistance and chamber are moved to a certain position, the conducting liquid will flow from the chamber through the conduit and into the casing, and will gradually rise along said resistance and gradually cut the latter out of the circuit.

1,568,849. PORTABLE CAMP STOVE. GEORGE KLEINSMITH, Pine Knot, Calif. Filed Nov. 20, 1924. Serial No. 751,068. 5 Claims. (Cl. 126—1.)

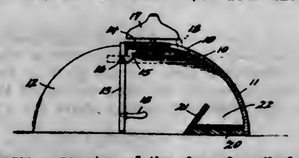


1. A camp stove, comprising in combination an outer body having a top plate extending there-across, an inner structure suspended from the top plate, a grate carried by the inner structure, an oven positioned in the inner structure and supported thereby above the grate.

1,568,850. DRAWING AND WRITING DESK. HANS KOCH, Dietikon, near Zurich, Switzerland. Filed Apr. 6, 1925. Serial No. 21,090. 4 Claims. (Cl. 45—131.)

2. A drawing board support, comprising a stand, links pivotally connected thereto, a strut connecting one end of the links and maintaining them in parallel relation,

means carried by the upper end of the strut for pivotally supporting a drawing board or the like, means extending from one of the links and adapted for adjustable connection with the stand to fix the angular relation of the

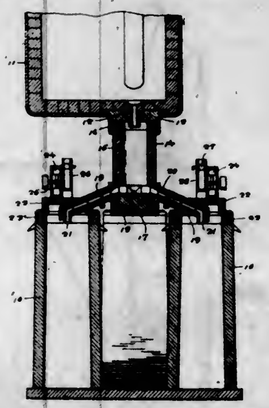


links and stand at will, a bracket carried by and projecting from the strut, and a member adjustable in the bracket and adapted to be connected to the drawing board beyond the pivotal connection thereof, whereby to adjust the angular relation of the board to the strut.

1,568,851. BATTERY. MILAN KNEZEVICH, Akron, Ohio. Filed Nov. 26, 1924. Serial No. 752,426. 1 Claim. (Cl. 136—125.)

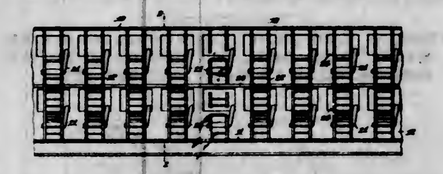
In a device of the type described, a pair of open top jars, an electrolytic solution in each jar, a pair of electrodes of block formation received in said jars, an apertured ear projecting from the top of each electrode, a rod projecting through the aperture of each ear to act as a support for the electrode by engaging the top of a jar, a conductor for said electrodes to inseparably connect the same, said conductor including depending portions permanently embedded in said electrodes, a portion connecting the embedded portions, and a lead-off part projecting laterally from one electrode, and a second pair of electrodes for said jars having formed integrally therewith a connecting conductor and a lead-off conductor.

1,568,852. GAME APPARATUS. PAUL H. KOHLER and EMIL N. KOHLER, St. Marys, Ohio. Filed Aug. 8, 1924. Serial No. 730,982. 6 Claims. (Cl. 273—127.)



1. In a game apparatus of the class described, in combination, a support, an audible signal mounted thereon and above said support, a peg pivotally mounted on and depending from said support and means on said peg to contact with and operate said signal through said support when said peg is swung about its pivot.

1,568,853. STOVE BURNER AND WATER HEATER. JOSEPH P. LANE, New York, N. Y. Filed Feb. 17, 1925. Serial No. 9,804. 2 Claims. (Cl. 126—53.)

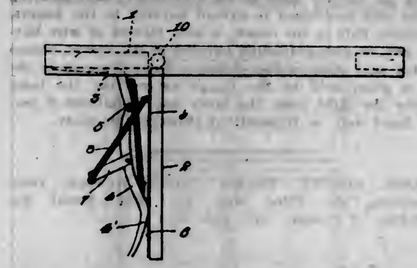


1. In a cook stove, the combination of two burners, a water grid having a valved inlet and a valved outlet, one of said burners surrounding said water grid substantially in the same plane, the other of said burners being arranged beneath said water grid, and means for maintaining the relative disposition of said burners and water grid.

1,568,854. STEEL-CASTING APPARATUS. DANIEL LARNER, Warren, Ohio, assignor of one-third to George E. Fulton, Warren, Ohio. Filed Aug. 5, 1924. Serial No. 730,285. 11 Claims. (Cl. 22—73.)

1. In a steel casting apparatus, the combination with a ladle and a plurality of molds, of means for conveying molten metal from the ladle to all of the said molds simultaneously protected from the effects of air.

1,568,855. PASSENGER COMPARTMENT. ALFRED W. LAWSON, New York, N. Y. Filed Apr. 21, 1925. Serial No. 24,848. 5 Claims. (Cl. 105—340.)



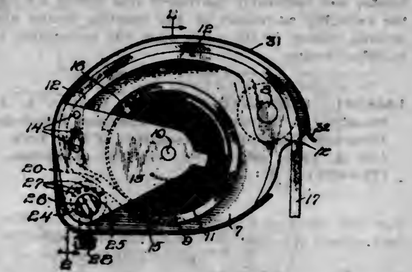
1. A passenger compartment having a passageway, and tiers of seats at opposite sides of said passageway, said passageway being common to all of said seats and all of said seats being directly accessible from said passageway.

1,568,856. SWINGING-DOOR CHECK. KARL LIDBECK and VERNER BRYNGELSON, Niagara, Wis. Filed June 10, 1925. Serial No. 36,255. 2 Claims. (Cl. 16—49.)

1. A door check comprising an L-shaped bracket adapted to be connected with a door frame, an arm pivoted

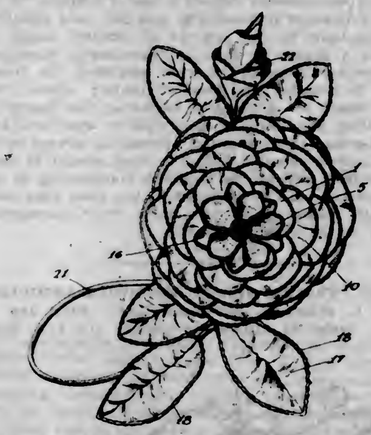
to the outer end of the bracket and having its outer end adapted to engage a door, a spring connecting the

arm with the bracket, a projection on the arm and a spring connected with the other end of the projection and adapted to be connected with a door.



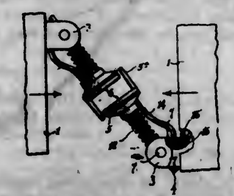
1,568,857. CIRCULATING PLUNGER PUMP. WILLIAM M. McGEE, Santa Monica, Calif. Filed Dec. 2, 1924. Serial No. 753,440. 2 Claims. (Cl. 103—5.)

1. A circulating plunger pump having in combination a packer with a reduced upper outer end, a conduit through the packer, a pipe string attached to the upper end of the conduit and having a passage on the outside thereof above the packer, a working barrel connected to the lower end of the conduit, a pipe plunger operating through the conduit, check valves in the body of the packer between the passage and conduit, and seats in said valves allowing fluid to be forced from the passage to the conduit, but not vice versa.



1,568,858. REBOUND CHECK. NORRIS F. McNAUGHT, Chicago, Ill. Filed Dec. 29, 1923. Serial No. 683,847. 9 Claims. (Cl. 267—10.)

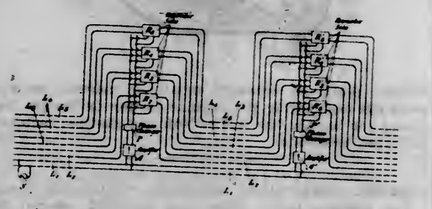
1. In a rebound check, the combination with a spring retracted drum, a strap coiled on the drum and having one end secured thereto, a stationary curved friction plate adjacent to the drum, the strap passing from the drum over the friction plate and having its free end adapted for attachment to a vehicle axle, whereby when said free end is released the strap is wound on the drum by the operation of the spring and when the free end is withdrawn the strap is unwound from the drum and pulled over the friction plate against the tension of the spring to thereby absorb the energy of the rebound of the axle, of means for regulating the friction engagement of the strap on the friction plate during the rebound comprising a pin in contact with the outer face of the strap at a point adjacent to its travel over the



friction plate, an eccentric mounting therefor, suitable markings designating the angular positon of the pin, and means for locking the pin in adjusted position, substantially as described.

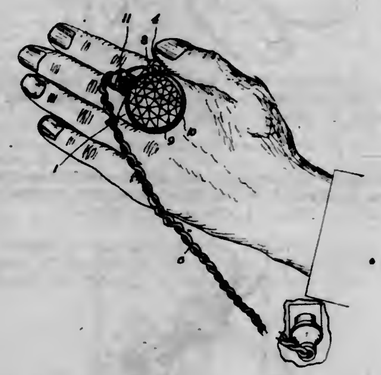
1,568,859. ARTIFICIAL FLOWER. GUADALUPE ROBAN, Los Angeles, Calif. Filed July 22, 1925. Serial No. 45,219. 13 Claims. (Cl. 41—13.)

1. An artificial flower formed of ribbon having wire on the edge thereof, the wire and ribbon being bent and crimped to simulate petals.



1,568,860. AUTOMATIC AIR-HOSE COUPLING. WALTER J. SPENCER, Dallas, Tex. Filed Feb. 7, 1925. Serial No. 7,691. 4 Claims. (Cl. 284—5.)

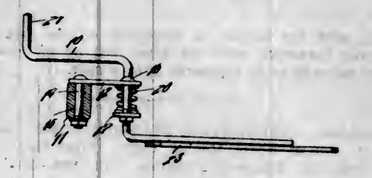
1. In an automatic hose coupling for railway cars having the standard air brake line in which is included a valve, comprising in combination coupling means connected for horizontal swinging movement to the ends of each car and disposed diagonally between adjacent cars, means for conducting air from the valve through



the coupling means, means operably connecting the coupling means to the valve to cause opening of the valve simultaneously with the engagement of the coupling means, and resiliently controlled stop means for limiting the swinging movement of the coupling means and for causing closing of the valve upon the uncoupling of the coupling means.

1,568,861. **REPEATER CIRCUIT.** HERMAN A. AFFEL, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed July 2, 1921. Serial No. 482,182. 8 Claims. (Cl. 179—170.)

1. In a transmission circuit, a line, a plurality of 22 repeaters arranged in tandem in said line, said repeaters being separated by line sections of sufficient length to introduce a change of phase in transmission thereover, each repeater including separate amplifiers for transmitting in opposite directions, alternating current controlled means for alternately rendering the oppositely transmitting amplifiers of each repeater operative, and means for supplying controlling alternating current waves to the tandem repeater sets of a given circuit in such phase relation that all the amplifiers transmitting in the same direction will be operated in the same time relation with respect to a voice wave train successively arriving at the repeater points.



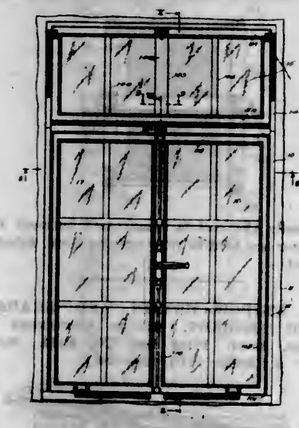
1,568,862. **TRAFFIC SIGNAL FOR MOTOR VEHICLES.** DELL L. ALBRIGHT, Hollywood, Calif. Filed Jan. 4, 1923. Serial No. 610,600. 4 Claims. (Cl. 177—329.)

1. In a traffic signal, a supporting means attachable to the first and second fingers of an operator, an electric light socket supported by said means, a switch connected to the supporting means, adapted to be operated by the operator's thumb, a wire bent in the form of a loop and having extended ends secured to the socket, a flange secured to the loop and a glass positioned therein over the end of the socket.

2. A traffic signal comprising in combination a securing element adapted to encircle a plurality of fingers of a hand, an electric lamp socket attached to said securing element and positioned to extend parallel to the fingers, an electric bulb in the socket, a loop formed of wire having a pair of ends extending parallel to the socket, means securing said ends to the socket, a flange secured to the loop, a glass held in the flange away from the lamp whereby the light from the lamp may illuminate a person's hand and be transmitted through the glass.

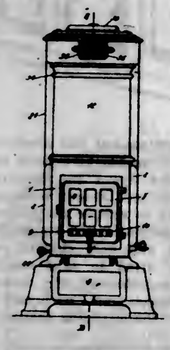
1,568,863. **SIGNAL.** ERNEST TAYLOR ATWELL, Independence, Mo. Filed Mar. 10, 1924. Serial No. 698,259. 2 Claims. (Cl. 116—51.)

1. A direction signal for vehicles comprising a rotatably mounted crank arm having one end located within convenient reach of the vehicle driver, a signal device at the opposite end of said arm designed to be moved to an active or an inactive position by rotation of the crank arm, spaced plates including a stationary plate and a relatively movable plate, both of said plates having openings therein for the passage of said arm, an annular flange secured to the arm and bearing against the inner face of the relatively movable plate, a washer bearing against the inner face of the stationary plate, a spring surrounding the arm between the flange and washer, and adjusting belts secured to the plates whereby the relatively movable plate may be adjusted to frictionally hold the arm against accidental movement.



1,568,864. **METHOD OF PICTORIAL REPRODUCTION.** HERMAN BAHR, Little Falls, N. Y. Filed Aug. 1, 1922. Serial No. 578,885. 5 Claims. (Cl. 101—115.)

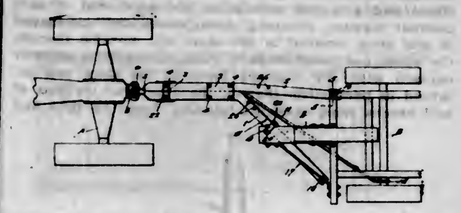
1. A method of simulating a hand-painted pictorial design, which consists in forming an original design, creating a foraminous stencil therefrom, forming cut-out stencils from said foraminous stencil, and coloring predetermined portions of the design with a desirable tint by said cut-out stencils.



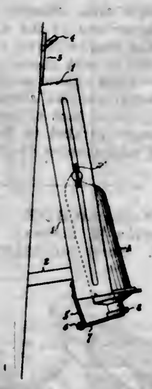
1,568,865. **CASEMENT WINDOW.** SIDNEY U. BARR, Brooklyn, N. Y. Filed Nov. 25, 1922. Serial No. 603,210. 6 Claims. (Cl. 189—60.)

1. In a casement window of the character described, a frame provided with a jamb, said jamb being formed with a plurality of shoulders arranged in different planes and inclined sections extending from one of the shoulders for directing water to a discharge point, and windows formed with sashes having shoulder members adapted to engage

the shoulders on said jamb, and a plurality of drip flanges overhanging said inclined sections, said shoulders on said sashes being spaced from said inclined sections.



1,568,866. **HEATING STOVE.** GEORGES BARAULT, Brussels, Belgium. Filed July 25, 1924. Serial No. 728,206. 6 Claims. (Cl. 126—68.)



1. In a heating stove a fire-box, the said fire-box being provided with controlled air-inlets and with a permanent air-inlet, a grate in the said fire-box, a fuel chamber arranged above the fire-box, means for admitting air above the fuel chamber, a high recuperating device arranged at the rear of the fuel chamber the said device being provided with a draught connection and being separated from the fuel chamber by an air passage, whereby the air admitted above the fuel chamber is conducted at the upper rear end of the fire-box to achieve the combustion of the gases escaping from the fire-box at the lower end of the heat recuperating device.

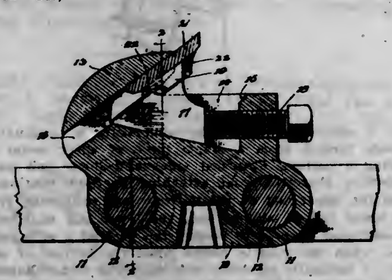
1,568,867. **TRACTOR HITCH.** CARLOS A. BARRY, Sutherland, Iowa. Filed Nov. 21, 1924. Serial No. 751,371. 6 Claims. (Cl. 280—33.44.)

1. In combination with a tractor and an implement, a frame having one end supported on the tractor and its other end attached to the implement, the rear part of the frame extending at an angle so that the implement will not track the tractor and a draw bar and draft bar connecting the implement with the tractor and taking the entire pulling strain.

1,568,868. **SUPPORT FOR COLLAPSIBLE CONTAINER TUBES.** BEN CLIFFORD BLACKMON, Dallas, Tex. Filed June 30, 1925. Serial No. 40,558. 2 Claims. (Cl. 221—60.)

2. A collapsible tube holder comprising in combination a body formed from a single piece of sheet metal including a bottom, upturned sides and lower end walls projecting therefrom and attaching portions continuing from the upper end of the bottom, legs projecting from the lower end of said bottom, the lower end wall being recessed and adapted to receive the neck of a collapsible tube, when the tube is placed upon the bottom of said body, a manually operable tube engaging and collapsing key mounted within the side wall of said body, a bracket secured to and extending from the lower end of said body, an arm pivotally connected to said bracket for swinging movement transversely of the mouth of the tube and a relatively small plate of a diameter sufficient to close the tube carried by the outer end of the swinging arm and adapted to be removably held against the mouth of the tube substantially as and for the purpose set forth.

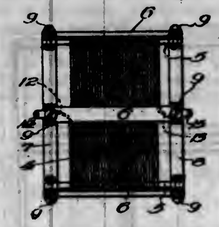
1,568,869. **CLAMPING CHUCK.** HEINRICH BOHS, Bonn, Germany. Filed Mar. 28, 1925. Serial No. 19,161. 1 Claim. (Cl. 279—64.)



A clamping chuck for drills and the like comprising in combination, a mandrel having radial slots formed in the tool receiving end thereof, each of said slots having their upper and lower faces converging and arranged in parallelism, an adjusting sleeve rotatably engaged over and adjustable with respect to said mandrel having an internal annular chamber therein, the upper end of said chamber being downwardly and outwardly inclined and the lower end of the chamber being open, an annulus engaged in the open lower end of the sleeve closing the

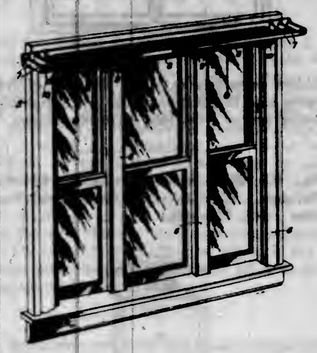
lower portion of said internal chamber, the inner face of such annulus being downwardly and outwardly inclined and arranged parallel to the upper end of said internal chamber, clamping cheeks correspondingly shaped to said slots received in the same and movable therein, the upper and lower faces of these cheeks being slidably engaged with the adjacent faces of the slots and arranged in parallelism thereto, the upper end portions of said cheeks being extended laterally from the slots and

formed with oblique faces slidably engageable with and parallel to the upper end of the annular chamber, and laterally positioned longitudinally extending feet on the outer sides of each of said cheeks arranged beyond and without the outer sides of said slots and received in portions of the internal annular chamber in the adjusting sleeve, the outer ends of each of said feet being obliquely formed and arranged parallel to the inclined surface of the inner side of said annulus and being slidably engageable thereover.



1,568,870. MINING-MACHINE CHAIN LINK AND TOOTH. NEWTON K. BOWMAN, Bowdil, Ohio. Filed Dec. 15, 1921. Serial No. 522,577. 12 Claims. (Cl. 262—33.)

1. In a mining machine, a pivoted chain link, a cutting tooth inclined forwardly upon the link at an angle to the longitudinal axis thereof, and means extending beneath the inner end face of the tooth sustaining the tooth against inward thrust and clamping the tooth in a position normally having its working end touching a plane passing substantially midway between the pivot points of the link at a right angle to said axis.



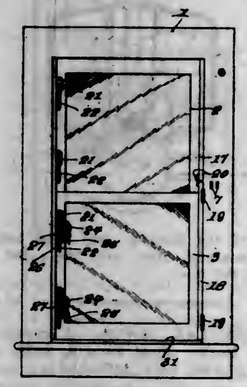
1,568,871. CONSTRUCTION FOR INDUCTANCES. THOMAS H. BRENNAN, Chicago, Ill. Filed Aug. 17, 1925. Serial No. 50,553. 2 Claims. (Cl. 175—359.)

1. A coil support comprising a plurality of relatively thin and narrow bars of dielectric material on which the coil is mounted, a pair of rings of dielectric material of substantially the same diameter as the coil, said rings being mounted on said bars adjacent to each end of the coil, a plurality of bars of dielectric material positioned on said coil opposite said first mentioned bars, notches formed in the inner and outer faces of the end rings at the positions of the end portions of the bars permitting the opposing faces of the bars to approach sufficiently close together to compress the convolutions of the coil between them, and bolts extending through said bars and

rings, whereby the coil is compressed between the bars and the latter are held in true circular form, substantially as described.

1,568,872. WINDOW-CURTAIN AND SHADE SUPPORTING BRACKET. MILTON OSTRANDER BRIGGS, Muscatine, Iowa. Filed Dec. 20, 1924. Serial No. 757,231. 8 Claims. (Cl. 156—24.)

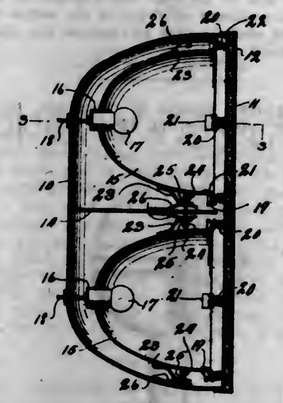
1. A combined curtain-rod and shade-roller supporting bracket of angular form having a main body section with horizontally extended sleeve and article-supporting portions at bottom and top thereof respectively, said body portion being slotted to receive the journal or reeling-pin of a shade-roller and said article-supporting portion being adapted to receive and hold curtain rods, an angular member extensibly fitted in said sleeve and a screw adapted to pass therethrough for securing the bracket in place upon a window frame with said angular member in engagement with the moulding thereof.



1,568,873. METHOD OF MANUFACTURING ARTIFICIAL ABRASIVES. CLARENCE J. BROCKBANK, Philadelphia, Pa., assignor to Abrasive Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Sept. 11, 1920. Serial No. 409,661. 7 Claims. (Cl. 204—63.)

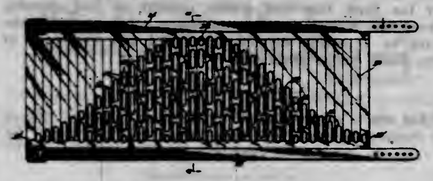
1. The method of producing crystalline alumina substantially free from impurities, which consists in fusing an aluminous ore with a reducing agent and boric acid, and separating the fused alumina from the reduction products.

1,568,874. WINDOW CONSTRUCTION. ROYSTON CABANISS, Atlanta, Ga. Filed June 6, 1924. Serial No. 718,884. 1 Claim. (Cl. 20—46.)



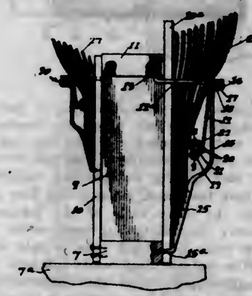
The combination with a frame and a sliding sash, and the sash holding bead on one side of the frame comprising an upper face and a lower hinged section, of

spaced sockets on the opposite vertical bead of the frame, plates having offset and depending pintles fixed on the frame and designed to be received in the sockets, when the sash is lowered, flexible elements connected



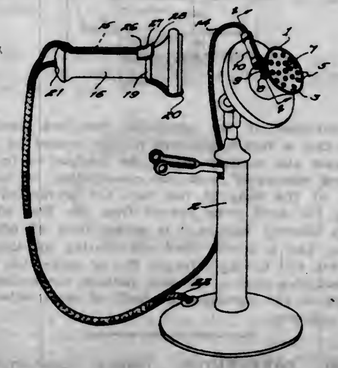
with the plates, pins carried by said flexible elements, and said pintles having apertures therethrough designed for the reception of the pins and to rest on the sockets when the sash has been partly raised to permit of the lateral swinging of the sash when the hinged bead section is swung to open position.

1,568,875. HEADLIGHT FOR AUTOMOBILES. ROBERT G. CAMBLIN, Bartlesville, Okla., assignor of one-half to Anthony R. Edmondson, Bartlesville, Okla. Filed Nov. 8, 1924. Serial No. 748,732. 4 Claims. (Cl. 240—41.)



1. In a headlight for automobiles, a housing, a reflector mounted within the housing and having a lamp, the reflector having outwardly and longitudinally projecting ears, resilient clips mounted upon the housing and having longitudinally extending slots, and screws passing through the ears and through said slots and engaging the wall of the housing to thereby support the reflector in spaced relation to the housing and in adjusted position therein.

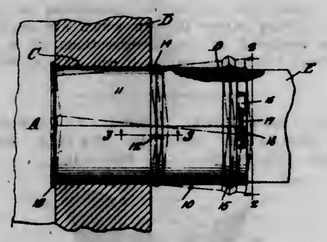
1,568,876. CYLINDRICAL PROTRACTOR. NELSON I. CAMPBELL and ABRAHAM M. HERSHMAN, Los Angeles, Calif. Filed Sept. 4, 1924. Serial No. 735,821. 11 Claims. (Cl. 33—75.)



1. A cylindrical protractor comprising a sheet of material having curves thereon which are developments of lines produced by the intersections of a cylinder with planes at various angles to the axis of said cylinder.

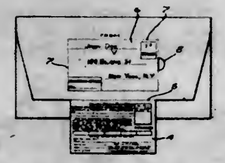
1,568,877. BAG RACK. LEMUEL J. CAYWOOD, Monterey Park, Calif. Filed Mar. 10, 1924. Serial No. 698,042. 12 Claims. (Cl. 101—212.)

7. A bag rack comprising in combination a backing member, a front inclined member adapted to arrange a series of bags held in the rack in echelon, and a printing device held in the rack and pressing against the outermost bag to print each bag in succession as it is withdrawn through the widest part of the rack.



1,568,878. COVER. JAMES G. CHAMBERS, Montreal, Quebec, Canada. Filed Dec. 29, 1924. Serial No. 758,768. 4 Claims. (Cl. 179—188.)

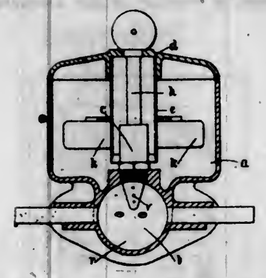
1. In combination with a telephone, of a means for closing the speaking tube thereof, comprising a fixed apertured disk in the mouth of the speaking tube, a second apertured disk pivotally secured to the fixed disk,



an arm thereon extending through the side of the speaking tube, spring means influencing the arm in one direction to turn the last mentioned disk to bring the apertures thereof in alignment with the apertures of the fixed disk, and means secured on and operable from the receiver of the telephone for influencing the arm in a second direction to bring the apertures of the disks out of alignment.

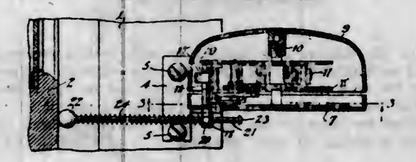
1,568,879. STOVEPIPE THIMBLE. EDWIN BRYAN CHRISTIAN, Wallace, Idaho. Filed May 27, 1925. Serial No. 38,250. 2 Claims. (Cl. 126—314.)

1. A stove pipe thimble comprising a pair of similar semi-cylindrical sections pivotally connected intermediate their ends whereby the sections may be contracted at one end to facilitate insertion within a flue opening, said end having outstanding flanges adapted to engage against the inner wall of the flue, and means connected with the other ends of the sections for effecting movement thereof toward each other to expand the first named ends the outer ends of said sections being formed with outstanding beads adapted to receive and conformingly engage upon the outstanding bead of a stove pipe section whereby to effect a clamping action thereon.



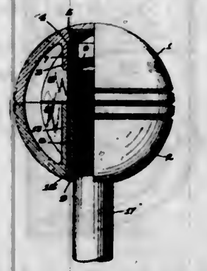
1,568,880. ENVELOPE. VERNON A. CONKLIN, Belmar, N. J., assignor of one-half to Henry A. Wilson, New York, N. Y. Filed May 3, 1924. Serial No. 710,904. 1 Claim. (Cl. 229—70.)

An envelope of the character described having a closure flap, a return postcard receipt defined by perforated lines and entirely within the confines of the flap, said card removable from and constituting an integral portion of the body of the flap, the perforated lines defining the card being spaced from the free edge of the flap whereby said card is spaced from all edges of the flap, and a second card constituting an extension of the flap and having a fragile line of connection therewith, said flap having adhesive thereon for securing to the body of the envelope and both of said cards being free of adhesive.



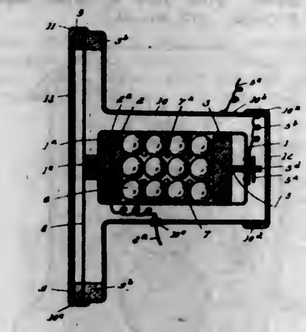
1,568,881. CARBURETOR. GEORGE CONSTANTINESCO, Weybridge, England. Filed Feb. 7, 1922. Serial No. 534,749. 1 Claim. (Cl. 261—62.)

In a down flow carburetor, a mixing chamber into which the fuel is discharged through an orifice, a throttle turning about a horizontal axis arranged vertically below said orifice, and a conical hood covering said orifice and extending into the mixing chamber to a point close



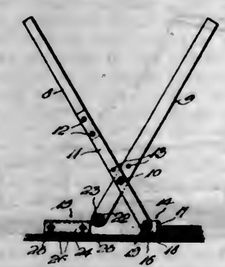
to the axis of the throttle, said hood having an air inlet and a mixture outlet with the outlet of greater capacity than the inlet.

1,568,882. BURGLAR ALARM. ANTHONY E. COYNE, New York, N. Y. Filed June 6, 1925. Serial No. 35,324. 2 Claims. (Cl. 116—91.)



2. A burglar alarm including a bell, a shaft projecting from the bell and adapted when in one position to hold the clapper of the bell against movement, a rod movably connected to the shaft located at right angles thereto, said rod adapted to engage a sash, a spring holding said rod in engagement with the sash to prevent turning movement of the shaft, and means for securing the bell to the sash not engaged by the rod so that upon movement of either of the sashes the rod will cause the shaft to turn and release the clapper of the bell to sound an alarm.

1,568,883. KNOB. ERNEST G. DANIELSON, San Francisco, Calif. Filed July 14, 1925. Serial No. 43,471. 4 Claims. (Cl. 74—33.)



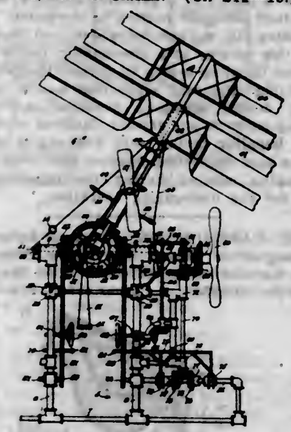
1. A knob comprising a cup-shaped member, a hollow member having internal threads, said hollow member being secured centrally within said cup-shaped member and projecting therefrom, and a cup-shaped member having a central opening adapted to receive said hollow member, said cup-shaped members being formed of synthetic resin molding material and held together by spinning the edge of said hollow member over the edge of said central opening.

1,568,884. MICROPHONE. LEOPOLD DARIMONT, Brussels, Belgium. Filed Oct. 4, 1924. Serial No. 741,661. 2 Claims. (Cl. 179—122.)

1. In a microphone, the combination with a suitable container, and poles arranged at opposite ends thereof, of a plurality of large balls placed directly between said poles and forming constant contacts between them, a plurality of small balls or grains placed in the interstices between said large balls and freely movable therein, and suitable connections to any desired telephonic circuit, substantially as set forth.

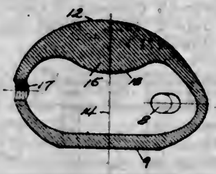
1,568,885. BOARD-FORCING TOOL. EDGAR C. DERBY, Moberly, Mo. Filed Aug. 27, 1925. Serial No. 52,907. 2 Claims. (Cl. 254—15.)

1. A board-shifting tool comprising a pair of crossed levers whose upper ends are exposed to be gripped by hand, said levers being fulcrumed together at their crossing point, one of said levers having parallel furcations between which the other lever passes, a shoe having a web portion straddled by the free ends of said furcations, a pivot passing through said furcations and said web portion, another shoe having spaced lugs between which an end of the other lever is received, and another pivot passing through said lugs and the intervening lever end, one of said shoes having antislipping teeth, the other being adapted to engage a board to be forced toward a previously laid board.



1,568,886. METHOD OF HEATING MATERIAL AT SUCCESSIVELY DIFFERENT TEMPERATURES. ARTHUR MCDOUGALL DUCKHAM and JOHN STANLEY MORGAN, London, England, assignors to Thermal Industrial and Chemical (T. I. C.) Research Company Limited, London, England, a British Company. Filed Aug. 9, 1921. Serial No. 491,021. 2 Claims. (Cl. 196—92.)

1. A process of heating a material at successively different temperatures for the purpose of fractionally vaporizing constituents thereof, which consists in causing the material to travel between a solid surface immersed in a bath of molten metal and a surface of the molten metal, removing the constituents volatilised by

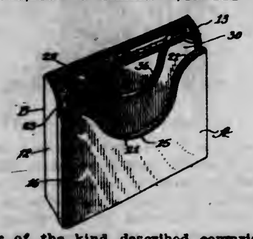


the treatment, and causing the unvolatilised portions of the material to travel between another such solid surface and a surface of molten metal and to acquire a different temperature at each passage.

1,568,887. MEANS FOR MAINTAINING THE EQUILIBRIUM OF FLYING MACHINES. FREDERICK WILLIAM DUPWA, Mexico, Mexico. Filed July 16, 1925. Serial No. 44,003. 3 Claims. (Cl. 244—19.)

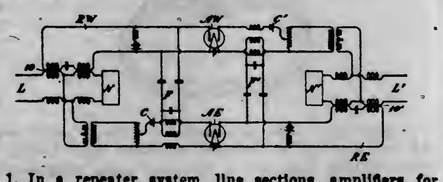
1. In a machine of the type described, two right-angularly arranged shafts rigidly joined at their centers, a lifting structure pivotally connected to one shaft, a pendant structure pivotally connected to the second shaft, a vertical shaft journaled in the lifting structure, a drive shaft journaled in the pendant structure, meshing bevel gears loose on the right-angularly arranged shafts, a bevel gear on the vertical shaft meshing with one of the loose bevel gears, and means for operatively connecting the drive shaft with the other of the loose bevel gears.

1,568,888. GOLF CLUB. WILLIAM DUNN, Palo Alto, Calif. Filed Apr. 4, 1925. Serial No. 20,670. 1 Claim. (Cl. 273—77.)



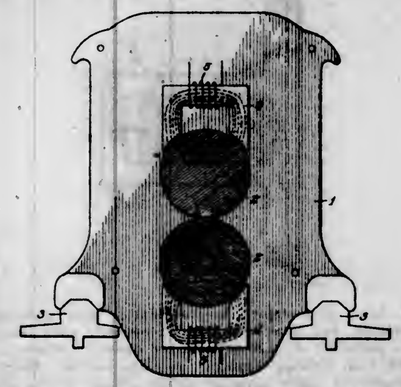
A golf club head comprising a hollow metal body cast as a complete integral structure and having a front striking face, and a rear wall being thickened to constitute a substantial portion of the total weight of said head, the mass of said rear wall being symmetrically disposed with relation to a vertical plane normal to and bisecting said striking face, the remainder of the walls of said head being relatively lighter in construction compared to said rear wall.

1,568,889. RETAINER CLIP. AXEL S. ELIASSON, New York, N. Y. Filed June 29, 1925. Serial No. 40,351. 7 Claims. (Cl. 24—11.)



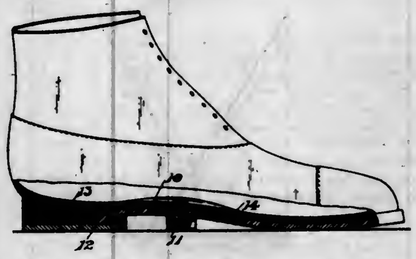
2. A retaining clip comprising holding means by virtue of which an instrumentality is releasably held, a supporting member, supporting means by virtue of which the retaining clip is supported in connection with a portion of a pocket of a garment, impaling means which impales itself into said portion of the pocket for holding the retaining clip against being detached from said portion of the pocket, and disengaging means for disengaging the impaling means to permit the detachment of the retaining clip, said supporting means consisting of relatively flexible clamping members carried by said supporting member, one of said clamping members carrying said impaling means, said disengaging means being carried by said supporting member with respect to which the clamping member having the impaling means is movable for the disengaging operation.

1,568,890. CASE HOLDER. LEONARD EMERICH, Elgin, Ill., assignor to Illinois Watch Case Company, Elgin, Ill., a Corporation of Illinois. Filed May 19, 1924. Serial No. 714,258. 9 Claims. (Cl. 224—29.)



8. A holder of the kind described comprising a box-like structure open only at the top and having in one of its walls an opening for the reception of a fastening device, and a lining fitted within the holder and movable into and out of position therein, the lining serving to conceal the inner face of the opening when positioned within the holder, substantially as described.

1,568,891. REPEATER CIRCUITS. LLOYD ESPENSCHIED, Queens, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed July 2, 1921. Serial No. 482,243. 10 Claims. (Cl. 179—171.)

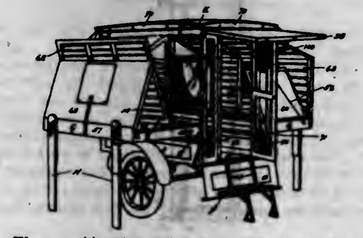


1. In a repeater system, line sections, amplifiers for repeating in opposite directions associated with said line sections, a circuit interconnecting said amplifiers in tandem independently of said line sections, and means to prevent the transmission of audible frequencies over said circuit.

1,568,892. METHOD AND APPARATUS FOR HEATING ROLLS. GORDON FOX, Chicago, Ill., assignor to Freyn Engineering Company, Chicago, Ill., a Corporation of Maine. Filed June 4, 1923. Serial No. 643,197. 3 Claims. (Cl. 80—41.)

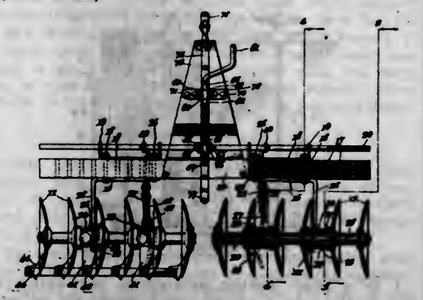
1. The method of heating the rolls of a sheet mill, which comprises passing a magnetic flux of rapidly changing magnitude and direction through rolls made of unlaminated magnetic material.

1,568,893. SHOE. MARTIN F. GALLAGHER, San Francisco, Calif. Filed Aug. 15, 1922. Serial No. 581,925. 1 Claim. (Cl. 36—76.)



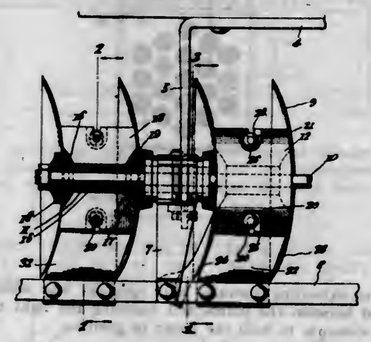
A shoe having a flexible shank portion, a comparatively narrow support member arranged transversely across the bottom of said shank portion and fixed thereto at substantially the center thereof, said support member being of a thickness whereby it will remain out of contact with the ground except when said shank portion is depressed.

1,568,894. CORSET, GIRDLE, AND THE LIKE. CHARLES F. LITTLEJOHN and JULIUS E. LIPSHITZ, New Haven, Conn. Filed June 20, 1924. Serial No. 721,357. 1 Claim. (Cl. 2—38.)



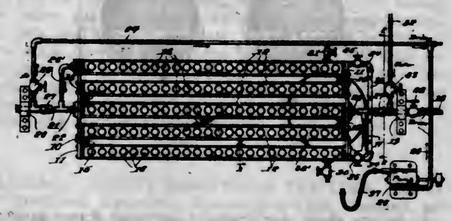
In a corset having an adjustable front, fastening means therefor comprising a single member composed of a plurality of united parallel strips, a series of studs arranged in columns carried by said strips, a pocket formed in one end of the corset to receive and retain said member, means for engaging said studs, a supporting strip for the latter means and a pocket formed in the other end of the corset to receive and retain said supporting strip.

1,568,895. BUNGALOW TRAILER. FRANCIS P. LYONS, Manchester, N. H., assignor to Gardner W. Pearson, trustee, Lowell, Mass. Filed Feb. 23, 1921. Serial No. 447,121. 7 Claims. (Cl. 296—23.)



1. The combination with a trailer having a tongue, a support therefor, two wheels and a substantially rectangular body comprising a floor, parallel sides, a front, and a tail board which swings down; of a covering which includes telescopic corner posts detachably attached at the corners of the trailer body, means to lock each post in a plurality of positions, a semi-rigid top connected to the corner posts by pivot joints; two detachable folding box bays one on each side, each adapted to fold into a vertical position inside a side of the trailer and to swing up and out to a horizontal position, each including a floor frame, three semi-rigid side walls and a semi-rigid top wall, all adapted to fold on such floor frame; slidable pivot connections for each box bay detachable from the trailer sides; supporting cords between each bay and a corner post; extensible legs attached to the outside edge of each bed frame adapted to be folded thereon when the bed frame is folded and to be extended therefrom to the ground when unfolded; a door frame and door hung from the back of the trailer top and adapted to swing up thereunder; a front folding box bay adapted to fold into the front of the trailer including a floor frame, three semi-rigid side walls foldable thereon and a top wall therefor; suitable fastening means for holding the various parts in position when folded and unfolded; steps adapted to hook on the tail board and to extend it in such manner as to support the back of the trailer; and weather strips adapted to make tight the joints between the outside walls.

1,568,896. DISK HARROW. AUGUSTA POSTELLE MCKAY, Rome, Ga., assignor to Towers & Sullivan Manufacturing Co., Rome, Ga., a Corporation of Georgia. Filed Oct. 20, 1924. Serial No. 744,730. 5 Claims. (Cl. 55—81.)

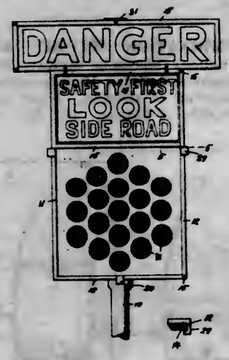


1. A harrow comprising a frame, a supporting yoke adjustable transversely of the frame, and having a pivotal movement about the frame in a substantially vertical direction, means for holding said yoke in various positions of angular adjustment, a disk gang supported pivotally in one portion of said yoke and slidably in the other portion of the yoke, and means on the frame coupled to said gang for sliding the same along the yoke.

1,568,897. COMBINATION WEIGHT AND DEPTH GAUGE. AUGUSTA POSTELLE MCKAY, Rome, Ga., assignor to Towers & Sullivan Manufacturing Co., Rome, Ga., a Corporation of Georgia. Filed Apr. 28, 1925. Serial No. 26,458. 4 Claims. (Cl. 55—30.)

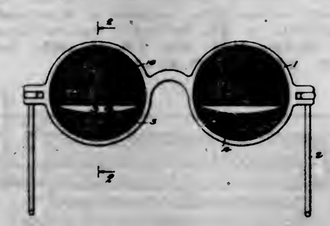
1. In a harrow having spaced discs with a spacing stool therebetween, a weight cylinder composed of a plurality of sections fitting about said spacing spool and between said discs, and means to removably unite the sections of the weight cylinder.

1,568,898. REFRIGERATING APPARATUS. CHARLES MCNAIR, Jackson, Miss., assignor, by direct and mesne assignments, to The Hawmack Manufacturing Company, Jackson, Miss. Filed Feb. 18, 1925. Serial No. 10,113. 2 Claims. (Cl. 62—114.)



2. A machine for making frozen confections comprising end members, a plurality of horizontally spaced separate freezing units removably secured between the end members, each unit comprising a vertically disposed elongated freezing compartment and separate containers within each compartment, means providing communication between the compartments, means to introduce a freezing solution within the compartments to act upon the contents of the containers, means for pivotally supporting the casing to position the freezing compartments in vertically spaced relation, means to successively supply a softening liquid to the freezing compartments to release the contents of the containers and means to indicate the introduction of the softening liquid within each of the compartments.

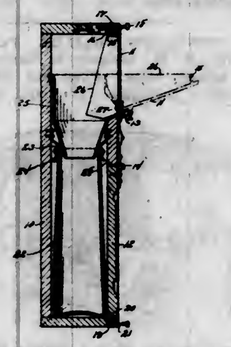
1,568,899. SIGN. ISAAC MERCER, Benton, and ED MERCER, West Frankfort, Ill. Filed May 29, 1926. Serial No. 33,739. 1 Claim. (Cl. 40—125.)



A sign comprising a support, a frame mounted thereon, separate panels mounted in said frame, one of said

panels including spaced plates, one of which is provided with a plurality of openings, light reflecting ele-

ments extending through said openings and means located between the plates and engaging the light reflecting elements to hold the latter in position.

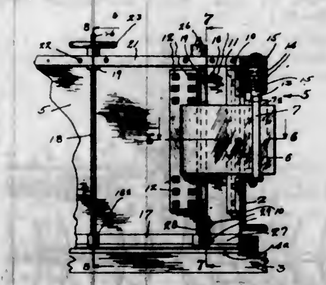


1,568,900. EYESHADE. HERBERT A. METCALF, New York, N. Y. Filed July 28, 1922, Serial No. 578,124. Renewed Nov. 12, 1924. 2 Claims. (Cl. 2—14.)

1. An eye shade, comprising a spectacle frame having a pair of lens receiving rings, each of said rings having an interior annular groove and a disk of translucent celluloid fitted into each of said grooves, each of said disks being provided with a cut at the center shaped as a segment of a circle and extending from near one side to near the opposite side, the part above the cut being pressed outwardly to form a hood arc-shaped in cross section with the bottom thereof spaced an appreciable distance from the upper edge of the lower part of the disk the said lower part of the disk being flat.

1,568,901. RECEIVER. EDWIN M. MICKEY, Gormania, W. Va. Filed June 15, 1925. Serial No. 37,302. 1 Claim. (Cl. 220—17.)

A device of the character described comprising a casing having upper and lower door openings, a door for each opening, latch means for each door, a refuse receiving receptacle arranged within the casing and capable of being placed therein or removed therefrom through the lowermost door opening, a funnel shaped member arranged within the casing and partly received by said receptacle and adapted to direct the refuse into the receptacle, and the door for said upper open-

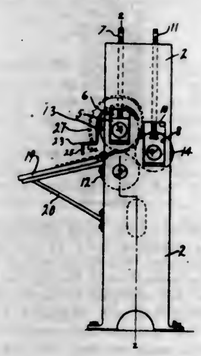


ing being designed to form a chute partly received by said funnel shaped member as and for the purpose specified.

1,568,902. BRAKE SLACK ADJUSTER FOR RAILWAY AND LIKE VEHICLES. JOHN MITCHELL and JOHN CECIL GEORGE COSSEY, London, England. Filed Jan. 19, 1925. Serial No. 3,501. 5 Claims. (Cl. 188—198.)

1. A brake slack adjuster comprising a pull rod divided into two parts, a slotted and internally toothed segment interposed between said parts and connected to one part, a pin on the other of the parts of said pull rod, said pin being adapted to engage a tooth of said segment, and thereby take up any slack in the brake gear, and means for retarding, during the return of the brake gear to the "off" position, the movement of the part of the pull rod connected to the brake relatively to the movement of the part connected to the toothed segment.

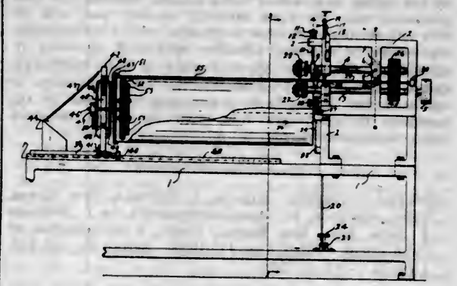
1,568,903. SLICE FOR PAPER-MAKING MACHINES. CHARLES WHITNEY MORDEN, West Linn, Oreg. Filed June 6, 1923. Serial No. 643,794. 5 Claims. (Cl. 92—44.)



1. In a paper making machine, in combination with two deckle frames spaced apart, relatively adjustable towards and from each other, and a slice supported between them, said slice consisting of a main part of lesser length than the space between said deckle frames in one of their adjustments, a removable complementary filling piece carried by one end of said main part to make the length of the slice correspond with said space, that end of the slice to which said complementary piece is affixed being provided at approximately its middle with an arm extending across the complementary piece to the adjacent deckle frame and constituting an element for supporting such end of the slice by that deckle frame.

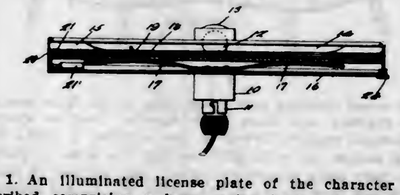
1,568,904. PROCESS FOR REFINING HYDROCARBON OILS. JACQUE C. MORRELL, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Apr. 27, 1923. Serial No. 635,124. 3 Claims. (Cl. 196—33.)

1. Steps in a process of refining hydrocarbon oils, comprising subjecting the oil separately and individually to the action of sulphuric acid and caustic soda containing litharge, and subsequent to the subjection of the oil to the action of caustic soda containing litharge, adding sulphur dioxide to assist in the refining reaction.



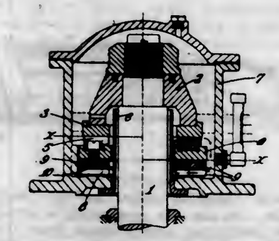
1,568,905. APPARATUS FOR ROLLING SHEET-METAL PIPE. MURDO JOHN MUNRO, Hamilton, Ontario, Canada, assignor of one-half to George Robert Petrie, Burlington, Canada. Filed July 5, 1924. Serial No. 724,415. 1 Claim. (Cl. 153—54.)

In apparatus for rolling sheet metal pipe, the combination with the frame of the apparatus, and the rolls mounted therein, of a stock supporting table supported by the frame and inclined downwardly and forwardly from the entrance to the rolls, an apron rigidly secured upon the frame and forming a protecting cover for the top and front of the upper roll, said apron formed at its lower front edge with a forwardly disposed step located in front of the entrance to the rolls, the front flange of said step extending into spaced relation above the table to form a gap between the table and said flange.



1,568,906. PIPE-MAKING APPARATUS. MURDO JOHN MUNRO, Hamilton, Ontario, Canada, assignor of one-half to George Robert Petrie, Burlington, Canada. Filed July 5, 1924. Serial No. 724,416. 3 Claims. (Cl. 153—9.)

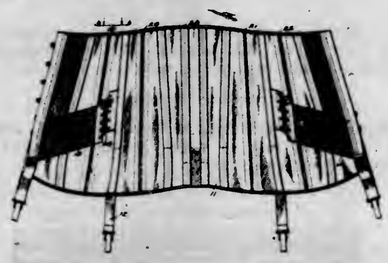
1. In pipe beading apparatus, the combination with the main frame of the apparatus, of co-operating rotatable pipe beading rolls mounted therein and adapted to engage the inner and outer faces respectively of a pipe to be beaded, means for rotatably supporting the pipe substantially parallel with the axes of the rolls, a lever pivotally mounted upon the frame for oscillation about an axis parallel to that of the beading rolls, a guide



roller carried by the lever and adapted to engage the inner face of the pipe adjacent to the corresponding beading roll, and positioning means for said lever.

1,568,907. LIGHTED PLATE. JACOB MYTKO, Depew, N. Y. Filed July 17, 1925. Serial No. 44,274. 2 Claims. (Cl. 40—132.)

1. An illuminated license plate of the character described comprising a lamp casing having a tail lamp positioned upon its forward end, a transversely disposed elongated compartment arranged upon the under side of and having communication with the said lamp casing, a license plate positioned within the said compartment, a lens for the license plate, spring fingers positioned upon the forward side of the compartment rear wall for holding the license plate and lens therefore in a desired position, and means included upon the said rear wall for opening and locking the same in removing and replacing the license plate for the ensuing year.

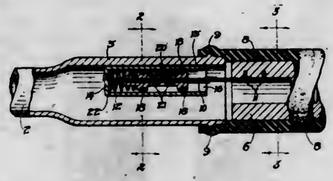


1,568,908. THRUST BEARING OR THE LIKE. HENRY THORNTON NEWBIGIN, Newcastle-on-Tyne, England, assignor to Michell Bearings Limited, London, England. Filed Apr. 4, 1924. Serial No. 704,215. 2 Claims. (Cl. 308—160.)

1. In a thrust bearing for a revolving shaft collar, the combination with a fixed abutment, of a circular row of separate rigid bearing elements to co-operate with a shaft collar, a rigid member carrying said bearing ele-

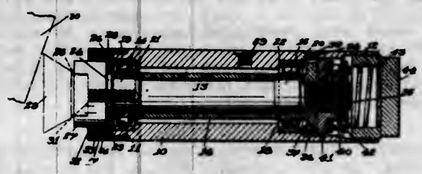
ments, a self-contained deformable pressure equalizing device supported directly on the fixed abutment for aligning the bearing elements to the plane of rotation of the collar, said device being located between the fixed abutment and the rigid carrying member and said device comprising a flexible diaphragm and a circumferential series of separate pressure equalizing members attached alternately to opposite sides of said diaphragm thereby forming two circumferential rows, the ends of the members in one row overlapping the ends of the members in the other row, said equalizing members being capable of tilting.

1,568,909. CORSET. SAMUEL J. NEWMAN, New Haven, Conn., assignor, by mesne assignments, to I. Newman & Sons, Inc., New Haven, Conn., a Corporation of Connecticut. Filed Aug. 11, 1922. Serial No. 581,213. 1 Claim. (Cl. 2—26.)



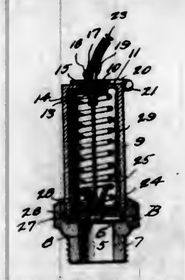
A corset provided with a body open at the front, means for drawing said front edges together, and an elastic abdominal support formed in two sections, a lacing for each section for adjustably securing the same in place, said body being formed with a box plait stitched in place extending from the top to the bottom and located between the lacings of said abdominal support and the front edges of the corset.

1,568,910. CLEANING COMPOUND. THOMAS S. NOGUCHI, New York, N. Y. Filed Sept. 22, 1924. Serial No. 739,208. 3 Claims. (Cl. 87—5.)



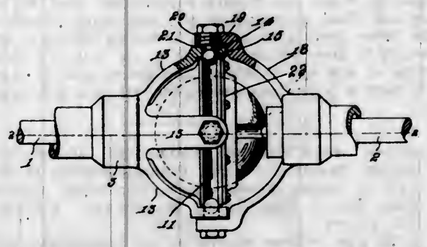
1. A cleaning and polishing compound comprising ground shelled peanuts combined with camphor, in the proportions of two parts of ground shelled peanuts to one of camphor.

1,568,911. SHOCK-ABSORBING DEVICE FOR HANDLE BARS OF MOTOR CYCLES AND THE LIKE. DOUGLAS FRANCIS O'BRIEN, Melbourne, Victoria, Australia. Filed Apr. 23, 1925. Serial No. 25,292. 11 Claims. (Cl. 208—126.)



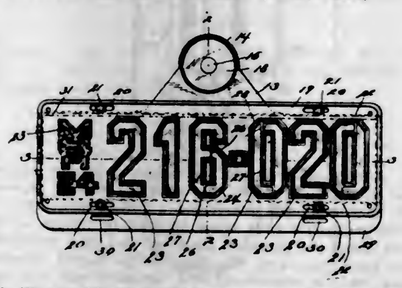
1. A shock absorbing device for the handle bars of motor cycles and the like comprising a spring mounted within and projecting longitudinally from the rear end of the handle bar, and a hand grip comprising an inner metal sleeve mounted on and fastened directly to the rear or projecting portion of said spring and an outer sleeve or casing of flexible material surrounding said inner sleeve.

1,568,912. SURFACING TOOL. GUSTAF A. OLIN, Worcester, Mass. Filed Apr. 25, 1924. Serial No. 708,920. 3 Claims. (Cl. 125—5.)



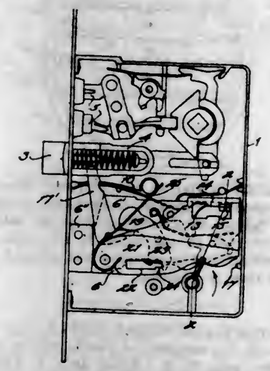
1. A surfacing tool of the character described, comprising a shell, antifriction bearings within the shell, a spindle journaled in said bearings and having one end projecting from the shell to receive a work engaging member, a shouldered portion on the opposite end of the spindle, a thrust bearing cooperating with said shoulder, a cap for the end of the shell proximate to said bearing, and resilient means intermediate the cap and the bearing for yieldingly forcing the bearing against the shouldered portion on the spindle.

1,568,913. COMPRESSION GAUGE. PERLEY L. ORMISTON, Portland, Oreg. Filed Aug. 7, 1924. Serial No. 730,697. 9 Claims. (Cl. 73—111.)



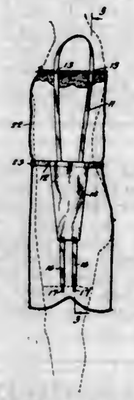
1. A pressure gauge of the class described including a cylinder having a pressure inlet at one end, a piston slidable in the cylinder, yieldable means for normally pressing the piston toward said one end of the cylinder, a resilient flexible bar movable through one end of the cylinder and having one end engaging said piston, a guide carried by the cylinder and cooperating with the bar for flexing the same so that the bar will be frictionally retained in any position to which it is moved by the piston.

1,568,914. UNIVERSAL JOINT. DABNEY P. OWENS, Lake Worth, Fla. Filed July 12, 1924, Serial No. 725,626. Renewed Nov. 9, 1925. 2 Claims. (Cl. 64—91.)



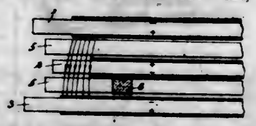
1. The combination with a housed drive shaft and a housed shaft to be driven thereby, of a universal connection between said shafts, comprising a spherical head on the end of the driven shaft having a peripheral annular groove, a socket secured on the end of the drive shaft receiving the head therein, ball members pocketed in the housing and received in the groove of the head, said socket having an outer peripheral groove, the drive shaft housing having rightangularly disposed curved arms arranged over the socket, anti-frictional balls carried by the arms and received in the groove of the socket, means on the ends of two of the oppositely disposed arms holding the balls in the groove, the driven shaft having a pair of oppositely disposed arcuate arms overlying two of the first mentioned arms, means passing through the ends of the said arms connecting the same together and holding the balls in the groove of the socket, all as and for the purpose set forth.

1,568,915. ILLUMINATED LICENSE PLATE. WILLARD M. PARKES, Onaway, Mich. Filed June 6, 1924. Serial No. 718,338. 2 Claims. (Cl. 40—133.)



1. The combination with an enclosure having lighting means therein, of a license plate secured thereover and provided with a series of openings defining characters, the openings having outstruck, inwardly beveled marginal walls, and a colored material held against the plate in rear of the said openings, the face of the plate having a distinguishing color applied directly thereto and the outwardly struck, inwardly beveled flanges also having a coloring matter applied directly thereto and positively distinguishable from the coloring of the face of the plate, the face of the plate at the bases of the flanges also having coloring matter applied around the flanges and of the same contour as the latter to set out the characters defined by the openings and flanges in contradistinction to the coloring of the face of the plate.

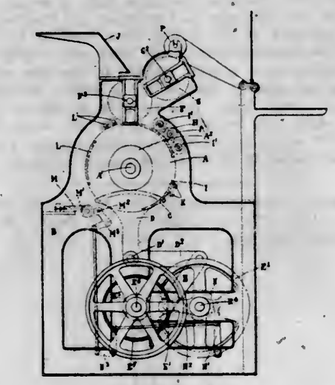
1,568,916. LOCK. ADOLPH PELZER, Tacoma, Wash. Filed Oct. 11, 1924. Serial No. 743,054. 1 Claim. (Cl. 70—29.)



In a lock, a dead bolt, a latch bolt, said dead bolt having a notch therein, a locking member for engaging the notch when the bolt is in projected position, a pair of tumblers on the dead bolt, a key for engaging one tumbler when the key is moved in an anti-clockwise direction to cause said tumbler to move the other tumbler to position where it will force the locking member from the notch so that when the key is moved in an opposite direction it will retract the dead bolt, a projection on the dead bolt, a pivoted lever having an opening therein for engaging the projection, said opening forming a pair of shoulders which act to hold the dead bolt in either its retracted or projected positions, said lever having a key engaging part whereby the key will move the same to release the projection from the shoulders, a lever on the bolt and engaging the latch bolt, a second lever on the bolt and having a part engaging the first lever, a key engaging part on the second lever whereby the key will move the levers to retract the latch bolt, a projection on the second lever, a lever pivoted to the lock casing and having an opening therein for receiving the projection on the second lever, said opening having a restricted part which will receive the projection when the lever has been moved to a certain position by the key to permit movement of the first and second levers by the key.

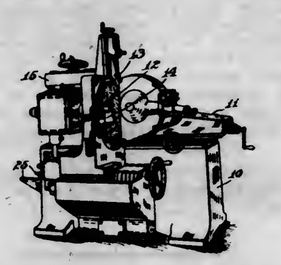
1,568,917. UNDERGARMENT. ADELINE C. PETERSON, New York, N. Y. Filed Jan. 9, 1924. Serial No. 685,226. 1 Claim. (Cl. 2—73.)

The combination with a woman's undergarment including a waist portion, of a pair of inverted U-shaped shoulder straps disposed upon the inside of the waist portion of the garment, each of said straps having its lower end connected to the waist band of the garment, said straps being connected to the upper edge of the garment, the undergarment being supported by the shoulder straps and providing for a vertical slack in the waist portion of the garment so that when the straps are taut they will relieve the garment body of the strains and stresses exerted on the straps supporting the hose, and hose supporting means connected to the band at points on the band where the free ends of each of the straps are connected to said band.



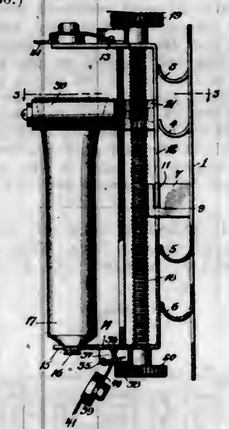
1,568,918. ELECTRIC CONDENSER. EMIL PFIFFNER, Frybourg, Switzerland. Filed Mar. 19, 1923. Serial No. 626,151. 5 Claims. (Cl. 250—41.)

1. An electric condenser consisting of superimposed and parallel connected part-condensers including dielectrics and metal coatings, the metal coating of each dielectric being in intimate contact with the dielectric



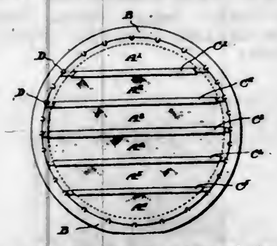
and the coatings of like polarity facing each other, varying in length and arranged a distance apart at least at the margin of the condenser to increase the path between the coatings of unlike polarity at the margins of the condenser.

1,568,919. PRINTING MACHINE. WILLIAM RATCLIFF and HUGH WALLACE, London, England, assignors to The Victory-Kidder Printing Machine Company Limited, Birkenhead, England, a Company of Great Britain. Filed Aug. 27, 1921. Serial No. 496,168. 6 Claims. (Cl. 101—172.)



1. In a machine of the class described, a shaft, a cylinder mounted upon the shaft, means to oscillate said cylinder, said cylinder being provided with segmental portions spaced about the cylinder and constituting respectively a printing plate, a damping surface, and an inking surface, a transfer roller, means operable through the oscillation of the cylinder to actuate said transfer roller in a step by step movement of rotation in one direction, and an impression roller against which the transfer roller bears.

1,568,920. BALANCE GRINDING WHEEL. MILTON O. REEVES, Columbus, Ind., assignor, by mesne assignments, to The Heim Grinder Company, Danbury, Conn., a Corporation of Connecticut. Original application filed July 14, 1922, Serial No. 574,873. Divided and this application filed Jan. 11, 1923. Serial No. 611,947. 5 Claims. (Cl. 73—51.)

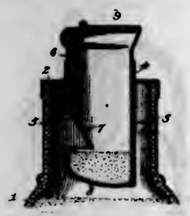


1. A wheel balancing track support for grinding machines comprising a bracket provided at one corner with a corner foot forming a fulcrum for the bracket and a horizontal perforation and a vertically spaced corner formed for engagement by a clamping means, and means to engage said two corners to clamp the same in place and to adjust the bracket to levelism.

1,568,921. TOOTH-PASTE EJECTOR. THOMAS HUGH ROBERTS, Cranford, and HUGH ROBERTS, Garwood, N. J. Filed July 30, 1925. Serial No. 47,102. 3 Claims. (Cl. 221—60.)

1. A tooth paste ejecter, comprising a bracket adapted to be secured to a support, a supporting member provided with apertured ends presenting a forked structure, the apertures in said ends being adapted to receive at different times the threaded discharge end of a collapsible tooth paste tube with the edges of the forked structure fitting into the threads of said threaded end, said supporting member being capable of being connected with said bracket with either end uppermost, a traveling member carried by said supporting member, manually actuated means for causing said traveling member to move back and forth, a pair of squeezing rollers carried by said traveling member and adapted to squeeze said tube as the rollers travel, and means for causing the rollers to rotate as they travel and in proportion to the distance traveled.

1,568,922. DEVICE FOR OBVIATING THE GLARE OF THE HEADLIGHTS OF MOTOR CARS AND OTHER VEHICLES. FRANCIS WILLIAM JAMES ROBINSON, Germiston, Transvaal, South Africa. Filed Jan. 19, 1925. Serial No. 3,512. 3 Claims. (Cl. 240—48.4.)

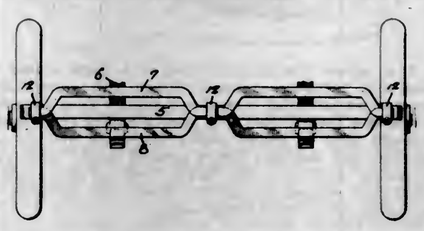


1. A device for obviating the glare of the headlights of vehicles which comprises a skeleton frame having cross strips folded in Z-section, slats of mica having their edges received in the folds of the adjacent cross strips and holding means stamped out of said frame for retaining the slats in position.

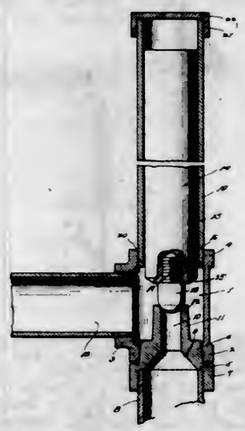
1,568,923. SPOUT FOR SUGAR BOWLS. IGNACIO RUIZ, New York, N. Y., assignor of one-fourth to William O. Hahn, New York, N. Y. Filed July 7, 1924. Serial No. 724,707. 2 Claims. (Cl. 221—98.)

1. A spout for sugar bowls and the like, which comprises a cylinder adapted to be inserted through the top

of a container, said cylinder having a closed bottom and a baffle plate bent from the material of the cylinder itself on its lateral wall, the bending of the baffle plate inwardly forming an opening through which the material can be discharged into the cylinder from the container.



1,568,924. GEM SETTING. AARON SHATKIN, Brooklyn, N. Y. Filed May 31, 1923. Serial No. 642,583. 9 Claims. (Cl. 63—29.)

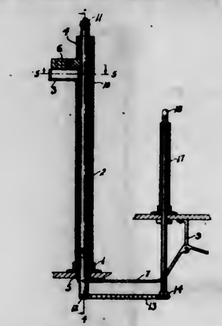


3. In a finger ring, a top-mount gem-setting including a top-mount shell permanently carried by the finger band of the ring, a unitary structure removably receivable by the shell and including a plurality of separable parts relatively adjustable to engage and set the gem on said structure with the structure removed from the shell, the outer mouth of the shell conforming to the outer periphery of the structure, the inner end of the shell having an opening, and an auxiliary device operable by way of such opening and from within the band of the ring, said device and the inner end of said structure having coacting screw threads, whereby turning said device relative to the shell moves said device axially of the shell to set the structure fully within the shell.

1,568,925. AUTOMOBILE BUMPER. SAMUEL H. SHAW, New York, N. Y., assignor to Universal Shock Eliminator, Inc., Long Island City, N. Y., a Corporation of New York. Original application filed Feb. 28, 1921, Serial No. 448,508, Patent 1,431,264, dated Oct. 10, 1922. Divided and this application filed Mar. 25, 1921. Serial No. 455,626. 18 Claims. (Cl. 293—55.)

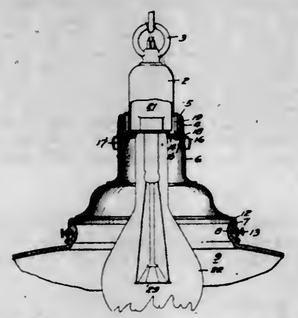
15. A bumper comprising a plurality of overlapped spring strap metal bars forming the impact member of the bumper, certain of said bars being offset from each other to afford a plurality of impact areas of greater vertical extent than the width of the bars, and certain of said areas of greater extent reaching substantially to the plane of the wheels.

1,568,926. RELEASE VALVE. BERRY V. STOLL, Louisville, Ky. Filed Oct. 26, 1922. Serial No. 597,009. 2 Claims. (Cl. 137—53.)



2. A release valve comprising a casing having an inlet and an outlet arranged at substantially right angles to each other and of substantially the same diameter as said casing, a concave valve seat located at the junction of the inlet and outlet, an extension fitted to the casing with its entire lower end open and communicating with the interior of said casing above the valve seat, a solid integral weight-imposing cylindrical member slidably mounted for vertical movement within the extension and substantially filling the open end thereof, said weight-imposing member having its lower end provided with a centrally disposed threaded socket and its lower peripheral edge beveled downwardly and inwardly in the direction of said socket, and a valve head having a threaded shank removably fitted into the socket and having its lower end projecting below the beveled edge of the weight-imposing member and provided with a substantially semi-spherical lower face for engagement with said concave valve seat.

1,568,927. RADIOPLATE BATTERY BOX. LOREN V. STONE and WONSLOW E. BAILEY, Theresa, N. Y. Filed Nov. 21, 1924. Serial No. 751,376. 6 Claims. (Cl. 136—109.)



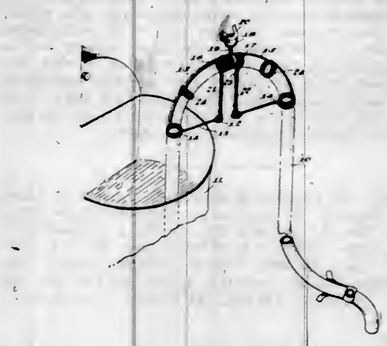
1. A battery box of the character described comprising a box like receptacle having a removable portion and adapted to contain a plurality of dry cells arranged in end to end relation and in rows, with the central terminal of each engaging the bottom of the one next in advance, the arrangement of the cells in the successive rows being reversed, terminal connections at one end of the box against which the two endmost ones of the entire series of cells contact, means at the ends of the box for making electrical contact between the rows of cells, one side of the box being provided with openings, and plate members arranged at intervals within the box and located between successive cells therein, the plate members having reduced extensions projecting through said openings whereby to permit tapping off of different voltages.

1,568,928. SIGNAL. ARTHUR A. SWANSON, Jamestown, N. Y. Filed Nov. 19, 1923, Serial No. 675,690. Renewed June 24, 1925. 2 Claims. (Cl. 116—46.)

1. A signal for a motor vehicle comprising an upright casing, a vertically movable member in said casing, an arm on said member, said casing having a slot therein through which the arm passes, a horizontal casing on the upright casing for receiving the arm when the same is in lowered position and means for raising the arm carrying member when a pedal of the vehicle is depressed.

1,568,929. ELECTRIC-LIGHTING FIXTURE. WHITMAN SYMMES, San Francisco, Calif., assignor to Thomas Day Company, San Francisco, Calif., a Corporation of California. Filed Oct. 20, 1924. Serial No. 744,554. 1 Claim. (Cl. 240—78.)

A lighting fixture comprising a canopy having a body portion and a skirt of larger diameter than the body, connected to the body by a shoulder, an electric lamp socket disposed in said canopy and fitting into said body portion, a depending holder of increasing diameter downwardly, an inturned flange on the upper end of the holder, a shoulder on said flange, a ring engaging said shoulder, a shoulder on the ring against which the lower end of the skirt bears, bolts extending through said flange and shoulder and securing the holder to the canopy and a bowl of non-transparent translucent material attached to and depending from the lower end of the holder, the body of the bowl being of greater diameter than the lower end of the holder.



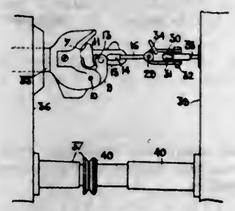
1,568,930. BED LAMP. WHITMAN SYMMES and WALTER HANSCHEN, San Francisco, Calif., assignors to Thomas Day Company, San Francisco, Calif., a Corporation of California. Filed May 11, 1925. Serial No. 29,281. 1 Claim. (Cl. 240—52.)

A bed lamp comprising a vertical frame having a downwardly bent upper portion, a lamp unit supported at the end of said portion, a downwardly directed hooking member on the vertical part of said frame for engaging the upper edge of the bed frame, an upwardly

directed hooking member for engaging the lower edge of the bed frame, and a coil spring connecting said latter hooking member with the lower end of said vertical frame.

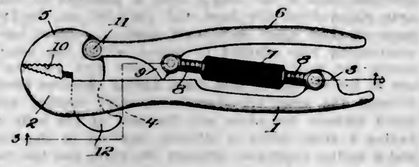
1,568,931. SIPHON-TUBE HOLDER. DAVIS EBENEZER THOMAS, Tampa, Fla. Filed Mar. 2, 1925. Serial No. 12,754. 3 Claims. (Cl. 248—29.)

3. A siphon tube holder formed of a single strand of wire and including an upper curved arch portion and lower arms extending toward one another from the ends of the arch portion, said arch portion having transversely disposed coils at spaced points therealong and an upstanding eye, and also having parallel spaced apart and depending loops, said arms having terminal eyes at their inner ends engaged through the lower ends or bights of said loops to provide bracing means.



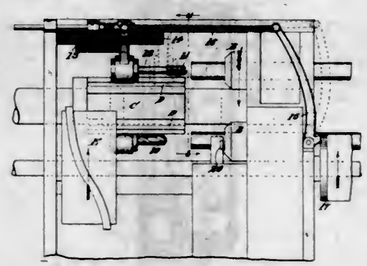
1,568,932. RUPTURE PAD. STEPHEN O. TRESCOTT, Battle Mountain, Nev. Filed Aug. 10, 1923. Serial No. 656,675. 4 Claims. (Cl. 128—117.)

1. A rupture pad comprising a rigid cup-like member, a pliable pad, resilient means for mounting the pad in the open side of the cup-like member, and a supplemental pad carried by said first mentioned pad and adapted to



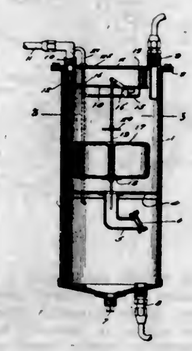
exert pressure at a point within the confines of the first mentioned pad to move the same inwardly of the cup-like member.

1,568,933. TRANSITION COUPLING DEVICE. GEORGE AUGUSTUS RODERICK TRIMMING, Lucknow, British India. Filed Mar. 19, 1925. Serial No. 16,758. 6 Claims. (Cl. 213—112.)



1. A transition locking device and apparatus for use in combination with an automatic car coupler provided with the well-known movable knuckle having a hub, said transition locking device comprising a closing face adapted to engage said hub, a guide-face for guiding the locking portion of the locking device into locking position relative to said knuckle, a projection intermediate said faces adapted to enter a depression in the body portion of said automatic coupler and means operable from the outside of the automatic coupler to release said knuckle from its locked position and thereby effect uncoupling of the coupling members.

1,568,934. WRENCH. WILLIAM C. TULL and ROY J. BRISTOL, Stanton, Nebr., assignors to Vera Biedinger, Joseph Lampe, Gordon B. Butterfield, and George H. Tatge, all of Norfolk, Nebr. Filed Feb. 15, 1924. Serial No. 693,063. 1 Claim. (Cl. 81—79.)

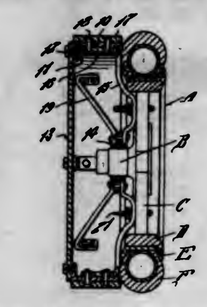


A wrench comprising a handle having an integral jaw at its forward end and an enlargement on its inner side at its rear end and also having a slot slightly in rear of said jaw, a second jaw having a hook-like arm disposed and movable in the said slot, a handle pivotally connected to the second-named jaw and extending rearwardly therefrom in spaced relation to the first-named handle and having an intermediate enlargement at its inner side, a link rod pivotally connected to the rear enlargement on the first-named handle, a link rod pivotally connected to the enlargement on the other handle; said link rods reversely threaded, and a nut having reversely threaded sockets receiving and engaging said rods.

1,568,935. MULTIPLE-SPINDLE SCREW MACHINE. PHILLIP A. UDALL, Stockton, Calif., assignor, by mesne assignments, to Caterpillar Tractor Co., a Corporation of California. Filed Dec. 18, 1919. Serial No. 345,833. 2 Claims. (Cl. 29—37.)

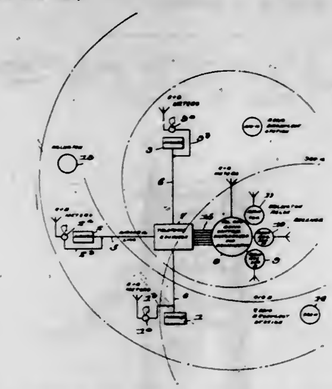
1. In a multiple spindle screw machine, a tool slide, a plurality of drills carried thereby, cam means for actuating the tool slide and moving said drills in unison into engagement with their respective blanks, a second tool slide mounted independently of the first mentioned slide, a reamer carried by the second mentioned slide, and cam means for feeding the second slide forwardly at a different speed from that of the first mentioned slide, said reamer being held in operative position with a blank while said drills are in operation.

1,568,936. FUEL-FEED SYSTEM. HENRY WATERSTONE, Montgomery, W. Va. Filed Dec. 16, 1922. Serial No. 607,428. 1 Claim. (Cl. 103—236.)



In a vacuum tank, a yoke-shaped frame connected with the cover thereof and having an opening in one limb thereof, a lever pivoted in said opening, a valve at one end of said lever, a spring engaging the other end of the lever and the cover for holding the valve closed, a bell crank pivoted on the frame and engaging the lever adjacent its spring end, a rod connected with the bell crank lever and having projections thereon and a float on the rod for engaging the projections.

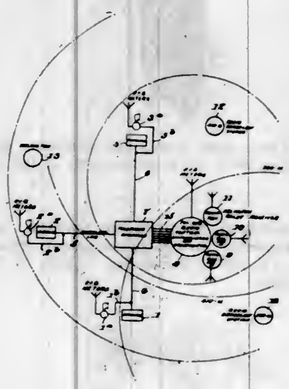
1,568,937. AUXILIARY VEHICLE WHEEL. JOHN J. ZWALSH, Cleveland, Ohio. Filed Nov. 11, 1924. Serial No. 749,292. 3 Claims. (Cl. 301—40.)



1. Means for securing an auxiliary wheel upon a vehicle wheel of the spoke type, the auxiliary wheel having spokes, comprising plate members disposed against the spokes of the auxiliary wheel and formed

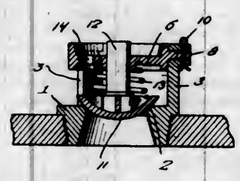
with slots at one end, U-shaped members pivotally connected at one end with said plate members and having their other ends formed with threaded extensions, said

U-shaped member being embracingly engaged about the spokes of the vehicle wheel with the threaded extensions passing through the slots, and nuts on said extensions for effecting a clamping action.



1,568,938. SYSTEM OF RADIO BROADCAST DISTRIBUTION. EDWARD E. CLEMENT, Washington, D. C. Filed July 14, 1924. Serial No. 726,021. 13 Claims. (Cl. 179—2.)

1. A broadcasting system comprising a plurality of primary stations, means at the primary stations for supplying high frequency carrier waves of different frequencies, means at each station to modulate its carrier by an intermediate frequency carrier itself modulated in accordance with a signal, the frequency of the intermediate carrier being the same for each primary station, a secondary station having receiving means tunable to the different primary frequencies, means at the secondary station to demodulate the received doubly modulated carrier wave so as to produce the modulated intermediate frequency wave, and means at the station to retransmit the modulated intermediate frequency.

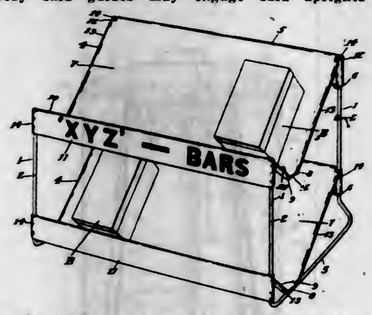


1,568,939. SYSTEM FOR RADIO BROADCAST DISTRIBUTION. EDWARD E. CLEMENT, Washington, D. C., assignor to Edward F. Colladay, Washington, D. C. Continuation of application Serial No. 581,829, filed Aug. 14, 1922, Patent No. 1,522,357, dated Jan. 6, 1925. This application filed Dec. 12, 1924. Serial No. 755,574. 9 Claims. (Cl. 250—6.)

1. A broadcast distributing system comprising a plurality of substations, a central station, a wire line connecting each substation with the central station, a radio broadcast transmitter at the central station, a radio receiver at each substation, and radio control

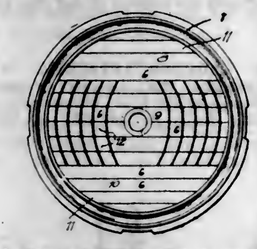
means at each substation controlled from the central station over the line connection for rendering the radio receiver inoperative.

1,568,940. VALVE. BENJAMIN F. DOOLEY, Port Arthur, Tex. Filed Sept. 18, 1924. Serial No. 738,521. 1 Claim. (Cl. 251—144.)



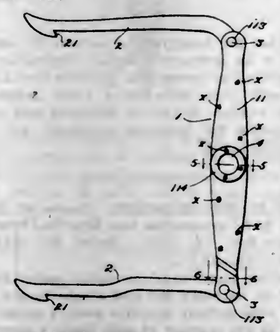
A valve structure comprising a body having a base provided with a port and a seat, a plurality of standards rising from the base and provided on the inner faces of their upper ends with notches, a plate having outstanding lugs adapted to engage within the notches, means for positively fixing the plate with relation to one of the standards, said plate having openings passing through the same transversely, a valve member interposed between the plate and the base of the body and having a stem which is slidably received in the plate, and a spring interposed between the plate and the valve member.

1,568,941. DISPLAY STAND. FRANCIS WINANS GIBSON, West Roxbury, Mass., assignor to H. D. Beach Company, Coshocton, Ohio, a Corporation of Ohio. Filed May 12, 1924. Serial No. 712,608. 5 Claims. (Cl. 211—24.)



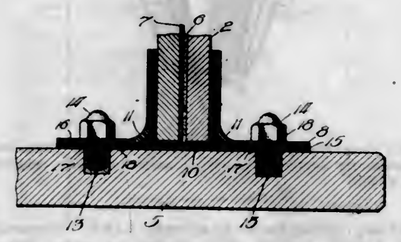
1. In a collapsible display stand, a pair of detachable spaced U-shaped end uprights of substantially the same size each comprising spaced substantially vertical front and rear shelf guide and supporting portions, and an intermediate substantially horizontal connecting floor-engaging portion; and a series of spaced superposed shelves slidably mounted on said end uprights, each shelf being bent upon

itself at its end edges to provide tubular guides and also being downturned adjacent its front and rear edges whereby said guides may engage said uprights and



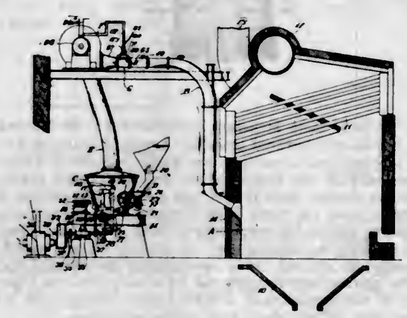
means for limiting the downward sliding travel of the shelves on said end uprights whereby to insure proper relative spacement of the shelves in the series.

1,568,942. HEADLIGHT REFLECTOR. REUBEN HALEY, Beaver, Pa. Filed Sept. 24, 1921. Serial No. 503,030. 1 Claim. (Cl. 240—41.)



A pressed glass reflector having a smooth parabolic inner surface, an outer mirrored surface, the entire area of which is formed by a plurality of light-diffusing faces, including upper and lower zones of horizontally extending flat reflecting faces running from edge to edge of the reflector and a middle zone sub-divided horizontally and vertically so as to form a plurality of flat, substantially rectangular reflecting faces, and attaching means formed integrally with said reflector.

1,568,943. DOBBY FOR LOOMS. EUGENE C. AMADEN, Allston, Boston, Mass., assignor to The Stafford Company, Boston, Mass., a Corporation of Massachusetts. Filed Apr. 5, 1922. Serial No. 549,785. 2 Claims. (Cl. 139—74.)

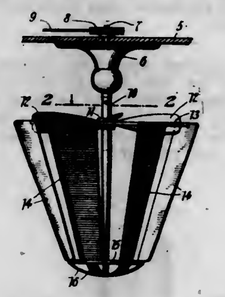


1. The combination with a dobby jack-lever having a pair of bearings spaced apart to receive the butt of a hook between them, of a hook constituted by a stamping of sheet-metal formed with a hole through its butt, and a pivot pin fitting said hole with a tight driving fit, and thereby securely affixed to the hook, and with its ends projecting at opposite sides of the hook and working in said bearings.

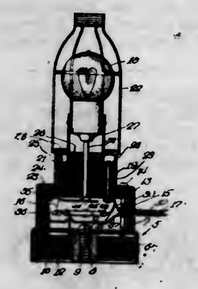
1,568,944. ANCHOR BETWEEN VITREOUS SLABS ARRANGED AT AN ANGLE TO EACH OTHER. DANIEL S. BEEBE, Chicago, Ill., assignor to The Vitrolite Company, Parkersburg, W. Va., a Corporation of West Virginia. Filed May 25, 1925. Serial No. 32,610. 10 Claims. (Cl. 72—101.)

1. In combination, a wall lying at right angles to and engaged with a second wall, the first wall having an element extending along the second wall from the juncture, a member fitted into the corner between said walls and overlying said element, and fastening means extending through said member and said element and into said second wall.

1,568,945. APPARATUS FOR PULVERIZING AND FEEDING FUEL TO FURNACES. LARS H. BERGMAN, Chicago, Ill., assignor to Raymond Bros. Engineering Co., Chicago, Ill., a Corporation of Illinois. Filed Apr. 17, 1924. Serial No. 707,308. 14 Claims. (Cl. 110—104.)



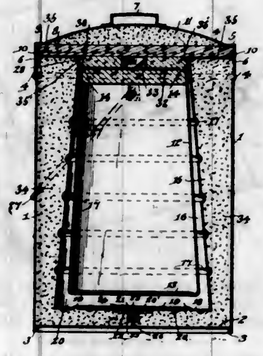
5. The combination with a furnace for burning pulverized fuel, a mill for pulverizing the fuel, a conduit, and means for propelling the fuel in suspension in an air current through the conduit directly from the mill to the furnace; of means operative automatically when the fuel propelling means is de-energized for shutting off communication between the furnace and the mill.



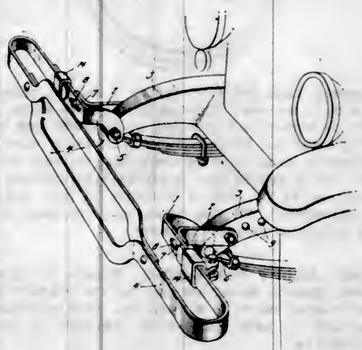
1,568,946. ELECTRIC-FAN BLADE. ARNOLD GENERICH, New York, N. Y., assignor to Abraham Bebel, New York, N. Y. Filed Jan. 7, 1925. Serial No. 964. 3 Claims. (Cl. 230—1.)

1. A power driven rotary fan having a plurality of radial paddle shaped blades, a ring or rings at the extremities of the blades, a plurality of arcuately curved

longitudinal vanes fixed to the ring or rings, said vanes being attached at their curved advancing edges and disposed tangentially and convergingly at their ends, and a pendantly supported shaft connected to their converging ends.



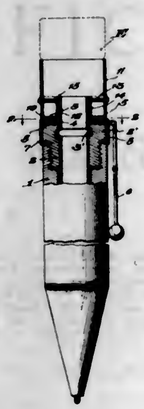
1,568,947. PORTABLE ELECTRIC LAMP. FREDERICK B. LITTLE, Chicago, Ill., assignor, by mesne assignments, to Orin B. Brown, St. Louis, Mo. Filed Nov. 15, 1920. Serial No. 424,165. 1 Claim. (Cl. 173—341.)



A portable lamp structure comprising an electro-magnet, a two-step terraced block of insulating material having a cylindrical opening in its larger end closed by the electro-magnet, the upper wall or step being much thicker than the annular wall around said opening and smaller in diameter than the lower step over which is adapted to be slipped a sleeve for supporting a lamp guard, the lower step serving as a stop for the sleeve, screws passing through the annular ledge surrounding the smaller step of the terrace and through the lower step into the upper wall of the magnet, and a lamp socket mounted on the upper step of the block and within said sleeve.

1,568,948. SHIPPING OR STORAGE RECEPTACLE OF THE VACUUM TYPE. EUGENE A. ROBB, Leavittsburg, Ohio. Filed Mar. 22, 1924. Serial No. 701,076. 5 Claims. (Cl. 220—9.)

1. A receptacle comprising a body portion, a tapering intermediate container arranged therein and spaced therefrom, a packing of insulation interposed between said container and said body portion, a tapering inner container connected with and suspended from the upper portion of said intermediate container, said inner container of less height and of less diameter than said intermediate container and providing therebetween a vacuum chamber, a flanged closure element extending inwardly from said body portion and seated on said intermediate container, a closure plug of two different diameters common to said element and said inner container, said plug provided in its top with a pocket and means arranged therein to facilitate the removal of the plug from closure position.

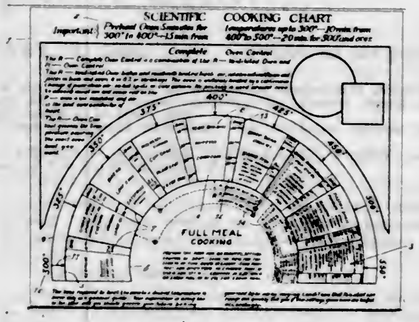


1,568,949. BUMPER ATTACHER. WILLIAM A. STARCK, Milwaukee, Wis., assignor, by mesne assignments, to George Albert Lyon, Philadelphia, Pa. Filed May 9, 1921. Serial No. 467,895. 40 Claims. (Cl. 293—55.)

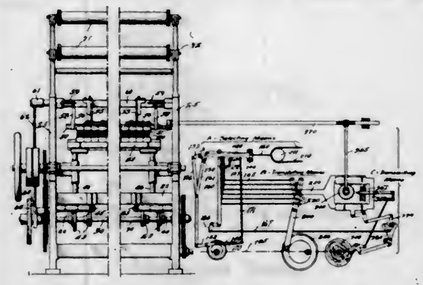
1. An attacher for fastening an automobile bumper to the side bar of an automobile frame comprising a pair of arms adapted to be fastened to the side bar, a portion of each of said arms lying in a plane substantially parallel to the bumper, means for fastening said arms together, and means for fastening a bumper bar to one of said attaching arms.

1,568,950. CLIP FOR PENCILS. DAVID M. BALLOU, Providence, R. I., assignor to Rex Mfg. Co., Providence, R. I. Filed Feb. 14, 1925. Serial No. 9,137. 11 Claims. (Cl. 24—11.)

1. In a writing instrument, an outer casing having a plug threaded in its outer end and a tube in the plug, a clip having a substantially ring-like head, a collar on the plug received in the opening of said head, a ferrule having inturned end edges one of which is clamped between the casing end and plug and the other of which is engaged over said head to hold same onto the plug and a sleeve seated on the outer edge of the ferrule and having a part engaged with the tube, the adjacent edge of the tube being extended at an angle and engaged with said part of the tube.



1,568,951. MECHANICALLY-OPERATED LEAD PENCIL. DAVID M. BALLOU, Mansfield, Mass., assignor to Rex Manufacturing Co., Providence, R. I., a Corporation of Rhode Island. Filed July 14, 1925. Serial No. 43,589. 10 Claims. (Cl. 120—18.)



1. In a mechanically-operated pencil, a lead carrier, an ejector, a rotatable worm member for feeding both said carrier and ejector, a collar notched to receive the worm engaging portion of said carrier when expelled from the worm, a spring for pressing the collar to ride against the end of the worm and adapted to yield and permit said collar to recede and so permit both said carrier and ejector to be yieldingly pressed beyond the end of the worm to permit the worm to continue its rotation after both the carrier and ejector have reached the end of their feeding strokes.

1,568,952. COOKING CHART. WATSON E. DERWENT, Rockford, Ill., assignor to Geo. D. Roper Corporation, Rockford, Ill., a Corporation of Illinois. Filed Sept. 5, 1925. Serial No. 54,635. 5 Claims. (Cl. 283—1.)

1. In a cooking chart, a table of foods arranged in an arc and divided radially into sections, each section having an assigned temperature referring to that to be maintained in an oven, and lists of foods in the separate sections arranged in radial columns, all of the foods in a section being capable of preparation in an oven at the same temperature.

1,568,953. STRAIGHT-FRAME KNITTING MACHINE. LOUIS HIRSCH, Weehawken, and HANS ZAHN, Union, N. J. Filed Apr. 5, 1924. Serial No. 704,399. 18 Claims. (Cl. 66—33).

1. In a knitting machine having a traversing bar to control the knitting, independent selecting means, in combination with operating mechanism connected between the bar and said independent means and adapted to give the bar varied lengths of movement positively in either longitudinal direction; said independent means selecting all the movements of the operating mechanism.

Patents Nos. 1,568,954 to 1,569,845.

THE OFFICIAL GAZETTE OF THE United States Patent Office.

Vol. 342—No. 2. TUESDAY, JANUARY 12, 1926. Price—$5 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscription, $5.00 per annum; single numbers, 10 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Changes in Classification.

Order No. 2,941, December 23, 1925, provides:

In *class 20, Wooden Buildings* (Division 33), establish the following subclasses and definitions, the patents contained in subclass 1.6 having been taken for the most part from various subclasses in class 211, Store Furniture, and those contained in subclass 1.7 having been taken for the most part from class 211, Store Furniture, subclass 8, Cabinets, Delivering:

Buildings

1.6 Stores
1.7 Self-service.

1.6. BUILDING, STORES. Buildings, booths and stands having arrangements of counters, shelves, cash desks, and the like to facilitate the sale and dispensing of wares.

Note.—For construction of counters, bins, and shelving per se see class 211, Store Furniture. For tables see class 45, Furniture.

1.7. BUILDING, STORES, SELF SERVICE. Stores having arrangements of entrances, exits, passageways, counters, and the like to facilitate self-service.

Note.—See classes 45, Furniture, subclass 26, Tables, Self-waiting, and 186, Store Service, subclass 1, Dining-room service.

In *class 211, Store Furniture* (Division 8), abolish the following subclass, the patents formerly contained therein having been placed for the most part in class 223, Apparel Apparatus, subclasses 18.1–18.8, indented under Garment forms, and subclass 61, Garment hangers, and the subclasses indented thereunder, all established in this order:

13 Display forms.

In *class 223, Apparel Apparatus* (Division 24), abolish the following subclass, the patents formerly contained therein having been placed for the most part in class 223, Apparel Apparatus, subclass 20.3, Putting on and removing garments, Stockings from forms, established in this order:

18.5 Putting on and stripping stockings from forms.

In *class 223, Apparel Apparatus* (Division 24), establish the following subclasses, the patents contained in subclasses 18.1–18.8 and subclasses 61–68 having been taken for the most part from class 211, Store Furniture, subclasses 13, Display forms, abolished in this order, and 24, Display stands; those contained in subclass 20.2 having been taken for the most part from class 45, Furniture, subclass 13, Hat and coat racks; and those contained in subclass 20.3 having been taken for the most part from class 223, Apparel Apparatus, subclass 18.5, Putting on and stripping stockings from forms, abolished in this order:

Garment forms

18.1 Display
18.2 Inflatable,
18.3 Limbs,
18.4 Neckwear,
18.6 Stays and form retainers,
18.8 Stands, pedestals, and bases.
61 **Garment hangers**
62 Combined type
63 Foldable,
64 Coat type
65 Foldable,
66 Sheet material,
67 Skirt or trousers
68 With clamp.
20.2 **Putting on and removing garments.**
20.3 Stockings from forms.

Interference Notice.

U. S. Patent Office, *Washington, Dec. 30, 1925.*

George F. Johnstone, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Lynn L. Bunnell, Main and Maple Avenues, Norwood, Cincinnati, Ohio, for registration of a trade-mark and trade-mark registered April 13, 1915, No. 103,815, to George F. Johnstone, 3527 Fourteenth Street NW., Washington, D. C., and a notice of such declaration sent by registered mail to said Johnstone, at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said Johnstone, his assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the Official Gazette for three consecutive weeks.

WM. A. KINNAN, *Acting Commissioner.*

Condition of Applications Under Examination at Close of Business December 31, 9125.

Room No.	(Total number of applications awaiting action, excluding Trade-Mark Division, 41,614; Trade-Mark Division, 1,838. Oldest new case, July 2, 1925; oldest amended, July 7, 1925. The dates given are 1925.) DIVISIONS, EXAMINERS, AND SUBJECTS OF INVENTIONS.	Oldest new application and oldest action by applicant awaiting office action. New.	Amended.	No. of applications awaiting action.

DECISIONS IN PATENT AND TRADE-MARK CASES.

Commissioner's Decision.

EX PARTE CAMERON.

Decided August 25, 1925.

1. RULE 133—GROUNDS OF REJECTION.

Rule 133 does not specify each particular class of cases that is appealable, but the rule is intended to be illustrative only.

2. SAME—SAME—"INOPERATIVENESS OF INVENTION"—SPECIFICATION INSUFFICIENT TO MEET REQUIREMENTS OF SECTION 4888, REVISED STATUTES.

Where appeal was taken from the action of the Examiner finally rejecting the claims on the ground that the application was defective in that it failed to comply with the statutory requirements that it be in such clear, concise, and exact terms as to enable anyone skilled in the art to make and use the device, *Held* that under rule 133 the question involved was one of "inoperativeness of invention" or the question whether the specification sets forth a structure that will support the claims and whether the claims can be predicated upon such disclosure in an operable sense.

3. APPEAL TO EXAMINERS IN CHIEF—SPECIFICATION SUFFICIENT TO MEET REQUIREMENTS OF SECTION 4888, REVISED STATUTES.

After an application has been given a filing date and has been examined by the Primary Examiner and by him finally rejected on the ground of lack of such full, clear, concise, and exact terms as are required by section 4888, Revised Statutes, appeal lies to the Examiners in Chief from such final rejection.

ON PETITION.

Mr. John Cameron for himself.

ROBERTSON, *Commissioner:*

Applicant petitions for relief from the action of the Examiners in Chief in dismissing his appeal on the ground of lack of jurisdiction.

This case has been pending for a long time. It has had numerous actions, and it is apparent from the record that the applicant, who is prosecuting his own case, is not familiar with patent law and procedure.

The Examiner held the application defective, since it failed wholly to comply with the statutory requirements that it be in such clear, concise, and exact terms as to enable anyone skilled in the art to which it pertains to make and use the device which forms the subject matter of the application.

The rejection of the claims was made final. From this action the applicant, on March 11, 1924, petitioned to the Commissioner to order the Examiner to reopen the case. One paragraph of the petition was a complaint against the Examiner. In reply to the petition, May 6, 1924, the Commissioner did not consider the merits of the rejection, but ruled that, as a question of practice, the Examiner was clearly right in rejecting the application. At the same time applicant was given another opportunity to amend, but the final rejection was not waived. Applicant was also notified that if he wished to appeal he must take such action within the year. An appeal to the Examiners in Chief was filed November 10, 1924. With the appeal was filed an amendment canceling all of the claims and presenting 12 new claims and a petition that they be entered, apparently for the purposes of appeal.

The Acting Commissioner ruled on the petition as follows:

As the final rejection of November 15, 1923, was based on an alleged lack of an adequate disclosure of the invention, it is held that the said amendments may, without impropriety, be entered for consideration by the Examiners-in-Chief.

The petition is accordingly granted. The Examiner is directed to enter the said amendments and forward the appeal.

The Examiner forwarded the appeal, with his answer, on January 20, 1925, and the case was set for hearing on April 15, 1925.

The decision of the Examiners in Chief states:

Upon full consideration of all the actions taken and the matters involved we are of the opinion that this case is quite similar to a number of others in which appeal has been taken to the Board of Examiners-in-Chief on substantially the same ground, that is "on all fours" with the present appeal, the application or specification and drawings of which the Examiner held failed to comply with the statute, section 4888, for like reasons.

* * * * *

In appellant's case here, the Examiner who is the expert of the Office in the art to which the invention is directed, stated that even though "he was presumed to be an expert and had carefully studied the specification and drawings he was *unable to understand* in what feature or features applicant believes his invention to reside." In other words, the Examiner is unable to determine what the disclosure is and since he has subsequently stated that the proposed amendment, permitted by the Commissioner, was also insufficient, that is, it was in his opinion such that it did not remedy matters and he was still unable to understand it, the disclosure must be still insufficient.

Under such a statement of facts it is not obvious or apparent that the Board are better qualified to determine the sufficiency of disclosure than the acknowledged expert—the Examiner—nor if he is unable to understand it how they should be.

The decision also states that it is not considered that this appeal involves any question that is directly appealable to the Examiners in Chief under rules 133 or 134.

[1] Rule 133 does not specify each particular class of cases that is appealable, but the rule is intended to be illustrative only, as indicated by the words "such as". It does not specify such grounds as "res adjudicata," "estoppel," or "double patenting," and yet these have always been held to be valid grounds of rejection and appeal.

[2] Under rule 133 the question involved in this appeal is really one of "inoperativeness of invention" or the question whether the specification sets forth a structure that will support the claims and whether the claims can be predicated upon such disclosure in an operable sense.

The decision of the Examiners in Chief refers to another case in which the claims were rejected

for lack of sufficient disclosure, and the appeal was dismissed by them on the ground that there was no actual rejection of the claims, as the Examiner had not passed upon their patentability. That, however, is not the criterion, as appeals on the questions of "res adjudicata," "estoppel," "new matter," and "division," for example, do not necessarily involve the questions of patentability or novelty.

The Board's decision also refers to section 4888, Revised Statutes, as to the requirements of an application and that section 4893, Revised Statutes, provides that the Commissioner shall cause an examination to be made only when the application is of the character defined by section 4888, Revised Statutes.

Such a construction of section 4893, Revised Statutes, would, in effect, make that section inoperative, as it would necessitate a double examination of each application, first, as to sufficiency of disclosure (sec. 4888, R. S.) and, second, as to its merits. In cases where the insufficiency was not discovered until the case had been prosecuted for a long time, as sometimes occurs, it would be necessary to rule that the application was not an application within the terms of section 4888, Revised Statutes, and the applicant would be deprived of an opportunity to appeal on that question.

In order to provide a remedy for applicants who, in their opinion, have been improperly denied a patent, the statutes wisely provide for appeals to the courts. As a prerequisite to such an appeal it is necessary to appeal to the Examiners in Chief, and this right of appeal to the courts on his entire application, including the claims, can not be taken away from him by dismissing the appeal to the Examiners in Chief.

[3] It is therefore held that after an application has been given a filing date and has been examined by the Primary Examiner and by him finally rejected on the ground of lack of such full, clear, concise, and exact terms as provided by section 4888, Revised Statutes, appeal lies to the Examiners in Chief from such final rejection.

The Examiners in Chief will therefore set a new date of hearing the appeal in this case and give appellant an opportunity to be heard and to file a brief if he desires to do so.

The petition is granted to the extent indicated.

Supreme Court of the United States.

STIIZ *v.* THE UNITED STATES.

Decided November 16, 1925.

1. INFRINGEMENT—QUESTION OF FACT—COURT OF CLAIMS.
Where the Court of Claims expressly found that it did not appear that any of the devices of plaintiff's patents had been manufactured or used by the United States or that his patents had been infringed by the United States, *Held* that infringement is a question of fact and that the finding of the Court of Claims is in the nature of a special verdict of a jury.

2. COURT OF CLAIMS—FINDINGS OF FACT NOT REVIEWABLE.
The Supreme Court accepts the findings of fact made by the Court of Claims and can not review them.

3. SAME—MIXED QUESTION OF LAW AND FACT—WHEN REVIEWABLE.
Where a finding determines a mixed question of law and fact, it is conclusive unless the court is able to separate the question to see whether there is a mistake of law.

APPEAL from the Court of Claims.

Mr Harry B. Stilz pro se.

Mr. John W. Loveland for the United States.

Mr. Justice BUTLER delivered the opinion of the Court.

Plaintiff brought this action, under the Act of Congress approved July 1, 1918 (c. 114, 40 Stat. 705), to recover compensation for the use and manufacture, by or for the Navy Department, of certain oil burners alleged to infringe Patents 945,873 and 1,066,161, granted him January 11, 1910, and July 1, 1913, respectively. The Court of Claims filed findings of fact and conclusion of law (59 C. Cls. 21), and adjudged that plaintiff was not entitled to recover.

The substance of the findings in respect of the prior art, the burners covered by plaintiff's patents, and the burners manufactured and used by the United States and alleged to be infringements may be indicated briefly. Each of these patents was for improvements in oil burners. In order successfully to be used for fuel, oil must be atomized to permit its mixture with the proper amount of air for combustion. In the prior art to which plaintiff's patents relate, there were numerous structures disclosed by patents and publications referred to in the findings, including two types of burners in use and known respectively as mechanical atomizers and steam atomizers. In the former the oil is atomized by means purely mechanical. It is projected, under heavy pressure from the burner into the furnace in a whirling cone-shaped film, which almost immediately develops into fine spray. In the latter there is a combination with the oil, while yet within the burner proper, of a stream of steam, air, or other gaseous fluid under pressure for the purpose of aiding the atomization. In both, air for combustion is admitted through a surrounding register and is more or less intimately intermixed with the oil spray.

The burner covered by Patent 945,873 provides for the use of steam, air or other gaseous fluid under pressure to aid in atomization of the oil. The oil, under heavy pressure, is discharged tangentially into the annular space of the nozzle between the outer casing and center plug, thus giving the oil a rotary motion in the nozzle. The steam or other fluid, under heavy pressure, is also discharged tangentially into this space in the same direction as the oil with which it rotates; and thus aids in atomizing the oil, which issues from the orifice of the nozzle at a high velocity through an air register and into the furnace in a cone-shaped film and spray. Air for combustion is supplied through the register, and mixes with the oil spray in it and in the furnace.

The burner covered by Patent 1,066,161 also provides for the use of steam, air or other gaseous fluids under pressure as an aid in the atomization of the oil. This includes an annular space between inner and outer casings of the nozzle. The oil and steam are not brought together until after the oil, under heavy pressure, is forced through a spiral and orifice into the front of this space in a rapidly rotating cone-shaped film. The steam, air or other fluid passes through a pipe under heavy pressure and is discharged tangentially into this space, rotating towards the outer orifice in a whirling layer. The oil leaving the inner orifice is struck by the rotating steam before it passes through the outer orifice. Air for combustion is supplied through a circular register attached to the front of the furnace through the center of which the oil is projected from the nozzle into the furnace in a cone-shaped spray. The air flows around the oil spray and mixes with it in the register and in the furnace where combustion takes place.

The type and character of the oil burners and equipment manufactured and used by the United States, and which are alleged by plaintiff to infringe his patents, are indicated by the findings. These oil burners and equipment provide for the atomization of the oil by means of its projection into the furnace under heavy pressure through spiral passages in the nozzle of the burner in a whirling cone-shaped film which almost immediately upon leaving the nozzle develops into fine spray. The air for combustion is furnished under mild blower pressure in the furnace room through an air register surrounding the burner and burner opening into the furnace. The register is provided with vanes or other means for giving the air a whirling motion to facilitate the intermixture with the oil spray. The oil and air are whirled together in the same direction. No steam, air, or other gaseous fluid is introduced into or used in the burner proper for any purpose, nor used with any part of the equipment for the atomization of the oil. The air, which passes through the register encircling the burner, is to supply oxygen necessary for combustion.

From the findings it clearly appears that the mixing of the steam, air or other gaseous fluid with the oil in the annular space to aid atomization before the spray is brought into contact with the air supplied for combustion and before it passes into the furnace is the important feature distinguishing the burners covered by plaintiff's patents from those above described which are manufactured and used by the United States. The Court of Claims expressly found,

It does not appear that any of the devices of the plaintiff's said Letters Patent No. 945,873 and No. 1,066,161 have been manufactured or used by the United States, or that said Letters Patent have been infringed by the United States.

[1, 2, 3] Infringement is a question of fact. The quoted finding is in the nature of special verdict of a jury. *United States* v. *Anciens Etablissements*, 178 O. G., 591; 1912 C. D., 620; 224 U. S. 309, 322, 330; *Brothers* v. *United States*, 263 O. G. 331; 1919 C. D. 450; 250 U. S. 88, 93. This Court accepts the findings of fact made by the Court of Claims and can not review them. *Collier* v. *United States*, 173 U. S. 79, 80. And even where a finding determines a mixed question of law and fact, it is conclusive unless the court is able to separate the question to see whether there is a mistake of law. *United States* v. *Omaha Indians*, 253 U. S. 275, 281; *Ross* v. *Day*, 232 U. S. 110, 116; *Whitcomb* v. *White*, 214 U. S. 15, 16; *Marquez* v. *Frisbie*, 101 U. S. 473, 476. Our consideration of the case is confined to questions of law. *Union Pacific Railway Co.* v. *United States*, 116 U. S. 154, 157; *Keokuk & Hamilton Bridge Co.* v. *United States*, 260 U. S. 125. And the situation is the same as it would be if the facts had been agreed upon by the parties. *United States* v. *Pugh*, 99 U. S. 265, 271. As no infringement was found, the facts are not sufficient to constitute a cause of action.

Judgment affirmed.

ADJUDICATED PATENTS.

(C. C. C. A. Pa.) The Thibodeau patent, No. 857,770, for candy-pulling machine, *Held* valid and infringed. *Schute* v. *Hildreth*, 8 F. (2d) 131.

(D. C. Md.) The Hayduck patent, No. 1,449,103, for process for making yeast, *Held* valid and infringed. *Fleischmann Yeast Co.* v. *Federal Yeast Corporation*, 8 F. (2d) 186.

(D. C. Md.) The Nilsson and Harrison patent, No. 1,449,127, for process for making yeast, *Held* invalid. *Fleischmann Yeast Co.* v. *Federal Yeast Corporation*, 8 F. (2d) 186.

PATENT SUITS.

TRADE-MARKS

OFFICIAL GAZETTE, JANUARY 12, 1926.

[VOL. 342. No. 2.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Ser. No. 183,656. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) LAUNDRY SALES CO., Atlanta, Ga. Filed July 25, 1923.

DIXIE

Cotton Padding

No claim is made to the exclusive use of the words "Cotton Padding" except in the arrangement shown.

Particular description of goods.—Laundry Padding, Either in the Piece or Roll.

Claims use since Jan. 1, 1923.

Ser. No. 183,856. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) WILLIAM D. ROOT, doing business as The Electrovend Company, Cleveland, Ohio. Filed July 30, 1923.

Electrovend

Particular description of goods.—Pop-corn and Peanut Vending Machines.

Claims use since July, 1922.

Ser. No. 183,857. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) WILLIAM D. ROOT, doing business as The Electrovend Company, Cleveland, Ohio. Filed July 30, 1923.

Electrovend Junior

Particular description of goods.—Pop-corn and Peanut Vending Machines.

Claims use since March, 1923.

Ser. No. 183,858. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) WILLIAM D. ROOT, doing business as The Electrovend Company, Cleveland, Ohio. Filed July 30, 1923.

Electrovend Marvel

Particular description of goods.—Pop-corn and Peanut Vending Machines.

Claims use since March, 1923.

Ser. No. 187,421. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) HEATHER COMPANY, New York, N. Y. Filed Oct. 24, 1923.

HEATHER

Particular description of goods.—Face Powders, Face Creams, Perfumes, Toilet Waters, Rouges, Hair Tonics, Hair Oils, Dentifrices, Tooth Powders, Nail Polishes, Deodorizing Preparations, and Sachet Powders.

Claims use since Jan. 1, 1910.

Ser. No. 190,221. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) BELA WEISS, doing business as B. Weiss, Laboratories, Detroit, Mich. Filed Dec. 28, 1923.

Particular description of goods.—Auto and Furniture Polish.

Claims use since Dec. 4, 1923.

Ser. No. 195,726. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) VENECIN A. G. FUR CHEMISCHE PRODUKTE, Berlin and Weimar, Germany. Filed Apr. 17, 1924.

VENECIN

Particular description of goods.—Mineral Waters Having Medicinal Properties to be Used Internally and Externally.

Claims use since May 1, 1923.

Ser. No. 196,382. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) FORSTMANN & HUFFMANN COMPANY, Passaic, N. J. Filed May 1, 1924.

Kashmana

Particular description of goods.—Woolen Piece Goods.

Claims use since Feb. 1, 1924.

Ser. No. 199,611. (CLASS 2. RECEPTACLES.) DOERR MANUFACTURING COMPANY, Grand Rapids, Mich. Filed July 5, 1924.

VANI-DOR

Particular description of goods.—Base-Metal Receptacles for Attachment to the Inside of Automobiles for Holding Toilet or Similar Articles.

Claims use since Sept. 1, 1923.

Ser. No. 199,748. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) GARCIA & MAGGINI CO., San Francisco, Calif. Filed July 8, 1924.

BONTON

Particular description of goods.—Green and Dried Fruits, Fresh Vegetables, Oranges in Their Natural State, Fresh Berries, Fresh Grapes, Dried Raisins, Fresh Grapefruit, Fresh Cantaloupes, Dried Vegetables, Canned Fruits, and Canned Fish.

Claims use since 1903.

Ser. No. 201,882. (CLASS 28. JEWELRY AND PRECIOUS-METAL WARE.) CARSON PIRIE SCOTT & Co., Chicago, Ill. Filed Aug. 26, 1924.

Particular description of goods.—Pearls and Pearl Necklaces.

Claims use since about Apr. 10, 1924.

Ser. No. 201,886. (CLASS 39. CLOTHING.) CARSON PIRIE SCOTT & Co., Chicago, Ill. Filed Aug. 26, 1924.

YARDLONG

Particular description of goods.—Men's Work Shirts.

Claims use since May 25, 1924.

Ser. No. 203,306. (CLASS 2. RECEPTACLES.) THE FULLER BRUSH COMPANY, Hartford, Conn. Filed Oct. 2, 1924.

Fullerex

Particular description of goods.—Manicure and Dresser Trays, Vanity Cases Made of Celluloid or Similar Material.

Claims use since about May, 1924.

Ser. No. 203,998. (CLASS 36. MUSICAL INSTRUMENTS AND SUPPLIES.) ANDS. KOCH A.-G., Trossingen, Germany. Filed Oct. 17, 1924.

Koch's Fidelio

No claim is made herein to the name "Koch" apart from the mark shown in the drawing.

Particular description of goods.—Mouth Organs, Accordions, Melodeons, Blow Accordions, Harmonica Flutes, Clarinet Flutes, Saxophone Flutes, Concertinas, Ocarinas, Bandoneons, Metallophones, Xylophones, Jew's-Harps, Wooden and Sheet-Metal Flutes, Violins, Mandolins, Guitars, Lutes, Balalaikas, Ukuleles, Banjos, Zithers, Parts of Said Instruments, Bows for String Instruments, and Strings for String and Pluck Instruments.

Claims use since Nov. 1, 1904.

Ser. No. 203,999. (CLASS 36. MUSICAL INSTRUMENTS AND SUPPLIES.) ANDS. KOCH A.-G., Trossingen, Germany. Filed Oct. 17, 1924.

Koch's Alpina

No claim is made herein to the name "Koch" apart from the mark shown in the drawing.

Particular description of goods.—Mouth Organs, Accordions, Melodeons, Blow Accordions, Harmonica Flutes, Clarinet Flutes, Saxophone Flutes, Concertinas, Ocarinas, Bandoneons, Metallophones, Xylophones, Jew's-Harps, Wooden and Sheet-Metal Flutes, Violins, Mandolins, Guitars, Lutes, Balalaikas, Ukuleles, Banjos, Zithers, Parts of Said Instruments, Bows for String Instruments, and Strings for String and Pluck Instruments.

Claims use since Nov. 1, 1904.

Ser. No. 204,000. (CLASS 36. MUSICAL INSTRUMENTS AND SUPPLIES.) ANDS. KOCH A.-G., Trossingen, Germany. Filed Oct. 17, 1924.

ANDSKOCH

Particular description of goods.—Mouth Organs, Accordions, Melodeons, Blow Accordions, Harmonica Flutes, Clarinet Flutes, Saxophone Flutes, Concertinas, Ocarinas, Bandoneons, Metallophones, Xylophones, Jew's-Harps, Wooden and Sheet-Metal Flutes, Violins, Mandolins, Guitars, Lutes, Balalaikas, Ukuleles, Banjos, Zithers, Parts of Said Instruments, Bows for String Instruments, and Strings for String and Pluck Instruments.

Claims use since Jan. 1, 1892.

Ser. No. 204,001. (CLASS 36. MUSICAL INSTRUMENTS AND SUPPLIES.) ANDS. KOCH A.-G., Trossingen, Germany. Filed Oct. 17, 1924.

No claim is made to the words "Made in Germany."

Particular description of goods.—Mouth Organs, Accordions, Blow Accordions, Violins, Parts of Said Instruments, and Strings for String and Pluck Instruments.

Claims use since July 1, 1913.

Ser. No. 204,988. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE WINCHELL FLOUR COMPANY, Saginaw, Mich. Filed Nov. 7, 1924.

The surname "Grant's" is hereby disclaimed except in combination with the mark shown.

Particular description of goods.—Fried-Cake Flour.

Claims use since June 10, 1924.

Ser. No. 205,043. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) WYMAN, PARTRIDGE & Co., Minneapolis, Minn. Filed Nov. 8, 1924.

NEWPORT

SATONEO

Particular description of goods.—Sateen in Piece Goods.

Claims use since Oct. 7, 1924.

Ser. No. 205,151. (CLASS 34. HEATING, LIGHTING, AND VENTILATING APPARATUS, NOT INCLUDING ELECTRICAL APPARATUS.) COMBUSTION UTILITIES CORPORATION, New York, N. Y. Filed Nov. 12, 1924.

CARBOGAS

Particular description of goods.—Generators, Producers, and Furnaces for Making Gas.

Claims use since April, 1921.

Ser. No. 205,152. (CLASS 34. HEATING, LIGHTING, AND VENTILATING APPARATUS, NOT INCLUDING ELECTRICAL APPARATUS.) COMBUSTION UTILITIES CORPORATION, New York, N. Y. Filed Nov. 12, 1924.

HYDROGAS

Particular description of goods.—Generators, Producers, and Furnaces for Making Gas.

Claims use since April, 1921.

Ser. No. 205,488. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) PERFECTION PRODUCTS CO., Rochester, N. Y. Filed Nov. 18, 1924.

COPPIT BRAND

No claim is made to the word "Brand" apart from the mark shown.

Particular description of goods.—Type Cleaner Known as Ink Off.

Claims use since Oct. 1, 1924.

Ser. No. 205,897. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) CLAUS ANDERSON, doing business as Anderson & Company, Chicago, Ill. Filed Nov. 28, 1924.

VALHALLA

Particular description of goods.—Roasted Coffee.

Claims use since Sept. 10, 1924.

Ser. No. 206,032. (CLASS 37. PAPER AND STATIONERY.) FRANK M. SAYFORD COMPANY, Brooklyn, N. Y. Filed Nov. 29, 1924.

AIRBUFF

Particular description of goods.—Packing and Wrapping Paper for Confectionery and the like.
Claims use since January, 1924.

Opopanol

Particular description of goods.—Artificial and Synthetical Perfumes and Essential Oils for the Production of Perfumes.
Claims use since July 6, 1920.

Ser. No. 221,432. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) M. NAEF & CIE., Geneva, Switzerland. Filed Oct. 8, 1925.

HELIOTROPOL

Particular description of goods.—Artificial and Synthetical Perfumes and Essential Oils for the Production of Perfumes.
Claims use since Jan. 13, 1897.

Ser. No. 221,433. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) M. NAEF & CIE., Geneva, Switzerland. Filed Oct. 8, 1925.

OLNICERA

Particular description of goods.—Artificial and Synthetical Perfumes and Essential Oils for the Production of Perfumes.
Claims use since Sept. 23, 1912.

Ser. No. 221,434. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) M. NAEF & CIE., Geneva, Switzerland. Filed Oct. 8, 1925.

"MOUSSAROME"

Particular description of goods.—Artificial and Synthetical Perfumes and Essential Oils for the Production of Perfumes.
Claims use since Mar. 29, 1922.

Ser. No. 221,435. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) M. NAEF & CIE., Geneva, Switzerland. Filed Oct. 8, 1925.

"CORALYS"

Particular description of goods.—Artificial and Synthetical Perfumes and Essential Oils for the Production of Perfumes.
Claims use since Mar. 29, 1922.

Ser. No. 221,436. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) M. NAEF & CIE., Geneva, Switzerland. Filed Oct. 8, 1925.

The words "Chuit, Naef & Cie," "M. Naef & Cie, Succrs," "Geneve," and "Marque De Fabrique" are disclaimed apart from the mark as shown in the drawing.
Particular description of goods.—Artificial and Synthetical Perfumes and Essential Oils for the Production of Perfumes.
Claims use since Aug. 26, 1910.

Ser. No. 221,437. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) M. NAEF & CIE., Geneva, Switzerland. Filed Oct. 8, 1925.

"SYLVESTRAL"

Particular description of goods.—Artificial and Synthetical Perfumes and Essential Oils for the Production of Perfumes.
Claims use since Nov. 8, 1922.

Ser. No. 221,438. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) M. NAEF & CIE., Geneva, Switzerland. Filed Oct. 8, 1925.

• VIOLETTOL •

Particular description of goods.—Artificial and Synthetical Perfumes and Essential Oils for the Production of Perfumes.
Claims use since Feb. 17, 1897.

Ser. No. 221,439. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) M. NAEF & CIE., Geneva, Switzerland. Filed Oct. 8, 1925.

• VIOLETTONE •

Particular description of goods.—Artificial and Synthetical Perfumes and Essential Oils for the Production of Perfumes.
Claims use since Feb. 17, 1897.

Ser. No. 221,440. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) M. NAEF & CIE., Geneva, Switzerland. Filed Oct. 8, 1925.

"CHIRONIAX"

Particular description of goods.—Artificial and Synthetical Perfumes and Essential Oils for the Production of Perfumes.
Claims use since July 24, 1923.

Ser. No. 221,441. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) M. NAEF & CIE., Geneva, Switzerland. Filed Oct. 8, 1925.

"CHEIRIA"

Particular description of goods.—Artificial and Synthetical Perfumes and Essential Oils for the Production of Perfumes.
Claims use since July 24, 1925.

Ser. No. 221,442. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) M. NAEF & CIE., Geneva, Switzerland. Filed Oct. 8, 1925.

Maïalis

Particular description of goods.—Artificial and Synthetical Perfumes and Essential Oils for the Production of Perfumes.
Claims use since July 6, 1920.

Ser. No. 221,443. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) M. NAEF & CIE., Geneva, Switzerland. Filed Oct. 8, 1925.

Grenadol

Particular description of goods.—Artificial and Synthetical Perfumes and Essential Oils for the Production of Perfumes.
Claims use since July 6, 1920.

Ser. No. 221,444. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) M. NAEF & CIE., Geneva, Switzerland. Filed Oct. 8, 1925.

• FLORENTINOL •

Particular description of goods.—Artificial and Synthetical Perfumes and Essential Oils for the Production of Perfumes.
Claims use since Feb. 17, 1897.

Ser. No. 221,445. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) M. NAEF & CIE., Geneva, Switzerland. Filed Oct. 8, 1925.

AROMANTHÈME

Particular description of goods.—Artificial and Synthetical Perfumes and Essential Oils for the Production of Perfumes.
Claims use since Oct. 28, 1903.

Ser. No. 221,446. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) M. NAEF & CIE., Geneva, Switzerland. Filed Oct. 8, 1925.

DIANTHÉOL

Particular description of goods.—Artificial and Synthetical Perfumes and Essential Oils for the Production of Perfumes.
Claims use since Feb. 8, 1901.

Ser. No. 221,503. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) NORTHWESTERN MILLING CO., Little Falls, Minn. Filed Oct. 9, 1925.

ROYAL QUALITY

Particular description of goods.—Wheat Flour.
Claims use since Mar. 1, 1906.

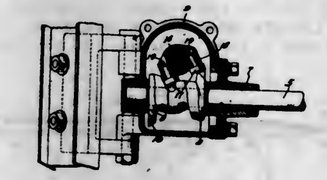
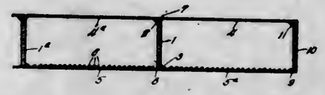
REISSUES



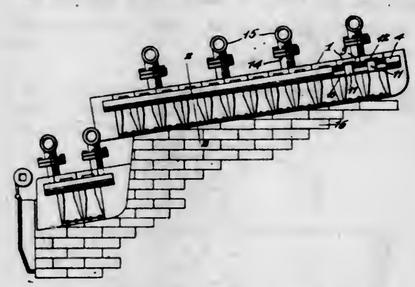
JANUARY 12, 1926.

16,246. GAME DEVICE. JOHN W. CULP, Johnstown, Pa. Filed Oct. 6, 1924. Serial No. 742,056. Original No. 1,500,110, dated July 8, 1924, Serial No. 655,907, filed Aug. 6, 1923. 2 Claims. (Cl. 273—145.)



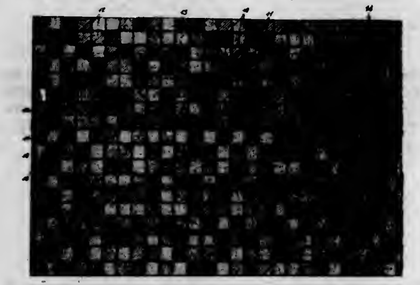
1. In a rockable game piece of the character set forth, a hollow and transparent member weighted at its lower end whereby said member normally assumes an upright position, said member being divided into upper and lower sections; a plate supported between said sections; and a game piece movable on said plate.

16,247. STEERING MECHANISM FOR MOTOR VEHICLES. GEORGE H. HANNUM, Pontiac, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Jan. 31, 1923. Serial No. 616,208. Original No. 1,425,765, dated Aug. 15, 1922, Serial No. 508,282, filed Oct. 17, 1921. 6 Claims. (Cl. 74—79.)



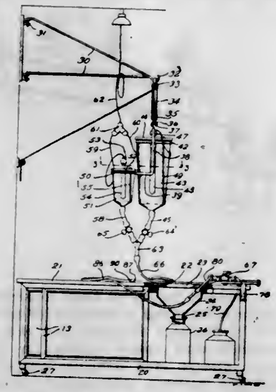
6. In steering mechanism of the class described, a rotatable steering shaft; two oppositely arranged cam members carried by said shaft and located adjacent the lower end thereof; an oscillating shaft located adjacent said cams and extending transverse to said steering shaft at one side of the axis thereof; bearing means carried by said oscillating shaft and having substantially flat portions with which said cam members engage and which portions are arranged substantially parallel with the plane of the axis of said oscillating shaft; and means whereby oscillating motion of said shaft is communicated to the wheels of a vehicle to thereby steer the same.

16,248. STEEL LUMBER. WALTER CLYDE JONES, Evanston, Ill. Filed Oct. 15, 1925. Serial No. 62,679. Original No. 1,548,809, dated Aug. 4, 1925, Serial No. 664,155, filed Sept. 22, 1923. 24 Claims. (Cl. 72—116.)



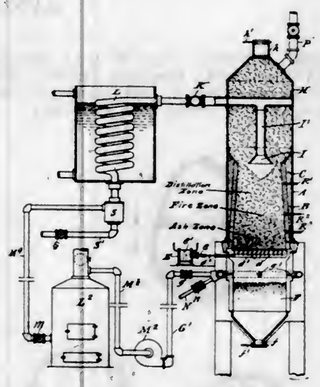
21. A self contained permanently organized steel lumber section adapted to be fabricated completely before installation and constituting a Z-shaped unitary structure serving as a combination building element, which comprises a relatively thick weight supporting studding portion and relatively thin sustaining plate portions extending laterally from said studding portion in opposite directions, said sustaining plate portions being of sufficient width, in conjunction with adjoining lumber sections, to span the spaces between adjacent studding portions.

16,249. FURNACE ARCH. JOHN WILLIAM GATES, Montreal, Quebec, Canada. Filed July 14, 1925. Serial No. 43,632. Original No. 1,500,123, dated July 8, 1924, Serial No. 638,279, filed May 11, 1923. 12 Claims. (Cl. 110—99.)



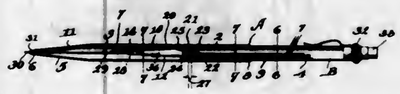
12. In a furnace suspended arch construction, a supporting harness including a plurality of spaced elements mounted in the furnace structure and each of said elements provided with spaced means for supplying air therethrough, and an arch structure comprising rows of blocks arranged between said spaced harness elements and removably interlocked therewith, the opposed faces of the blocks in adjacent rows being recessed to provide rectangular air receiving passages of greater width than depth opening upon the under side of the arch and communicating respectively with the spaced air supply means of said harness elements, the egress ends of the passages in adjacent rows of blocks extending longitudinally of the depth of the furnace and, in the aggregate, exceeding the major portion of the depth of the blocks, and means interposed between the blocks and spaced elements permitting the individual removal and displacement of the blocks vertically with respect to the face of the arch, by the removal and replacement of said means.

16,250. SURFACE COVERING AND METHOD OF DECORATING THE SAME. CHARLES F. HUMPHREYS, Lancaster, Pa., assignor to Armstrong Cork Company, a Corporation of Pennsylvania. Filed Dec. 7, 1925. Serial No. 73,930. Original No. 1,520,130, dated Dec. 23, 1924, Serial No. 717,658, filed June 3, 1924. 2 Claims. (Cl. 41—17.)



1. The method of decorating a surface which comprises covering the surface with a uniform pattern of spaces with a limited number of varying appearances, arranging the spaces of like appearance upon the surface with irregularity of occurrence, and repeating the arrangement over an area so large as to be not perceived by a single glance of the eye, whereby to stimulate the haphazard appearance of hand laid tiling.

16,251. MEDICAL APPARATUS FOR USE IN PROCTOTHERAPY. OSCAR BOTO SCHELLBERG, New York, N. Y., assignor to Schellberg Manufacturing Corporation, New York, N. Y., a Corporation of New York. Filed Nov. 17, 1923. Serial No. 675,389. Original No. 1,425,420, dated Aug. 8, 1922, Serial No. 463,702, filed Apr. 22, 1921. 6 Claims. (Cl. 128—227.)

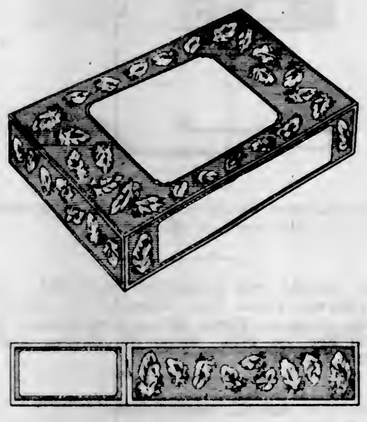


1. A device of the character described comprising a bracket, a rectangular frame having a portion thereof bent at right angles to the main portion to provide means for supporting a plurality of containers, a container suspended in one portion of said rectangular frame, a container rigidly supported in the other portion of said rectangular frame, and means for adjustably supporting said frame relative to the bracket, substantially as described.

16,252. METHOD AND APPARATUS FOR DISTILLATION OF CARBONACEOUS MATERIAL. ROBERT M. CATLIN, Franklin, N. J., assignor to Catlin Shale Products Company, New York, N. Y., a Corporation of Delaware. Filed July 18, 1925. Serial No. 44,006. Original No. 1,509,667, dated Sept. 23, 1924. Serial No. 492,885, filed Aug. 17, 1921. 9 Claims. (Cl. 202—16.)

1. The process of distilling carbonaceous material containing a volatilizable portion and a combustible solid portion, which comprises feeding such material in a descending column, maintaining a zone of combustion at the lower part of the column by supplying a preformed incombustible mixture of air and incombustible gas to the lower part of said combustion zone, regulating the quantity of said air-gas mixture to maintain a distillation zone above the combustion zone, regulating the proportions of said air-gas mixture to prevent combustion in said distillation zone, leading off the evolved gases and vapors from the column above the distillation zone, separately obtaining, from said evolved gases and vapors, the condensible portions thereof and also a supply of incombustible gas, and using said incombustible gas to form the incombustible air-gas mixture for subsequent distillation of carbonaceous material such as described.

16,253. PENCIL. HOWARD L. FISCHER and FRANK J. KRISTOFEK, St. Paul, Minn., assignors to Brown & Bigelow, St. Paul, Minn., a Corporation of Minnesota. Filed Apr. 12, 1923. Serial No. 631,719. Original No. 1,375,579, dated Apr. 19, 1921, Serial No. 254,522, filed Sept. 7, 1918. 6 Claims. (Cl. 120—19.)

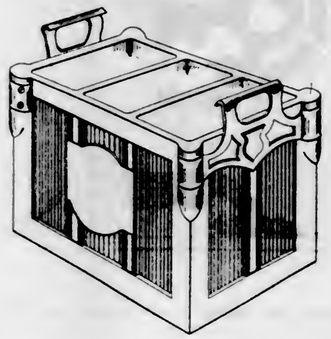


5. A pencil having its body formed of two thin walled metallic telescoping tubular members, a lead-holding means movably connected at its rear end to the inner end of the rear member for holding a marking lead to project through the forward member in writing position, and movable lead-ejecting means carried by said holding means, the walls of the inner and outer members being relatively distorted whereby they are frictionally held under spring tension in adjusted position.

DESIGNS

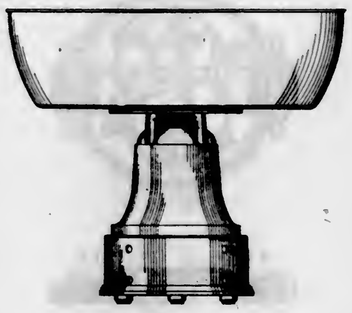
JANUARY 12, 1926.

69,196. BOX. RAY BECKER, Chicago, Ill., assignor to Chas. Emmerich & Co., Chicago, Ill., a Corporation of Illinois. Filed Nov. 12, 1924. Serial No. 11,860. Term of patent 3½ years.



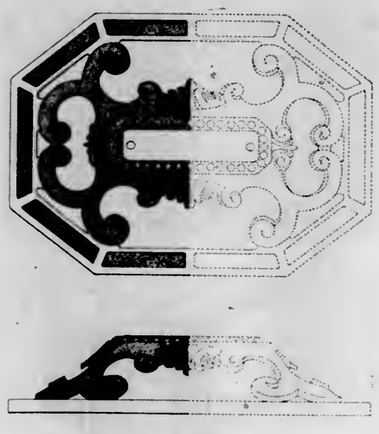
The ornamental design for a box as shown.

69,197. MERCHANDISING WHEEL. FRANK BEIDELSTEIN, Milwaukee, Wis. Filed Mar. 9, 1925. Serial No. 12,646. Term of patent 3½ years.



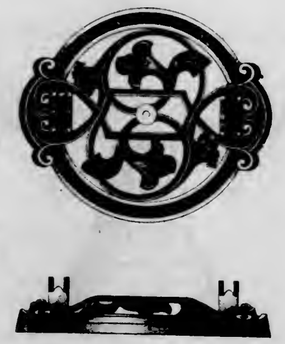
The ornamental design for a merchandising wheel, substantially as shown.

69,198. STORAGE-BATTERY JAR. EDWIN S. BOYER, Plainfield, N. J., assignor to American Hard Rubber Company, Hempstead, N. Y. Filed May 9, 1925. Serial No. 13,387. Term of patent 3½ years.



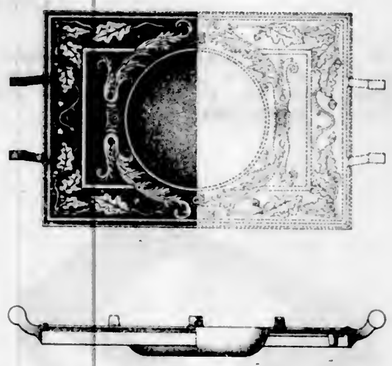
The ornamental design for a storage battery jar, as shown.

69,199. CASING FOR A CANDY MACHINE. GEORGE E. BRENT, Nashville, Tenn. Filed May 29, 1922. Serial No. 2,457. Term of patent 14 years.



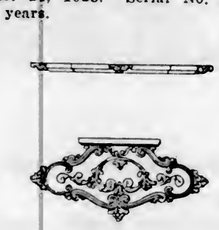
The ornamental design for a casing for a candy machine, substantially as shown.

69,200. BASE FOR A SMOKER'S STAND OR SIMILAR ARTICLE. LESLIE H. BURLIN, Chicago, Ill., assignor to Burlin Co., a Firm composed of Leslie H. Burlin and Walter H. Sedgwick, Chicago, Ill. Filed Oct. 10, 1925. Serial No. 15,092. Term of patent 7 years.



The ornamental design for a base for a smoker's stand or similar article, as shown.

69,201. BASE FOR A SMOKER'S STAND OR SIMILAR ARTICLE. LESLIE H. BURLIN, Chicago, Ill., assignor to Burlin Co., a Firm composed of Leslie H. Burlin and Walter H. Sedgwick, Chicago, Ill. Filed Oct. 10, 1925. Serial No. 15,093. Term of patent 7 years.

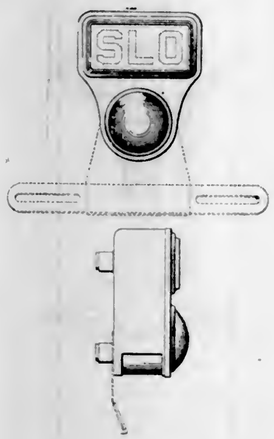


The ornamental design for a base for a smoker's stand or similar article, as shown.

69,202. TRAY TOP FOR A SMOKER'S STAND OR SIMILAR ARTICLE. LESLIE H. BURLIN, Chicago, Ill., assignor to Burlin Co., a Firm composed of Leslie H. Burlin and Walter H. Sedgwick, Chicago, Ill. Filed Oct. 10, 1925. Serial No. 15,094. Term of patent 7 years.

The ornamental design for a tray top for a smoker's stand or similar article, as shown.

69,203. SHELF FOR LIGHTING FIXTURES. FRANK S. CROWELL, Toledo, Ohio, assignor to The Edward N. Riddle Company, Toledo, Ohio, a Corporation of Ohio. Filed Apr. 14, 1925. Serial No. 13,124. Term of patent 7 years.



The ornamental design for a shelf for lighting fixtures, as shown.

69,204. SHELF FOR LIGHTING FIXTURES. FRANK S. CROWELL, Toledo, Ohio, assignor to The Edward N. Riddle Company, Toledo, Ohio, a Corporation of Ohio. Filed Apr. 14, 1925. Serial No. 13,126. Term of patent 7 years.

The ornamental design for a shelf for lighting fixtures, as shown.

69,205. COMBINATION SIGNAL AND TAIL LAMP. FRED A. CULVER, Worcester, Mass., assignor to Culver Stearns Manufacturing Company, Worcester, Mass., a Corporation of Massachusetts. Filed Jan. 13, 1923. Serial No. 4,878. Term of patent 7 years.

The ornamental design for a combination signal and tail lamp, as shown.

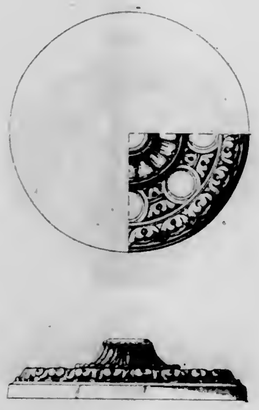
69,206. SPINDLE FOR LAMPS. JOSEPH DI SILVESTRO, Philadelphia, Pa., assignor to American Wood Turning Co., Philadelphia, Pa., a Firm composed of Charles Ozlek, Herman Ozlek, and Moses I. Ozlek. Filed Oct. 23, 1925. Serial No. 15,235. Term of patent 7 years.

The ornamental design for a spindle for lamps as shown.

69,207. SPINDLE FOR LAMPS. JOSEPH DI SILVESTRO, Philadelphia, Pa., assignor to American Wood Turning Co., Philadelphia, Pa., a Firm composed of Charles Ozlek, Herman Ozlek, and Moses I. Ozlek. Filed Oct. 23, 1925. Serial No. 15,236. Term of patent 7 years.

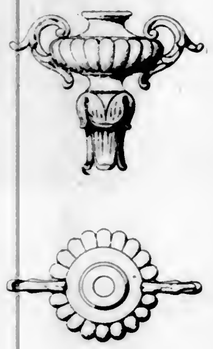
The ornamental design for a spindle for lamps as shown.

69,208. SPINDLE FOR LAMPS. JOSEPH DI SILVESTRO, Philadelphia, Pa., assignor to American Wood Turning Co., Philadelphia, Pa., a Firm composed of Charles Ozlek, Herman Ozlek, and Moses I. Ozlek. Filed Oct. 30, 1925. Serial No. 15,305. Term of patent 7 years.



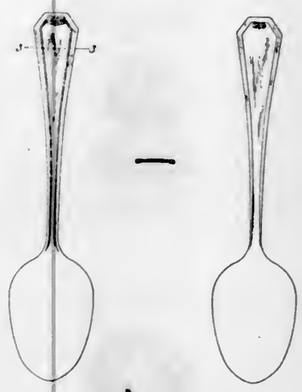
The ornamental design for a spindle for lamps as shown.

69,209. LAMP BASE. JOSEPH DI SILVESTRO, Philadelphia, Pa., assignor to American Wood Turning Co., Philadelphia, Pa., a Firm composed of Charles, Herman, and Moses I. Ozlek. Filed Oct. 30, 1925. Serial No. 15,306. Term of patent 7 years.



The ornamental design for a lamp base as shown.

69,210. LAMP BASE. JOSEPH DI SILVESTRO, Philadelphia, Pa., assignor to American Wood Turning Co., Philadelphia, Pa., a Firm composed of Charles Ozlek, Herman Ozlek, and Moses I. Ozlek. Filed Nov. 6, 1925. Serial No. 15,371. Term of patent 7 years.



The ornamental design for a lamp base as shown.

69,211. SPINDLE FOR LAMPS. JOSEPH DI SILVESTRO, Philadelphia, Pa., assignor to American Wood Turning Co., Philadelphia, Pa., a Firm composed of Charles Ozlek, Herman Ozlek, and Moses I. Ozlek. Filed Nov. 6, 1925. Serial No. 15,372. Term of patent 7 years.

The ornamental design for a spindle for lamps as shown.

69,212. SPOON OR SIMILAR ARTICLE. HENRY F. GOETZ, Waterbury, Conn., assignor to The Chase Companies Inc., Waterbury, Conn., a Corporation. Filed Apr. 13, 1925. Serial No. 13,104. Term of patent 14 years.

The ornamental design for a spoon or similar article as shown.

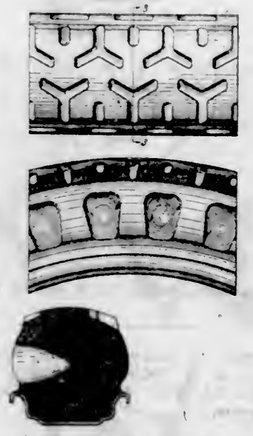
69,213. BOTTLE. JOHN G. GOMILA, New Orleans, La., assignor to World Bottling Co., Ltd., New Orleans, La. Filed Nov. 14, 1925. Serial No. 15,421. Term of patent 14 years.

The ornamental design for a bottle as shown.

69,214. PLATE OR SIMILAR ARTICLE. ERNEST GOODWIN, East Liverpool, Ohio, assignor to The Edwin M. Knowles China Co., East Liverpool, Ohio, a Corporation of West Virginia. Filed Aug. 3, 1925. Serial No. 14,305. Term of patent 7 years.

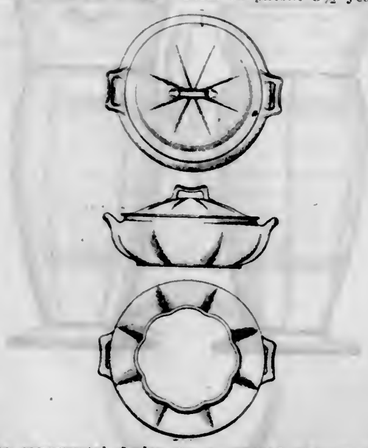
The ornamental design for a plate or similar article, as shown.

69,215. PICKLE JAR. VICTOR ERNEST GUILHEM, Bordeaux, France. Filed July 21, 1924. Serial No. 10,210. Term of patent 14 years.



The ornamental design for a pickle jar, as shown.

69,216. PICKLE JAR. VICTOR ERNEST GUILHEM, Bordeaux, France. Filed July 21, 1924. Serial No. 10,211. Term of patent 14 years.



The ornamental design for a pickle jar, as shown.

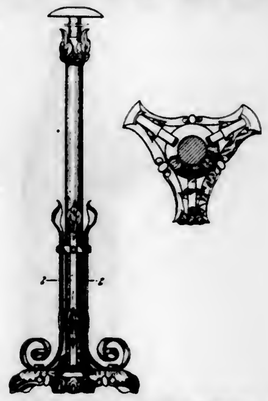
69,217. RESILIENT TIRE. ALBERT HARGRAVES, Akron, Ohio, assignor to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Nov. 1, 1924. Serial No. 11,261. Term of patent 14 years.

The ornamental design for a resilient tire, as shown.

69,218. COVERED DISH OR SIMILAR ARTICLE. GEORGE HAVILAND, Limoges, France. Filed Jan. 30, 1922. Serial No. 443. Term of patent 3½ years.

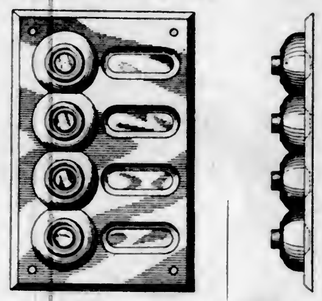
The ornamental design for a covered dish or similar article, as shown.

69,219. CUP OR SIMILAR ARTICLE. GEORGE HAVILAND, Limoges, France. Filed Jan. 30, 1922. Serial No. 445. Term of patent 3½ years.



The ornamental design for a cup or similar article, as shown.

69,220. JUG. T. CLARENCE HEISEY, Newark, Ohio, assignor to A. H. Heisey & Company, Newark, Ohio. Filed Mar. 24, 1923. Serial No. 5,583. Term of patent 14 years.



The ornamental design for a jug, as shown.

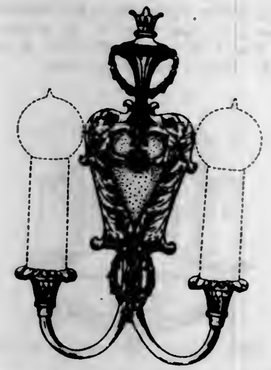
69,221. BASE FOR DISPLAY STAND. SAMUEL A. KIMMELSTIEL, New York, N. Y. Filed Aug. 13, 1925. Serial No. 14,418. Term of patent 3½ years.

The ornamental design for a base for display stand, as shown.

69,222. MULTIPLE PUSH BUTTON. KNUD KNUDSEN, Danbury, Conn. Filed Aug. 8, 1923. Serial No. 6,987. Term of patent 14 years.

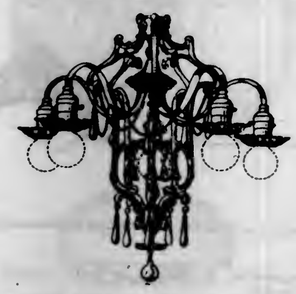
The ornamental design for a multiple push button substantially as shown.

69,223. BRACKET ELEMENT FOR AN ELECTRIC-LIGHTING FIXTURE. ISIDORE KRANZ, New York, N. Y. Filed Oct. 7, 1925. Serial No. 15,038. Term of patent 3½ years.



The ornamental design for a bracket element for an electric lighting fixture, as shown.

69,224. LIGHTING FIXTURE. ISIDORE KRANZ, New York, N. Y. Filed Oct. 7, 1925. Serial No. 15,039. Term of patent 3½ years.



The ornamental design for a lighting fixture as shown.

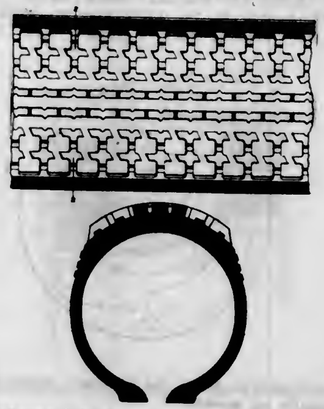
69,225. ELECTRIC-LIGHTING FIXTURE. ISIDORE KRANZ, New York, N. Y. Filed Oct. 7, 1925. Serial No. 15,040. Term of patent 3½ years.

The ornamental design for an electric lighting fixture as shown.

69,226. LIGHTING FIXTURE. ISIDORE KRANZ, New York, N. Y. Filed Oct. 7, 1925. Serial No. 15,041. Term of patent 3½ years.

The ornamental design for a lighting fixture as shown.

69,227. HOT-WATER BOTTLE. OBA KRICHBAUM, Delaware, Ohio. Filed Oct. 14, 1925. Serial No. 15,112. Term of patent 14 years.

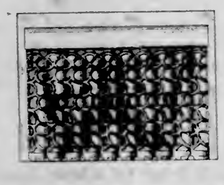


The ornamental design for a hot water bottle as shown.

69,228. LAMP SHADE. MARTHA N. LEONARD, Washington, D. C. Filed Sept. 18, 1925. Serial No. 14,808. Term of patent 3½ years.

The ornamental design for a lamp shade, as shown.

69,229. TREAD FOR TIRES. HARRY S. MOORADIAN, Dayton, Ohio, assignor to The Dayton Rubber Manufacturing Company, Dayton, Ohio, a Corporation of Ohio. Filed Oct. 26, 1925. Serial No. 15,252. Term of patent 14 years.

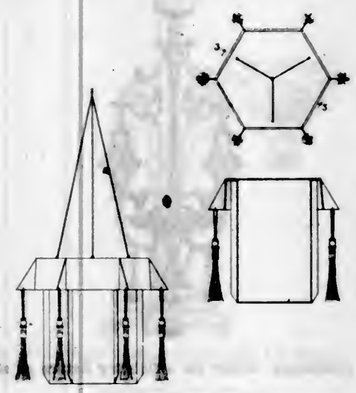


The ornamental design for a tread for tires, as shown.

69,230. COFFEEPOT OR ANALOGOUS ARTICLE. HAROLD E. NOCK, Newburyport, Mass., assignor to Towle Manufacturing Company, Newburyport, Mass., a Corporation of Massachusetts. Filed Oct. 7, 1925. Serial No. 15,054. Term of patent 7 years.

The ornamental design for a coffeepot or analogous article, substantially as shown and described.

69,231. FIREBACK OR SIMILAR ARTICLE. GEORGE E. PICKUP, Newark, Ohio, assignor to The Wehrle Company, Newark, Ohio, a Corporation of Ohio. Filed July 27, 1923. Serial No. 6,876. Term of patent 7 years.

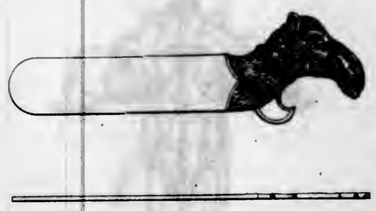


The ornamental design for a fireback or similar article, substantially as shown.

69,232. VEHICLE SIGNAL FACEPLATE. LEE D. PIERCE, Fulton, N. Y. Filed Apr. 21, 1922. Serial No. 1,905. Term of patent 7 years.

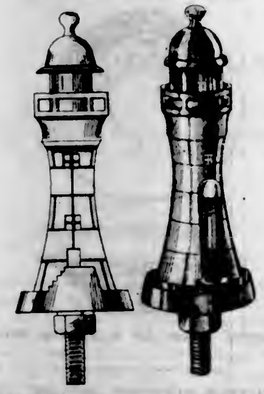
The ornamental design for a vehicle signal faceplate, substantially as shown.

69,233. CONTAINER FOR TEA. LOUIS L. RAYNOR, New York, N. Y., assignor to The Pagoda Tea Company, Inc., a Corporation of New York. Filed Oct. 20, 1925. Serial No. 15,201. Term of patent 14 years.



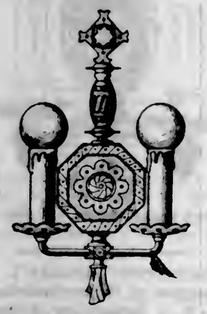
The ornamental design for a container for tea, as shown.

69,234. LIGHTING FIXTURE OR THE LIKE. FREDERICK ROETTGES, New York, N. Y., assignor to Harry Hilfman, New York, N. Y. Filed Oct. 8, 1925. Serial No. 14,998. Term of patent 3½ years.



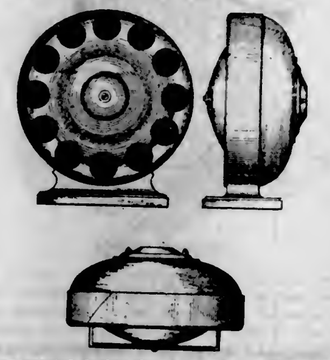
The ornamental design for a lighting fixture or the like as shown.

69,235. BOTTLE OPENER. EVERETT IRVING ROGERS, Jr., Providence, R. I. Filed Sept. 19, 1925. Serial No. 14,835. Term of patent 7 years.



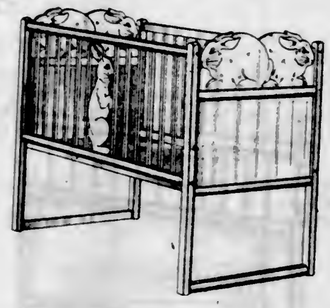
The ornamental design for a bottle opener, substantially as shown.

69,236. COMBINED ORNAMENT AND TEMPERATURE INDICATOR FOR RADIATOR CAPS. PIETRO ROSSI, Eastbourne, England. Filed June 30, 1925. Serial No. 13,957. Term of patent 3½ years.



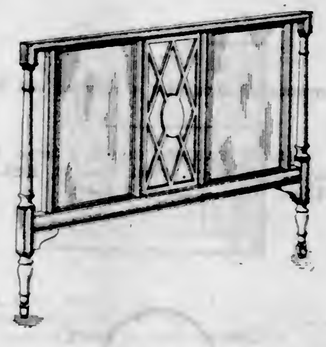
The ornamental design for a combined ornament and temperature indicator for radiator caps as shown.

69,237. WALL BRACKET. WILMER STANLEY SNOW, Oak Park, Ill., assignor to Crown Electrical Manufacturing Company, St. Charles, Ill., a Corporation of Illinois. Filed Nov. 28, 1925. Serial No. 15,567. Term of patent 3½ years.



The ornamental design for a wall bracket, as shown.

69,238. SOUND AMPLIFIER. LESLIE STEVENS, Glen Ridge, N. J. Filed Aug. 23, 1924. Serial No. 10,538. Term of patent 7 years.



The ornamental design for a sound amplifier as shown.

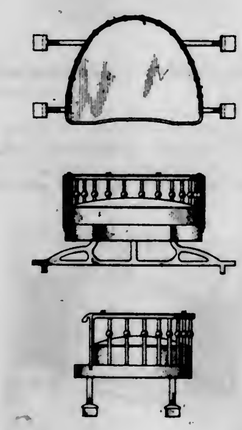
69,239. CHILD'S CRIB. CHARLES A. STUART, Kenosha, Wis., assignor to Simmons Company, Kenosha, Wis., a Corporation of Delaware. Filed Nov. 9, 1925. Serial No. 15,387. Term of patent 14 years.

The ornamental design for a child's crib as shown.

69,240. BEDSTEAD END FRAME. CHARLES A. STUART, Kenosha, Wis., assignor to Simmons Company, New York, N. Y., a Corporation of Delaware. Filed Nov. 9, 1925. Serial No. 15,388. Term of patent 14 years.

The ornamental design for a bedstead end frame as shown.

69,241. BEDSTEAD END FRAME. CHARLES A. STUART, Kenosha, Wis., assignor to Simmons Company, New York, N. Y., a Corporation of Delaware. Filed Nov. 9, 1925. Serial No. 15,389. Term of patent 14 years.

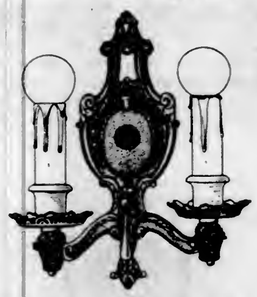


The ornamental design for a bedstead end frame as shown.

69,242. BEDSTEAD END FRAME. CHARLES A. STUART, Kenosha, Wis., assignor to Simmons Company, New York, N. Y., a Corporation of Delaware. Filed Nov. 9, 1925. Serial No. 15,390. Term of patent 14 years.

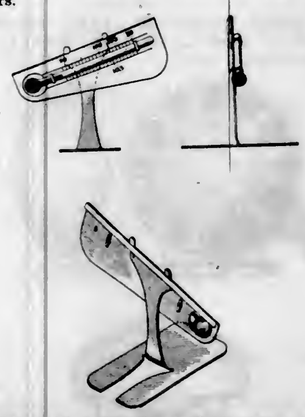
The ornamental design for a bedstead end frame as shown.

69,243. CHILD'S BARBER CHAIR. PETRO TRARARA, Benton Harbor, Mich. Filed June 25, 1925. Serial No. 13,890. Term of patent 7 years.



The ornamental design for a child's barber chair, as shown.

69,244. LIGHTING FIXTURE OR THE LIKE. GUSTAVE E. VILLARET, Leonia, N. J., assignor to Harry Hilfman, New York, N. Y. Filed Oct. 3, 1925. Serial No. 15,001. Term of patent 3½ years.

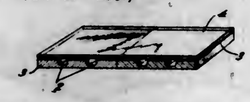


The ornamental design for a lighting fixture or the like as shown.

69,245. LIGHTING FIXTURE OR THE LIKE. GUSTAVE E. VILLARET, Leonia, N. J., assignor to Harry Hilfman, New York, N. Y. Filed Oct. 3, 1925. Serial No. 15,002. Term of patent 3½ years.

The ornamental design for a lighting fixture or the like as shown.

69,246. THERMOMETER. HERBERT J. WINN, Rochester, N. Y., assignor to Taylor Instrument Companies, Rochester, N. Y., a Corporation of New York. Filed Nov. 20, 1925. Serial No. 15,477. Term of patent 14 years.

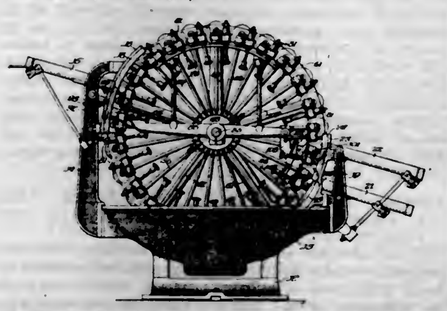


The ornamental design for a thermometer, as shown.

PATENTS

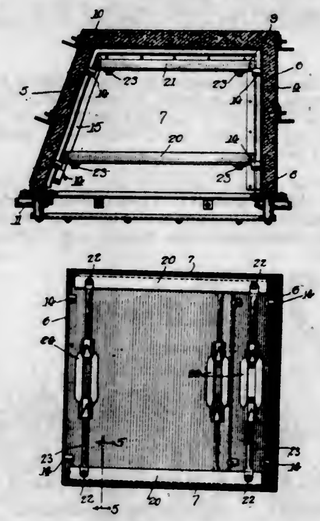
GRANTED JANUARY 12, 1926.

1,568,954. ILLUMINATED DIRECTIONAL SIGNAL FOR ELEVATORS. FRANZ A. BOEDTCHER, Bergenfield, N. J. Filed Feb. 20, 1922. Serial No. 537,740. 1 Claim. (Cl. 40—135.)



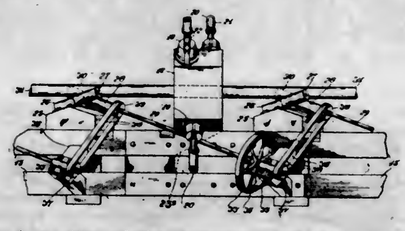
An illuminated signal for elevators embodying a plate of glass one face of which is provided with a depression in the form of a character or symbol, the undepressed portion of said face being opaque, a source of light positioned adjacent the opaque face of the plate and adapted to illuminate the depression in said face so that said depression will appear from the opposite face of the plate as illuminated, and a color screen positioned between the base of the depression and the source of light.

1,568,955. MOLDING MATERIAL. HERMANN BUCHHOLZ, Berlin, Germany. Filed Nov. 14, 1923. Serial No. 674,631. 5 Claims. (Cl. 106—12.)



3. Material suitable for the formation of molded articles comprising in combination a major percentage of acetyl cellulose and a minor percentage of glass dust, said composition being in the form of a fine impalpable powder.

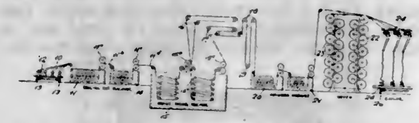
1,568,956. CAN-TESTING MACHINE. WILLIAM CAMERON, Chicago, Ill., assignor to Cameron Can Machinery Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 4, 1922. Serial No. 604,691. 10 Claims. (Cl. 73—51.)



1. In a can testing machine the combination of a rotatable carrier, a plurality of can holders mounted thereon, separating blocks interposed between successive holders, a guard plate at one side of the carrier disposed inside the path of travel and in proximity to the can holders, a can delivery chute opposed to said guard plate, and a spring pressed arm beneath said chute for positioning the cans in said holders.

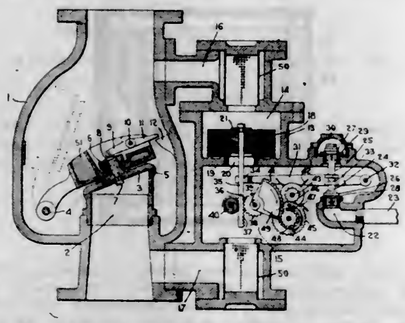
1,568,957. MOLDING FORM FOR CONCRETE VESSELS. ERVIN MOTT CAMP, Chicago, Ill. Filed Mar. 15, 1924. Serial No. 699,439. 6 Claims. (Cl. 25—130.)

1. In a mold form, a core member comprising a side wall member bound on the edges with an undercut reentrant binding piece, in combination with end members having reciprocal undercut reentrant binding members adapted to engage the aforementioned binding members and screw threaded rods connected across from end member to end member and adapted to hold and move the end members into engagement or disengagement with the wall member.



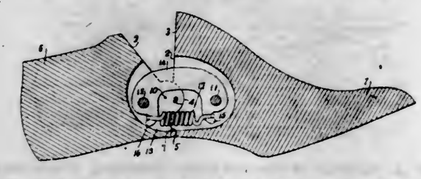
1,568,958. STEEL-CLEANING MACHINE. ALBERT CARTER, Chicago, Ill., assignor of one-half to James B. Blackman, Harrisburg, Ill. Filed Feb. 11, 1924. Serial No. 691,945. 6 Claims. (Cl. 51—14.)

1. A machine of the character described, comprising a housing, jet action producing means secured in the walls of the housing so as to direct jets of an abrasive



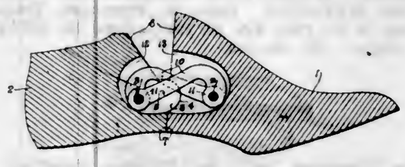
medium in criss-cross manner toward a common axis, a plurality of oppositely inclined rollers adapted to carry a tube in alignment with said axis, and means whereby the rollers are rotated and the tube given rotative and longitudinal movement along said axis through the housing.

1,568,959. PROCESS OF TREATING WARP IN LONG CHAIN OR ROPE FORM. HAROLD MASON CHASE and GEORGE WILMOT ROBERTSON, Danville, Va., assignors to Riverside and Dan River Cotton Mills, Danville, Va., a Corporation of Virginia. Filed Nov. 20, 1924. Serial No. 751,054. 15 Claims. (Cl. 8—5.)



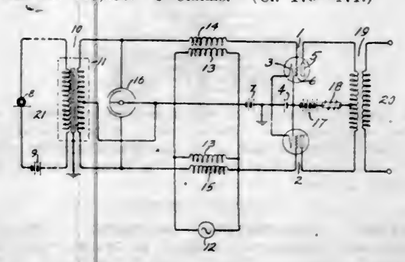
6. The continuous process of treating warp in rope or chain form which consists in boiling out the warp, dipping the warp in a vat dye, oxidizing it, re-dipping it in the same dye, again oxidizing it, washing it and drying it.

1,568,960. RETARDING DEVICE FOR ALARM CHECK VALVES. EZRA E. CLARK, Newtonville, Mass. Filed Sept. 24, 1923. Serial No. 664,412. 8 Claims. (Cl. 169—23.)



1. In an alarm valve mechanism, the combination with a water-way having a check valve therein, of a bellows-like device which is at all times subjected on its exterior to the pressure on the delivery side of the check valve and on its interior to the pressure on the inlet side of the check valve, whereby said bellows will be extended when a reduction of pressure occurs on the delivery side, means to retard the expanding movement of the bellows, and an alarm valve operated by the expanding movement of said bellows.

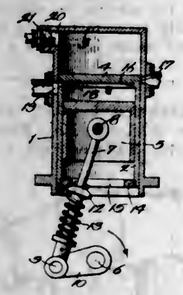
1,568,961. LAST. GEORGE CLAUSING, Portsmouth, Ohio, assignor to The Vulcan Last Company, Portsmouth, Ohio, a Corporation of Ohio. Filed Apr. 28, 1924. Serial No. 709,476. 10 Claims. (Cl. 12—136.)



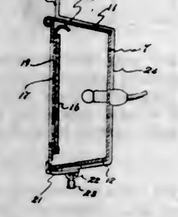
1. In a last, a toe part and a heel part adapted to rock about a common center, an extensible link joining said last parts and a yielding means connected to the ends of said link for resisting the movements of its ends and the movement of the last parts.

1,568,962. LAST. GEORGE CLAUSING, Portsmouth, Ohio, assignor to The Vulcan Last Company, Portsmouth, Ohio, a Corporation of Ohio. Original application filed Mar. 26, 1924, Serial No. 701,986. Divided and this application filed Sept. 29, 1924. Serial No. 740,536. 3 Claims. (Cl. 12—136.)

1. In a last, a toe part and a heel part pivoted on one another about a given center forming a joint therebetween so that the parts can rock on one another about said common center, a link connecting said parts mounted on pins in said parts so arranged that it has no lateral movement on the pins and so formed that it proceeds from one pin upwardly to a point above the other pin and then downwardly to form an angular spring-like hook which is adapted to flex when the last parts pass over the common center of movement and to hold the parts in their expanded or collapsed position when they are so moved.



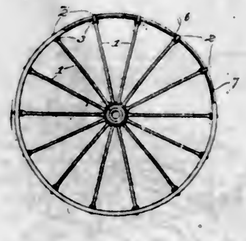
1,568,963. TRANSLATING APPARATUS. ROY E. CORAM, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 17, 1923. Serial No. 639,680. 5 Claims. (Cl. 179—171.)



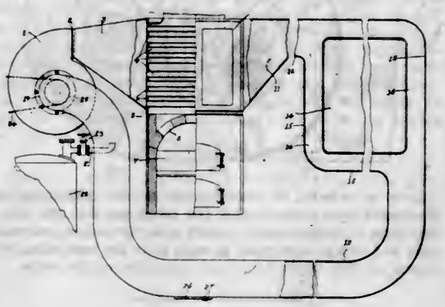
1. The combination of an electronic valve modulator having a grounded heated cathode, an anode and a control electrode, an input circuit connected to the cathode and control electrode, means to couple the source of low frequency modulating currents to the input circuit, said coupling means having a capacity to ground in parallel with the path between the control electrode and cathode, a source of high frequency oscillations coupled to the input circuit, said last mentioned coupling means being located between the control electrode and the first mentioned coupling means.

1,568,964. INTERNAL-COMBUSTION ENGINE. HARRY A. DOUGLAS, Bronson, Mich. Filed July 23, 1924. Serial No. 727,727. 10 Claims. (Cl. 123—78.)

7. An internal combustion engine including two telescopically related cylinders having adjacent portions defining a chamber of variable capacity, there being ports for admission of fuel and the exhaustion thereof when spent and for admitting fuel from the chamber of variable capacity into the inner cylinder, and valving means governed by the engine and governing said ports; a piston in the inner cylinder; motion transmitting mechanism interposed between the engine crank and the inner cylinder to move this cylinder in a fuel compressing direction, the piston having lost motion engagement with the inner cylinder to move it in a direction to enlarge said chamber and open the intake port; and ignition means in position to ignite the fuel passed into the inner cylinder from the chamber of variable capacity.



1,568,965. LICENSE-PLATE HOUSING. JOHN D. DOUGLAS, Detroit, Mich. Filed June 15, 1925. Serial No. 37,140. 2 Claims. (Cl. 40—132.)

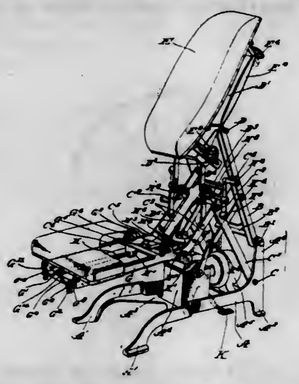


1. A device of the class described, comprising a housing; illuminating means mounted in said housing; a door frame swingably mounted on said housing; guide members mounted on the inner surface of said door frame, adjacent the lower and side edges thereof; a transparent plate mounted in said guide members removably; a metallic plate slidably mounted in said guide members intermediate said frame and said transparent member, said metallic plate having indicating media perforated therein, the upper edge of said metallic plate being angularly turned, to provide a gripping portion for facilitating the removal of said metallic plate from said guide members upon the swinging of said door frame to an open position beyond a predetermined degree; and supporting means embracing said housing on three sides, and adapted for serving as an abutment for preventing the swinging of said door frame open beyond a predetermined degree.

1,568,966. METHOD OF MAKING METAL WHEELS. ERNEST EVERETT EINFELDT, Davenport, Iowa, assignor to G. Watson French, Joseph L. Hecht, and W. H. Stackhouse, all of Davenport, Iowa, composing the Firm of French & Hecht, Davenport, Iowa. Filed June 10, 1924. Serial No. 719,058. 8 Claims. (Cl. 29—174.)

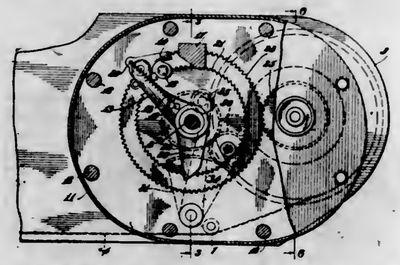
1. The method of making metal wheels, which consists in assembling an open wheel member on spokes and providing for circumferential play of the assembled wheel member relative to the spokes, connecting the ends of the wheel member together whereby the circumferential play of the wheel member will prevent lateral stresses on the spokes, and finally fastening the spokes rigidly to said wheel member.

1,568,967. HEATING SYSTEM. LEWIS M. ELLIS, Connersville, Ind., assignor to Winslow Safety High Pressure Boiler Company, Chicago, Ill., a Corporation of Illinois. Filed July 8, 1922. Serial No. 573,603. 7 Claims. (Cl. 237—1.)



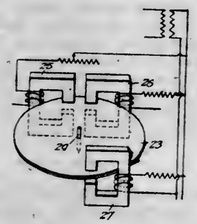
7. In a steam heating system, means for circulating a volume of air through the system, means for heating the air for preheating the system and for causing the air to absorb moisture therein, means for circulating a volume of steam through the system after it has been preheated by the air, said volume of steam displacing the volume of air therein, and means for allowing the air displaced to escape from the system.

1,568,968. POSTURE-ADJUSTING TABLE. DOSSA DIXON EVINS, Davenport, Iowa, assignor of one-half to Frank W. Elliott, Davenport, Iowa. Filed Nov. 28, 1924. Serial No. 752,509. 21 Claims. (Cl. 128—73.)



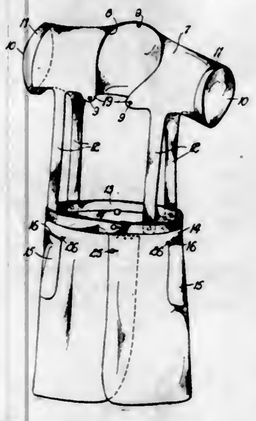
1. In an adjusting table, a base, a main supporting member pivoted thereto, a body supporting element pivoted at one point on said main supporting member, a second body supporting element pivoted at another point upon said main supporting member and means for tilting and depressing said first mentioned body supporting

element in response to rotation of said main supporting member, and means for maintaining said second



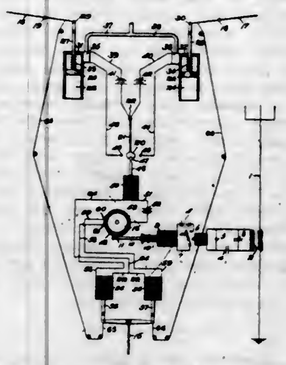
body supporting elements in substantially horizontal position during the rotation of said main supporting member.

1,568,969. CAMERA. SHERMAN M. FAIRCHILD, Oneonta, N. Y. Filed Oct. 11, 1919. Serial No. 330,066. 17 Claims. (Cl. 242—71.)



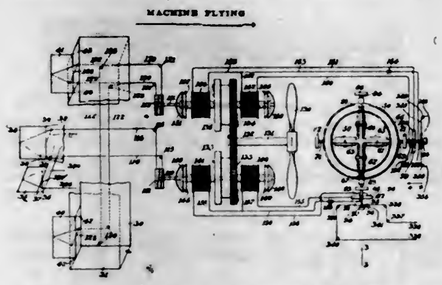
1. In a camera, in combination, a reel containing an unexposed film strip, a reel for receiving the film after exposure, a continuously operating motive device for said reels and means controlled by said reels for regulating the length of film exposed in each operation of the reels.

1,568,970. INTEGRATING METER. ERNEST H. FREEMAN, Wilmette, Ill. Filed Apr. 15, 1920. Serial No. 374,076. 3 Claims. (Cl. 171—264.)



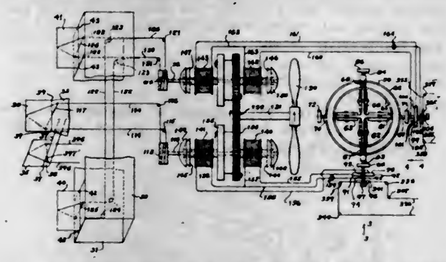
2. A meter of the induction motor type having a conductor disc rotor, a plurality of magnets having their poles disposed on opposite sides of said disc at different positions thereon all of said magnets having cores of sufficient cross-sectional area throughout their length to permit operation thereof at less than magnetic saturation during normal fluctuations of the current in the respective coils, one of said magnets being constructed and wound to produce a relatively strong magnetic field so as to exert a predominating retarding torque on said disc, the winding circuits of said magnets being connected in multiple to a common source of electromotive force, and means for varying the admittance of the circuit of one of said magnets to vary the speed of said meter so that said meter integrates a function of said circuit.

1,568,971. COMBINATION COAT AND OVERCOAT. MAX GALDHAED, St. Louis, Mo. Filed May 26, 1924. Serial No. 715,872. 2 Claims. (Cl. 2—85.)



1. A combination coat and overcoat comprising a coat, a yoke removably attached over the outside of said coat, straps depending from said yoke, a belt removably attached to said straps at their lower ends, and a skirt removably carried by said straps and belt.

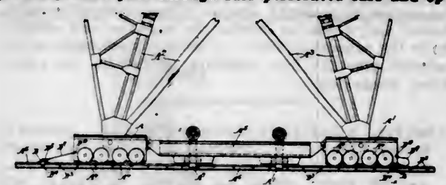
1,568,972. SYSTEM OF AEROPLANE CONTROL. JOHN HAYS HAMMOND, Jr., Gloucester, Mass. Filed Mar. 7, 1914, Serial No. 823,218. Renewed Apr. 3, 1916. Serial No. 88,723. 33 Claims. (Cl. 244—29.)



1. A system for controlling an aeroplane or air craft at a distance by radiant energy including in combination, an aeroplane or air craft body having balancing or stabilizing means, a controller cooperating with said means and determining the position thereof, and means responsive to radiant energy from a distance to interrupt the action of said controller upon said balancing or stabilizing means.

1,568,973. DIRIGIBLE DEVICE. JOHN HAYS HAMMOND, Jr., Gloucester, Mass. Filed June 11, 1915. Serial No. 33,450. 10 Claims. (Cl. 244—29.)

1. The combination with a dirigible body of steering means carried thereby for steering said body laterally in either direction, stabilizing means cooperating with said steering means and automatically operative to maintain said body upon a given course, means for tilting said body in either direction upon an axis extending longitudinally of said body, stabilizing means cooperating with said tilting means and automatically operative independently of said first mentioned stabilizing means to stabilize said body with respect to said axis, and means including a fluid distributing valve which is operative to modify the action of said first mentioned stabilizing means and the action of said second mentioned stabilizing means and steer said body laterally in either direction and through any desired angle and to simultaneously tilt said body either in one direction or in an opposite direction about said axis depending upon the lateral movement of said body.

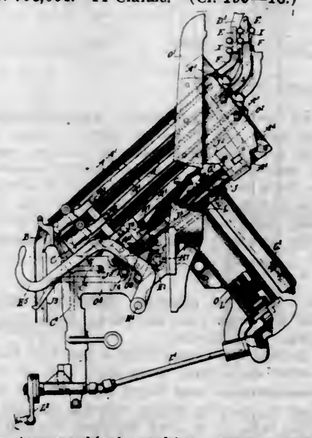


1,568,974. DIRIGIBLE DEVICE. JOHN HAYS HAMMOND, Jr., Gloucester, Mass. Original application filed June 11, 1915, Serial No. 33,450. Divided and this application filed Nov. 28, 1923. Serial No. 677,450. 32 Claims. (Cl. 244—29.)

1. The combination with a dirigible body of means carried thereby and movable with respect thereto for rotating said body about an axis extending longitudinally thereof, means cooperating with said first mentioned means for automatically stabilizing said body with respect to said axis, and means responsive to radiant energy and acting through said stabilizing means for rotating said body selectively about said axis through the action of said first mentioned means.

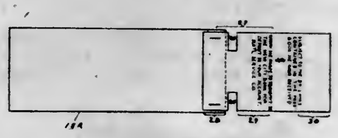
1,568,975. STOP FOR BRIDGE TOWERS. FRED G. HARTWELL, Chicago, Ill., assignor to Arthur C. Johnston, Chicago, Ill. Filed Apr. 10, 1924. Serial No. 705,710. 3 Claims. (Cl. 104—249.)

1. A removable anchor block adapted to engage a rail, for travelling members, comprising a body and wheels adapted to rest upon a track, said block having perforated ears depending downwardly from the sides of said block in line with perforations in the track, a removable lock pin adapted to pass through said perforated ears and opposed perforations in the track to hold the block in place, and a flexible member attached to the block at one end and a travelling member at the other.



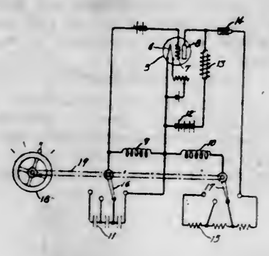
1,568,976. REGULATING VALVE. EVAN JONES, Pittsburgh, and WILLIAM R. MCKELL, Avalon, Pa. Filed Oct. 22, 1925. Serial No. 64,107. 2 Claims. (Cl. 251—73.)

2. The combination with an internal combustion engine having an intake manifold of circular cross section and carbureter, of a thin relatively flat valve body mounted between and having a circular port connecting said manifold and carbureter, and a thin relatively flat valve plate mounted in a suitable guide opening in said body for a transverse sliding movement, said valve plate being provided with an opening adapted to permit unobstructed passage of the explosive mixture from said carbureter through said manifold, and a cut-off portion adapted to be moved across said valve port to regulate and entirely cut-off the flow of explosive mixture from carbureter to said manifold, said cut-off portion of said valve plate being provided with a depression having a rounded inner end and open outer end, said depression having a continually increasing cross section from said rounded inner end to its open outer end so as to provide an increasing supply of air to said manifold as said cut-off portion of said valve plate is moved across said valve port.



1,568,977. TYPOGRAPHICAL COMPOSING AND DISTRIBUTING MACHINE. DAVID S. KENNEDY, Brooklyn, N. Y., assignor to Mergenthaler Linotype Company, a Corporation of New York. Filed Apr. 12, 1924. Serial No. 706,004. 14 Claims. (Cl. 199—16.)

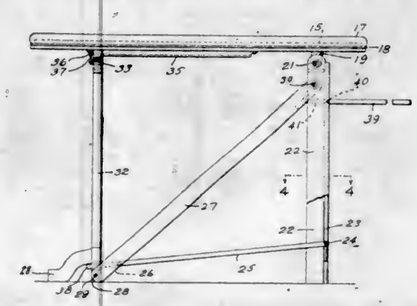
1. In a typographical machine equipped with assembling and distributing mechanisms, the combination of a magazine unit comprising a series of magazines, a sup-



porting frame for said magazine unit, means for shifting the supporting frame to locate a selected plurality of magazines in operative relative to the distributing mechanism, and means for moving the magazine unit relatively to the supporting frame to bring any magazine of the selected plurality into operative relation to the assembling mechanism.

1,568,978. AUXILIARY BANKING MEANS. HAROLD B. KLINE, Utica, N. Y., assignor to National Automatic Teller Corporation, Utica, N. Y., a Corporation. Filed Apr. 22, 1922. Serial No. 555,991. 4 Claims. (Cl. 229—68.)

1. For use with a deposit-receiving machine an envelope to receive the money, said envelope having sufficient of the pocket portion thereof transparent to reveal the denomination of the money and having a long tab projecting from one end, the intermediate part of which is adapted to have impressed thereon a receipt and the outer end of which forms the handle for placing the envelope into the machine and for withdrawing the receipted part after it is severed by the machine from the envelope.

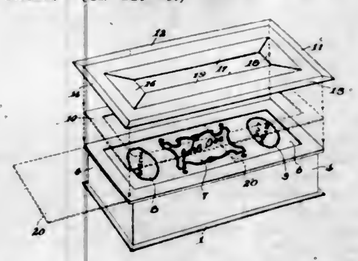


1,568,979. OSCILLATION GENERATOR. VERN O. KNUDSEN, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 3, 1921. Serial No. 498,258. 12 Claims. (Cl. 250—36.)

1. In an oscillation generator, an amplifying device having an input and an output circuit, means to couple said input and output circuits to produce oscillations, means to determine the frequency of the generated oscillations, a variable resistance connected in series in said circuit to determine the amplitude of the generated oscillations, and a single means to vary both the frequency determining means and said variable resistance.

1,568,980. IRONING BOARD. SIGMUND F. KOHN, New York, N. Y. Filed June 20, 1924. Serial No. 721,156. 7 Claims. (Cl. 68—10.)

1. An ironing table comprising a board, a folding support therefor embodying three legs, two of which are pivotally mounted on said board adjacent one end thereof, and one leg having sliding relation to said board to support the same at a pont adjacent the other end of said board, said first mentioned legs and second mentioned leg being connected by struts pivotally attached to said first mentioned and second mentioned legs adjacent the upper ends and lower end thereof, respectively; and means for maintaining said first mentioned and second mentioned legs in operative position, said means em-

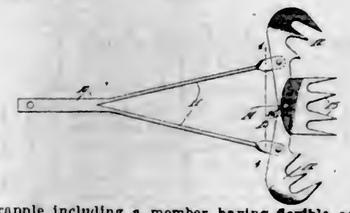


bodying a brace rod slidably connected with the first mentioned legs and pivoted to said struts adjacent the second mentioned leg.

1,568,981. STAY BOLT FOR BOILERS. FREDERICK K. LANDGRAF, Pittsburgh, Pa., assignor to Flannery Bolt Company, Pittsburgh, Pa. Filed Sept. 14, 1921. Serial No. 500,644. 1 Claim. (Cl. 85—1.5.)

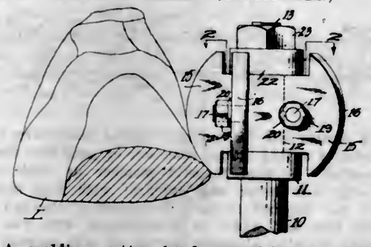
A flexible staybolt having a rounded head at one end and having its other end portion threaded, said bolt having a contracted cylindrical intermediate portion and a tapering neck portion between one end of said contracted cylindrical intermediate portion and the bolt head, the threaded portion having greater diameter than the intermediate portion, and said bolt also having a tapering portion between said contracted cylindrical portion and the threaded portion of the bolt.

1,568,982. CANDY BOX. BYRON H. LENGSFIELD, New Orleans, La. Filed June 25, 1925. Serial No. 39,567. 4 Claims. (Cl. 229—8.)



1. A box cover having side walls, end walls and a top, an open faced frame adapted to receive a card superimposed on the top, means for fastening the frame to the top along two side edges and one end thereby forming a pocket having an entrance at the open, end, the means consisting of suitable covering material for the frame, cut to allow for overlap along the outside and inside edges of the frame, the outside overlaps being adapted for securely fastening three outside edges of the frame to the corresponding edges of the box cover.

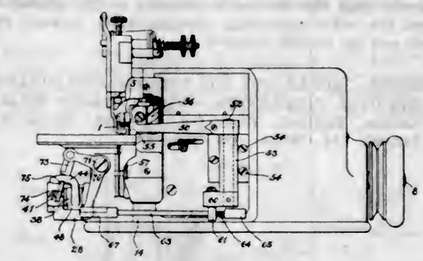
1,568,983. GASSING HOOD. GASTON J. LIPSCOMB, New York, N. Y. Filed May 18, 1923. Serial No. 639,831. 9 Claims. (Cl. 43—125.)



9. A plant treating machine comprising a mobile hood having an inlet adjacent its front end, means for forcing gas through said inlet into intimate contact with vegetation beneath the hood, an outlet adjacent the rear end of said hood and means for positively withdrawing through said outlet to be used over again.

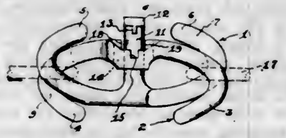
1,568,984. GRAPPLE. ALBERT MCCOLLUM, Atkins, Ark. Filed July 11, 1925. Serial No. 42,958. 1 Claim. (Cl. 294—99.)

A grapple including a member having flexible arms, a jaw member intermediately pivoted on one end of each arm, and extending transversely thereof, the inner ends of the arms being pivotally connected, the inner end of one arm being formed with a notch, the corresponding end of the other arm being formed with a lateral projection for engagement in said notch whereby to permit pivotal movement of the inner ends of the arms outwardly beyond the ends of the flexible arms and thereby maintain the jaw members in open position, and a member mounted on the pivot of the inner ends of the jaw members and arranged to be moved by contact with an object whereby to move the pivotal connection of the jaws inwardly of the ends of the flexible arms and thereby permit said arms to close the jaws on the object.



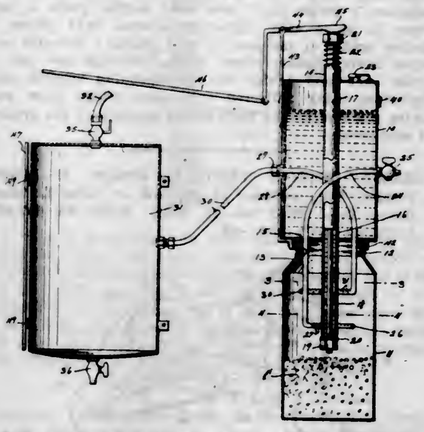
1,568,985. CUTTER HEAD FOR MOLDING MACHINES. GEORGE B. MAGOON, Worcester, Mass. Original application filed June 27, 1922, Serial No. 571,161. Divided and this application filed Mar. 28, 1925. Serial No. 19,136. 7 Claims. (Cl. 144—224.)

1. A molding cutter head comprising a supporting member having a plurality of flat faces, and a plurality of cutting blades secured in assembled relation about said member, each blade being firmly and separately secured to each of its two adjacent cutting blades.



1,568,986. SEWING MACHINE. JOSEPH M. MERROW, Hartford, Conn., assignor to The Merrow Machine Company, Hartford, Conn., a Corporation of Connecticut. Filed Dec. 17, 1923. Serial No. 681,254. 11 Claims. (Cl. 112—162.)

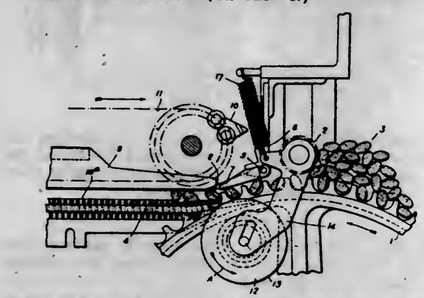
1. In a sewing machine, in combination, feed mechanism including a feed dog, a feed changing device associated with the feed mechanism and adjustable to vary the range of movement imparted to the feed dog, a device operable upon an edge or superposed edges of material



and adjustable to vary its relation to the stitching elements, and means interposed between said device and the feed changing device whereby adjustment of one of them will impart an adjustment to the other.

1,568,987. CHAIN LINK. FREDERICK W. MEYERS, Chicago, Ill. Filed Dec. 19, 1924. Serial No. 757,044. 3 Claims. (Cl. 59—88.)

3. In a chain link, in combination, two complementary members, the said members having hooked ends and flat surfaces, the said flat faces contacting with each other, an upright rod in one of the members, the said rod being T-shaped at the top, a projection underneath the said T-shaped portion, a square opening in the other complementary members, and slots and shoulders in the walls of the said opening.

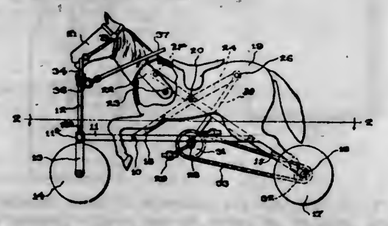


1,568,988. ACETYLENE GENERATOR. DELBERT A. MILAM, Charleston, W. Va. Filed July 22, 1924. Serial No. 727,572. 2 Claims. (Cl. 48—4.)

2. In an acetylene gas generator, a water chamber, a carbide chamber, an outlet for the carbide chamber and a measuring valve comprising a tube communicating with the water chamber and with the carbide chamber and a member operating within the tube having spaced valves

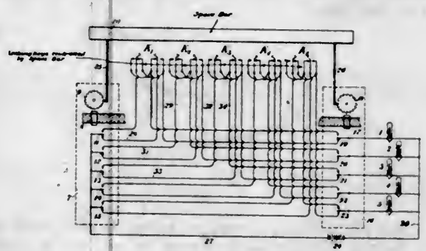
one of which normally closes the communication between the tube and the carbide chamber, the other of said valves closing the communication between the water chamber and the tube upon operation of the member to open the valve controlling communication between the tube and the carbide chamber.

1,568,989. APPARATUS FOR FEEDING AND ARRANGING OVAL CIGARETTES. WALTER EVERETT MOLINS, London, England. Filed Oct. 6, 1924. Serial No. 742,047. 14 Claims. (Cl. 226—5.)



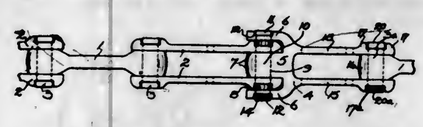
1. Apparatus for arranging oval cigarettes in lapped formation in the usual style of packed oval cigarettes comprising a hopper, means for delivering the cigarettes from the hopper, means for positively turning automatically each cigarette upon leaving the delivery means, into a slanting or sloped position and means for retaining the cigarettes in such position while they are continuously moved for grouping, transferring or other similar operations.

4. Apparatus for arranging oval cigarettes in lapped formation in the usual style of packed oval cigarettes, comprising a hopper, a fluted conveyor for delivering the cigarettes from the hopper, a resilient finger adjacent said conveyor beneath which the cigarettes are moved, said resilient finger and the rear edge of a flute of said conveyor serving to positively turn each cigarette into a sloping position, and means for retaining the cigarettes in such position while they are continuously moved for grouping.



9. In a cigarette packing machine for oval cigarettes, a hopper, a carrier plate, means to deliver said cigarettes from said hopper to said plate in overlapping, sloped relation, a guide plate over said carrier plate, a conveyor to move said cigarettes between said plates, a slotted bridge at the ends of said plates, a transfer conveyor having pusher pieces passing through said slot, a brush over said bridge having depending bristles, said cigarettes being delivered onto said bridge from said plates and retained in their sloped relation by the bristles of said brush.

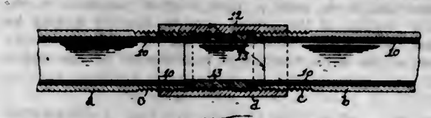
1,568,990. CHILD'S VEHICLE. JOSEPH A. MOORE, Palmer, Tex., assignor of one-half to Amos L. Ticer, Boyce, Tex. Filed Dec. 16, 1922. Serial No. 607,361. 2 Claims. (Cl. 208—42.)



1. A child's vehicle comprising a frame, supporting wheels therefor, a figure of an animal positioned above the frame, a rod extending through the frame and pivotally engaging the figure to support the latter, a pivotal connection between the body and head of the figure, foot operated means including a crank shaft, whereby the vehicle may be propelled, a substantially V-shaped member mounted upon the rod and connected to the body and neck of the figure, means connecting the V-shaped member and crank shaft, whereby the body of the figure may be rocked upon the rod and the head moved relatively when the crank shaft is operated, and guiding means for the vehicle.

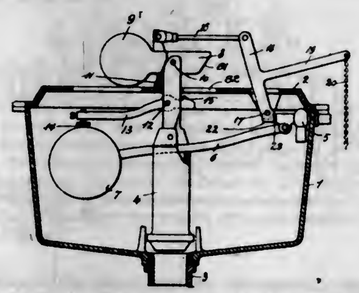
1,568,991. CIPHERING AND DECIPHERING DEVICE. LYMAN F. MOREHOUSE, Montclair, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Apr. 15, 1920. Serial No. 374,159. 1 Claim. (Cl. 178—22.)

In a ciphering and deciphering device, a telegraph transmitter including a tape provided with prearranged groups of perforations therein and a set of contacts controlled in accordance with said groups of perforations, a set of contacts controlled by key mechanisms operable in accordance with the code combinations of the original message, a group of signal lamps under the joint control of said sets of contacts for displaying the code combinations of the enciphered or deciphered message, means for locking said key mechanisms in operated position, and means for releasing said key mechanisms and for advancing said perforated tape.



1,568,992. MASTER LINK FOR CONVEYER CHAINS. RALPH L. MUDGE, Detroit, Mich. Filed Feb. 10, 1925. Serial No. 8,313. 4 Claims. (Cl. 74—49.)

1. A master link for conveyer chains comprising a central member having lateral arms one on each side thereof, substantially parallel to said member at their outer ends and their inner ends integral with said member, and a pin adapted to pass transversely through said member and said arms, in combination with two substantially parallel elements united to said member and extending in the opposite direction to said arms, transverse openings through said elements adapted to receive a pin and means for preventing rotation of said pin.

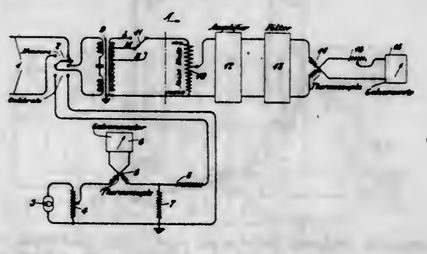


1,568,993. PIPE FITTING. RENYES J. NEWSOM, Lynn, Mass. Filed Oct. 21, 1922. Serial No. 596,134. 3 Claims. (Cl. 285—148.)

3. A pipe fitting for cement lined pipe comprising an outer member of relatively hard metal and an inner member of metal relatively softer than the lining of said pipe and capable of being compressed by said lining, said inner member being of substantial thickness and having at its inner circumference a lip of substantial length to enable the said lip to extend into the harder

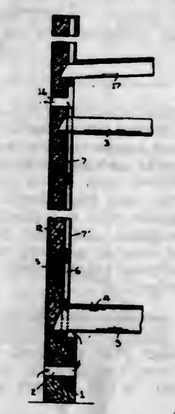
member of a cement lined pipe having a lining broken back from the end of said pipe and to engage and be compressed by said broken back lining and make a tight joint therewith.

1,568,994. FLUSHING TANK. CHRISTEN NÖRBORK, Copenhagen, Denmark. Filed Apr. 11, 1922. Serial No. 551,562. 1 Claim. (Cl. 4—19.)



An apparatus of the class described, comprising, in combination, a tank having a valve-controlled outlet and a valve-controlled inlet, the latter being adapted for connection to a source of fluid under pressure, a pivoted member for retaining the inlet valve closed, a weighted member pivoted to the outlet valve and adapted to fulcrum on a fixed portion of the tank thereby to retain the outlet valve open, means for simultaneously swinging said members on their pivots to permit the inlet valve to be opened under pressure of the fluid and the outlet valve to be closed by gravity thereby to fill the tank, a pivoted latch for engaging one of said retaining members thereby to maintain both of said members in tank-filling position, and a pivoted float adapted when raised to release said latch thereby to permit return of the retaining members to initial position.

1,568,995. ATTACHMENT PLUG. REUBEN B. BENJAMIN, Chicago, Ill., assignor to Benjamin Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 17, 1922. Serial No. 553,856. 5 Claims. (Cl. 173—348.)

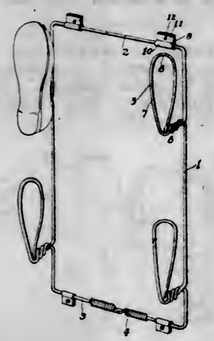


1. A separable attachment plug comprising a body member and a cap member, said body member comprising center and side contacts and blade-engaging contacts, said cap member comprising blades for engaging said blade-engaging contacts, an extension handle movably mounted on said cap member, and means for holding said extension handle in alignment with said plug.

1,568,996. ELECTRICAL MEASURING APPARATUS. FRED H. BEST, Westfield, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Jan. 3, 1924. Serial No. 684,247. 8 Claims. (Cl. 179—175.)

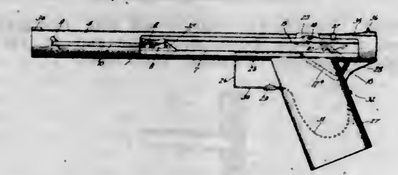
5. The method of measuring the effect upon telephone transmission of interfering current of a single frequency or of a plurality of frequencies which consists in measuring a standard current of definite magnitude and of a single frequency, the measurement being in units representing the detrimental effect upon transmission, then weighing the frequencies present in an interfering current, and measuring this current by the same units.

1,568,997. CONCRETE STRUCTURE FOR HOUSING. IVEY T. BLOUNT, Miami, Fla. Filed July 12, 1924 Serial No. 725,747. 4 Claims. (Cl. 72—49.)



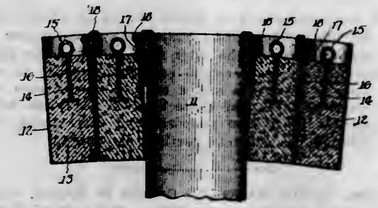
1. A wall comprising an outer portion of poured concrete, its inner side resting against an inner course of laths, spaced studs, to the outer sides of which the laths are attached, an inner course of laths attached to the inner sides of the studs and a coat of plaster over the inner course of laths, the space between the studs being left open for ventilation purposes and there being provided through the concrete portion, air outlets.

1,568,998. SHOE HANGER. GEORGE W. BRUCE, Childress, Tex. Filed Apr. 21, 1924. Serial No. 707,955. 2 Claims. (Cl. 211—17.)



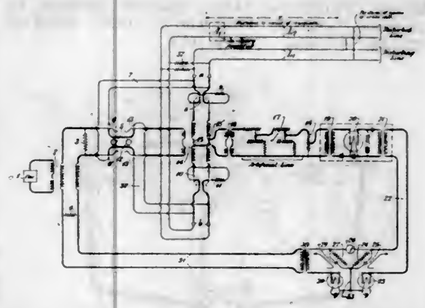
1. A device of the character described comprising a strand of wire bent to form a body including a vertically disposed portion which is crimped intermediate

its length and in spaced relation to the free end of the crimped portion twisted to provide a shoe-supporting head and twisted shank connecting the head with the



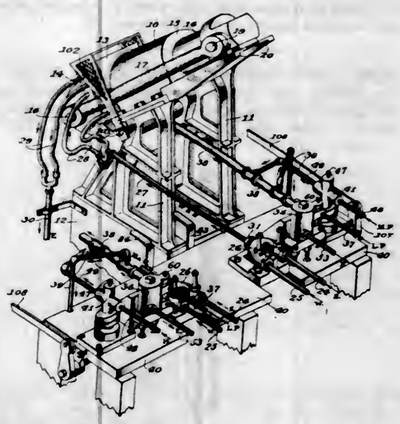
vertically disposed portion of said body, said head extending upwardly from said shank and being in the form of a loop rounded at its upper end and tapering downwardly to the shank.

1,568,999. FEED AND TRIGGER MECHANISM FOR TOY PISTOLS. CLAUDE L. BUNTEN, Rawlins, Wyo. Filed Apr. 22, 1925. Serial No. 25,035. 5 Claims. (Cl. 124—13.)



1. A feed and trigger device for toy pistols comprising a barrel, spaced tracks thereon, a reciprocal carrier guided in said tracks and provided with a shoulder, a substantially U-shaped latch device pivoted at the end of one of its arms, said latch device provided with a latch finger engageable with said shoulder, and a spring member for maintaining said latch device normally in one position, said member provided with an extension adapted to be operated to compress said spring and raise said latch finger.

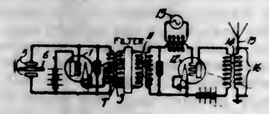
1,569,000. WEIGHT FOR SINKING WELL CASINGS. WILLIAM H. CATER, Chicago, Ill. Filed Oct. 7, 1925. Serial No. 60,950. 4 Claims. (Cl. 166—1.)



1. A weight for well-casings and the like, comprising a metal shell, a filling for said shell terminating short of an end of the shell and containing relatively-heavy particles and cement, a reenforcing plate inside of said shell, the latter and said plate being apertured in register with one another and opposite the unoccupied space of the shell, whereby the apertures may accommodate a supporting hook with a part thereof received in the empty portion of the casing, and an eye-bolt having its shank embedded in said filling with its eye in the empty space of the shell whereby it is protected by the latter.

1,569,001. ELECTRICAL MEASURING APPARATUS. ALVA BENSON CLARK, Brooklyn, N. Y., and GEORGE CRISSON, Hackensack, N. J., assignors to American Telephone and Telegraph Company, a Corporation of New York. Filed Dec. 22, 1923. Serial No. 682,267. 11 Claims. (Cl. 179—175.)

1. In a system for locating causes of crosstalk, the combination with a disturbing line circuit of a disturbed line circuit, the said circuits being characterized by a cause of crosstalk existing therebetween, a transmission measuring circuit connected with said line circuits and a by-pass connection between said line circuits.

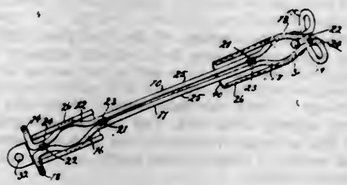


1,569,002. MEANS AND METHOD FOR PRESSING MOLDED ARTICLES. ROBERT F. CRUDGINTON and JOHN T. KILBRIDE, Bridgeport, Conn., assignors to Columbia Phonograph Company, Inc., Bridgeport, Conn., a Corporation of New York. Filed July 5, 1924. Serial No. 724,429. 23 Claims. (Cl. 18—16.)

6. In combination, a press, and a piping system including control valves and automatic mechanical means for actuating the same, so arranged and constructed that the press is automatically closed by fluid under one pressure, held closed for a predetermined period by a fluid under a greater pressure, heated for a predetermined period while under the greater pressure, cooled for a period in excess of the heating period and while under the greater pressure, and opened.

7. The method of molding a sound record consisting in placing the record material on a matrix and slowly applying pressure thereto for a definite time interval to spread it thereover, and then pressing it tightly thereagainst.

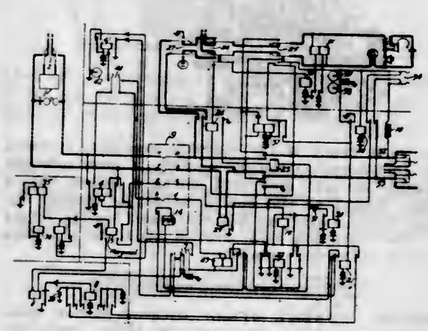
1,569,003. SIGNALING SYSTEM. AUSTEN M. CURTIS, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 21, 1922. Serial No. 530,762. 24 Claims. (Cl. 250—17.)



16. A radio transmission system comprising an antenna, a source of radio frequency waves coupled to said antenna, means upon which a message is recorded to vary the dielectric properties thereof, means whereby the frequency of the waves produced by said source is controlled by the varying dielectric properties of said means for controlling the supply of signal currents to said antenna.

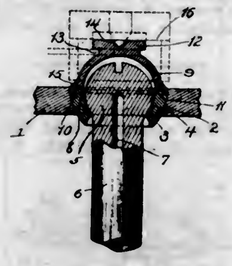
1,569,004. SAFETY DEVICE. PHILIP H. DAUB, Helena, Ohio. Filed June 18, 1925. Serial No. 38,097. 9 Claims. (Cl. 246—204.)

2. In combination with a railway rail, a pair of bar-like members provided with longitudinal slots pivotally mounted relative to each other, means adapted to engage the slots, a spring mounted at the terminal of one of the bar-like members, and controlling means adapted to be actuated by the other bar-like member.



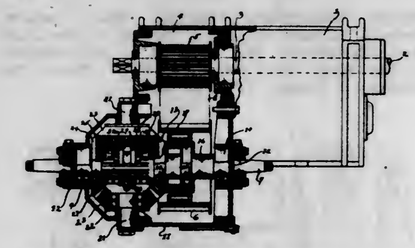
1,569,005. LOOSE-LEAF BINDER. JAMES C. DAWSON, Webster Groves, Mo., assignor to Elma N. Dawson, Webster Groves, Mo. Filed Sept. 16, 1924. Serial No. 738,022. 7 Claims. (Cl. 129—24.)

2. In a loose leaf binder, a resilient rod terminating at each end in paper holding prongs and formed into an arch adjacent to each of said prongs, the bases of said arches forming bearings and the outer bearing of each arch being in the plane of the arches and out of alinement with the inner bearings of said arches.



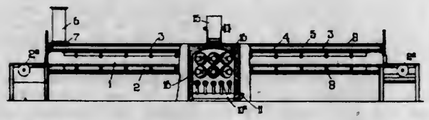
7. In a loose leaf binder, the combination of a pair of rods each formed into a short rigid arch at each end thereof and terminating in paper holding prongs, said arches forming a toggle at each end of the pair of rods and resilient clips for holding said rods in assembled relation and for retaining said prongs in either open or closed position through the action of said toggles.

1,569,006. TELEPHONE SYSTEM. GERALD DEAKIN, Antwerp, Belgium, assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 13, 1924. Serial No. 737,478. 5 Claims. (Cl. 179—27.)



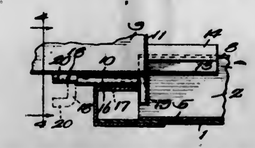
1. In a telephone system, subscribers' lines, a finder switch in which said lines terminate, a trunk, means responsive to a call on one of said lines for operating said finder to extend such line to said trunk, an individual key for each line, a key for said trunk, and means responsive to the actuation of one of said line keys and said trunk key for causing the operation of the finder to extend said trunk to the corresponding line as a called line.

1,569,007. STAY-BOLT STRUCTURE FOR BOILERS. ETHAN I. DODDS, Central Valley, N. Y., assignor to Flannery Bolt Company, Pittsburgh, Pa. Filed Feb. 26, 1923. Serial No. 621,381. 2 Claims. (Cl. 85—1.5.)



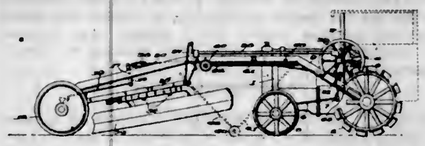
1. In a staybolt structure, the combination with a boiler sheet having an opening and a bearing member having initial universally adjustable mounting in said opening, of a cap or closure mounted on said bearing member and a single weld encircling the cap or closure and bearing member and uniting both the bearing member and cap or closure to the boiler sheet, said cap or closure having a head formed with a recess providing a mounting adapted to receive a cutting tool for removing the welding alloy.

1,569,008. GEARING. HARRY B. DODGE, Clintonville, Wis., assignor to Four Wheel Drive Auto Company, Clintonville, Wis., a Corporation of Wisconsin. Filed Nov. 21, 1921. Serial No. 516,683. 2 Claims. (Cl. 74—59.)



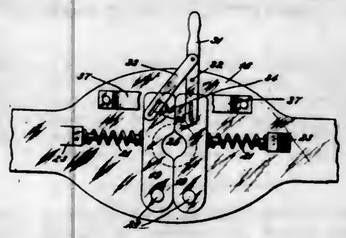
2. In a device of the character described, a reversing transmission including a shaft, a gear rotatably mounted on said shaft and having a hollow hub, a pulley secured to said hub, a ballbearing member disposed between said hub and shaft, and spacing collars on said shaft and each disposed upon opposite sides of said ballbearing member.

1,569,009. BAKER'S OVEN. WILLIAM DREDGE, Manchester, England. Filed Jan. 24, 1924. Serial No. 688,289. 2 Claims. (Cl. 107—57.)



1. Heating arrangements for bakers' ovens of the type containing an endless travelling conveyor, comprising, in combination, an air-heating chamber on the side of the oven; a plurality of gaseous fuel burners in said chamber; means for supplying high pressure combustible gas to the burner-nozzles; means for admitting and forcing air into the heating-chamber; conduits passing through the wall of the heating-chamber for introducing the heated air and products of combustion into the oven; means for controlling said conduits; and distributing pipes connected to the said conduits and arranged to distribute the heated air and products of combustion on both sides of the travelling conveyor.

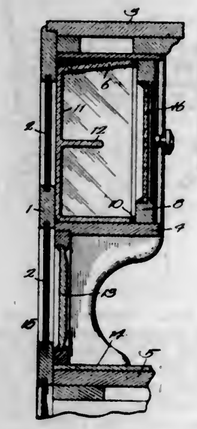
1,569,010. CABINET. ANTHONY P. GRIMES, Two Rivers, Wis., assignor to Hamilton Manufacturing Company, Two Rivers, Wis., a Corporation of Wisconsin. Filed June 27, 1925. Serial No. 39,983. 2 Claims. (Cl. 45—7.)



2. The combination with a cabinet having a sliding drawer; of a horizontal bearing upon a rear portion of a side wall of the drawer; and a rod having an intermediate portion journaled in said bearing, another portion angular to and depending from the first, and an end portion continuing angularly to the plane of said other rod portions and projecting horizontally from the drawer into alinement with a frame portion of the cabinet normally to prevent complete withdrawal of the drawer.

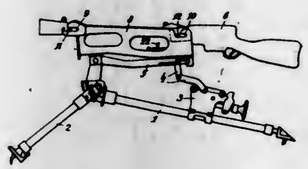
1,569,011. IMPLEMENT ATTACHMENT FOR TRACTORS. CLARENCE E. GILBERT, Aberdeen, S. Dak. Filed Sept. 22, 1924. Serial No. 739,163. 4 Claims. (Cl. 97—232.)

1. An implement attachment of the type described comprising a frame, wheels for supporting the forward ends of said frame, and means at the opposite end of said frame for engagement and support upon an engine of locomotion, a movable implement supporting member carried by said frame, means for elevating and lowering said implement supporting member manually, a drop frame pivotally mounted upon said frame intermediate its length, auxiliary supporting wheels carried by said drop frame and arranged to rest upon the ground when the drop frame is pivoted downwardly, a strut pivotally connected to said drop frame adjacent to its outer end, and a gripping member carried by said strut arranged to engage with said movable implement supporting member, whereby movement of said supporting member may occasion movement of said drop frame to elevate or lower the rearward end of said implement attachment at will.



1,569,012. AUTOMATIC MINE-CAR COUPLER. BENJAMIN E. GILDERSLEEVE, Lynchburg, Va. Filed Oct. 17, 1923. Serial No. 669,158. 1 Claim. (Cl. 213—177.)

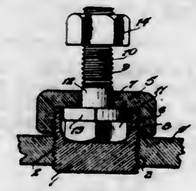
A car coupler including a plate having an opening, a pair of latch plates pivotally mounted on the first plate and having cooperating notches forming an opening registering with the opening of the first plate, springs normally urging the plates into contact opposite said opening of the first plate, a coupling bar having an enlarged head arranged to separate said plates and enter said openings, a lever pivotally supported on the first plate and slidably connected with one of the pivoted plates, a link pivotally carried by the lever and slidably connected with the other pivoted plate, and a guide for the plates and links.



1,569,013. CABINET. HARRY C. GOWRAN, Two Rivers, Wis., assignor to The Hamilton Manufacturing Company, Two Rivers, Wis., a Corporation of Wisconsin. Filed Mar. 22, 1923. Serial No. 626,781. 1 Claim. (Cl. 211—7.)

A cabinet having a door opening of a height and width as great as the height and width of the interior of the cabinet, a door for controlling said opening an open front one piece refractory lining inserted within the cabinet and forming the operative, top, bottom side and rear walls thereof, said lining having its top wall inclined downwardly from its front to its rear and its exterior height and width at the open front end thereof corresponding to said dimensions of the interior of the

cabinet, and rails secured to the top, bottom and side walls of the interior of the cabinet to hold the lining in position and forming a stop to limit closing movement of said door, the outer faces of said rails being substantially flush with the interior faces of the related portions of the refractory lining.

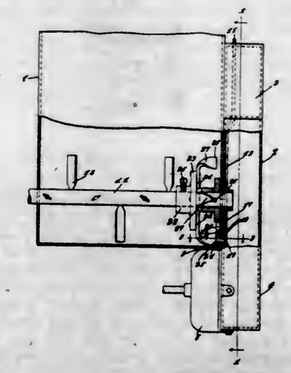


1,569,014. MACHINE-GUN SUPPORT. WERNER CHRISTIAN LASSEN HAUBROE, Copenhagen, Denmark. Filed June 19, 1925. Serial No. 38,178. 3 Claims. (Cl. 89—40.)

1. Improvements in supports for machine guns of the kind by which the latter is resting with two pairs of pins in notches in the side walls of a frame, characterized in that a bolt 27 on the gun is connected with a sliding piece 16 adapted to move back and forth in the frame 7, 8 and being actuated by one or more springs 18, which are compressed by the recoil of the gun and the thereby produced motion of the sliding piece in the frame, and which after the recoil has ceased moves the sliding piece and the gun forward again into normal position

1,569,015. BOILER AND TANK STUD FITTING. THOMAS F. HAYS, North Little Rock, Ark., assignor of one-fourth to James W. Delaney, Little Rock, Ark. Filed Apr. 18, 1923. Serial No. 632,917. 3 Claims. (Cl. 248—20.)

3. A stud fitting comprising a bushing exteriorly threaded to be permanently fitted into a boiler shell or the like and having a socket in its outer end, a cap removably fitted onto the said outer end of the bushing and having a central opening, a threaded stud having its shank fitted through the opening in the cap and provided with a head received within the recess and confined by the cap, and a spring washer upon the shank of the stud between the cap and the head of the stud.

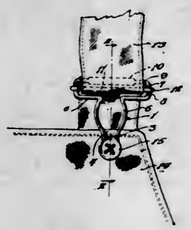


1,569,016. TYPEWRITING MACHINE. WILLIAM F. HELMOND, Hartford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Jan. 17, 1923. Serial No. 613,096. 3 Claims. (Cl. 197—22.)

1. In a typewriting machine, the combination with a platen, of a series of radially arranged type-bars printing at a common point against said platen, a type-bar segment, and a curved fulcrum wire on said segment supporting all of said type-bars, the type-bars being all of equal length, the segment having equally spaced slots to guide said type-bars, said type-bars being arranged in three groups, namely, a middle or main group and two sub-groups at the sides of the main group, the slots for the middle group of type-bars being perpendicular to the segment, the slots for each sub-group of type-bars being skewed relatively to the segment to cause the type-bars of said sub-groups to fan outwardly from each other at their free ends, providing clearance for the types on the bars of said sub-groups.

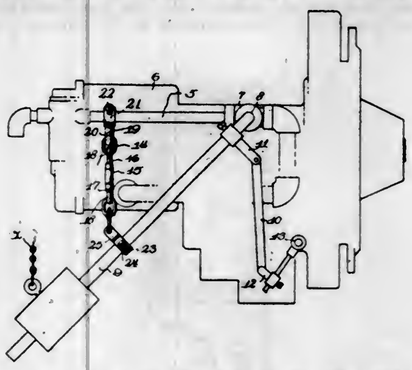
1,569,017. COTTON DUSTER. GRACE P. HOBBS, Winder, Ga., assignor, by direct and mesne assignments, to Warren De Sosa, Atlanta, Ga. Filed Oct. 29, 1923, Serial No. 671,604. Renewed Nov. 21, 1925. 6 Claims. (Cl. 43—148.)

1. The combination with a bulk holder having a side outlet and a suction flue in communication with the outlet, of a rotatable series of spaced strips adjacent the outlet, each of said strips having a laterally extended



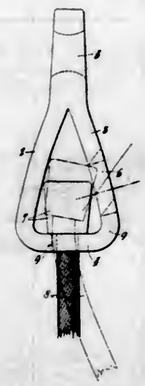
twisted portion constitute a blade, each blade having a straight free edge radially disposed relative to its axis of rotation and having its front or advancing face curved to exert a wiping deflecting action toward the outlet of material in the path of the blades.

1,569,018. ATTACHMENT PLUG. CHARLES L. HOPKINS, River Forest, and CHESTER E. WARNER, Berwyn, Ill., assignors to Benjamin Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 12, 1922. Serial No. 528,647. 14 Claims. (Cl. 173—343.)



4. An attachment plug, comprising a threaded shell contact, and an extension handle having a universal joint connection with respect to said threaded shell contact, said universal joint connection comprising a ring coaxial with said threaded shell contact and pivotally mounted with respect thereto, and a loop handle pivotally connected with said pivot ring.

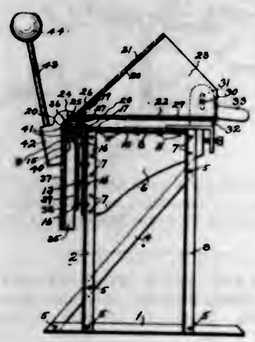
1,569,019. COMBINED SLIDE AND BUTTON LOOP FOR OVERALLS. WILLIAM M. HUESEMAN, Dilisboro, Ind. Filed June 14, 1924. Serial No. 720,022. 1 Claim. (Cl. 24—245.)



An article of the class described comprising a body portion formed from a strand of wire bent intermediate its length to provide a U-shaped button receiving loop and having the upwardly extending arms of said loop bent outwardly and then upwardly and inwardly to provide a strap receiving eye extending transversely of said loop and beyond opposite sides thereof, a sleeve fitted upon the inturned end portions of said wire strand to reinforce the upper portion of said eye and retain the said inturned end portions in alinement with each other, and a cross bar extending longitudinally of said eye and having its ends formed into eyes loosely mounted upon the portions of said wire strand at the ends of the eye and mounting the cross bar for vertical sliding movement.

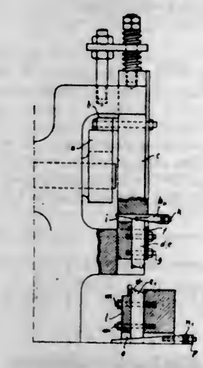
1,569,020. CONTROL FOR AN OIL-BURNER FEED. ALFRED W. HUTCHISON, Chicago, Ill. Filed Feb. 5, 1925. Serial No. 6,995. 2 Claims. (Cl. 137—139.)

1. In an oil burner structure a fuel feed pipe, a valve therein, a regulator lever extending from said valve and movable in a vertical plane alongside said pipe, and means connecting said pipe and lever at a point remote from said valve, said means consisting of a chain connected at opposite ends respectively to said pipe and said lever, and a device for adjusting the length of said chain whereby said lever is supported in divers lowered positions.



1,569,021. WIRE-ROPE CONNECTION. EMIL JORGENSEN, Stillwater, British Columbia, Canada. Filed Aug. 18, 1924. Serial No. 732,742. 3 Claims. (Cl. 24—123.)

1. A means for releasably connecting a wire rope to another rope, said means comprising the combination with a rope having a thimbled enlargement at its end, of a substantially triangular member adapted to be connected at its apex to said other rope, said member having an aperture in one of its sides adapted to admit said thimbled enlargement when presented endwise, and a slot extending from the aperture to the centre of the base of the triangular member the width of the slot being adapted to pass said first mentioned rope but to retain the enlargement.



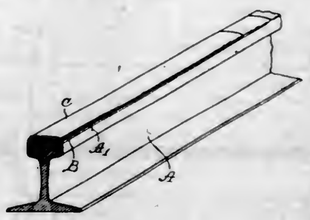
1,569,022. BENDING BRAKE. THOMAS J. KELLEHER, Chicago, Ill. Filed June 9, 1924. Serial No. 718,782. 3 Claims. (Cl. 153—16.)

1. In a bending brake, standards, heads and a bed, all rigidly secured together, said bed comprising a horizontal member and a vertical plate, the upper side of said plate curved, and the edge of said curved side joined to said horizontal member adjacent to the forward edge thereof by metal rods which are welded to

said horizontal member and to said edge of the curved side of said vertical member, in combination with a bar forming the lower member of the jaw of the brake, and metal rods welded to said bar and to said horizontal member, to rigidly join the same.

1,569,023. SAW-SETTING MACHINE. FRITZ KOCH and RICHARD POHLMANN, Cronenberg, Germany. Filed Feb. 20, 1925. Serial No. 10,653. 2 Claims. (Cl. 76—66.)

1. A saw setting machine comprising in combination a vertical frame, a slide member arranged therein, means for reciprocating the slide member, a punch carried by the slide member consisting of two removable parts, a die shoe arranged below the slide member, a die consisting of two removable parts disposed within the die shoe characterized in that by the operation of the punch upon a saw interposed between it and the die adjacent teeth are displaced to the left and right by a single passage of the saw through the machine.

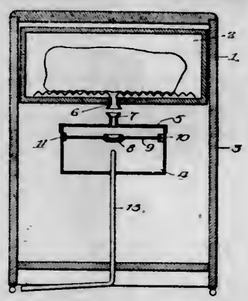


1,569,024. BLOWPIPE. LAURENCE OLIPHANT, Trenton, N. J., assignor to Oxweld Acetylene Company, a Corporation of West Virginia. Filed Feb. 8, 1922. Serial No. 533,938. 2 Claims. (Cl. 158—27.4.)

1. In a blowpipe, the combination of a head having a gas passage comprising a socket and a throat, an injector nozzle in said socket having a tapering passage therethrough arranged to discharge into said throat and providing a chamber adjacent the entrance of said throat, said head having a combustible gas duct opening into said chamber and an oxygen duct opening into said

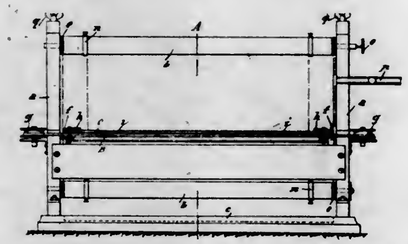
socket behind said nozzle, a tapering needle valve disposed in said nozzle passage and having its seating surface more abruptly inclined than the cooperating seat in said nozzle passage, and a nut having threads coupling it to said head and to said valve.

1,569,025. METHOD OF JOINING METALS BY FUSION WELDING. HARRY R. PENNINGTON, Chicago, Ill., assignor to C. H. Hollup Corporation, a Corporation of Illinois. Filed Apr. 18, 1922. Serial No. 555,377. 7 Claims. (Cl. 78—93.)



1. A process of welding two metals, one of which must be rapidly cooled after welding and the other of which must be slowly cooled after welding, consisting in first welding to one of said metals an interposed body of metal the physical constituency of which is not impaired by either slow or rapid cooling, then cooling said welded metals at the rate required by said main metal, next welding to said interposed metal the other of said first-named metals, and then cooling the last-named metal at its proper rate.

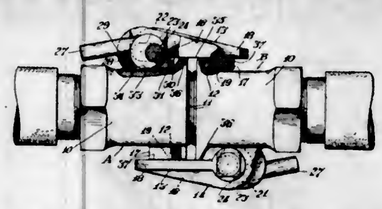
1,569,026. REFRIGERATING DEVICE. CHARLES A. PETERSON, Chicago, Ill. Filed Apr. 14, 1919. Serial No. 289,867. 2 Claims. (Cl. 62—55.)



1. A refrigerating device comprising a receptacle, an ice chamber in said receptacle for containing the ice to be used for cooling purposes, a cooling chamber in the receptacle, a tank beneath said ice chamber and located in said cooling chamber, said tank having all its sides exposed so as to act as cooling surfaces for said cooling chamber, a communication from the bottom of said ice chamber to said tank through which the water produced by the gradual melting of the ice passes into said tank, a liquid receiver movably mounted in said tank into which said water is received, said liquid receiver being comparatively small so that the small quantity of water which it holds will remain at a comparatively low temperature so as to act in cooling the cooling chamber,

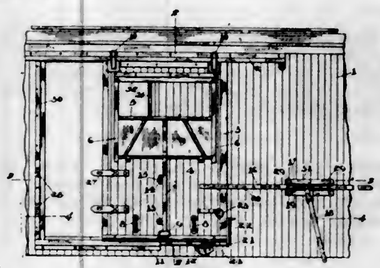
means for intermittently and automatically discharging the water from said liquid receiver into said tank where it is held for a predetermined time to also act to cool

said cooling chamber, and means for automatically and intermittently discharging the accumulated water from said tank after the cooling effect thereof has been utilized to cool said cooling chamber.



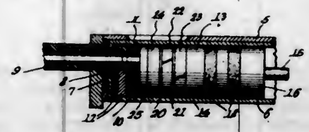
1,569,027. METHOD AND APPARATUS FOR THE ACCURATE REPRODUCTION OF PAINTINGS, DRAWINGS, OR PRINTS OF ALL KINDS WITH COLORED ELEMENTS OF ANY DESCRIPTION. IGINO PICCIONI, Tivoli, Italy. Filed Dec. 9, 1921. Serial No. 521,247. 1 Claim. (Cl. 41—1.)

The method of reproducing a picture, drawing or the like, consisting in cutting the original or pattern in narrow strips each containing a series of small patches of the pattern; arranging said patch strips together end to end to form a long strip in the same order as that in which they were cut, arranging a portion of such long strip across a fabric on which the copy is to be made: reproducing on the copy fabric the patches displayed by such portion of the patch strip, moving such copy fabric in a direction at an angle to said patch strip and a distance corresponding to the width of the latter, arranging the next consecutive portion of such patch strip across said copy fabric, reproducing the patches of such consecutive portion of the strip on the copy fabric in consecutive order to the first patches reproduced thereon and continuing such operations until all the consecutive portions of the patch strip have been thus reproduced, and thereby forming a copy of the original.



1,569,028. COUPLER. EDWARD C. POST, Chicago, Ill., assignor to Vapor Car Heating Company, Inc., Chicago, Ill., a Corporation of Illinois. Original application filed Mar. 9, 1922, Serial No. 542,297. Divided and this application filed Apr. 18, 1924. Serial No. 707,379. 9 Claims. (Cl. 285—65.)

2. For use as an element of a hose coupling, a coupler head provided with a forwardly extending arm, a member slidable on said arm and adapted to be engaged with a mating coupler by a lateral movement of said couplers,

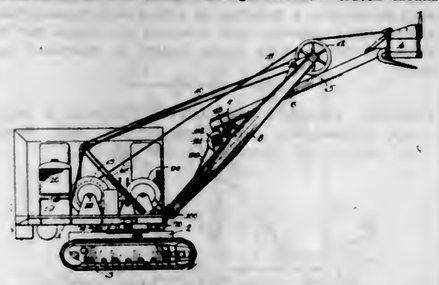


and means comprising a cam supported to rotate on an axis transversely of the length of said coupler to actuate said sliding member to draw the couplers together.

1,569,029. GRAIN DOOR FOR RAILWAY CARS. HENRY L. POWER, Brandon, Manitoba, Canada. Filed Apr. 21, 1922. Serial No. 555,910. 2 Claims. (Cl. 268—6.)

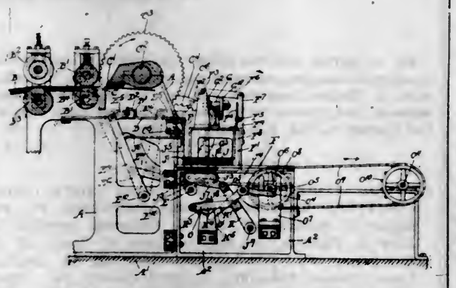
1. A grain door for railway cars suitably supported to slide transversely of the doorway; a bar secured to one end of the door, having a series of longitudinally arranged holes formed therein; a guide on the side of the car, through which the bar passes, said guide having a longitudinal slot exposing the face of said bar; a lever pivoted on the side of the car; and a pawl loosely pivoted on one end of the lever, said pawl being guided by the sides of said slot and adapted to engage the holes in the bar.

1,569,030. AIR GUN OR RIFLE PLUNGER. MYRON R. RANDALL, Waupaca, Wis. Filed Mar. 18, 1924. Serial No. 700,142. 4 Claims. (Cl. 74—109.)



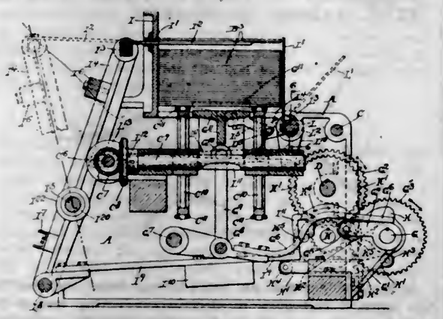
1. An air gun or rifle plunger, a solid hard fibre ring mounted thereon to serve as guide means, a split resilient metallic packing ring carried by the plunger at the rear of the solid ring, and a split hard fibre packing ring carried by the plunger at the rear of the metallic ring.

1,569,031. POWER SHOVEL. JOHN D. RAUCH, Lima, Ohio, assignor to The Ohio Steam Shovel Company, Lima, Ohio, a Corporation of Ohio. Filed Mar. 2, 1925. Serial No. 12,476. 11 Claims. (Cl. 214—135.)



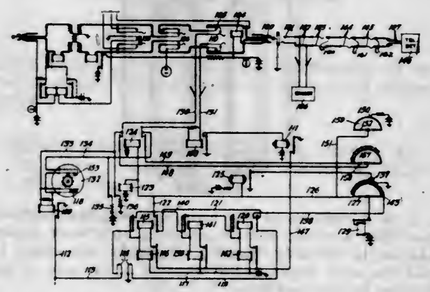
1. In a device of the class described, a frame having a boom and a dipper on the forward end thereof, a motor at the rear end of said frame, flexible cable controlling

means for said dipper including a drum mounted on a transverse axis in front of said motor and operatively connected to the latter through friction clutch means



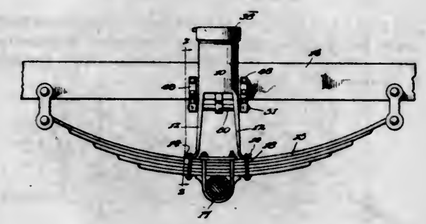
rotatable on an axis in front of said drum, gear reduction mechanism interposed between said clutch and said drum, and brake means associated with said friction clutch means.

1,569,032. SHINGLE CUTTER. HUGO REICHEL, Chicago, Ill. Filed Aug. 24, 1923. Serial No. 659,055. 23 Claims. (Cl. 93—93.)



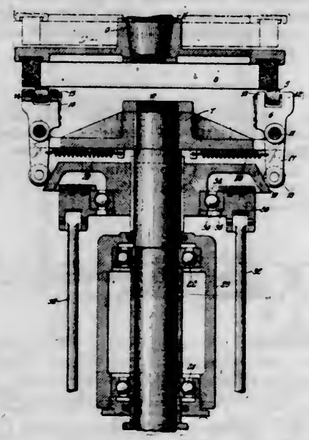
8. A shingle stacker comprising in part a feed table adapted to receive in a horizontal position the successive shingle sections as they are delivered, and a shingle feed element adapted to engage the edge of each shingle and discharge it therefrom before the succeeding shingle is deposited thereupon.

1,569,033. SHINGLE STACKER. HUGO REICHEL, Chicago, Ill. Filed Nov. 28, 1924. Serial No. 752,528. 39 Claims. (Cl. 214—6.)



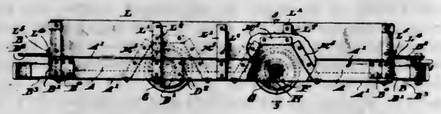
1. A stacker for relatively thin articles, comprising a vertical reciprocating receiving table and a conveyor, and means for delivering articles to said receiving table in timed succession, and means for delivering the accumulation of such articles upon said table to said conveyor when a predetermined number of articles has been received thereupon, comprising in part means for downwardly moving the receiving table below the level of the conveyor, and for raising it again, after the conveyor has removed the accumulated articles thereby deposited thereon.

1,569,034. MACHINE-SWITCHING TELEPHONE-EXCHANGE SYSTEM. WILLIAM A. RHODES, Kansas City, Mo., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Apr. 14, 1922. Serial No. 552,627. 9 Claims. (Cl. 179—27.)



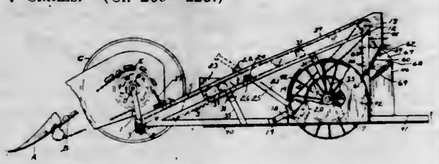
1. In a telephone system, telephone lines, means including automatic switching apparatus for interconnecting the same, a dial, means for associating said dial with said switching apparatus, impulse sending means automatically actuated by the variable operation of said dial and a part of the digits of the desired number for invariably transmitting the same code of impulses to said automatic switching apparatus, and means for transferring the control of said automatic switching apparatus from said impulse sending means to the impulse contacts of the dial for transmitting sets of impulses to said automatic switching apparatus corresponding to the remaining digits dialed.

1,569,035. PNEUMATIC SHOCK ABSORBER. ABSALOM W. RICKS, Rexburg, Idaho. Filed June 23, 1924. Serial No. 721,771. 12 Claims. (Cl. 188—88.)



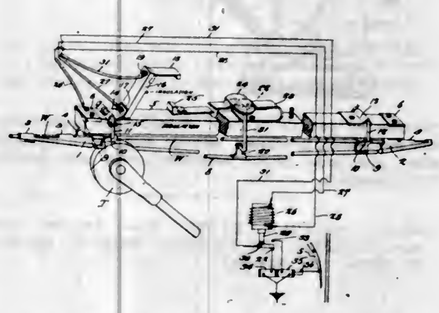
1. A shock absorber including an air cylinder having a bottom wall, a cap closing the cylinder, means for connecting said cylinder with a vehicle axle, the bottom wall of the cylinder and said cap being provided with air inlet passages, spring closed inwardly opening air inlet valves at the inner ends of the passages, a piston reciprocable in the cylinder and having a piston rod slidable through said bottom wall, means for connecting the piston rod with a vehicle frame, and air filtering means mounted in said passages.

1,569,036. GRINDING MACHINE. ROBERT F. RUNGE, Forest Hills, N. Y. Filed Sept. 14, 1923. Serial No. 662,659. 12 Claims. (Cl. 51—132.)



1. In a machine of the class specified, the combination with a rotary abrasive member, of a work holder adapted to rotatably support a workpiece, and means to rock the work holder in the direction of the axis of the rotation of the workpiece.

1,569,037. RAILWAY CAR. HUGH W. SANFORD, Knoxville, Tenn. Filed Mar. 5, 1925. Serial No. 13,260. 32 Claims. (Cl. 105—364.)

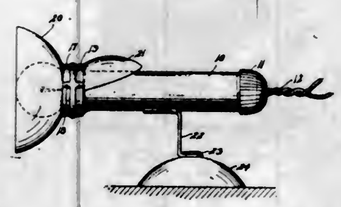


2. In a railway car of the kind described, the combination with side sills and an end structure, of a bottom plate and an upright bar supported by the end structure and having its lower end extending through and secured to the bottom plate for supporting the latter, substantially as described.

1,569,038. POTATO-HARVESTER ATTACHMENT. ARNO SCHMECHEL and GEORGE SCHUBERT, Thiensville, Wis. Filed Dec. 6, 1924. Serial No. 754,352. 7 Claims. (Cl. 209—125.)

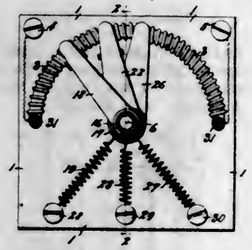
1. In a device of the character described, the combination with a wheeled frame having a support adapted to sustain receptacles to be filled and an opening leading to the ground at one side thereof, of a conveyor operable to carry material in the direction of said support, and a chute arranged to receive material from said conveyor whereby to be adapted to fill a container carried by said support, said chute comprising a hollow deflector provided with enclosing walls and adjustable with reference to the path of material delivered by said conveyor and adapted in one position of adjustment to receive such material therethrough and in another position to oppose the outside surface of one of its walls to such material in a direction to deflect such material into said opening, whereby said conveyor and chute may be employed for handling either desired or undesired material.

1,569,039. TROLLEY CONTACTOR. RICHARD R. SCOGGAN, Jeffersonville, Ind. Filed Mar. 13, 1923. Serial No. 624,743. 13 Claims. (Cl. 246—252.)



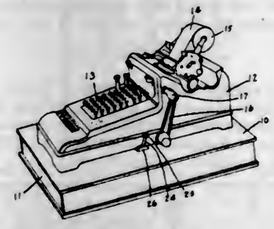
10. A device of the class described including an elongated insulating member for attachment to a trolley wire, a flexible insulated runway mounted below said member, and means for movably attaching both ends of the runway to the insulating member.

1,569,040. CORROSIVE-PREVENTING LIQUID COMPOSITION. CHESTER A. SEAGE, Harrisburg, Pa., assignor of one-fifth to John G. Hopwood, one-fifth to John M. Fletcher, one-fifth to James S. Carey, all of Harrisburg, Pa., and one-fifth to Frank M. Hunter, Lower Paxton Township, Dauphin County, Pa. Filed Oct. 31, 1924. Serial No. 747,136. 2 Claims. (Cl. 134—1.)



1. An adhesive liquid composition adapted to form a coating for battery terminals, wires and all corrodible battery parts comprising one to three pounds of ammonium stearate, three pounds of naphthalene powder, one to three quarts of ammonium hydroxide, and eight to ten gallons of water.

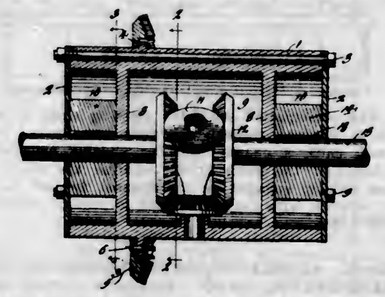
1,569,041. TROUBLE LIGHT. WILLIAM C. SHAY, Jamestown, N. Y. Filed Mar. 2, 1925. Serial No. 12,767. 4 Claims. (Cl. 240—8.18.)



1. A trouble light, an incandescent lamp included in the forward end portion, electric conducting means included in the opposite end portion thereof, attaching means included upon the lower side of the lamp casing, and a reversible reflecting means included upon the forward end portion of the lamp casing.

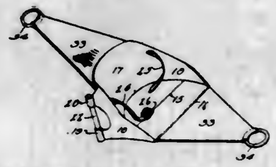
1,569,042. POTENTIOMETER. DAVID HARRISON SHERIFF, Jr., Kansas City, Mo. Filed Mar. 5, 1923. Serial No. 622,936. 2 Claims. (Cl. 201—55.)

2. In a multiple potentiometer, a base, a resistance element associated with the base, a plurality of concentric spindles with operating knobs and contact fingers, the latter engaging said resistance element, terminal posts to which the ends of said resistance element are connected, and terminal posts to which said fingers are respectively connected.



1,569,043. COMBINATION MACHINE STAND AND DRAWER. JOSEPH R. SHOWERS, Shelbyville, Ind., assignor, by direct and mesne assignments, to Indiana Cash Drawer Company, Shelbyville, Ind., a Corporation of Indiana. Filed Sept. 25, 1920. Serial No. 412,694. 5 Claims. (Cl. 235—22.)

2. A cabinet unit for supporting a crank handle operated register, said unit comprising a money-drawer and latching means therefor both within the cabinet, in combination with a readily removable plunger projecting through an opening in the top of the cabinet, said plunger arranged within the path of the crank handle to operate said means during the last part of the downward movement of the handle.

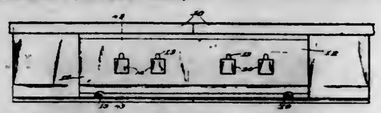


1,569,044. POSITIVE DRIVE. GLENN D. SMITH and WILBUR F. EARHART, Pontiac, Mich. Filed Aug. 23, 1924. Serial No. 733,822. 3 Claims. (Cl. 74—100.)

1. In a differential mechanism of the class described, a differential housing, a gear on the exterior of the differential housing, a pair of partitions disposed in spaced relation to each other within the housing to form a central compartment and two end compartments, axles extending into the housing and terminating within the central compartment, differential gears on the inner end of the axles, a differential spider mechanism within the central compartment and mounted on the housing and in cooperative association with the differential gears, a block keyed to each axle and disposed within the corresponding end compartments and provided with a pair of oppositely disposed cam surfaces, and rollers on the cam surfaces adapted to be wedged

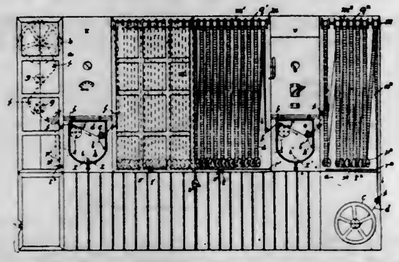
therebetween and the housing upon the spinning of the associated axle all in the manner and for the purpose specified.

1,569,045. CHILD CARRIER. ELLA H. SOMMER, Sioux City, Iowa. Filed Apr. 9, 1925. Serial No. 21,830. 1 Claim. (Cl. 155—67.)



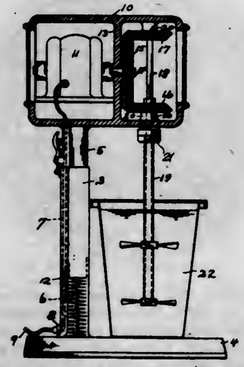
In a child's seat, a seat member, a back and sides formed of a sheet of fabric secured to the edge of the seat member on three sides thereof, handles secured to the upper edges of the sides, and fastening devices on the back and on the bottom member to which may be secured hammock extensions.

1,569,046. RESILIENT WHEEL. JOHN A. STAHLE, Boston, Mass., assignor to Stahle Mechanical Tire Co. Ltd., Boston, Mass., a Corporation of Maine. Filed Feb. 1, 1922, Serial No. 533,447. Renewed June 2, 1925. 6 Claims. (Cl. 152—28.)



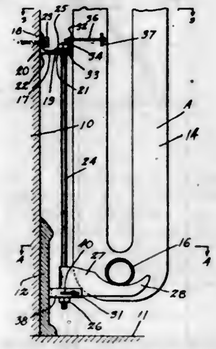
1. In a wheel, the combination with an inner hub member, of an outer tire-receiving member, a plurality of load-transmitting members pivoted at their inner ends to the hub member, a plurality of levers pivoted to the outer member, springs acting on said levers, a link pivotally connecting each load-transmitting member to the outer tire-receiving member and another link connecting each load-transmitting member to one of the levers.

1,569,047. RAIL JOINT. SANDFORD FELIX STANTON, Lockland, Ohio. Filed Feb. 4, 1925. Serial No. 6,738. 3 Claims. (Cl. 238—251.)



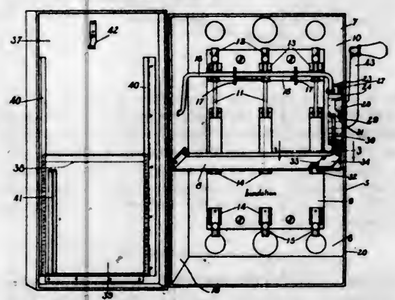
1. The combination with the meeting ends of rails, of bolts disposed through the rails and having heads on both ends, a channel member slidably engaged on the heads of the bolts at one side of the rails, and means slidably engaged on the channel member in covering relation with respect thereto to prevent movement of the latter.

1,569,048. APPARATUS FOR REGENERATING CINEMATOGRAPHIC FILMS. FRIEDRICH JOHANN JACOB STOCK, Munich, Germany. Original application filed Apr. 24, 1923, Serial No. 634,249. Divided and this application filed Oct. 4, 1924. Serial No. 741,781. 3 Claims. (Cl. 91—45.)



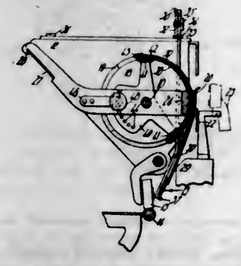
1. An apparatus for regenerating worn film bands comprising in combination a casing having two compartments for the treatment of the emulsion side and of the base side respectively of the film, a drying chamber after the first compartment and a vapor chamber after the second compartment, positively moved conveyers within each of the said chambers to convey the film band in a number of worm-like advancing independent loops, and means to positively and automatically advance the film through the apparatus.

1,569,049. DRINK MIXER. ALBERT STUFFLEBEAM, Paris, Ark. Filed Aug. 11, 1924. Serial No. 731,382. 1 Claim. (Cl. 259—132.)



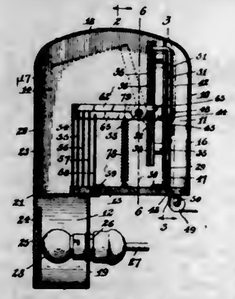
In a drink mixer, a base for supporting the receptacle in which the liquid is to be mixed, a telescopic standard mounted thereon, an elongated casing mounted thereon, said casing being divided by a partition wall having a bearing, a motor on one side of said partition, bearings on the upper and lower side of the casing and on the other side of the partition, concentric shafts journaled in said bearings, agitator blades upon said shafts, and means to drive said shafts in opposite directions simultaneously.

1,569,050. RADIATOR HANGER. HENRY A. SWARTZ, Jr., Minneapolis, Minn., assignor to Thomas O'Connell, Sr., St. Paul, Minn. Filed July 14, 1923. Serial No. 651,620. 4 Claims. (Cl. 248—17.)



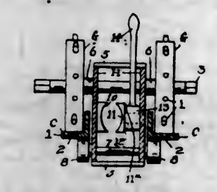
1. A radiator hanger comprising an angular support, having two legs of unequal length, a bolt passing through one of said legs for clamping the same against a wall, a rod hung from the other of said legs, a radiator supported at its lower portion from said rod, a separate clip having two arms extending angularly with respect to each other positioned upon said support and held in place by said rod and a bolt slidably connected to said clip for holding the upper portion of the radiator in place.

1,569,051. SAFETY SWITCH BOX. DAVID T. WADSWORTH, Cold Springs, Ky., assignor to The Wadsworth Electric Manufacturing Company, Covington, Ky., a Corporation of Kentucky. Filed Feb. 11, 1925. Serial No. 8,534. 5 Claims. (Cl. 200—50.)



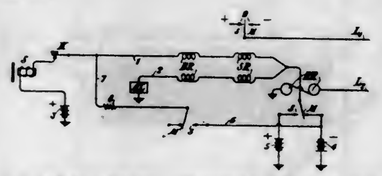
1. In a device of the class described the combination with a switch box of an apertured interior wall in the box for providing a pair of compartments therein, a cover member forming a closure for the box and having an aperture therein for providing access to one of the compartments, a panel slidably mounted upon the cover member for closing the aperture therein, an elongated rib carried by the panel and adapted to pass through the aperture in the interior wall when the panel is moved along its slidable mounting, and means mounted upon the interior wall and contained within the second compartment for closing the aperture in said interior wall.

1,569,052. TYPEWRITING MACHINE. JOHN WALDHEIM, Elizabeth, N. J., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed June 17, 1925. Serial No. 37,647. 6 Claims. (Cl. 197—135.)



1. The combination with a typewriting machine, a carriage, a platen-frame borne by said carriage, a platen-shaft and a line-spacing mechanism therefor, of a stationary platen-strip mounted on said platen-shaft, and means controlled by said line-spacing mechanism for line-spacing a stiff work-sheet in front of the platen-strip.

1,569,053. AUTOMOBILE SIGNAL. FREDERICK M. WALZ and CHARLES J. WALZ, Buffalo, N. Y. Filed Apr. 28, 1924. Serial No. 709,462. 18 Claims. (Cl. 116—45.)



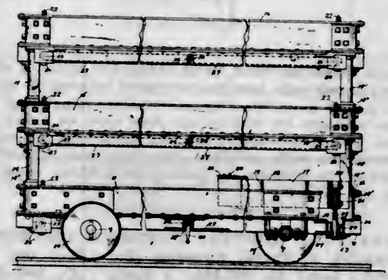
1. An automobile signal having a plurality of signaling elements arranged one in front of another, a reciprocating actuating element to successively engage said signaling elements, and a single manipulating element for actuating said reciprocating actuating element for selectively displaying any of said signaling elements.

1,569,054. RODDING MACHINE. WILLIAM G. WARNER, Pittsburgh, Pa. Filed Oct. 13, 1922. Serial No. 594,417. 10 Claims. (Cl. 175—376.)

1. For use in a manhole for inserting push rods into or withdrawing them from a conduit communicating with said manhole, a rodding machine characterized by the combination of a portable carriage adapted to be moved in said manhole in alinement with said conduit, means for moving said carriage, and means mounted on said carriage for engaging the duck rods for pushing or pulling the same, substantially as described.

1,569,055. TELEGRAPH CIRCUIT. ALLAN WEAVER, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Jan. 19, 1924. Serial No. 687,362. 3 Claims. (Cl. 178—2.)

1. A telegraph system comprising a receiving relay, an armature therefore, marking and spacing contacts associated with said armature, marking and spacing batteries associated with said contacts, a branched loop circuit connected to said armature, windings in each branch of said loop circuit of a polar break relay and of a polar sending relay, an armature for said break relay, marking and spacing contacts for said break relay, means for connecting the armature of said break relay to the upper branch of said loop circuit, and means for connecting the spacing contact of said break relay to the marking battery of said receiving relay.

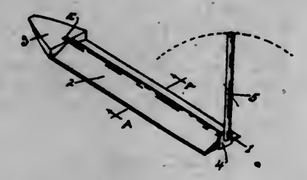


1,569,056. COLORED PATENT LEATHER AND PROCESS OF MAKING THE SAME. WILLIAM C. WELCH, Newton, Mass., assignor to Snyder Welch Process Corporation, Boston, Mass., a Corporation of Massachusetts. Filed July 8, 1925. Serial No. 42,173. 18 Claims. (Cl. 91—71.)

1. In a method of making colored patent leather, the steps comprising applying to the leather successive coatings of japanner's varnish to form patent leather, and applying and firmly affixing in the surface of one of said coatings a thin layer of powdered color to impart to the patent leather the general appearance of a continuous sheet of the color.

10. As a new article of manufacture, a colored patent leather comprising ordinary patent leather having a thin layer of powdered color firmly affixed on the surface of the coating and a transparent protective layer covering the color layer.

1,569,057. CONCRETE-MOLDING MACHINE. ARTHUR WHITE and JACOB J. MOHR, Sheboygan Falls, Wis. Filed May 1, 1925. Serial No. 27,191. 12 Claims. (Cl. 25—121.)



1. A molding machine, comprising a frame, a plurality of mold and core members removably mounted thereon, a second frame removably mounted on the first frame, a plurality of mold and core members removably mounted on the second frame, and means on the frames for elevating the mold and core members.

1,569,058. SHEET BINDER. GEORGE P. WIGGINTON, Kalamazoo, Mich., assignor to Kalamazoo Loose Leaf Binder Co., Kalamazoo, Mich. Filed May 28, 1925. Serial No. 33,434. 8 Claims. (Cl. 129—1.)

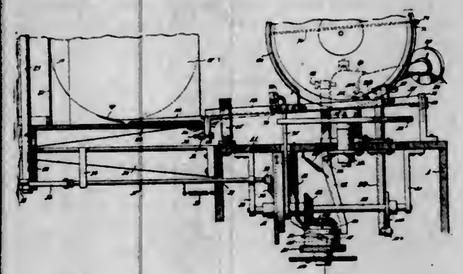
8. In a binder, the combination of sheets, covers, post bars provided with sheet engaging posts, said covers and post bars being provided with co-engaging members whereby the bars are removably secured within the covers, and non-releasable means for permanently connecting said bars.

1,569,059. CRATE-LID REMOVER. JOHN R. WOOD, Wichita, and DAVID C. WOOD, Liberal, Kans. Filed June 6, 1925. Serial No. 35,419. 3 Claims. (Cl. 254—21.)

1. In a crate lid remover, a bar having a pointed nose on one end, a blade trunnioned longitudinally on said bar, a lever integral with said blade for reciprocating the latter, for the purpose shown and described.

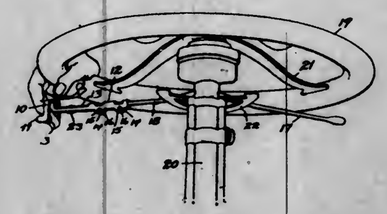
1,569,060. TRACK HANGER. WILLIAM F. WRIGHT, Lisbon, Ohio. Filed Aug. 28, 1924, Serial No. 734,711. Renewed Dec. 2, 1925. 9 Claims. (Cl. 104—111.)

4. A hanger including strips having bolt receiving openings, opposed angle members interposed between the strips and having beam engaging jaws, means connecting the angle members for binding the jaws upon an interposed beam, and means connecting the strips and extending between the angle members and under said connecting means of the members for holding the members assembled with the strips.



1,569,061. SANITARY TOOTHPICK DISPENSER. CHARLES L. YOUNG, Richmond, Ind. Filed Oct. 29, 1923. Serial No. 671,585. 1 Claim. (Cl. 206—21.)

A tooth pick holder and dispenser, comprising in combination, a container having an open upper end and adapted to contain tooth picks standing on end therein, a cap for the open end of the contaner, said cap being dome-shaped with an exit aperture formed through the center thereof, a pair of ears secured to the surface of the cap and near the periphery thereof, a pivot connecting said ears, a closure disc having a cavity in its lower face, a pad secured in said cavity, an arm rigidly secured to the edge of the disc with its opposite end located

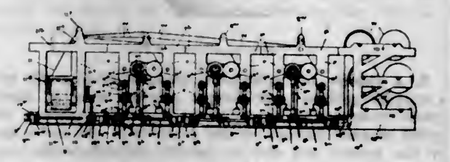


between said ears and rotatably mounted on said pivot, a lug forming an outward projection of said arm to prevent the arm from turning outward beyond vertical position, said pad being adapted to rest on the surface of the cap and close said aperture, all substantially as set forth.

1,569,062. RECORD-MANIPULATING MECHANISM FOR PHONOGRAPHS. CORBAN H. ZILME, Detroit, Mich. Filed Jan. 26, 1924. Serial No. 688,692. 11 Claims. (Cl. 274—10.)

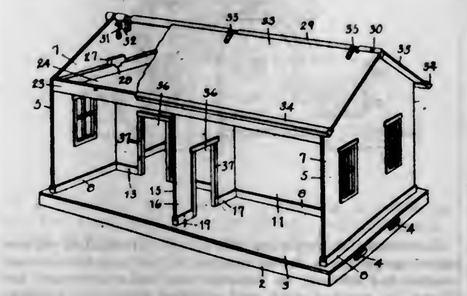
11. Means for manipulating a record relative to a phonograph having a record holder and an adjustable tone arm, said means comprising a tiltable and rockable trough adapted to receive a record on edge and lay said record on said holder, means connecting said trough to said tone arm so that said tone arm may be adjusted in timed relation to the manipulation of the record, and means in said phonograph adapted for tilting and rocking said trough in timed relation to the operation of said phonograph.

1,569,063. AUTOMOBILE CONTROL-LEVER ATTACHMENT. RALPH A. ZOLLA, Revere, Mass. Filed July 13, 1922. Serial No. 574,849. 6 Claims. (Cl. 74—39.)



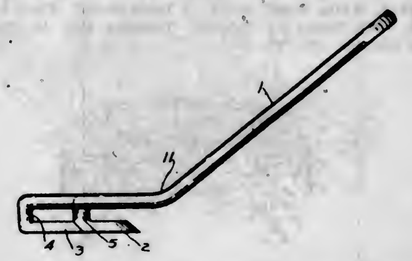
1. An attachment of the character described having rounded finger forms adapted to be positioned near the rim of a steering wheel so as to be actuated by the fingers of the operator without removing the hand from said rim, and pair of emergency shoulders integral therewith.

1,569,064. WEB-TREATING MACHINE. CHARLES E. ARCHBALD, New Brunswick, N. J. Filed July 9, 1923. Serial No. 650,230. 5 Claims. (Cl. 271—2.1.)



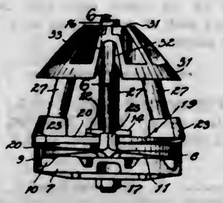
1. A web controlling device for web-treating machines comprising a flexible member, means for bowing it and means supporting the two ends of the member for independent universal adjustment.

1,569,065. WEB-PRINTING PRESS. HENRY F. BECHMAN, Battle Creek, Mich., assignor to Duplex Printing Press Company, Battle Creek, Mich., a Corporation of Michigan. Filed Jan. 17, 1925. Serial No. 3,163. 13 Claims. (Cl. 270—5.)



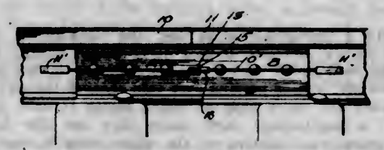
1. In a printing press, a plurality of similar printing units and a folder unit; each of said units having a similar base frame whereby the said units are interchangeable in position and may be arranged in any desired relation.

1,569,066. KNOCKDOWN TOY BUILDING. JOHN W. BEIGER, Ludington, Mich., assignor to The Carrom Company, Ludington, Mich. Filed Apr. 4, 1925. Serial No. 20,672. 10 Claims. (Cl. 46—37.)



2. In a toy of the class described, the combination of a base, end walls having upwardly tapered upper edges with notches in the apex thereof and longitudinal and transverse partition walls, a ceiling member disposed between said end walls above said partitions, said end walls having supporting blocks for said ceiling member and centrally disposed positioning blocks engaging the top of said ceiling member, said ceiling member being notched to receive said positioning blocks, downwardly projecting base engaging pins on said walls, the pins on said end walls being headed, said base having key-hole slots therein coacting with said headed pins, said longitudinal partition wall constituting locking means for said end walls, said transverse partition walls having pins engaging said ceiling member, a roof comprising a center rod notched to engage said notches in said end walls and constituting a tie member therefor and roof members hinged to said rod, and coacting hooks and eyes on said rod and end walls whereby the room is detachably secured in position.

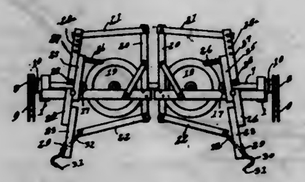
1,569,067. BRICKLAYER'S JOINTER. CHARLES BELKNAP, Burlington, Wash. Filed Apr. 21, 1925. Serial No. 24,718. 3 Claims. (Cl. 72—188.)



1. In a tool of the class described two rectangular shaped shoes arranged so that one follows the other, each of said shoes having beveled toes and one of said toes being curved on one corner and the other on the opposite corner, a handle for supporting the said shoes and means on said handle for limiting the distance the said shoes may extend into a groove or the like.

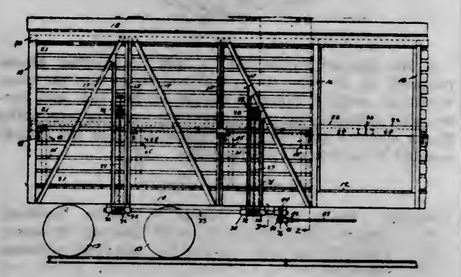
1,569,068. EARTH ANCHOR. JASPER BLACKBURN, Webster Groves, Mo. Filed June 23, 1924. Serial No. 721,929. 5 Claims. (Cl. 189—92.)

5. An anchor comprising a base, expanding blades mounted on the base, an anchor rod secured to the base, a conical member mounted on the anchor rod, and connections between the conical member and the expanding blades whereby said blades are expanded when the conical member is moved toward the base.



1,569,069. RAIL BOND. JAMES F. BROWN, Lookout, Ky., assignor of one-half to J. E. Belcher, Lookout, Ky. Filed May 2, 1922. Serial No. 558,008. 1 Claim. (Cl. 173—262.)

As an article of manufacture, a rail bond comprising a pair of conducting cables, one end of each of the cables having an elongated angular block formed with a laterally extending lug, the other end of one of the cables having a cylindrical body secured thereto and extending longitudinally therefrom, said body having a

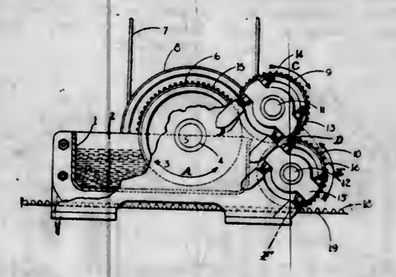


tapered bore extending inwardly from its outer end and a laterally extending opening communicating with the bore, the other end of the other cable having a plug secured thereon, the external contour of which is in correspondence with said tapered bore.

1,569,070. AUTOMATIC BLOCKING HOE. JESSE A. CAIN, Bend, Oreg., assignor to Beet Machinery Company, Walla Walla, Wash., a Partnership. Filed Dec. 1, 1921, Serial No. 519,068. Renewed Mar. 16, 1925. 2 Claims. (Cl. 97—13.)

1. In a cotton chopper, a frame, driving wheels attached to said frame, a line shaft mounted on the front end of said frame, means to drive the line shaft from the driving wheels, an operating mechanism consisting of a frame hingedly mounted on and extending rearward from the line shaft, and having a main shaft journalled in the frame carrying a fly wheel, and terminating forward of the frame in a bevel pinion, a counter shaft journalled in the frame and terminating rearwardly in a crank, and eccentric gears mounted on said main and counter shaft in operable contact, a bevel gear mounted on the line shaft and positioned in operable contact with said bevel pinion, a yielding hoe lever attached to said crank and carrying a hoe at its lower end, and means to raise or lower the rear end of said frame in a vertical plane about said line shaft.

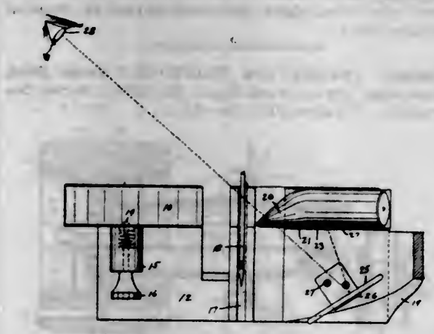
1,569,071. CONVERTIBLE STOCK CAR. RAY C. CHISAM, The Dalles, Oreg. Filed Mar. 25, 1925. Serial No. 18,094. 2 Claims. (Cl. 105—370.)



1. In a convertible stock car, the combination of a stock car; a centrally divided upper deck normally resting on said lower deck; sheaves mounted in the sides of said car; chains passing over said sheaves through the car sides the inner ends of which fasten to said upper deck; a longitudinal shaft under each car side frame and under each section of the upper deck having the outer end of said chains wound thereon; a worm wheel on each of said longitudinal shafts; a transverse shaft under said car; worms on said transverse shaft meshing with said worm wheel; reversible ratchets on said transverse shafts; and means for supporting said upper decks on said lower decks independently of said chains or car sides.

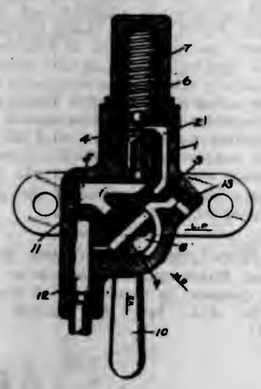
1,569,072. CLOSURE FOR RECEPTACLES. FREDERICK C. CLEMENT, Philadelphia, Pa. Filed Apr. 1, 1925. Serial No. 19,789. 6 Claims. (Cl. 215—52.)

1. A closure for receptacles comprising a grasp and a stopper portion, said stopper portion being of taper-spiral cross-section, and means laterally bracing the spiral stopper portion to the grasp with the outer end of the former left free to permit circumferential contraction whereby the closure is snugly fitted into the receptacle mouth.



1,569,073. MEANS FOR APPLYING SILICATE TO CORRUGATED STRAWPAPER. CHARLES EVERETT COLGROVE, Toronto, Ontario, Canada. Filed Oct. 11, 1923. Serial No. 667,887. 1 Claim. (Cl. 91—50.)

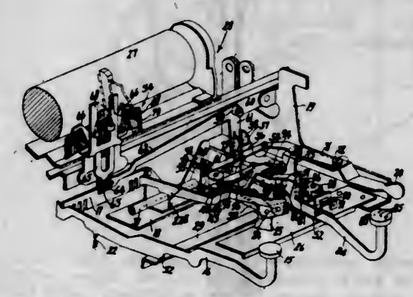
In means for applying silicate to corrugated strawpaper comprising a driver dipping roller, and a tank containing the silicate, an intermediate roller receiving its silicate in contact with said dipping roller, an application and feed roller below said intermediate roller receiving its silicate in contact with the latter, gears rigidly secured to said rollers and intermeshing one with the other, and means providing a path through the machine under said feed and application roller for the passage of the corrugated paper and adapted to permit actuating engagement of the corrugations with the teeth of the gear on said feed roller.



1,569,074. SHUTTLE. ALFRED F. COLLINS, Portland, and CHARLES MCGINLEY, Oswego, Oreg. Filed Sept. 10, 1923. Serial No. 661,756. 2 Claims. (Cl. 88—1.)

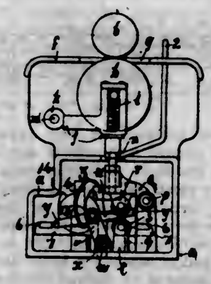
1. The combination of a longitudinal shuttle member having an aperture in its rear side with a longitudinal bobbin member in said shuttle having its open side visible through said aperture and a stationary mirror behind said shuttle arranged to reflect the image of said shuttle

to the eye of the operator in a manner to disclose the amount of thread on said bobbin within the shuttle while in motion.



1,569,075. FLUID-PRESSURE BRAKE. WILLIAM E. DEAN, Wilkinsburg, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Feb. 24, 1925. Serial No. 11,033. 3 Claims. (Cl. 303—79.)

1. A retaining valve device comprising a retaining valve and a manually operated valve for controlling communication from the brake cylinder through said retaining valve device and having a position for venting fluid from the brake cylinder through a restricted passage directly to the atmosphere.



1,569,076. TYPEWRITING MACHINE. WILLIAM A. DONSON, Bridgeport, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Dec. 12, 1922. Serial No. 606,363. 15 Claims. (Cl. 197—88.)

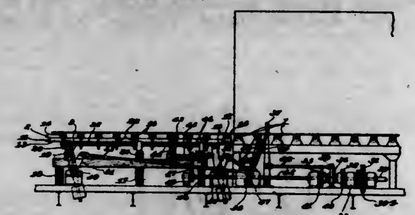
13. In a typewriting machine having a letter-feeding carriage, type-operating keys, a universal bar operated by said keys and controlling the carriage, ribbon-vibrating mechanism operable by said universal bar, bichrome mechanism settable for different throws of the ribbon-vibrator, a silent key non-operative upon the universal bar, and means for enabling said silent key to operate said ribbon-vibrator at the different positions to which said bichrome mechanism is set, said vibrating mechanism including a lever operable by said universal bar, a link connected to move idly with said lever during the operation of

said type-operating keys, and means to enable the silent key to actuate said link and thereby operate said lever to vibrate the ribbon.

1,569,077. MEANS FOR GUIDING FABRICS INTO STENTERING AND OTHER MACHINES. GEORGE DURRANT, Fairfield, Manchester, England. Filed Oct. 14, 1924. Serial No. 743,542. 4 Claims. (Cl. 26—66.)

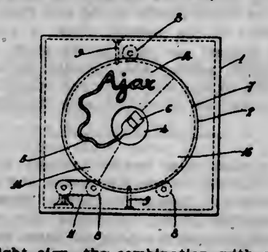
1. Cloth guiding apparatus, comprising a stationary driving roller, a pressure roller aranged below the driving roller, a pivoted frame supporting the pressure roller, a pivoted lifting lever provided with an adjusting device which bears on the underside of the said frame and regulates the height of the pressure roller, a pivoted feeler which bears against one edge of the cloth, and means for automatically raising and lowering the said lifting lever controlled by the said feeler and operating to place the cloth into and out of contact with the driving roller.

1,569,078. MEANS FOR MAINTAINING A RESERVE IN FUEL TANKS. MURRAY S. ELTON and GEORGE EDWARD BARNHART, Pasadena, Calif. Filed Apr. 28, 1925. Serial No. 26,554. 6 Claims. (Cl. 158—46.5.)



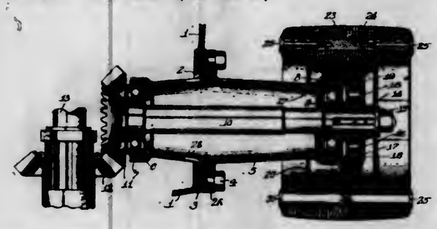
1. In combination with a tank, an outlet fitting in the bottom of said tank, a tube extending into said tank and into said fitting, said tube having a port therein above the bottom of said tank; said tube having a second port

therein, said second port being positoned within said fitting; means to adjust said tube to open said second port to drain the tank; a ring on said tube; and a



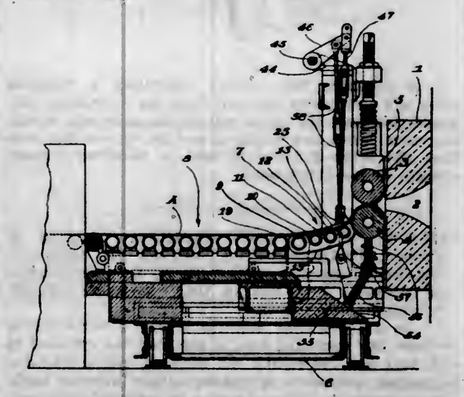
spring catch rising from said outlet fitting and adapted to engage said ring to hold said tube in adjusted position.

1,569,079. APPARATUS FOR CRACKING OFF AND HANDLING CONTINUOUSLY-FORMED SHEET GLASS. ALBERT E. EVANS, Pittsburgh, Pa., assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed Mar. 18, 1925. Serial No. 16,423. 12 Claims. (Cl. 49—48.)



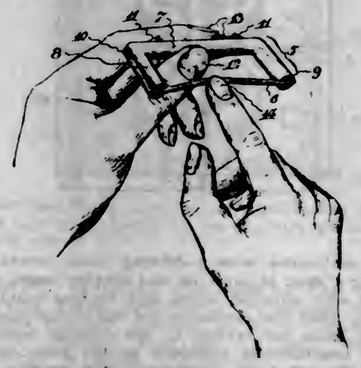
1. Apparatus for cracking off and handling sections of a continuously formed horisontally moving glass ribbon, transversely scored to facilitate cracking off, comprising a table for receiving and supporting a glass section mounted for vertical movement so that it may be lowered below the level of the continuously formed ribbon causing the section upon the table to crack away from the ribbon and a secondary table below the level of the first table adapted to receive the cracked off section when the first table is lowered and provided with rolls mounted for rotation in planes at right angles to the line of movement of the ribbon.

1,569,080. LIGHT SIGN. ERIK ARTUR FAGERLUND, Stocksund, Sweden. Filed Apr. 23, 1924. Serial No. 708,592. 4 Claims. (Cl. 40—132.)



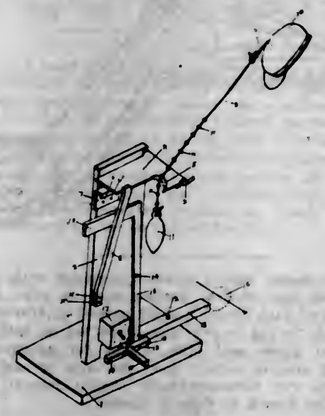
1. In a light sign, the combination with a stationary screen having translucent advertising signs, of a source of light, and a rotary disk located at the one side of said stationary screen and having a continuous translucent part and a continuous opaque part, said parts having the form of two complementary sectors, so as to alternately uncover and cover, when rotated, said translucent advertising signs, said signs having the form of a sinuous band.

1,569,081. PULLEY FOR TRACTORS. HENRY FORD, Dearborn, Mich. Filed Mar. 26, 1919. Serial No. 285,255. 1 Claim. (Cl. 74—7.)



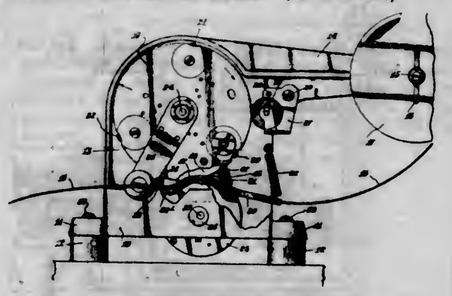
In a pulley attachment for a tractor forward of the rear axle assembly and independent thereof, which tractor includes a transmission housing containing a power take-off gear in spaced relation to the housing wall, and a pulley adapted to be suported outside of the housing and driven by a shaft from said power take-off gear, a bearing casing for said shaft solely supported from said transmission housing, said bearing casing having an intermediate peripheral flange attached to said housing wall and long and short portions with the short portion extending into the housing and provided with lubricant receiving openings adjacent said flange, and the long portion of said bearing casing protruding from the housing wall, the long portion of said casing being proportioned so that any torsion of said shaft is transmitted to the ends of said bearing casing and from there to said housing to prevent binding at said take-off gear, anti-frictional bearings in the extreme ends of said bearing casing, said bearing casing and said anti-frictional bearings solely supporting said shaft and affording a lubricant chamber communicating with the interior of said transmission housing by virtue of the openings in said bearing casing adjacent said flange.

1,569,082. APRON FOR PLATE-GLASS MACHINES. JOHN H. FOX, Pittsburgh, Pa., assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed Jan. 22, 1924. Serial No. 687,704. 7 Claims. (Cl. 49—33.)



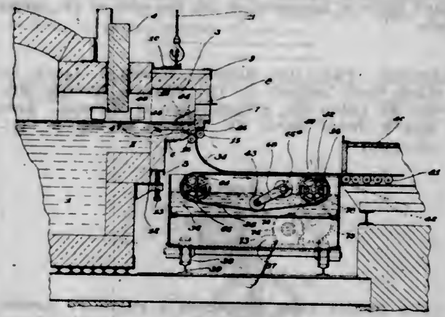
1. In combination with apparatus for continuously withdrawing a plastic sheet or ribbon of glass from a tank, including a pair of forming rolls, of a table for receiving the continuously formed sheet below the pass between the rolls, an apron intermediate the forming rolls and table mounted for swinging movement about its end adjacent the table, and means for supporting the apron at various angles of adjustment.

1,569,083. MANICURING IMPLEMENT. ANNA E. FREY, Philadelphia, Pa. Filed May 22, 1925. Serial No. 31,995. 3 Claims. (Cl. 132—73.)



1. A manicuring implement consisting of a rectangularly configured bow having aligned grooves in the ends with relatively narrower kerfs in the angular corners thereof, and a length of twined absorbent-cotton stretched across the aforesaid grooved ends with its terminal parts gripped in the kerfs.

1,569,084. GOLF PRACTICING AND TRAINING DEVICE. WILLIAM J. GOLDSWORTHY, San Francisco, Calif. Filed May 16, 1923. Serial No. 639,291. 21 Claims. (Cl. 273—35.)

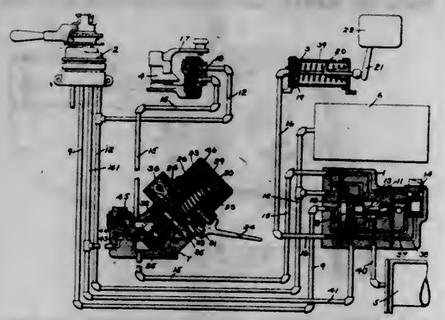


2. In a golf training and practicing device, in combination, an elongated pliable member provided at one end with an engaging means detachably connecting with the head-wear of the player, a tensing means connected to the said elongated pliable member and exerting therethrough a continual forward and downward pull on the head of the player, a movable stop-and-release actuated by the said tensing means in the upward and backward movement of the head of the player and a supporting means carrying the said movable stop-and-release and permitting the movement thereof.

1,569,085. TICKET-PRINTING MACHINE. WILLIAM H. HEYNE, Jr., Passaic, N. J. Filed Dec. 6, 1923. Serial No. 678,881. 15 Claims. (Cl. 101—97.)

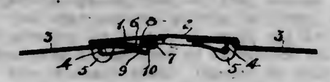
1. A ticket printing machine embodying therein a printing couple, one of the members of which is provided with a plurality of spaced printing elements, each of said elements including therein a sequence of independently adjustable character wheels, means whereby some of the character wheels upon one of said elements may be automatically and progressively actuated, and the other member of which consists of a rotatable impression cylinder, means whereby said printing element carrying member may be continuously rotated, intermittently operative gearing between said last named member and the other member of the printing couple, whereby the impressions by the elements upon said other member may be brought closely together, and means for directing a strip into the printing relation between said members.

1,569,086. APPARATUS FOR MAKING SHEET GLASS. HALBERT K. HITCHCOCK, Pittsburgh, Pa., assignor of one-half to Hitchcock Experiment Company, a Corporation of New Jersey. Filed Dec. 8, 1923. Serial No. 679,347. 12 Claims. (Cl. 49—88.)



1. In apparatus for forming sheet glass, a glass container adapted to carry a bath of molten glass and having a dowawardly directed outlet slot through which a continuous sheet or ribbon is adapted to discharge by gravity, a laterally extending endless belt of woven fabric in position to receive the ribbon, and a cooling bath through which the belt is passed.

1,569,087. FLUID-PRESSURE BRAKE DEVICE. JOHN HUMM, Houston, Tex., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Jan. 22, 1924. Serial No. 687,858. 5 Claims. (Cl. 303—19.)

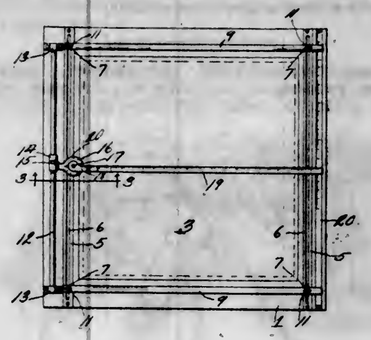


1. In a safety car control equipment, the combination with a safety control pipe, a valve for controlling com-

munication through said pipe, and a piston operated by fluid under pressure for operating said valve, of foot

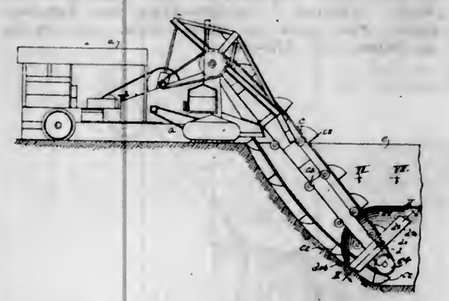
controlled means for also operating said valve, said means being operatively connected to said valve at a point intermediate the valve and the piston.

1,569,088. BUCKLE. ERNEST N. HUMPHREY, New Britain, Conn. Filed Nov. 18, 1924. Serial No. 750,548. 2 Claims. (Cl. 24—75.)



1. In a buckle of the character described, two plates, a spring plate secured to one of said plates, and located wholly to the rear thereof, said spring plate having its forward edge free, an interlocking shoulder at the free edge of said spring plate, an interlocking shoulder on the other plate adapted to be passed between the interlocking shoulder on the spring plate and the adjacent rear surface of the plate carrying the same for interlocking engagement, and means for limiting the outward range of movement of the free edge of the spring plate.

1,569,089. FRICTION HINGE. JOSEPH J. JANCA, St. Louis, Mo., assignor to The Emerson Electric Mfg. Co., St. Louis, Mo., a Corporation of Missouri. Filed May 5, 1924. Serial No. 711,299. 2 Claims. (Cl. 16—140.)



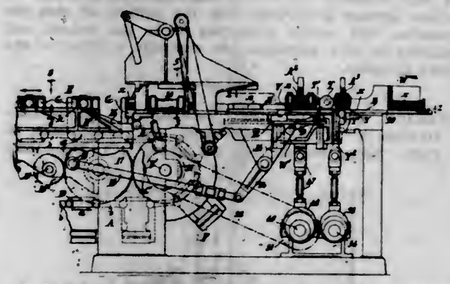
1. A friction hinge comprising a stationary member composed of rigid spaced flanges one of which has a threaded hole and the other of which has a hole of larger diameter and in alinement with the threaded hole, a movable member between said flanges, a plate between the flange having the larger hole and said movable member, said movable member and said plate having holes in alinement with the holes in said flanges, and said plate being arranged to make contact with the movable member substantially throughout the area of the plate, a clamping screw passing through said larger hole and through the holes in said plate and the movable member and engaging the hole in the other flange and forming a pivot upon which said movable member turns, and an enlarged cylindrical portion on said screw in said larger hole arranged to press against the plate and to impinge the same against the side wall of the movable member.

1,569,090. DRAFTING BOARD. FRED D. JOHNSON, Moline, Ill. Filed June 23, 1924. Serial No. 721,885. 1 Claim. (Cl. 33—76.)

The combination with a drawing board, means for clamping a sheet of paper on said drawing board, of a straight edge extending across said drawing board, an upwardly offset disc carried by one end of said straight edge, a guide bar carried by the drawing board, a bracket longitudinally adjustable on the guide bar, a downwardly offset disc carried by said bracket, and means pivotally connecting said discs and operable to secure them together in adjusted position.

1,569,091. DIGGING MACHINE. WILLIAM P. KEAN, Detroit, Mich. Filed Aug. 19, 1925. Serial No. 51,237. 3 Claims. (Cl. 37—87.)

1. In a digger, having a boom provided with a conveyor chain and buckets passing over an idler at the lower end of said boom, a shaft extending transversely across, and resting in bearings supported by said boom at a point above said idler, means for rotating said shaft, and arcuate cutters upon the ends of said shaft adapted to cut correspondingly shaped lateral extensions of the trench to form a tunnel.

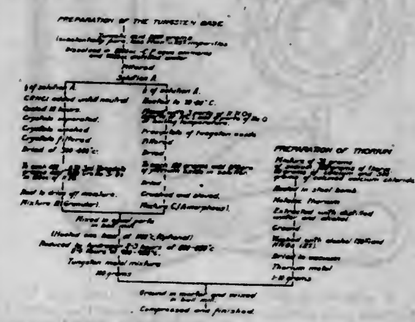


1,569,092. COMPRESSION-SLEEVE SEAL. JOHN B. KEATING, Piedmont, Calif., assignor to Byron Jackson Pump Mfg. Co., Berkeley, Calif., a Corporation of California. Filed Oct. 5, 1922. Serial No. 592,547. 1 Claim. (Cl. 286—7.)

In a deep well turbine pump, the combination in each set of one inner and one outer casing with one impeller housed between, the inner casing of each set formed with a central bore and counterbore and with a concentric offset shoulder at the base of said inner casing, a shaft for the bore and a sealing sleeve of rubber for the counterbore, and a plate adapted to seat in the said

offset shoulder and compress the sleeve around the shaft, and said plate having an opening through which the shaft extends.

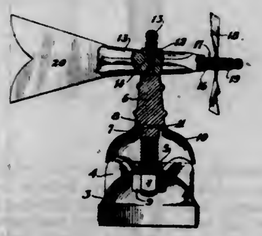
1,569,093. MACHINE FOR MAKING CAN BODIES. PETER KRUSE, Brooklyn, N. Y., assignor to E. W. Bliss Company, Brooklyn, N. Y., a Corporation of West Virginia. Filed Mar. 13, 1925. Serial No. 15,266. 8 Claims. (Cl 113—10)



1. In a body making machine comprising a horn, means for wrapping the blank around the horn, and means for soldering the overlapping edges, the combination therewith of means for preliminarily bending the flat blank for a zone extending beyond its lap seam to either side toward its middle to a curve conforming approximately to the curve of the corresponding portion of the horn, whereby to ensure that the completed body will have a contour in cross-section conforming closely around its circumference to the contour of the horn.

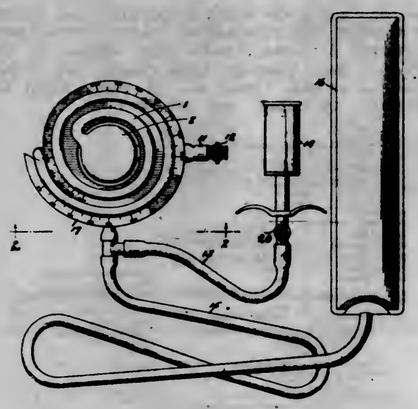
1,569,094. DRAWER PULL AND WINDOW LIFT. GEORGE B. KURTZON, Chicago, Ill., assignor to Garden City Plating and Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed June 7, 1924. Serial No. 718,503. 3 Claims. (Cl. 16—124.)

1. A drawer pull comprising a face plate provided with an elongated opening, a boxlike extension upon the rear of said plate providing a recess back of said opening, said extension being bored and threaded, and screws inserted through the rear of the drawer front and engaged in said threaded bores.



1,569,095. BODY OF HIGH ELECTRON AND LIGHT EMISSION AND PROCESS OF MAKING THE SAME. CLEMENS A. LAISE, Toledo, Ohio, assignor to The Electron Relay Company, Lucas County, Ohio, a Corporation of Ohio. Filed Nov. 21, 1923. Serial No. 676,007. 10 Claims. (Cl. 250—27.)

2. A composition of matter comprising a tungsten, thorium, and vanadium alloy, and finely divided particles of yttrium oxide interspersed throughout said composition, the tungsten comprising 90% or more, the thorium from 0.50 to 5.0%, the vanadium 0.50% or less and the yttrium oxide from 0.55 to 2.50% of the composition.

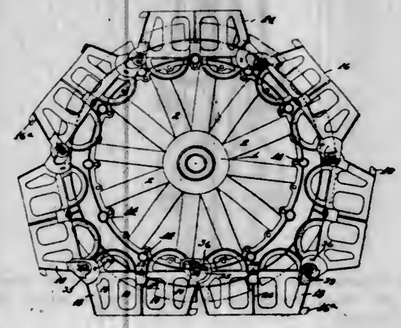


10. A process of producing refractory filamentary bodies which comprises compacting the constituent powders into a homogeneous coherent billet by combined heat and pressure, subjecting the billet to a heat-treatment, hammering said billet at a high temperature, forming a refractory oxide envelope thereon, ductilizing and annealing the oxide enveloped billet and then wire-drawing it to the desired diameters.

1,569,096. ORNAMENT FOR AUTOMOBILE RADIATORS. HENRY P. LONG, King City, Mo. Filed Jan. 7, 1924. Serial No. 684,831. 1 Claim. (Cl. 46—14.)

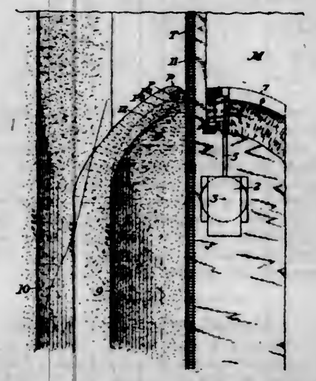
An ornament for automobile radiator caps having a plurality of spaced projections on its top and a central opening therein comprising a post having a reduced threaded end providing a shoulder, a hollow dome having a central aperture to receive the post, the central upper portion of the dome contacting with said shoulder and its bottom edge embracing and engaging said projections, said threaded portion traversing the opening in the cap and having a nut thereon engaging the underside of the cap, a vertical spindle extending from the top of the post, a horizontally swinging arm intermediately pivoted on the spindle, said arm having a vane at one end and a revoluble wheel at the other.

1,569,097. SPHYGMOMANOMETER. LUTHER B. MACKENZIE, New York, N. Y. Filed Aug. 10, 1923. Serial No. 565,698. 3 Claims. (Cl. 73—44.)



1. A sphygmomanometer comprising a spirally wound tube having a normally closed end lying at the center of the spiral, the opposite end of the tube being bent so as to underlie the normally closed end of the tube when the tube is held with the convolutions thereof lying in a horisontal plane.

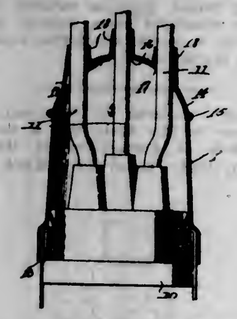
1,569,098. DRIVE-WELL POINT. HARRY R. MARK, Chicago, Ill., assignor to Clayton Mark & Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 22, 1924. Serial No. 745,807. 3 Claims. (Cl. 166—7.)



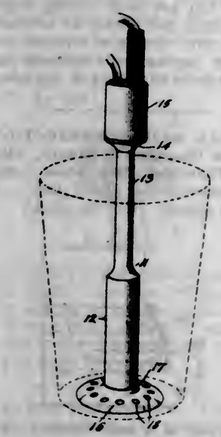
1. A drive-well point comprising a foraminated inner tube having a driving point, screen sections of fine mesh completely enveloping said inner tube and covering said foraminations, protective foraminated sleeve sections enveloping said screen sections, said screen sections and sleeve sections having substantially registering edges and a filling of solder lying in and covering the free edges of said screen and sleeve sections and firmly uniting the same together and to said inner tube.

1,569,099. CONVERTER ATTACHMENT FOR DRIVE WHEELS. ROYAL R. MILLER, Chicago, Ill., assignor to Miller Traction Tread Company, a Corporation of Delaware. Filed June 17, 1922. Serial No. 568,992. 11 Claims. (Cl. 305—6.)

5. The combination with a drive wheel, of an annulus mounted on each side thereof, means extending transversely of the drive wheel and connecting the annuli, a coaxial annular shoulder formed on each annulus, tread elements engaged over the annuli and adapted to roll on said shoulder and having depressions formed therein, helical springs projecting from the bottom of each depression, and means projecting from the annuli and engaged in said depression to transmit a drive to the tread elements.



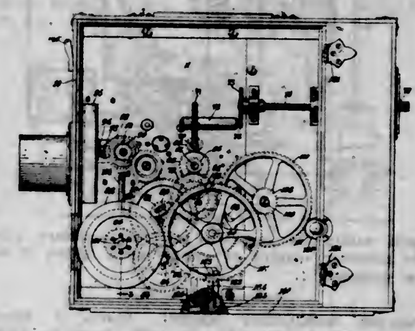
1,569,100. METHOD OF HANDLING MATERIAL. DONALD S. MULLIN, Pittsburgh, Pa. Filed Mar. 5, 1925. Serial No. 13,126. 9 Claims. (Cl. 214—152.)



1. The method of handling material, comprising moving a stripping tool to a predetermined position, initially operating said tool to remove an upper bench of the material, carrying said material by the stripping tool laterally from the point of removal, and depositing said removed material from a point not higher than the point from which it was removed, substantially as described.

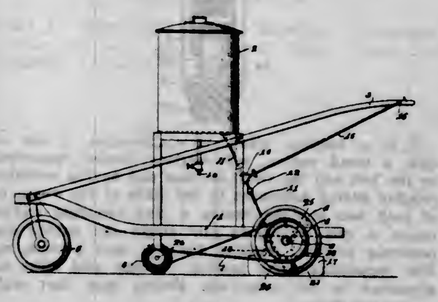
1,569,101. PROTECTOR FOR DISTRIBUTOR WIRES. JOHN PRESTON VAUGHN, St. Petersburg, Fla. Filed Sept. 23, 1924. Serial No. 739,329. 3 Claims. (Cl. 200—19.)

1. A protector for electric distributors, timers, and the like, comprising a molded flexible resilient sheath having one end open to receive the distributor or timer, and the other end closed, said closed end being provided with a plurality of outwardly projecting flexible resilient electric conduit receiving nipples.



1,569,102. IMMERSION HEATER. ALONZO A. WARNER, New Britain, Conn., assignor to Landers, Frary & Clark, New Britain, Conn., a Corporation of Connecticut. Filed Nov. 6, 1923. Serial No. 673,969. 1 Claim. (Cl. 219—41.)

An immersion heater comprising an elongated casing for entirely enclosing a heating unit, and an annular plate fixedly attached to the foot of said casing, said plate having a diameter substantially greater than the diameter of the casing and curving outwardly and downwardly from the casing to serve as a stand to hold the heater upright in a receptacle and as a guard to hold the heater a safe distance away from a surface when laid on its side, the plate having a plurality of perforations which serve to facilitate immersion and aid in insulating the periphery of the plate from the heat generated in the casing.

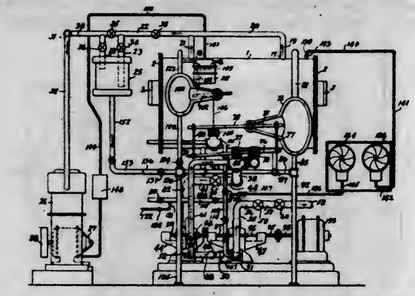


1,569,103. MOVING-PICTURE CAMERA. CHARLES P. WATSON, New York, N. Y. Filed May 18, 1920. Serial No. 381,175. 8 Claims. (Cl. 88—17.)

1. A high speed moving picture camera having a metal framework, mechanical means secured to and carried by said framework for intermittently feeding a negative film to be exposed, a light excluding box structure substantially surrounding said framework and mechanical means and containing dark space for the film reels, a lens structure through which the film is exposed, means whereby the lens structure is firmly secured to said frame work by metal connecting parts, a shutter cooperating to

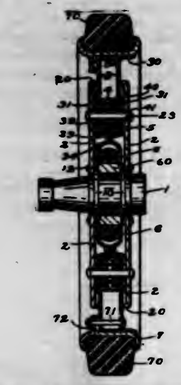
cut off the light through the lens when the film is moving between exposures, means for driving the mechanism at a speed to cause the film to be exposed at the rate of about 150 or more consecutive exposures per second and means whereby a supporting standard may be secured firmly to said frame work by metal connecting parts.

1,569,104. TRAFFIC-LINES STREET-PAINTING MACHINE. HOWARD BROWN WENTZ and JOHN BAILEY PRIDGEN, Charlotte, N. C. Filed Dec. 31, 1924. Serial No. 759,061. 7 Claims. (Cl. 91—25.)



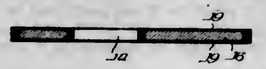
1. In a traffic line street-painting machine, the combination of a wheeled frame, a paint tank mounted on the frame, a painting brush positioned under the frame, resiliently suspended runners arranged on each side of the paint brush, means for discharging paint in front of the brush, a rotatable brush positioned in advance of the paint brush to sweep the street, and means for rotating said brush while the machine is in operation.

1,569,105. DEACTIVATOR. PERRY WEST, Newark, N. J., assignor, by mesne assignments, to Elliott Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Apr. 28, 1923, Serial No. 636,401. Renewed Apr. 13, 1925. 16 Claims. (Cl. 183—2.5.)



1. A deactivator, embodying a fluid chamber, means for maintaining a vacuum therein, means for spraying a fluid thereinto, a screen within said chamber for further

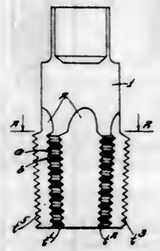
breaking up said fluid, means for removing freed gases from the chamber, means for removing treated fluid therefrom, means for maintaining a constant flow of



liquid within the apparatus, and an auxiliary water-line governor adapted to operate upon failure of said first governor.

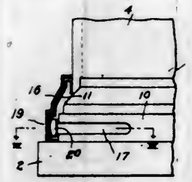
1,569,106. RESILIENT WHEEL. EDWIN J. WHITE, Seattle, Wash. Filed July 14, 1925. Serial No. 43,460. 5 Claims. (Cl. 152—28.)

1. In a resilient wheel, in combination, a hub section, a tread section, web sections carried respectively by the hub and the tread sections and having restrained relative sliding movement in the plane of the wheel, one of said web sections having a ring receiving annular recess, a ring seating in said recess and having disk-receiving pockets, resilient disks in said pockets, and disk supporting axles passing through said disks and supported in the other web section from that which carries the disks.



1,569,107. WATERPROOF PANEL BOARD. JOHN F. WHITE, Chicago, Ill., assignor to White Products Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 11, 1924. Serial No. 731,356. 5 Claims. (Cl. 91—68.)

1. An automobile panel board comprising a sheet of fibrous material having edges shaped for the intended structural use and having the fiber at all sides and edge surface portions impregnated with water-repellent material, the surfaces being free of unabsorbed oleagenous coating and the interior fibers substantially devoid of the impregnating material.

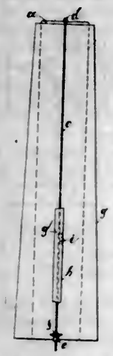


4. The method of forming a panel board for structural use, comprising shaping a board of absorptive paper composition with the desired panel contour, and intramarginal apertures appropriate to the intended use then applying a heated, tacky, water-repellent liquid to all surfaces of the shaped panel in quantity sufficient to impregnate the superficial fibers without impregnating the interior fibers, or leaving unabsorbed excess of treating material on the surfaces.

1,569,108. TAP. CHARLES E. WILLIAMS, Mansfield, Mass., assignor to Bay State Tap & Die Company, Mansfield, Mass., a Corporation of Massachusetts. Filed May 31, 1924. Serial No. 716,884. 4 Claims. (Cl. 10—141.)

1. A tap having the threads so formed and arranged that one wall of each thread will have cutting engagement with the work, the opposite wall of each thread being so relieved that it will not have cutting engagement with the work, the cutting walls being on alternately opposite faces of the successive threads so arranged that there will be two proximate cutting walls followed by two proximate non-cutting walls and so on in the same manner.

1,569,109. METAL SASH CONSTRUCTION. CHARLES B. YOUNG and CHARLES J. CASPAR, Pittsburgh, Pa., assignors to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed May 1, 1925. Serial No. 27,185. 5 Claims. (Cl. 20—56.4.)



1. In combination in a sash framing corner construction, a window framing, a pair of glass sheets mounted in the framing and lying at an angle to each other to form a corner, a pair of metal sash members lying on the outer sides of the sheets, and secured against the outer faces of said sheets, and provided adjacent their ends with longitudinally extending slots, a metal corner piece fitting over the ends of said sash members, and rotatable clamping members carried by the corner member and provided at their inner ends with blocks adapted in one position of rotation to be passed through said slots, and in another position to lie crosswise behind the sash members and clamp such members to the corner member.

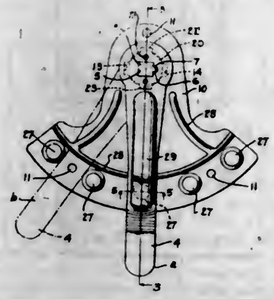
1,569,110. DEVICE FOR THE PRODUCTION OF CREASES IN TROUSERS. WILLIAM YOXALL, Manchester, England. Filed May 8, 1923. Serial No. 637,558. 1 Claim. (Cl. 68—10.)

In an apparatus for creasing trousers, an ironing board having a straight longitudinal groove in its top surface, a cord adapted to be arranged in the groove over the material to be creased and secured to the board at one

end of the groove, and a screw clamp secured to the board at the other end of the groove and adapted to

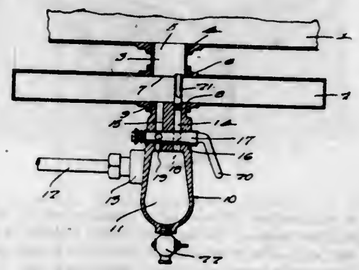
hold the cord in the groove under tension, said cord operating to retain a portion of the cloth in the groove and permit the cloth to be ironed on the board.

1,569,111. PROCESS FOR MANUFACTURING A PERYLENE VAT DYE. ALOIS ZINKE and HERMANN SHOEPFER, Graz, Austria, assignors, by mesne assignments, to Felice Bensa, Genoa, Italy. Filed Oct. 17, 1923. Serial No. 668,966. 7 Claims. (Cl. 260—56.)



1. A process for manufacturing perylene vat dyes consisting in treating perylene quinone with chlorine.

1,569,112. HEADGEAR. WILLIAM BERNSTEIN, New York, N. Y. Filed Feb. 24, 1922. Serial No. 538,849. 1 Claim. (Cl. 2—204.)

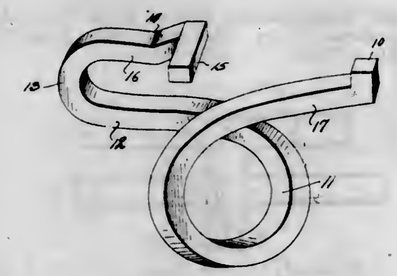


In the head covering and protecting shield for infants, the combination with a cap of a veiling attached along the front, sides and top of said cap and extending therefrom, a hem formed along the outer edge of said veil, tying strings upon said cap and tying strings engaging through said hem upon the veiling.

1,569,113. DAMPER MECHANISM. ALBERT BLUMLEIN, New York, N. Y., assignor to Parker Ventilation Company, Inc., a Corporation of New York. Filed July 8, 1924. Serial No. 724,761. 11 Claims. (Cl. 126—295.)

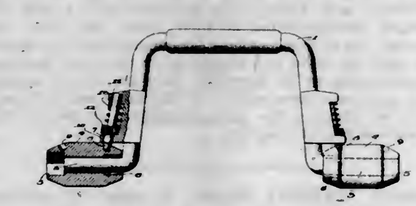
1. A damper mechanism including in combination a damper having a shaft, and positioning means therefor including a handle on the shaft and a series of spaced apart lever stops constructed and arranged to position and hold the lever either on or between the stops to correspondingly position the damper.

1,569,114. RESERVE-FUEL-SUPPLY TANK. EDGAR A. BOND, Ramah, N. Mex. Filed May 9, 1925. Serial No. 29,131. 4 Claims. (Cl. 158—46.5.)



1. In combination with a main fuel supply tank, a reserve supply tank communicating therewith, a fitting associated with said reserve tank, said fitting being provided with a fuel chamber, a discharge pipe extending therefrom, said fitting being provided with a pair of passages communicating at their lower ends with the chamber, one of said passages communicating at its upper end with the main fuel supply tank, the other passage communicating at its upper end with the reserve supply tank, and means associated with the fitting and said passages for effecting the excommunication of one of the passages with said chamber.

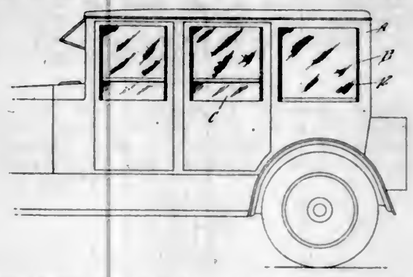
1,569,115. RAILWAY SPIKE. KUNIBERT P. BRANDT, Oriska, N. Dak. Filed May 12, 1924. Serial No. 712,860. 1 Claim. (Cl. 85—23.)



A railway spike of the class described including an elongated body provided with a slit at one end to form bifurcations, said body provided with a longitudinally extending bore tapering from an intermediate portion to the extremities of the bifurcations, and a pin of the same contour as the bore disposed therein so that it may be driven through the bore a comparatively short distance when the spike has been driven home in a tie to spread the bifurcations throughout their length, and thereby cause the latter to cling closely to that portion of the pin extending therethrough.

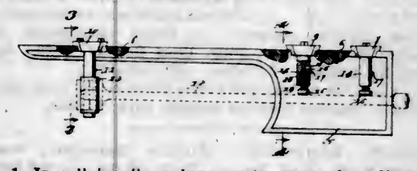
1,569,116. RAIL ANCHOR. JUNIUS E. BUSBY, Jackson, Ky., assignor of one-half to Benton R. Cooper, Covington, Ky. Filed Apr. 23, 1925. Serial No. 25,374. 5 Claims. (Cl. 238—330.)

3. A rail anchor formed of a single piece of resilient material, the ends of the material being formed to engage with the rail, the intermediate portion of the material being formed to provide a closed depending coil.



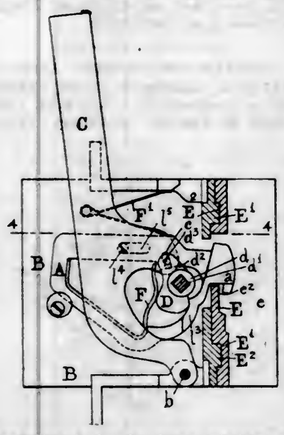
1,569,117. WRENCH. EUGENE ROY CARPENTER, Ansonville, N. C. Filed Nov. 21, 1924. Serial No. 751,320. 1 Claim. (Cl. 81—121.)

A device of the character described comprising a substantially U-shaped handle having an outturned end portion at one end of an arm thereof, said arm having spaced lugs extending laterally thereof in transverse alignment with said outturned end portion, said lugs having aligned openings formed therethrough, a locking pin slidable in said openings and movable toward and away from said outturned end portion, a stop on said locking pin located between said lugs for limiting the movement of the latter in the openings of the lugs, an expansion spring encircling said locking pin and disposed between said stop and one of said lugs for urging said locking pin toward said outturned end portion, and a tubular socket member adapted to be disposed on said outturned end portion and having a recess in its outer wall adapted to be engaged by said locking pin when said socket member is in a certain position on said outturned end portion, whereby said socket member will be releasably held against movement relatively to said handle, said stop on the locking pin having a roughened outer face for engagement with a finger of the hand of an operator of the device.



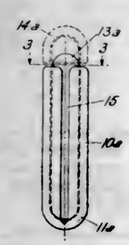
1,569,118. AUTOMOBILE WINDOW SCREEN. HARRY A. CURTIS, Manitowoc, Wis., assignor of one-half to Arthur Wensing, Manitowoc, Wis. Filed Apr. 16, 1924. Serial No. 706,979. 1 Claim. (Cl. 296—44.)

A screen attachment for the slidably mounted windows of a closed vehicle, comprising a roller located above the window and carrying heads, a screen secured to and wrapped about the roller between said heads, means connecting the end of said screen to the slidably mounted window, stationarily mounted casings at the ends of said roller beyond the heads thereon provided with bearings for the end portions of the roller, and coil springs lo-



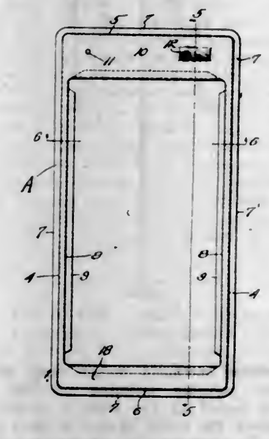
cated within said casings and each having one end connected to the outer wall thereof and its other end connected with the adjacent head.

1,569,119. LINING JIG. MATHIAS A. FEIDER, Madison, Ind. Filed Mar. 15, 1923. Serial No. 625,395. 2 Claims. (Cl. 33—180.)



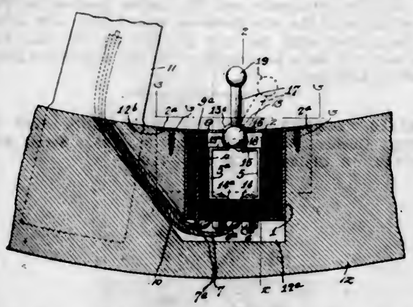
1. In a lining jig, a base, posts, means for adjustably connecting the posts to the base, a wrist pin on one of the posts for oscillatably supporting a connecting rod, arms in parallel position with relation to each other projecting from the other posts, and pressure yieldable elements projecting from the said arms, the member which is to be gaged being held so as to be swung in engagement with said yielding elements.

1,569,120. DEVICE FOR FASTENING DOORS, WINDOWS, AND THE LIKE. WILLIAM STEPHEN COX GLOVER, Oxford, England. Filed Apr. 10, 1923. Serial No. 631,195. 2 Claims. (Cl. 292—113.)



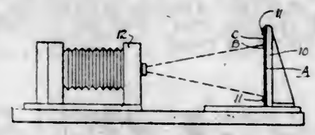
1. In a fastening device for doors, windows and similar purposes of the type comprising a casing affixed to the door and a floating latch member carried thereby, the combination with the casing and floating latch member of a device located within the latch member for actuating same, a lever pivoted to the casing to engage the actuating device, guides for the latch member, a ramp up which the catch end of the latch member mounts and behind which it falls, means for drawing the catch end into contact with the vertical edge of the ramp to tighten the latch in the locked position, spring means to prevent the latch member when in engagement with the ramp from undue strain if movement occurs between the frame and the door, said means also preventing rattle of the door against the frame and means to prevent the latch from being accidently moved from the locked position.

1,569,121. SAUSAGE SANDWICH AND ROLL THEREFOR. NEWTON L. HALL, Salt Lake City, Utah. Filed Oct. 26, 1921. Serial No. 510,517. 3 Claims. (Cl. 99—11.)



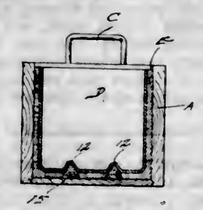
1. An article of food including a hollow, relatively elongated, approximately cylindrical, self-supporting roll open at one end, the wall of the roll being slotted.

1,569,122. RECEPTACLE FOR FLOUR AND THE LIKE. AXEL I. S. HALVORSEN, Albany, Ind. Filed Nov. 12, 1921. Serial No. 514,492. 4 Claims. (Cl. 220—80.)



1. As a new article of manufacture, a rectangular frame of the character described, made from a single piece of sheet metal molded to shape and comprising a top wall; two side bars, each of which is U-shaped in cross section throughout the greater part of its length; a bottom wall; a relatively large rear wall section adjacent the upper end of the frame integrally joining the top wall and upper portions of the side bars, and a relatively small rear wall section adjacent the lower end of the frame integrally joining the bottom wall and lower portions of the side bars.

1,569,123. AUTOMOBILE STEERING WHEEL AND ELECTRIC HEADLIGHT SWITCH. BOYD HAMBLET, Florence, Colo. Filed Nov. 9, 1923. Serial No. 673,719½. 3 Claims. (Cl. 200—6.)



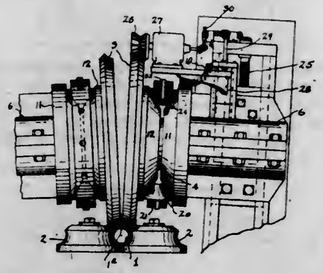
1. In a switch of the character described, a casing having formed in the inner face of one wall thereof a concavity, a pair of resilient contacts arranged within the casing opposite to said concavity and extending into proximity to one another, a spherical switching element engaged in said concavity and having a flattened face opposing and engaging said resilient contacts, and means for rotating said spherical switching element upon the diametrical axis thereof lying in a plane bisecting the switching element and extending between adjacent faces of said contacts.

1,569,124. PROCESS AND MEANS FOR MAKING PHOTOMECHANICAL PRINTING PLATES. JOSEPH A. H. HATT, New York, N. Y. Filed Aug. 4, 1920. Serial No. 401,180. 27 Claims. (Cl. 95—5.)

1. For use in making photo-mechanical printing plates a photographic corrective plate the same size as and in contact with the original and carrying a part or the whole of the design of the original thereon in form to modify the color values in a negative of the original made through the corrective plate.

1,569,125. STORAGE-BATTERY CONTAINER. CLARENCE W. HAZELETT, Lakewood, and ALBERT R. GOLDRICK, Cleveland, Ohio, assignors, by mesne assignments, to The Cleveland Trust Company, trustee, Cleveland, Ohio. Filed Feb. 2, 1922. Serial No. 533,684. 5 Claims. (Cl. 136—166.)

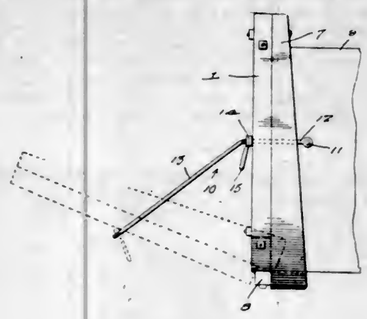
1. A storage battery container comprising an outer casing, hollow moulding cores composed of permeable preformed fibrous material adapted to form a plurality of battery element cavities within the casing, said cores having the bottom walls thereof formed with hollow ribs ex-



tending into the core cavities and a fusible mass of cementitious acid proofing material filling the spaces between the casing and the core walls and the hollow portions of the acid proofing material filling the spaces between the casing and the core walls and the hollow portions of the rib structure of the core members, whereby the core walls are permeated with the acid proofing material and the ribs and core walls are reinforced by the solidifying acid-proofing material.

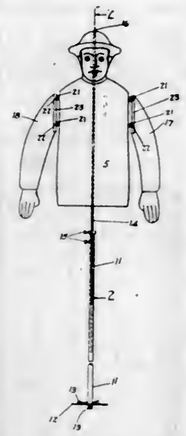
1,569,126. LIFTER FOR ICE-CREAM CANS. GUY B. HILL, Oneida, Wis. Filed Apr. 9, 1925. Serial No. 21,949. 3 Claims. (Cl. 294—116.)

1. A lifter for cans comprising two crossed jaw shanks, the upper ends of which are longitudinally slotted, the lower ends of which are curved downward and inward toward each other and formed with trminals adapted to engage beneath the rim of an ice cream can and the shanks just above said terminal ends being formed with forwardly projecting lugs adapted to engage over the lid of the can.



1,569,127. ELECTRIC WELDING MECHANISM. JOHN W. HOLT, Cleveland, Ohio. Filed Oct. 27, 1921. Serial No. 510,700. 9 Claims. (Cl. 219—6.)

1. In electric welding mechanism, the combination of a support, a shaft journaled therein, an electrode roll mounted on one end of said shaft, and means for conducting electric current to said roll without passing through said shaft, said means including a plurality of members acting to support said roll having rolling contact therewith at symmetrically disposed circumferentially spaced points.

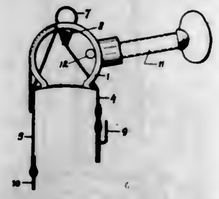


1,569,128. END GATE. GEORGE KOENIG, Lawler, Iowa. Filed Aug. 31, 1925. Serial No. 53,581. 1 Claim. (Cl. 296—58.)

In a structure of the class described, a pair of uprights, a connecting strap between said uprights, said uprights being formed with openings intermediate their ends, channel shaped guides carried by the inner sides of said uprights, a gate slidably mounted in said guides, side pieces carried by said uprights, said side pieces extending downwardly beyond the lower ends of said uprights, suspension rods extending slidably through the openings in the uprights, said suspension rods being adapted to be pivotally mounted upon a wagon body,

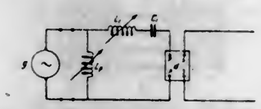
and being provided with screw threaded portions, and nuts cooperable with said screw threaded portions and engageable with said uprights to maintain the structure in a vertical gate forming position, or in an inclined shoveling board forming position.

1,569,129. SCARECROW. ANDREAS R. LARSEN, Minneapolis, Minn. Filed Mar. 3, 1921. Serial No. 449,297. 6 Claims. (Cl. 46—46.)



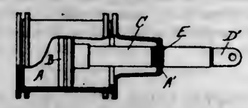
1. A scarecrow having a hollow body portion and hollow means movably mounted on the scarecrow adapted when moved by the wind to strike the body portion, whereby the sound caused by said striking is increased by the resonance of said hollow body portion.

1,569,130. METHOD OF HARDENING COPPER. LOUIES NEMITOF, Kansas City, Mo. Filed Feb. 6, 1922. Serial No. 534,449. 14 Claims. (Cl. 148—11.)



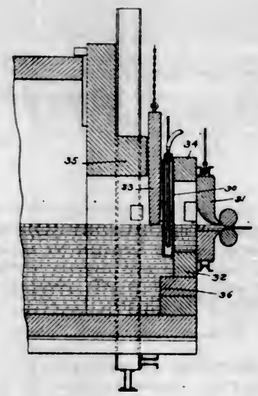
3. The method of hardening copper consisting in embedding copper heated to a bright red in a mixture moistened with a hydrocarbon and comprising a silicious substance and a substance containing phosphate of lime, substantially as set forth.

1,569,131. TOURNIQUET. JULIUS NORD, The Hague, Netherlands. Filed Feb. 12, 1925. Serial No. 8,613. 3 Claims. (Cl. 128—327.)



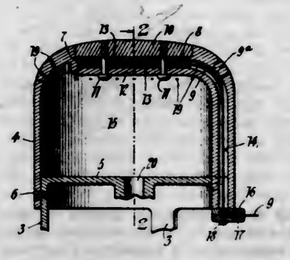
1. A surgical appliance to stop bleeding, comprising a case having one slot on the top and two slots underneath, a wedge-shaped part mounted in the top slot and a short strap fastened to the wedge, passing through one slot underneath; a second strap passing through the second slot underneath and also through the top slot; a hook fastened to one strap and an eye fastened to the other one; and a screw by which the tension of the strap can be regulated and the wedge fixed, arranged at one side of the case.

1,569,132. METHOD OF AND ARRANGEMENT FOR STARTING FREQUENCY-TRANSFORMING INSTALLATIONS. MENDEL OSNOS and LEO KASARNOWSKI, Berlin, Germany, assignors to Radio Corporation of America, a Corporation of Delaware. Filed Oct. 25, 1922. Serial No. 596,842. 6 Claims. (Cl. 172—281.)



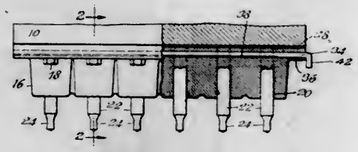
1. An arrangement for supplying a transformer requiring a large magnetizing current by drawing only a small current from the source of power comprising, a source of alternating voltage, a transformer requiring a high magnetizing current coupled to said source, variable tuning means comprising means in series with said transformer for enabling said transformer under normal operation to take a current of the required value leading the voltage of said source and for enabling said transformer under starting conditions to take sufficient current to decrease the reactance of the transformer to the point beyond which its reactance will decrease with increase in current, said tuning means also including an inductive reactance in parallel with said transformer and series tuning means, to correct the power factor in said source.

1,569,133. AIR BRAKE. ALLEN E. OSTRANDER, Ridgewood, N. J., assignor to Westinghouse Air Brake Company, New York, N. Y., a Corporation of Pennsylvania. Filed Dec. 15, 1921. Serial No. 522,596. 3 Claims. (Cl. 116—127.)



3. In a fluid pressure brake, the combination with a brake cylinder and a piston movable therein, of a member associated with said piston and provided with an indicating zone which is partly exposed when the brake cylinder piston travel is normal and is wholly exposed when the brake cylinder piston travel is excessive.

1,569,134. GATE FOR GLASS TANKS. WILLIAM OWEN, Pittsburgh, Pa., assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed Dec. 8, 1923. Serial No. 679,343. 4 Claims. (Cl. 49—55.)

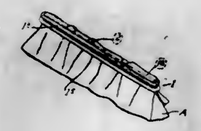


3. The combination with a melting tank having an outlet opening at its forward end, of a water cooled metal gate to the rear of such outlet opening mounted for vertical movement through the top of the tank, and adapted when lowered to cut off the flow of glass to said outlet, and a vertically movable shield of refractory material to the rear of the gate adapted to be lowered to a position with its lower edge adjacent to the surface of the glass bath or to be lowered into the glass and form an emergency cut off or gate.

1,569,135. PRESSING BLOCKS. LESLIE M. PAGE, Maplewood, N. J., and LOUIS MEYLACH, Brooklyn, N. Y. Filed Apr. 2, 1925. Serial No. 20,228. 2 Claims. (Cl. 223—1.)

1. A pressing block including in combination a block body of hollow dome-shaped construction, a floor for closing the lower portion thereof whereby a cavity is enclosed within said body, a chamber in the upper domed portion of said body opening upwardly and isolated from said body cavity, an electric heating coil within said chamber, wires attached to said coil, a cap for closing the upper opening to said chamber, and a channel within the side wall of said body leading from said coil chamber to the foot of said body for the passage of the coil connecting wires.

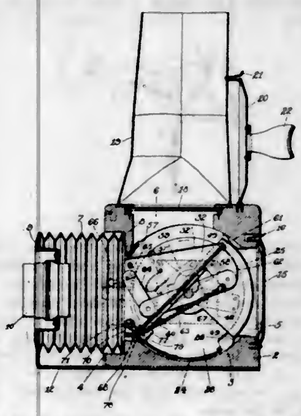
1,569,136. TOOL HOLDER. FRANK PARDEE, JR., Hazleton, Pa., assignor to Anthracite Separator Company, Hazleton, Pa., a Corporation of Pennsylvania. Filed Mar. 27, 1925. Serial No. 18,690. 8 Claims. (Cl. 164—118.)



1. In combination with a notched tool, a holder therefor and a locking member arranged for engagement with the notch of said tool, said member having a portion of such cross-section that it will release the tool when turned relatively in said holder.

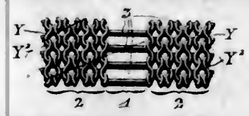
1,569,137. REFINING OF COPPER-NICKEL MATTE. ROBERT LEE PEEK, Ottawa, Ontario, and TORGNY FREDERICK TORELL, Aylmer, Quebec, Canada, assignors, by mesne assignments, to National Trust Company Limited, Toronto, Canada. Filed Aug. 26, 1920. Serial No. 406,059. 10 Claims. (Cl. 204—57.)

1. The method of utilizing Bessemerized copper-nickel matte which comprises separating copper from copper-nickel sulfate solutions by cementation upon an excess of such matte, removing the greater part of the copper from the partially exhausted matte and producing from the residue the copper-nickel sulfate solution for use in the treatment of a corresponding quantity of Bessemerized matte.



1,569,138. TIE FOR CLOSING THE MOUTHS OF BAGS. ROBERT E. PIERCE, St. Louis, Mo., assignor to Bemis Bro. Bag Company, St. Louis, Mo., a Corporation of Missouri. Filed Sept. 22, 1924. Serial No. 739,053. 4 Claims. (Cl. 24—30.5.)

2. A bag tie comprising a member adapted to be applied to the mouth of a bag to close same, said member being composed of a plurality of portions about one of which the neck portion of the bag is looped and the other portions of said member being adapted to be bent to closely embrace said neck portion of said bag.



1,569,139. CAMERA. ERNEST A. PIGEON, Beverly, Mass. Filed July 18, 1923. Serial No. 652,321. 17 Claims. (Cl. 95—42.)

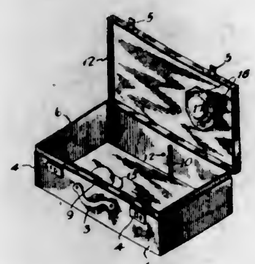
1. In a camera comprising a camera box, a lens mounted in one side of said box, and means at the opposite side of said box for supporting a film, a shutter interposed betwen said lens and film and comprising a hollow cylindrical shell cut away at one side thereof and having an exposure slot through its opposite side, means supporting said shutter for rotative movement

about an axis transverse to the axis of said lens, said shutter including a part adjustable to vary the width of said slot.

1,569,140. KNITTED FABRIC. HARRY G. G. QUERNS, Philadelphia, Pa. Filed June 24, 1924. Serial No. 721,981. 3 Claims. (Cl. 66—4.)

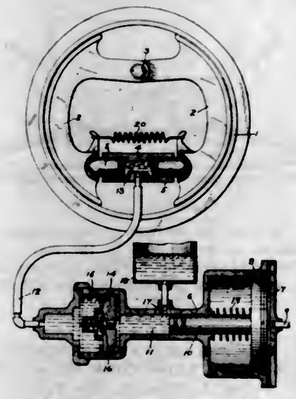
1. A plain knitted fabric produced by simultaneous feeding of fiber silk and a soft pliable cotton yarn, said fabric being characterized by intervals across which the two yarns are floated, the connecting portions of the silk yarn by virtue of its inherent stiffness, bowing or rounding inwardly and imposing a like disposal of the cotton yarn thereby accentuating the depth of the intervals in the fabric.

1,569,141. SWINGING-RAIL SWITCH FROG. WILLIAM HARISON RIFE, La Junta, Colo. Filed July 29, 1924. Serial No. 728,963. 10 Claims. (Cl. 246—386.)



2. A swinging rail switch frog, comprising a rail section pivoted at one end, oppositely inclined wedges on opposite sides of the swinging end of the rail, abutments adjacent said wedges, and means for simultaneously moving said wedges longitudinally of the rail section in opposite directions.

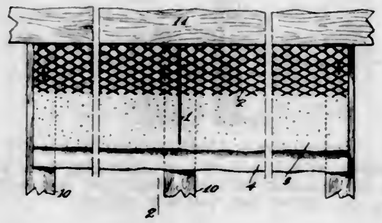
1,569,142. COMBINATION LUGGAGE. HOMER RIPPETOE, Jersey City, N. J., assignor to Saks & Company, New York, N. Y., a Corporation of New York. Filed Mar. 19, 1924. Serial No. 700,225. 1 Claim. (Cl. 190—51.)



A combination traveling case, comprising a suit-case having a partition in its body hinged to one side wall intermediate the ends thereof and of a length approxi-

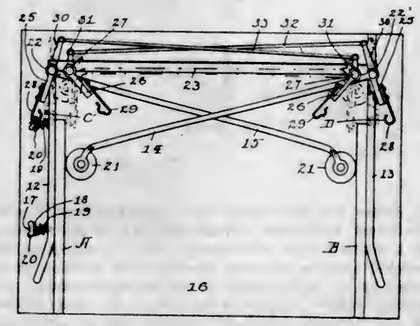
mately equal to the width of the interior of the body so as to be adapted to lie flat against said wall or to be swung straight across the interior to divide the same into two compartments, and means for removably attaching

two hat-forms, one of them to the bottom of the body in the space of one of said compartments, and the other hat-form to the inside of the cover over the space of the other compartment, substantially as set forth.



1,569,143. AUTOMOBILE BRAKE. HENRY J. ROBINSON, East McKeesport, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Nov. 14, 1923. Serial No. 674,666. 5 Claims. (Cl. 188—152.)

1. In a braking mechanism, the combination with a brake piston operated by pressure transmited through a body of liquid for applying the brakes, of a piston acting on said body of liquid to apply pressure thereto, and a piston operatively connected to said liquid pressure transmitting piston through a column of liquid and operated by fluid under pressure.



1,569,144. METALLIC LATHING. CHARLES H. SCAMMELL, New York, N. Y., assignor to Charles H. Scammell Co., Inc., New York, N. Y., a Corporation of New York. Filed Jan. 21, 1924. Serial No. 687,429. 3 Claims. (Cl. 72—116.)

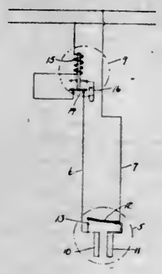
1. A new article of manufacture, consisting of an elongated strip of metallic lathing having a backing sheet secured thereto, and a marker consisting of a small strand between said backing sheet and the metal lathing, said marker running longitudinally of said

lathing strip and positioned to indicate the location of studs or similar furring when said lathing is being applied.

1,569,145. APPARATUS FOR AIDING IN THE FORMING AND NAILING OF BOXES. WILBUR C. SHARP, Camarillo, Calif. Filed Oct. 8, 1924. Serial No. 742,336. 3 Claims. (Cl. 144—295.)

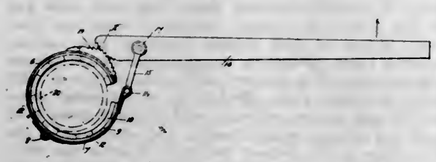
1. Apparatus for aiding in the forming and nailing of box bodies, comprising, in combination, a support, a pair of side bars on said support spaced apart and against and between which the ends of a box to be formed are adapted to be placed in upright position to receive the bottom of the box while it is being nailed thereto, a pair of presser elements pivoted on said support to swing into two positions, one in which they are adapted to hold the ends outwardly in upright position against said side bars in nailing position and the other in which they assume a releasing position away from said ends and said box body, and grippers movable to open and close by the action of said presser elements, said opening movement being effected by the movement of the presser elements outwardly against said box ends and said closing movement being effected by the releasing movement of said presser elements, said grippers being positioned and adapted when closed to hold cleats along the upper edges of the ends of the box body after the sides, ends and bottom of the box have been formed in readiness to finally receive the top.

1,569,146. ANTIRATTLER DEVICE. MAURICE SIMON, St. Louis, Mo. Filed Jan. 19, 1924. Serial No. 687,344. 8 Claims. (Cl. 292—155.)



5. An anti-rattler device comprising a bracket adapted to be mounted on a part of a window frame, a spindle supported by said bracket, a hollow body having threaded

engagement with said spindle, a rubber tip supported in the end of said hollow body adapted to contact with the window pane, a head on the spindle preventing the

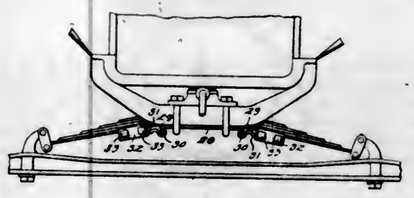


separation of said spindle and said hollow body and a lock nut threaded on said spindle and positioned between said hollow body and said bracket.

1,569,147. MEANS FOR PREVENTING OVERHEATING OF ELECTRICALLY-HEATED APPLIANCES. ALVA T. SMITH, Winsted, Conn. Filed Feb. 5, 1925. Serial No. 6,930. 1 Claim. (Cl. 219—20.)

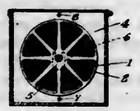
A device for preventing the overheating of electrically-heated appliances, comprising two circuit conductors, a normally-open thermostatic short-circuiting switch connected between the said conductors in position to be affected by the temperature of the heated appliance, and a circuit-breaker interposed in one of the said conductors and through which the heating current normally flows, whereby, when the temperature of the appliance rises above a predetermined point, the thermostatic short-circuiting switch will act to short circuit the conductors, and thereby momentarily increase the flow of current through the circuit-breaker, and thus cause the latter to act to open the circuit.

1,569,148. PIPE WRENCH. DONALD M. STAINBROOK, Orland, Ohio. Filed May 1, 1925. Serial No. 27,162. 2 Claims. (Cl. 81—67.)



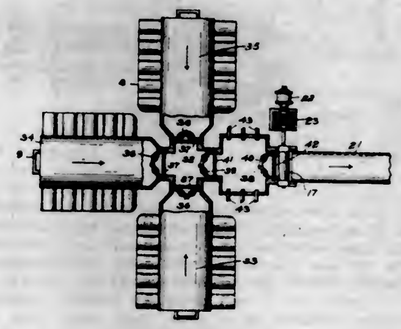
1. A pipe wrench, comprising a jaw formed of two curved bands of sheet metal arranged broadside of the axis of the jaw and hinged together, a toothed block secured against the outer side of the free end portion of one band and arranged diametrically opposite to its hinge, a lever provided with teeth for engaging with the toothed block, and a link pivotally connecting the free end portion of the other band with the said lever.

1,569,149. FASTENER FOR BAGS OR THE LIKE. BERNARD STEMBER, New York, N. Y. Filed Jan. 10, 1922, Serial No. 528,151. Renewed Nov. 17, 1925. 3 Claims. (Cl. 292—89.)



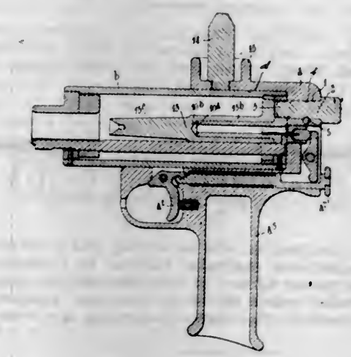
1. In a bag or the like provided at its mouth with a frame having jaws adapted to be opened or closed, fastening means for holding the jaws in closed relation, and a member carried by the jaw at one side of the mouth, the combination of additional fastening means for holding the jaws in closed relation including a bridge mounted on said member, a flexible tab pivotally supported by said bridge, and means on the bag at the side opposite said bridge and below the frame for securing the outer portion of the tab thereto.

1,569,150. AUTOMOBILE SPRING CONTROL AND REPAIR DEVICE. JESSE E. STEVENS, Lebanon, Ind. Filed Aug. 25, 1924. Serial No. 734,107. 5 Claims. (Cl. 267—51.)



1. In a control for springs of automobiles, stiffening plates adapted to be applied to the main leaves of a spring, the said control having interengaging hook-like ends, and means for securing the elements to the spring.

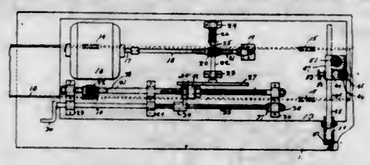
1,569,151. PROCESS OF WATERPROOFING MOTION-PICTURE FILMS AND OTHER GELATINOUS SURFACES. VICTOR A. STEWART, New York, N. Y. Filed Feb. 20, 1924. Serial No. 694,105. 2 Claims. (Cl. 95—89.)



1. The method of subjecting exposed and developed photographic film to the action of chemical vapors to render insoluble the colloid substances on the film, which comprises winding up the film and an open textured spacing tape into a composite roll thereby to space apart the film convolutions, placing said reel in a gas tight chamber and projecting vapors into said chamber to act upon the film surfaces through the medium of the tape.

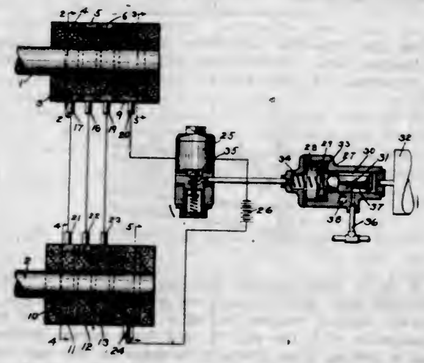
1,569,152. GLASS TANK CONSTRUCTION. THOMAS H. SWARTZLANDER, Aspinwall, Pa., assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed Mar. 25, 1922. Serial No. 546,866. 5 Claims. (Cl. 49—54.)

5. In combination in a glass tank construction, a receiving chamber having a plurality of laterally opening sides with a discharge outlet at one of said sides, a plurality of melting tanks leading into the other sides of the tank at angles to each other of less than 180 degrees, means for heating the melting tanks, and means for heating the receiving chamber.



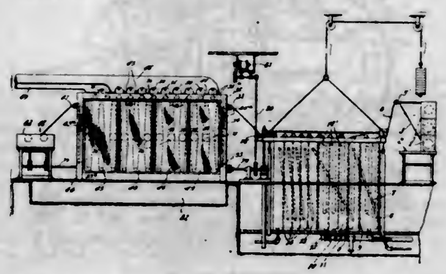
1,569,153. CAPTIVE BOLT OR LIKE PROJECTILE DEVICE. ROBERT TEMPLE, Bromley, England. Filed Feb. 20, 1925. Serial No. 10,649. 14 Claims. (Cl. 17—1.)

1. A device of the type described comprising a captive projectile having a piston-like member at its rear end, a tapered forward end of substantial length and an intermediate portion adapted to be guided, together with a barrel member having internally arranged longitudinal rod-like guiding means for guiding the intermediate part of the projectile.



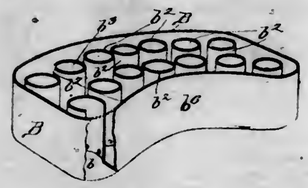
1,569,154. METAL-CUTTING MACHINE. JAMES TEMPLE, Portland, Oreg. Filed Mar. 2, 1925. Serial No. 12,803. 1 Claim. (Cl. 266—23.)

A carriage for metal cutting machines having in combination a wheeled frame; a motor on said frame; a worm shaft extending from the shaft of said motor; a worm on said worm shaft; a spring-urged slidable transverse shaft mounted on said frame; a worm wheel on said transverse shaft meshing with said worm; a friction disk on said transverse shaft; a splined shaft mounted on said frame alongside of said disk; a friction pinion on



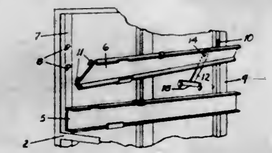
the spline of said splined shaft; a feed screw for moving said pinion along the face of said disk; means for rotating said screw and driving gears between said splined shaft and the wheels of said frame.

1,569,155. TRAIN-CONTROL DEVICE. THOMAS H. THOMAS, Edgewood, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Mar. 24, 1924. Serial No. 701,377. 8 Claims. (Cl. 303—20.)



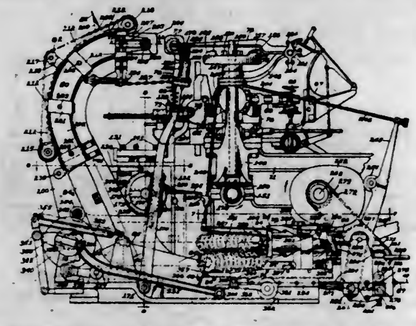
1. In an electric circuit controlling mechanism, the combinations with two synchronously rotating elements, of electric switch members associated with each element and adapted to maintain an electric circuit continuously closed so long as said elements rotate in synchronism, the circuit being opened upon failure of one element to rotate.

1,569,156. PHOTOGRAPHIC-FILM DRIER. FREDRICK B. THOMPSON, Los Angeles, Calif. Filed Feb. 9, 1924. Serial No. 691,633. 22 Claims. (Cl. 34—48.)



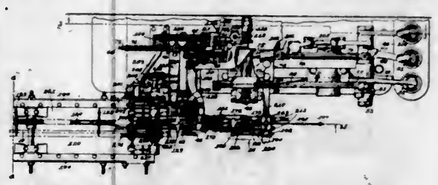
2. In a photographic film drier, the combination of a frame, having transparent side and end walls, an air duct at the top of the frame, a second air duct at the top of the said frame and at the film exit end of the drier, means for imparting motion to the film tape, and a take-up reel.

1,569,157. BEVERAGE-VENDING DEVICE. HARRY A. THOMPSON, Lowell, Mass., assignor to The Moxie Company, Boston, Mass., a Corporation of Maine. Filed Mar. 24, 1924. Serial No. 701,298. 1 Claim. (Cl. 224—48.)



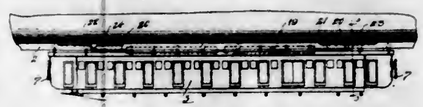
In a beverage vending device, in combination, a carrier, having a liquid tight bottom and side walls; an ice open topped pan, fitting within the carrier, having a bottom, provided with a multiplicity of perforations, partitions surrounding each perforation, forming chambers open top and bottom, with spaces separating adjacent chambers, open at the top only; means to carry and support the carrier.

1,569,158. FILING CABINET. FRED W. TOBEY, Grand Rapids, Mich. Filed July 19, 1923. Serial No. 652,517. 8 Claims. (Cl. 45—77.)



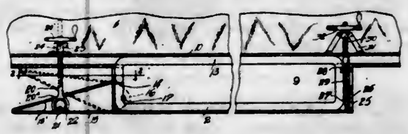
4. In a filing cabinet, the combination of a casing provided with slotted front and rear corner members, a drawer support member having a stud at its front end engageable with the slot in said front corner member, and a locking lever pivotally mounted on the rear side of said support member to be engaged with said slot in said rear corner member.

1,569,159. WIRE-SPRING-BALING MACHINE. BERT L. VAN ORMAN, Highland Park, Mich., assignor to L. A. Young Industries, Inc., Detroit, Mich. Filed Nov. 21, 1923. Serial No. 676,072. 60 Claims. (Cl. 100—31.)



34. In a structure of the class described, the combination with an assembling chute, means for feeding springs thereto one by one whereby they are nested therein, means for ejecting the springs from said assembling chute, means for passing a wire around the assembled springs, and means for tying the wire.

1,569,160. WIRE-SPRING NESTING OR ASSEMBLING MACHINE. BERT L. VAN ORMAN, Highland Park, and ROSS V. HEILMAN, Detroit, Mich., assignors to L. A. Young Industries, Inc., Detroit, Mich. Filed Mar. 30, 1925. Serial No. 19,436. 21 Claims. (Cl. 140—2.)

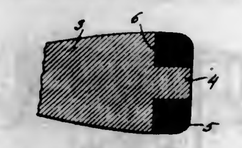


1. In a structure of the class described, the combination of an assembling chute comprising top and bottom walls, side walls disposed between said top and bottom walls, at least one of said side walls being adjustably supported, means for successively feeding springs to the forward end of said chute, an ejector comprising sprockets mounted in a plane above said chute for axial adjustment, a conveyor chain carried by said sprockets, flights mounted on said conveyor chain and adapted on their operative reach to project through the slots in said side walls of said chute, means for driving said conveyor chain with a step by step movement operatively associated with said feed means whereby the actuation of the ejector conveyor is timed to discharge the springs in assembled groups, a delivery table disposed transversely of the said assembling chute and to which the groups of springs are discharged from said chute, a reciprocating pusher adapted to shift the groups of springs on said delivery table from the path of the groups of springs delivered by said ejector, and operating means for said pusher whereby its actuation is timed.

1,569,161. AIRSHIP. EBER H. VAN VALKENBERG, Monroe, Wash., assignor of one-half to Oscar Silverstein, Spokane, Wash. Filed Apr. 27, 1925. Serial No. 26,082. 5 Claims. (Cl. 244—29.)

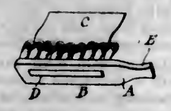
1. The combination with an airship and a longitudinally movable car suspended thereon, of a stationary abutment carried by one of said members, and motive fluid actuated means carried by the other member for coaction therewith for relatively adjusting said members.

1,569,162. BALLASTING MEANS. EBER H. VAN VALKENBERG, Monroe, Wash., assignor of one-half to Oscar Silverstein, Spokane, Wash. Filed Apr. 27, 1925. Serial No. 26,083. 5 Claims. (Cl. 244—30.)



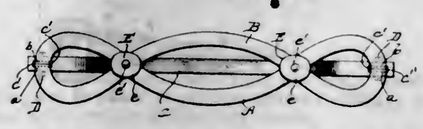
1. In an airship, the combination with a water-ballast tank carried thereby and provided with intake and outlet ports, of a hinged scoop adapted to normally close the intake port, means for adjusting the scoop for opening the port, and means for controlling the outlet port.

1,569,163. BURNER. BENJAMIN FRANKLIN WALDRON, Duncan, Okla. Filed Apr. 11, 1925. Serial No. 22,884. 4 Claims. (Cl. 158—74.)



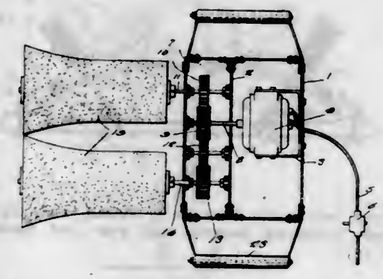
4. A device of the class described, constructed as set forth in claim 1, and further characterized by the fact that both of the last-specified means comprise a support carried by the body, shafts journaled in the support, eccentrics on the shafts, and members wherewith the eccentrics cooperate, said members being mounted, respectively, on the carrier and on the valve, one of said members being adjustable longitudinally of the part whereon it is mounted, and means for holding the said member in adjusted positions.

1,569,164. CHISEL HANDLE. EDWARD J. WIDMER, Denver, Colo. Filed Sept. 1, 1925. Serial No. 53,772. 3 Claims. (Cl. 145—61.)



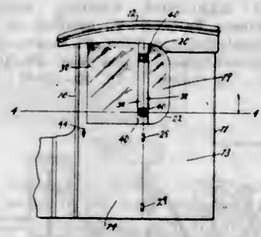
3. A chisel handle having secured to its end a protector consisting of highly compressed canvas cemented together by means of a phenolic condensation product.

1,569,165. TOOTH-CLEANSING AND GUM-MASSAGING DEVICE. MELANIE WOLF, New York, N. Y. Filed May 27, 1924. Serial No. 716,227. 6 Claims. (Cl. 15—167.)



1. A device of the kind described, comprising a body having a rubbing surface and a flexible sheet connected to said body extending beyond the rubbing surface and adapted to be held between the teeth of the user, as and for the purpose described.

1,569,166. AUTOMOBILE BUMPER. FRANK AMATO, Long Island City, N. Y. Filed Dec. 20, 1923. Serial No. 681,713. 5 Claims. (Cl. 293—55.)

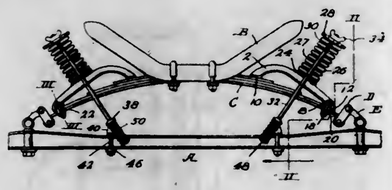


1. A bumper embodying a plurality of curved front members the end portions of which are flanged rearwardly of said members, means for fixedly attaching said flanged ends of the front members, a rear member positioned for the end portions thereof to have slidable engagement with the connected end portions of the front members, and car-attaching means for said rear member.

1,569,167. SHOE-SHINING MACHINE. RANDOLPH ANDERSON, Sr., St. Louis, Mo. Filed Aug. 15, 1924. Serial No. 732,297. 1 Claim. (Cl. 15—23.)

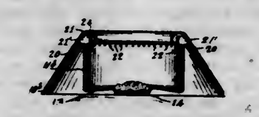
A portable shoe shining apparatus including a casing having handles thereon, shafts supported by and projecting through the casing, electrically controlled operating means for the shafts to cause said shafts to turn in the same direction, rotary brushes each having a hollow core to receive the shafts therein, means limiting the longitudinal movement of the brushes on the shafts, in an inward direction, means on the outer ends of the cores for causing the brushes to rotate with the shafts, and depressible spring clutch means carried by the shafts engaging the cores for removably locking the brushes on the shafts.

1,569,168. AUTOMOBILE CAB. KENNETH S. BAXTER and CHARLES H. CANNON, Michigan City, Ind., assignors to Sheet Metal Products Company, Michigan City, Ind., a Corporation of Indiana. Filed Aug. 3, 1925. Serial No. 47,684. 4 Claims. (Cl. 296—45.)



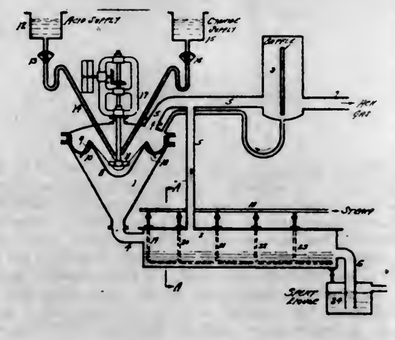
2. In an automobile cab, the combination of a side panel having a window opening extending rearwardly from the forward edge of the upper portion thereof, a window sash hinged at its rear edge to swing between a position against the inner side of said panel and a position closing said window opening, a door hinged to the side panel below the window opening, a glass slidably mounted in the door, a front guide for the glass extending upwardly from the forward edge of the door and a guide hinged to the window sash in line with the hinges of the door.

1,569,169. SHOCK ABSORBER. WILLIAM N. BORDER, Kansas City, Mo. Filed Dec. 24, 1924. Serial No. 757,904. 3 Claims. (Cl. 267—28.)



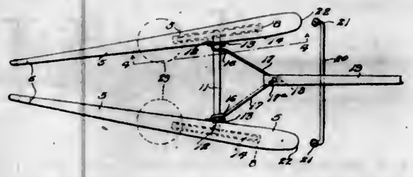
1. A shock absorber consisting of a lever seated at its ends upon one of the vehicle springs, a main spring mounted upon the intermediate portion of said lever, a

cap mounted upon said main spring, a pair of rods extending freely through eyes in said cap, a yoke secured to an upsprung portion of the vehicle and having eyes



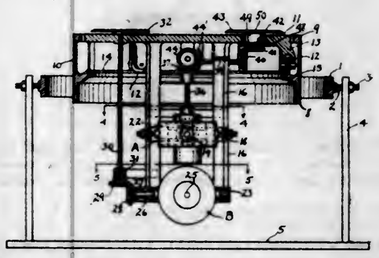
through which said rods freely extend, and auxiliary springs interposed between said yoke and heads on said rods.

1,569,170. INSECT TRAP. MAURICE BRAUN and GEZA GELENCSER, New York, N. Y. Filed Apr. 4, 1924. Serial No. 704,123. 3 Claims. (Cl. 43—121.)



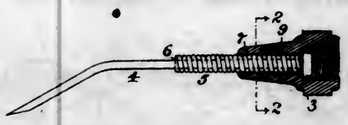
2. An insect trap comprising an outer inclined member formed adjacent its top with an annular receptacle, a bowl depending from the bottom of said receptacle, said receptacle being formed in its bottom with a number of small apertures vertically alined with the inner face of the side wall of the said bowl, and a bridging member covering the top of the said receptacle.

1,569,171. APPARATUS FOR PRODUCING AND RECOVERING REACTION GASES. MORTIMER JAY BROWN, Niagara Falls, N. Y., assignor to The Pacific R. & H. Chemical Corporation, El Monte, Calif., a Corporation of California. Filed Mar. 26, 1925. Serial No. 18,458. 12 Claims. (Cl. 23—286.)



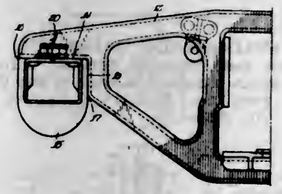
1. In apparatus for producing reaction gas from a solution, a vessel for receiving solution, means for continuously supplying reacting solution ingredients to the vessel, mixing means flowing the solution during mixing in the vessel away from the supply, means for continuously discharging the reacted solution from the vessel, and means for collecting the reaction gas liberated from the solution during such mixing and discharge.

1,569,172. ROLLING TOY. CYRIL BUJOER, St. Paul, Minn. Filed Mar. 7, 1925. Serial No. 13,890. 5 Claims. (Cl. 46—45.)



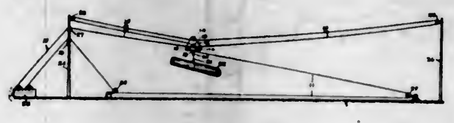
1. A top comprising an axle, a supporting wheel fixed on each end of the axle in slanting relation to the axle, the figure of a fish journaled on each end of the axle and having an inverted cavity inclosing the wheel except a small portion of its lower segment, a handle journaled on the axle between the wheels for moving the toy, and slidable means supporting the tail end of each fish.

1,569,173. CONTINUOUS AUTOMATIC LATITUDE AND LONGITUDE INDICATOR. REGINALD C. COLLEY, Houston, Tex. Filed Nov. 27, 1923. Serial No. 677,238. 6 Claims. (Cl. 33—204.)



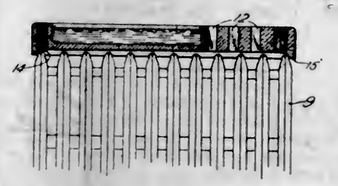
1. In a device of the character described, a support a gimbal pivoted on said support, a table mounted in said gimbal, posts depending from said table, a gimbal mounted on said posts, a gyroscope supported thereon to rotate on a vertical axis, a ring on said posts pivotally supported on a horizontal shaft, a gyroscope supported in said ring to rotate on a horizontal axis, dials on said table, and operative connections between outer axis of said gyroscope gimbal and one of said dials and between said shaft and the other of said dials in the manner described.

1,569,174. HYPODERMIC NEEDLE. EDMOND C. CROWTHER, Philadelphia, Pa., assignor to de Sanno & Hoskins, Inc., a Corporation of Pennsylvania. Filed Jan. 27, 1921. Serial No. 440,316. 3 Claims. (Cl. 128—221.)



3. A hypodermic needle and support, consisting of a cap for attachment to a syringe, combined with a needle having its blunt end rigidly secured to the cap, and a flexible sleeve fitting in close contact with the needle for approximately one-half its length, said sleeve having one end fitting into and soldered to the cap and also soldered to the needle.

1,569,175. SIDE FRAME CONSTRUCTION FOR CAR TRUCKS. HARRY E. DOMER, St. Louis, Mo., assignor to Scullin Steel Co., St. Louis, Mo., a Corporation of Missouri. Filed Mar. 27, 1924. Serial No. 702,190. 7 Claims. (Cl. 105—218.)



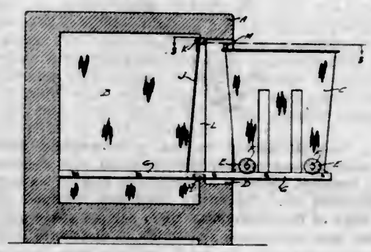
1. Side frame construction comprising a pressed steel side frame and pressed steel journal boxes welded to said side frame.

1,569,176. CABLE HOISTING AND CONVEYING APPARATUS. FORREST T. DUNHAM, Oakville, Wash. Filed Oct. 15, 1924. Serial No. 743,640. 5 Claims. (Cl. 212—87.)

1. A cable hoisting and conveying apparatus embodying a carriage, a hauling cable mounted on sheaves one end of which is attached to said carriage and the other end of which is attached to suitable hoisting means, said carriage being movably mounted upon said hauling cable and having two sheaves mounted therein on which said hauling cable may travel, a hoisting block movably mounted upon said hauling cable at a point between said two sheaves in said carriage, and a haulback cable attached to said hoisting block.

1,569,177. HUMIDIFIER. HAROLD E. EGGERS, Omaha, Nebr. Filed Nov. 20, 1924. Serial No. 750,999. 8 Claims. (Cl. 237—78.)

6. A humidifier comprising a pan one wall of which is composed of porous or capillary material, said wall having cylindrical air passageways therein.

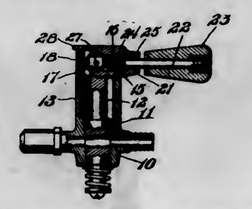


1,569,178. FLUID-PRESSURE INDICATOR. CASSIUS M. FOSTER, Toledo, Ohio. Filed Mar. 27, 1925. Serial No. 18,683. 6 Claims. (Cl. 73—81.)

4. In combination, a nipple mounted for turning movements, a fluid pressure gauge having a stem projecting therefrom which has an inlet passage to the gauge, the outer end of the stem being fashioned and having its passage enlarged to form a socket adapted to seat over

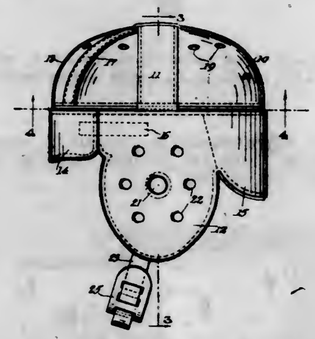
the nipple and co-act therewith to cause it to turn with the stem when turned, and a nipple seating gasket in the socket.

1,569,179. REFRIGERATOR. GUSTAV J. GAUENDLER, Clayton, Mo. Filed Aug. 14, 1922. Serial No. 581,771. 4 Claims. (Cl. 62—69.)



1. In a refrigerator having an ice chamber therein with an opening in the wall thereof, an ice container adapted to be moved into and out of said chamber through said opening, flanges disposed adjacent the vertical sides of said opening and projecting inwardly from the wall of said chamber and having their inner edges inclined inwardly from top to bottom, and a shield swingably mounted in said chamber above said opening and adapted to swing down into engagement with said inclined edges of said flanges when said container is moved out of said chamber.

1,569,180. GAS-COCK LOCK. BERNARD HAGBERG, Muskegon, Mich. Filed Sept. 3, 1925. Serial No. 54,362. 2 Claims. (Cl. 251—165.)

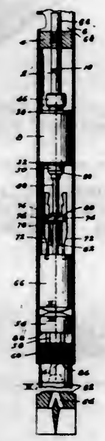


1. In combination with a gas cock including the usual valve element and stem therefor and casing, an angular extension upon the stem having a bore, a housing for the stem carried by the body of the valve and having portions opposing the angular portion of the stem throughout the movement of the stem, a plunger mounted in the bore of the angular portion of the stem, a handle element for shifting the plunger to partially rotate or to

longitudinally move the same, a tit on the plunger and a socket in the opposed portion of the stem housing, single means constantly urging the tit on the plunger

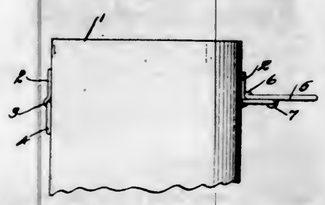
in a direction to engage the stem housing and to rotate the plunger and means preventing rotation of the plunger until the tit is engaged in the socket of the stem housing and then permitting limited rotation thereof.

1,569,181. FOOTBALL HELMET. THOMAS J. HARTMAN, Chicago, Ill. Filed Feb. 10, 1922. Serial No. 535,526. 2 Claims. (Cl. 2—3.)



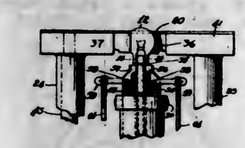
1. A football helmet having a crownpiece provided with lateral, longitudinal and diagonal stiff reenforcing straps fastened thereon, a perforated pliable leather lining extended over the entire head and fastened to the inner edge of the crownpiece, there being a space provided between said crownpiece and lining to distribute localized pressure evenly over the head, and ear pads fastened to said crownpiece by means of said lateral reenforcing straps.

1,569,182. PACKING. FRANK A. HEADSON, Milwaukee, Wis. Filed Aug. 27, 1921. Serial No. 496,054. 6 Claims. (Cl. 154—45.5.)



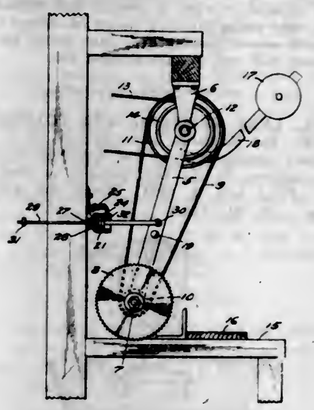
1. A quadrangular packing comprising in its construction a folded sheet forming a plurality of layers of flexible material in adhesive engagement with each other, each of said layers having an integral folded marginal portion which is integral with the next adjacent layer and extends longitudinally of the packing strip, the longitudinal marginal edges of said sheet being infolded between and inclosed and covered by adjacent marginally connected layers of the packing, and having an intermediate adhesively connected layer extending between and separating said infolded longitudinal marginal edges.

1,569,183. WELL-DRILLING APPARATUS. CHARLES H. HERMAN and FRANK G. SCHROER, Kansas City, Mo.; said Frank G. Schroer assignor to said Charles H. Herman. Filed Jan. 7, 1924. Serial No. 684,770. 2 Claims. (Cl. 255—1.)



1. In a drilling apparatus a hammer, means for engaging said hammer to raise the same, a hollow reciprocatory piston for actuating said means, a partition dividing the interior of said piston into chambers having ports, valves for controlling said ports, a cylinder in which the piston operates and cooperates therewith in shifting said valves to effect alternate closing of the ports, means for effecting the release of the hammer so that the same may deliver a blow to force the drill bit downwardly, and a tubular piston stem communicating with one of the piston chambers and extending through one end of the cylinder and a bore in the hammer.

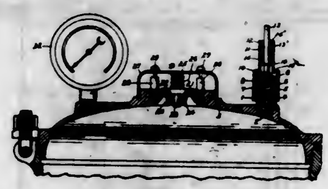
1,569,184. DETACHABLE HANDLE. MAX HERRING, Waukegan, Ill. Filed Aug. 28, 1923. Serial No. 659,806. 1 Claim. (Cl. 294—27.)



A detachable handle consisting of a substantially U-shaped bar the side portions of which are provided at their ends with return bent portions folded back in close contact with the surfaces of the side portions and forming compact abutting heads, the side portions being provided at their opposite sides and at points between their ends with pointed hooks the pointed ends of which are disposed towards the intermediate portion of the bar.

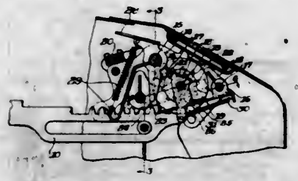
1,569,185. MACHINE AND METHOD FOR SEALING INCANDESCENT LAMPS. JOHN JOSEPH HIGGINS, East Orange, N. J., assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed Jan. 10, 1923. Serial No. 611,831. 18 Claims. (Cl. 49—2.)

8. A sealing-in machine for miniature incandescent electric lamps comprising means for supporting an exhaust tube, means for supporting a mount in axial alignment with said exhaust tube, means for temporarily supporting a bulb with the neck portion thereof in overlapping relation to an end of said exhaust tube, means for automatically adjusting said bulb in a given concentric position with respect to said mount, means for heating said positioned tube and bulb to effect a consolidation thereof and means for discharging air through said exhaust tube to maintain the passage in said exhaust tube open.



1,569,186. AUTOMATIC CHECK FOR TRIMMER SAWS. HENRY C. HILKE and THOMPSON H. BOYD, Seattle, Wash. Filed May 29, 1924. Serial No. 716,558. 3 Claims. (Cl. 143—46.)

1. The combination with a swingable frame of a trimmer-saw machine, of a cylinder having an end provided with a central aperture, a rod extending through said aperture and having one of its ends connected to said frame, means provided upon said rod adjacent its other end and engageable with said cylinder end to limit the travel of the frame in one direction, and a piston mounted upon the rod and adapted to enter the cylinder to limit the travel of the frame in the other direction.



1,569,187. RELIEF MEANS FOR PRESSURE COOKERS. JESSE R. JEWELL, Lincoln, Nebr., assignor to National Manufacturing Company, Lincoln, Nebr., a Corporation of Nebraska. Filed June 25, 1921. Serial No. 480,481. 8 Claims. (Cl. 137—53.)

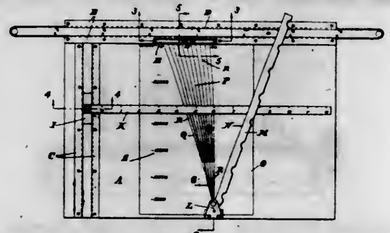
1. In a pressure cooker a cover, studs secured in said cover and extending upwardly therefrom, heads formed on said studs, a hood provided with bayonet slots adapted to receive the heads of said studs, and a spring positioned between said hood and valve and

compressed when said heads are passed through the enlarged portion of said bayonet slots and the hood rotated.

1,569,188. CALCULATING MACHINE. OLIVER D. JOHANTGEN, Oak Park, Ill., assignor to Victor Adding Machine Co., Chicago, Ill., a Corporation of Illinois. Filed Apr. 2, 1925. Serial No. 20,090. 9 Claims. (Cl. 235—137.)

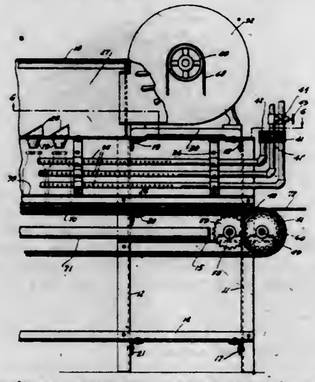
1. In a calculating machine, a plurality of register wheels, a carry device cooperating with said register wheels and oscillatable about a fixed axis, a plurality of actuators for said register wheels respectively, said register wheels being movable back and forth from driven relationship with respect to said actuators to cooperative relationship with said carry device, and means for returning said carry device while the register wheels are being driven by said actuators.

1,569,189. TYPE CHASE. FREDERICK KOHNLE, Dayton, Ohio. Filed Apr. 2, 1925. Serial No. 20,212. 6 Claims. (Cl. 101—393.)



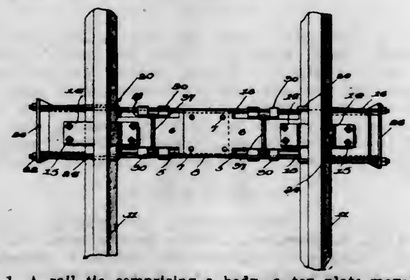
1. A type chase, having opposingly related rows of spaced parallel V-shaped grooves, the width of each groove and distance between adjacent grooves being equal, and type supporting plates substantially equal in thickness to the width of a groove engageable with the grooves to form parallel walled type receiving ways of different widths, whereby a maximum number of spacing combinations can be obtained in a chase of minimum size.

1,569,190. FIRE-CONTROL APPARATUS. OSCAR KRUPP, Nashville, Tenn. Filed May 16, 1924. Serial No. 713,862. 7 Claims. (Cl. 235—61.) (Granted under the act of Mar. 3, 1883, 22 Stat. L., 625.)



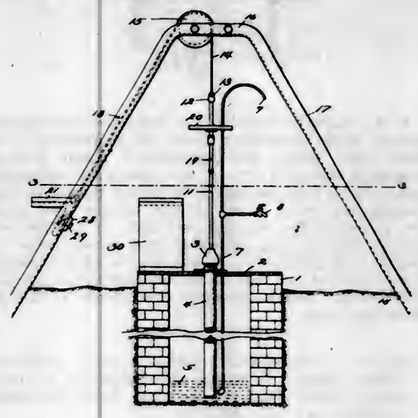
3. A fire control apparatus embodying a base, an azimuth scale slidably mounted horizontally of the base,

a deflection scale slidable vertically of the base, a chart carried by the base, and a travel arm pivotally mounted



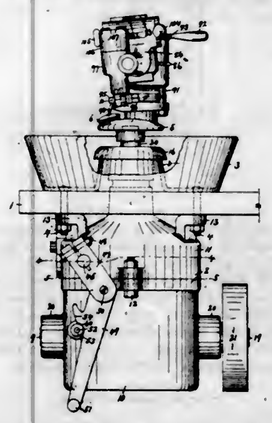
on the base and adapted to intersect the azimuth and deflection scales to mechanically compute the degree of deflection.

1,569,191. COOLING APPARATUS. HARRY D. LATHROP and WALTER H. PAULSON, Chicago, Ill.; said Paulson assignor to said Lathrop. Filed Oct. 23, 1922. Serial No. 596,285. 45 Claims. (Cl. 257—23.)



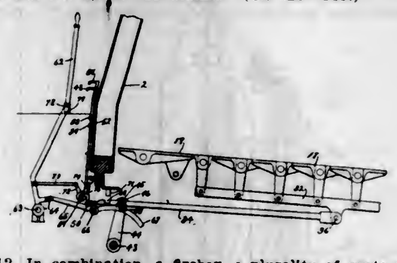
8. A cooling apparatus comprising means for conveying a plurality of heated articles therethrough; means arranged in cooperative relation with said articles for cooling same and automatically tempering the cooling medium to said articles during the operation of said apparatus; said means during a portion of the travel of said articles being directed to the outside thereof, and at another point in said travel being directed to both the inside and outside.

1,569,192. RAILROAD TIE. FREDERICK DUDLEY LEMAN, Raton, N. Mex. Filed Mar. 16, 1925. Serial No. 15,940. 6 Claims. (Cl. 238—95.)



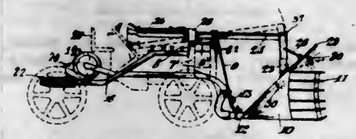
1. A rail tie comprising a body, a top plate movably positioned on the body and having side flanges contacting with the body, means for clamping rails on said top plate, fastening rods arranged at opposite sides of said body and having hooks engaged with the rails, and end plates receiving said rods and engaged with the ends of the body.

1,569,193. PUMP. ANDREW L. LEWIS, Petersburg, Va. Filed June 30, 1922. Serial No. 571,885. 1 Claim. (Cl. 103—212.)



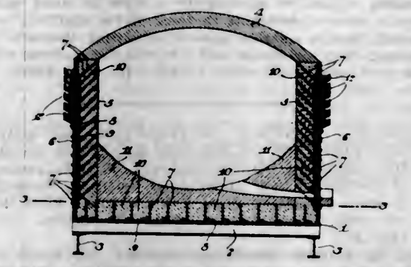
A pump comprising a cylinder, a reciprocatory plunger working in said cylinder, a plunger rod, a foot rest secured to said plunger rod, a pulley, a second foot rest, and flexible means passing over said pulley for securing said second foot rest to said plunger rod.

1,569,194. LENS GRINDING AND POLISHING MACHINE. ELI MAYNARD LONG, Geneva, N. Y., assignor, by mesne assignments, to The Standard Optical Company, Geneva, N. Y., Incorporated in New York in 1924. Filed Aug. 2, 1921. Serial No. 489,197. 12 Claims. (Cl. 51—124.)



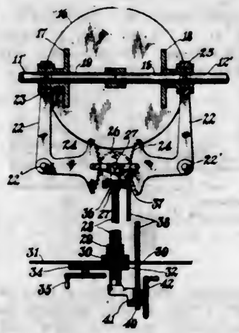
9. In a lens-grinding and polishing machine, a rotary lap-supporting spindle, a rotary lens-operating spindle adjustable laterally and angularly relatively to the lap-supporting spindle and provided with a pin at one side of the axis for engaging a lens-holder, and means for rocking the second-named spindle in reverse directions.

1,569,195. GRATE SHAKER. NATHAN M. LOWER, ALBERT R. CHALKER, and LONNIE EDWARD OSBORNE, Pittsburgh, Pa., assignors to Locomotive Stoker Company, a Corporation of Pennsylvania. Filed Jan. 22, 1925. Serial No. 3,914. 13 Claims. (Cl. 126—169.)



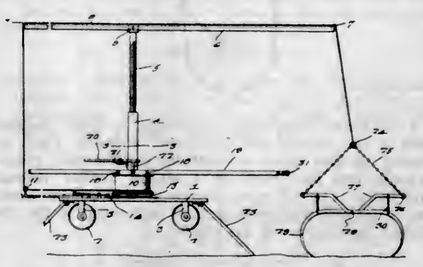
12. In combination, a firebox, a plurality of grate sections therefor, a movable member, power means for operating said member, links secured to said sections for operating the same, a control member for each grate section for selectively detachably connecting said links to said member, and a single lever for manually operating said sections.

1,569,196. INSECT EXTERMINATOR. JAMES A. MCDANIEL, Shawnee, Okla. Filed Dec. 5, 1922. Serial No. 605,040. 2 Claims. (Cl. 43—140.)



1. A machine adapted to carry illuminated traps in front of it, comprising a vehicle frame, a trap supporting frame in front of said vehicle, a series of traps mounted on said frame, means to illuminate said traps, a lever swiveled on said vehicle frame, connections between said lever and said supporting frame so as to provide for free vertical and lateral movement of the traps and supporting frame, a collector carried on the vehicle, pipes communicating with said traps, and collector means for creating a suction in said pipes for conveying insects from said traps and delivering the same in said collector.

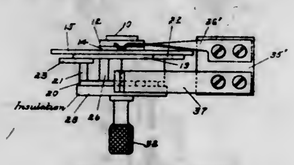
1,569,197. FURNACE WALL AND LINING CONSTRUCTION. NORMAN E. MACCALLUM, Phoenixville, Pa. Filed Aug. 13, 1924. Serial No. 731,720. 5 Claims. (Cl. 263—46.)



2. A furnace comprising a hearth, an exterior base plate for said hearth, a plurality of metal strips secured to and projecting inwardly and upwardly from said base plate, and a refractory material packed between said strips and said base binding plate into intimate binding contact with said plate.

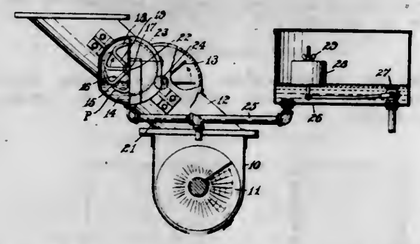
1,569,198. VARIABLE POWER-TRANSMISSION MEANS FOR COMBINATION AIR WITHDRAWING AND DELIVERY APPARATUS. JAN MIKE, Dawson, N. Mex. Filed Apr. 12, 1924. Serial No. 706,049. 2 Claims. (Cl. 74—26.)

1. In a device of the class described, a pair of driven shafts, a friction drive disk, a pair of driven disks mounted on the respective shafts and engaging said drive disk on opposite sides of the centre thereof, bell crank levers connected to said driven disks to adjust them along the said shafts, gear elements on the other ends of said levers, a common gear meshing with said gear elements, and means for shifting said gear bodily to impart a common movement in one direction to said levers and for rotating said gear to impart unitary movement to said levers in relatively different directions, including a longitudinally movable rod on which said gear is mounted.



1,569,199. HAYSTACKER. LEVI S. MINERD, Howard, Kans. Filed June 5, 1924. Serial No. 718,057. 2 Claims. (Cl. 212—44.)

1. A device of the class described including a platform, a standard mounted on said platform and extending vertically therefrom, the upper end of said standard being provided with an adjustable section adapted to extend the length thereof, a beam mounted on said standard intermediate the ends and adapted to be adjusted in its height above the platform, by the adjusting of the standard, a drum rotatable on the standard on top of the platform, a lifting cable connected at one end with a gripping device, and extended over suitable pulleys at the ends of said beam, and connected at the opposite ends with said winding drum adapted for winding thereon, in the rotation of the drum, an operating bar rotatably mounted on the standard above said drum and adapted for engagement with projections formed on the upper ends of the drums to effect the rotation thereof in the rotation of the bar member about said standard, means for lifting said

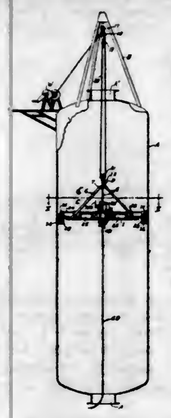


bar member upwardly on said standard to prevent engagement thereof with the projections on the drum, and braking means for the drum having a manually operable handle, operable to control the rotation of the drum.

1,569,200. TIME SWITCH. DOUGLAS L. PARKHURST, Washington, D. C. Filed Nov. 1, 1924. Serial No. 747,359½. 9 Claims. (Cl. 200—38.) (Granted under the act of Mar. 3, 1883, 22 Stat. L., 625.)

4. In an electrical time switch, a time shaft, a sleeve upon the shaft, a pair of disc members fixed upon the sleeve, a ring loosely mounted upon said sleeve and between said disc members, an elongated peripheral contact carried by one of said disc members and the ring, a stationary contact arm arranged to wipe said peripheral contacts, and means whereby the ring may be adjustably clamped to one side of one of said disc members.

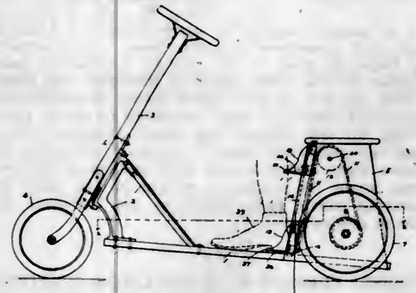
1,569,201. GRAIN CONDITIONER. SCEBRON M. PIERSALL, Abilene, Kans. Filed July 14, 1924. Serial No. 725,798. 6 Claims. (Cl. 83—27.)



1. A grain conditioner comprising a chute inclined both to the vertical and horizontal, a paddle wheel arranged in said chute so that its paddles will project radially into the depth of a stream flowing through said chute, a water pump driven by said paddle wheel, and a delivery pipe leading from said pump to the discharge stream line of the chute.

1,569,202. MEDICAL PREPARATION. JULIUS R. PROCHNOW, San Antonio, Tex. Filed Nov. 10, 1923. Serial No. 674,035. 4 Claims. (Cl. 167—7.)

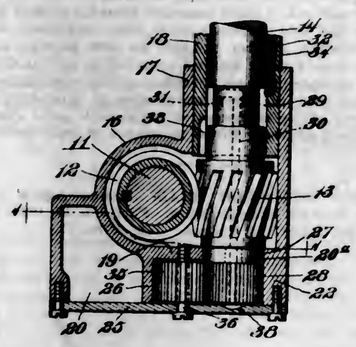
2. A preparation for internal use comprising a solution of the constituents of balsam copaiba, sweet spirits of nitre, and hexamethylene tetramine, with the formaldehyde produced in solution.



1,569,203. SCRAPING DEVICE. WAYNE P. RICE, HOWARD A. MERTZ, and CHESTER E. MOORE, Ponca City, Okla., assignors to Marland Refining Company, Ponca City, Okla., a Corporation of Oklahoma. Filed Nov. 21, 1923. Serial No. 676,193. 16 Claims. (Cl. 15—104.13.)

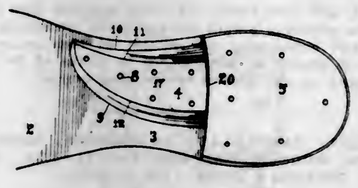
2. A device for removing solid matter from the walls of stills and the like, comprising a member adapted to be introduced into a still, rotatable means mounted on said member and adapted to contact with a wall of

said still, and means whereby said rotatable means may be rotated while in contact with said still wall, thus rotating said member.



1,569,204. VELOCIPEDE. SAMUEL L. ROGERS, San Francisco, Calif., assignor to Julien A. Bried, Oakland, Calif. Filed Oct. 6, 1923. Serial No. 666,978. 13 Claims. (Cl. 208—38.)

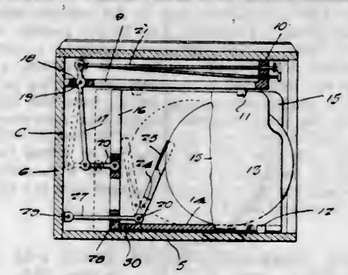
1. In a velocipede, a front steering wheel, a rear driving road wheel, framing connecting the wheels including a platform adapted for a rider to stand upon, and a movable device at the rear of the platform connected through suitable power transmitting elements for driving the rear wheel and adapted for movement by the heel only of the rider to drive the rear wheel.



1,569,205. IGNITION DISTRIBUTOR MOUNTING AND PUMP FOR OILING THE BEARINGS THEREOF. ARTHUR L. SANDIN, Bismarck, N. Dak., assignor of one-half to Lahr Motor Sales Company, Bismarck, N. Dak., a Corporation of North Dakota. Filed Mar. 19, 1925. Serial No. 16,783. 7 Claims. (Cl. 184—27.)

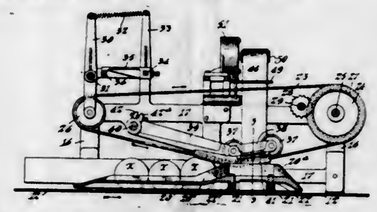
1. An ignition distributor mounting and means for oiling the same comprising in combination a distributor shaft having a worm gear and a generator shaft having a worm for coaction with the gear, a housing for the adjacent ends of said shafts adapted to be secured to the generator and providing beneath the generator shaft a reservoir, the lower end of the distributor shaft being projected into said reservoir and formed to provide one end of a gear pump, a second gear for the gear pump meshing with the gear of the distributor shaft to be driven thereby and a longitudinal port formed in the distributor shaft to provide an outlet from the gear pump and communicating with bearings

of the distributor shaft, the bearings of the distributor shaft including upper and lower sections, the distributor shaft intermediate said sections having a groove into which said port discharges and a wick mounted in the bearing wall of the upper bearing and extending into said groove.



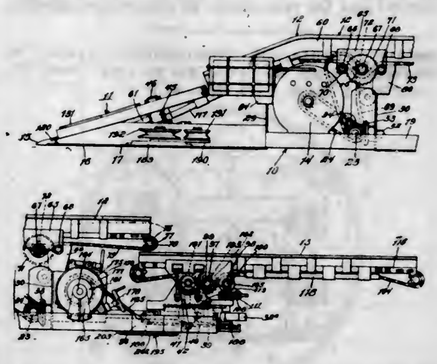
1,569,206. ARCH SUPPORTER. LAWRENCE E. SCRANNAGE, Philadelphia, Pa. Filed July 5, 1924. Serial No. 724,331. 1 Claim. (Cl. 36—76.)

As a new article of manufacture, an arch support for foot-wear comprising a single piece of rubber adapted to be secured to the shank of a shoe and having curved longitudinal edges converging toward one end thereof, the upper surface of the support being curved longitudinally to fit the shank of the shoe and the lower surface of said support being flat and in a plane with the tread portion and the heel of said shoe, the said upper surface being also curved laterally and having lateral depressions to the depth of the neutral axis, and the said support having the marginal edges of the upper surface thereof extending beyond the marginal edges of the lower surface.



1,569,207. PHONOGRAPH-RECORD EJECTOR. SAMUEL V. SEARS, Falls City, Nebr. Filed Mar. 27, 1925. Serial No. 18,752. 3 Claims. (Cl. 211—16.)

1. In combination, a cabinet, a record holder slidable in the cabinet, a lever pivoted in the cabinet, a push rod for swinging the lever, a link connecting the lever with the holder, an arm pivoted on the holder intermediate its ends, a rod connecting one end of the arm to the cabinet whereby when said first mentioned rod



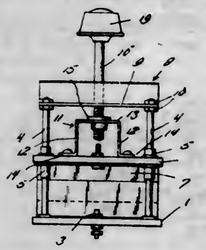
is actuated to swing the lever for pushing the holder outwardly of the cabinet, said arm is swung for projecting a record from the holder.

1,569,208. FRUIT-MARKING MACHINE. FREDERICK J. SÉVIGNÉ, Milford, N. H. Filed Aug. 5, 1925. Serial No. 48,264. 14 Claims. (Cl. 101—35.)

12. The combination with a horizontal carrier, of a guideway in close proximity thereto for directing a row of oranges advanced by said carrier, a feeder belt above the carrier and positioned relatively thereto to engage the tops of oranges successively advanced by the carrier, a marker in line with the guideway between the carrier and feeder belt, and a pivoted arm having a plurality of rolls in tandem bearing on the operative run of the feeder belt above the marker.

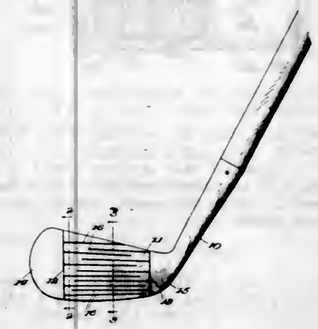
1,569,209. CONVEYER. CHARLES W. SHANABERGER, Indiana, Pa., assignor of two-thirds to John Barnes, Philadelphia, Pa. Filed June 9, 1925. Serial No. 36,034. 26 Claims. (Cl. 198—8.)

1. In a loading machine of the type described, a stationary conveyer structure, a movable conveyer structure, a drive for the conveyer of the stationary conveyer structure, a connection between the drive and the conveyer of



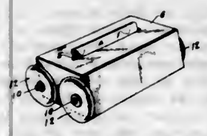
the movable conveyer structure permitting rotation of the movable conveyer structure about a vertical axis through 180° and adjustment of the movable conveyer structure about a horizontal axis in any position of the conveyer about its vertical axis, including a turntable upon which the movable conveyer is mounted, a gear axial to the turntable, a turntable base having mounted therein a shaft continuously driven from the drive, a pinion on the shaft meshing with the gear and connectible to the shaft to be driven thereby, a horizontal shaft operatively connected with said gear to be driven thereby, bearings for said horizontal shaft, and a mounting for the movable conveyer rotatably engaged with the bearings of the horizontal shaft.

1,569,210. REEL-CONTROLLING MEANS FOR CASTING RODS. OTTO G. SNYDER, Dayton, Ohio. Filed Apr. 3, 1925. Serial No. 20,517. 3 Claims. (Cl. 242—84.5.)



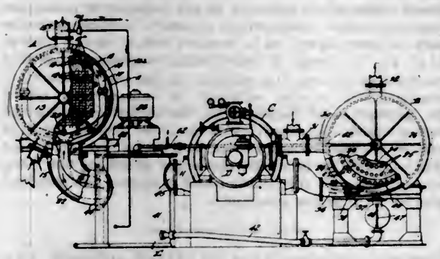
1. In a device of the type described, a reel post, a reel freely mounted on the outer end of said post, a sleeve rotatably and longitudinally movable on said post and in normal engagement with said reel, cam means on said post within the sleeve to draw the latter from engagement with the reel when said sleeve is turned, an abutment on the inner end of said post, and resilient means surrounding the post within the sleeve between said abutment and the cam means, for the purpose specified.

1,569,211. VARIABLE CONDENSER. ELMER W. SPENCER, Hemple, Mo. Filed May 16, 1924. Serial No. 713,760. 1 Claim. (Cl. 250—41.)



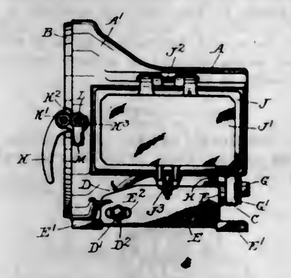
A variable condenser comprising a base of rectangular form, a plurality of rods mounted at the corner portions of said base and extending laterally therefrom in spaced parallel relation, a plurality of parallel spaced condenser plates mounted on said base and extending therefrom in lateral relation, a movable plate having guides slidably fitting said rods, a plurality of spaced parallel condenser plates mounted on said movable plate and projecting laterally therefrom adapted for movement in all of the relations and in spaced relation between the condenser plates mounted on said base member, a plate member removably mounted on the end portions of said rod, a shaft rotatably mounted in said plate member and held therein against axial movement, a U-shaped bracket member mounted on said movable plate member, and a block member mounted in said U-shaped bracket member having a threaded opening threadedly cooperating with the threaded portion of said shaft for effecting a sliding movement of the movable plate member on said rod on the rotative movement of said shaft.

1,569,212. GOLF-CLUB HEAD. JAMES ABRAM GARFIELD AITKEN, Holyoke, Mass. Filed Jan. 17, 1925. Serial No. 3,133. 5 Claims. (Cl. 273—77.)



1. A golf club having its blade provided with facial grooves extending toward one another in alternating relation and overlapping one another at their inner portions to provide an area shaded by virtue of the close proximity of the grooves where they overlap.

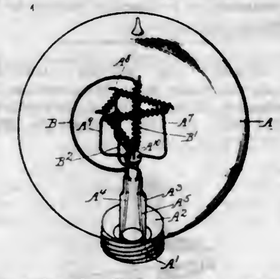
1,569,213. RAZOR-BLADE SHARPENER. SAMUEL S. BAER, Baltimore, Md. Filed Dec. 18, 1924. Serial No. 756,840. 4 Claims. (Cl. 51—86.)



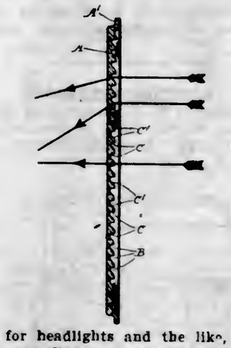
2. In a sharpening device, the combination of two spaced sharpening rollers each provided with journals and with traction rollers, and a box having bearings for said journals, the sharpening surface of each sharpening roller being enclosed within said box, the traction rollers extending below the bottom of the box, the top of the box having a slot within which part of the blade may be inserted and tilted on the edges of the slot alternately in opposite directions into contact with the sharpening surfaces of the sharpening rollers while the remainder of the blade is grasped and used to propel the device in opposite directions over a surface and for effecting the tilting of the blade on said edges of the slot.

1,569,214. REFRIGERATING SYSTEM. WILLIS H. CARRIER, Essex Fells, N. J., assignor to Carrier Engineering Corporation, Newark, N. J. Filed Sept. 2, 1922. Serial No. 585,999. 36 Claims. (Cl. 62—115.)

1. In a refrigerating system employing a volatile liquid refrigerant, the combination with an evaporator for the liquid refrigerant, a condenser for the refrigerant vapor, a compressor which withdraws the refrigerant vapor from the evaporator and delivers it at a higher pressure to the condenser, and means for returning the liquefied refrigerant from the condenser to the evaporator, of means which produces a circulation of a relatively small volume of the liquid refrigerant, means for delivering refrigerant vapor and any noncondensible gas therein from the condenser into said circulating liquid refrigerant, means for condensing the refrigerant vapor in such circulating liquid to separate it from said noncondensible gas, and means for the escape of said noncondensible gas from the system.



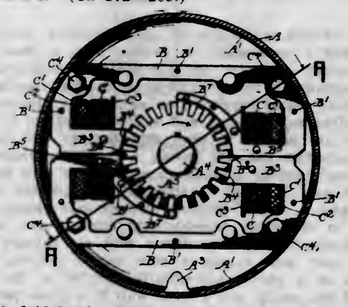
1,569,215. HEADLIGHT CASING. CHARLES W. DAKE, Chicago, Ill., assignor to The Pyle-National Company, Chicago, Ill., a Corporation of New Jersey. Filed Aug. 11, 1922. Serial No. 581,081. 7 Claims. (Cl. 240—41.)



1. In combination in a locomotive light, a light casing and a supporting bed upon which it is mounted and means for adjusting the casing vertically and laterally with relation to said bed, said means including slots in the side of and adjacent the forward end of said bed, and lugs on said casing adapted to be supported from said slots to permit vertical pivotal movement of the casing with relation to the bed and adapted to be moved lengthwise from said slots to permit lateral rotation of the casing.

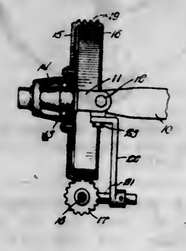
1,569,216. ELECTRIC LIGHT. CHARLES W. DAKE, Chicago, Ill. Filed Feb. 23, 1923. Serial No. 620,561. 5 Claims. (Cl. 176—40.)

1. In an electric light globe, a base, a support projecting upwardly therefrom within said globe, a longitudinal filament section upwardly projecting from said base, a holding hook adapted to hold the outer end of said longitudinal section, a plurality of transverse filament sections located in a single plane intermediate the ends of and perpendicular to the longitudinal section and surrounding it, and a plurality of hooks upwardly and outwardly projecting from said support, adapted to support said transverse sections.



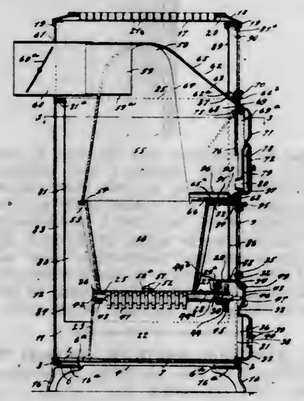
1,569,217. LENS FOR HEADLIGHTS. CHARLES W. DAKE, Chicago, Ill. Filed Feb. 23, 1923. Serial No. 620,563. 1 Claim. (Cl. 240—48.4.)

In a lens for headlights and the like, a plurality of corrugations extending outwardly and upwardly from the central vertical axis of the lens, each individual corrugation comprising a wall substantially parallel to the line of approach of the rays, and a face extending from the top of one wall to the bottom of the next, comprising reversed curves meeting intermediate said walls, the portions of said face adjacent the walls forming relatively extended surfaces conforming substantially to planes perpendicular to the axis of approach of the rays.



1,569,218. ELECTRIC MACHINE. CHARLES W. DAKE, Chicago, Ill. Filed Dec. 10, 1923. Serial No. 679,526. 8 Claims. (Cl. 171—209.)

1. A field lamination for electric machines comprising a transverse element having a laterally extended portion at either end and pole pieces inwardly extending sub-

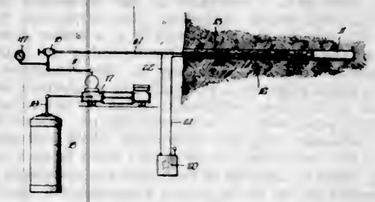


stantially parallel with the transverse element from such opposed lateral extensions, the pole pieces being of different width measured in a direction normal to the transverse element.

1,569,219. BRAKE AND METER CONSTRUCTION. ADIEL Y. DODGE, South Bend, Ind., assignor to Bendix Brake Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 13, 1924. Serial No. 698,860. 8 Claims. (Cl. 74—7.)

2. An automobile brake drum having a circumferentially-extending heat-radiating worm thread at its periphery.

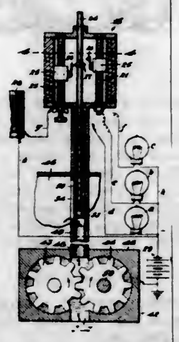
1,569,220. HEATING APPARATUS. EDWARD R. DOWNE, Larchmont, N. Y., assignor to The Fox Furnace Company, Elyria, Ohio, a Corporation of Ohio. Filed Jan. 30, 1924. Serial No. 689,418. 12 Claims. (Cl. 126—67.)



1. A heating apparatus of the character described, comprising a rectangular supporting base, a heat-emitting element supported on said base and including an ash receptacle, a fire-pot and a combustion chamber, a rectangular casing supported on said base structure and surrounding said element and spaced therefrom to provide an air passage between said element and casing, said combustion chamber having a forwardly projecting fuel throat opening through an aperture in said casing, and the ash receptacle having an open portion registering with a second opening through said casing, and a wall in the space between said element and casing and spaced therefrom to divide said air passage vertically, said wall having a rear curved portion, said portions in a plane substantially parallel to the side walls of the casing, and a front wall in a plane parallel to the front wall of the casing, the front portion of said wall having an opening through which said fuel throat projects.

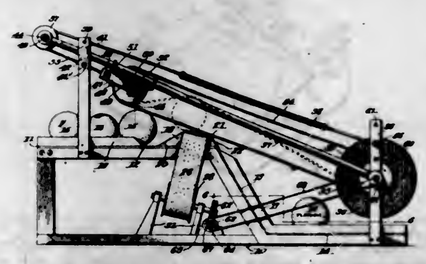
1,569,221. MANUFACTURE OF LACTIC ACID. STANLEY E. FAITHFULL, Boston, Mass. Filed May 8, 1924. Serial No. 711,894. 12 Claims. (Cl. 260—120.)

1. In the process of making lactic acid by the fermentation of an acid liquor containing somewhat hydrolyzed carbohydrate material, in the presence of lactic acid bacteria, while preventing excessive accumulation of acid in said liquor, at a temperature of about 112 to 114° F., the steps of introducing a gaseous oxidising material containing free oxygen, during the fermentation treatment, in amount sufficient to substantially retard the production of butyric acid, thereafter rendering the liquor alkaline and heating to near the boiling point of water, whereby remaining carbohydrates are converted into caramel-like products, thereafter adjusting the H-ion concentration in the solution and removing proteins and similar nitrogenous substances.



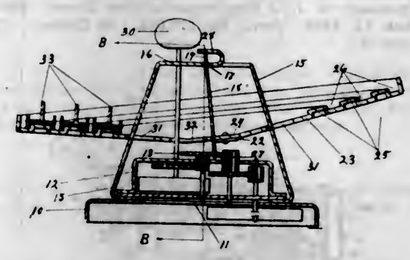
1,569,222. COMBINATION BLASTING METHOD AND MEANS. DENT FERRELL and ARTHUR W. HELMHOLTZ, Harrisburg, Ill. Filed Mar. 16, 1925. Serial No. 15,728. 10 Claims. (Cl. 102—5.)

1. The method of blasting which comprises inserting into a drill hole a closed container, connecting the container to a source of fluid supply, forcing fluid into the closed container under pressure, and applying to said fluid a gasifying heat, the gasification producing a pressure sufficient to rupture a wall of the container.



10. Apparatus for blasting comprising a rigid container, electrical means in the container adapted to cause the liberation of heat, a source of fluid supply, means adapted to force said fluid under pressure into the container, and means adapted to supply electricity to the electrical means in the container.

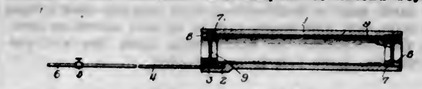
1,569,223. VEHICLE SPEED INDICATOR. CHARLES GORE, Los Angeles, Calif. Filed July 22, 1922. Serial No. 576,835. 3 Claims. (Cl. 175—335.)



1. In a device for indicating and controlling speeds of vehicles, a liquid-containing chamber, a pump having an inlet communicating with said chamber, a tube leading from the outlet of said pump having a side opening communicating with said chamber, a spring pressed reciprocal bar extending longitudinally into said tube, a piston on said bar, a wiper contact on said bar, means for driving said bar by propulsion of a vehicle whereby liquid will be forced against the piston in the tube to effect upward movement of the bar, said piston in moving upward uncovering the opening in said tube whereby liquid may pass from the tube to the chamber, and means controlled by the wiper contact for signaling when the vehicle has reached a predetermined speed.

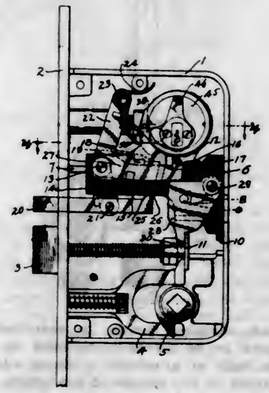
1,569,224. FRUIT-MARKING MACHINE. ARTHUR B. HALE, Tampa, Fla., assignor, by mesne assignments, to F. J. Sévigné Machine Company, Nashua, N. H., a Corporation of New Hampshire. Filed Apr. 8, 1924. Serial No. 704,978. 18 Claims. (Cl. 101—40.)

1. A marking machine having a conveyor, stationary marking means for articles advanced by the conveyor, one of said means being displaceable through engagement with an article to prevent premature advancement of a succeeding article with respect to the marking means, and stationary means for temporarily arresting each article as it approaches the marking means.



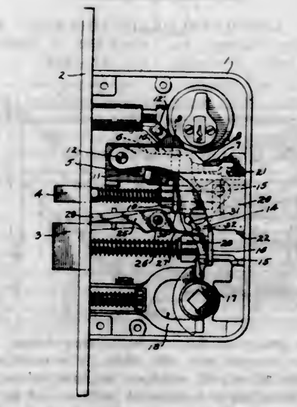
1,569,225. MECHANICAL TOY. LESTER S. GUNDERMAN, Pittsburgh, Pa. Filed Mar. 8, 1924. Serial No. 697,740. 9 Claims. (Cl. 272—35.)

1. A toy comprising a base, an inverted U-shaped member mounted in the base, a spring motor including a driving gear in said U-shaped member, an upright member eccentrically mounted and freely movable in said driving gear and movable on said U-shaped member, a disc attached to said upright member, tracks forming a structurally integral portion of said disc, and playing pieces adapted to travel on said tracks.



1,569,226. MECHANICAL PRESSURE DEVICE. ARTHUR W. HELMHOLTZ and DENT FERRELL, Harrisburg, Ill. Filed Oct. 17, 1924. Serial No. 744,184. 6 Claims. (Cl. 102—5.)

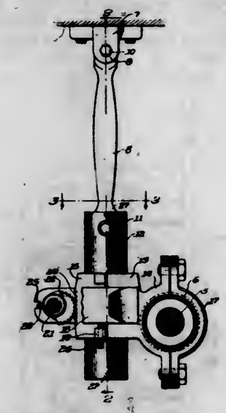
4. Blasting apparatus, comprising a cylindrical closed container, adapted to fit in a drill hole, an end of said container being removable and replaceable and being of less strength than the walls of the cylinder, a pipe connected to the container and adapted to extend beyond



the drill hole, means for supplying fluid under pressure to the pipe and means for controlling the flow of the fluid through the pipe.

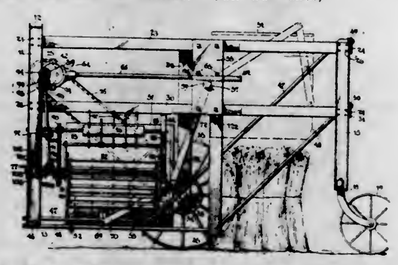
1,569,227. LOCK. NORMAN B. HURD, New Britain, Conn., assignor to The American Hardware Corporation, New Britain, Conn., a Corporation of Connecticut. Filed Mar. 18, 1925. Serial No. 16,300. 6 Claims. (Cl. 70—92.)

1. In a lock, a lock case, a latch carried by said case, means for locking said latch in projected position, tumbler means for locking said means in one position, and an auxiliary latch for dogging said tumbler to prevent actuation of said means when the auxiliary latch is projected.



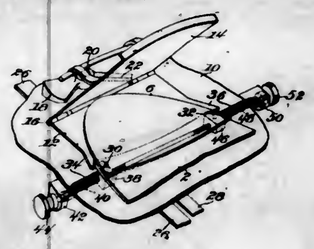
1,569,228. LOCK. NORMAN B. HURD, New Britain, Conn., assignor to The American Hardware Corporation, New Britain, Conn., a Corporation of Connecticut. Filed July 13, 1925. Serial No. 43,187. 4 Claims. (Cl. 70—92.)

1. In a lock, a lock case, a slide bolt therein, a latch bolt in the case, a key-controlled member, means carried by said slide bolt and operable by said key-



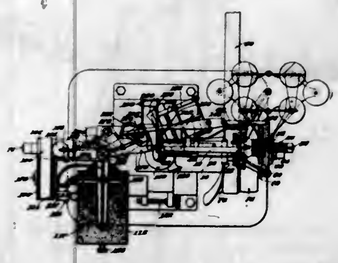
controlled member, an operating member to be engaged by said means and to be operated thereby for retracting the latch bolt, a dead-locking latch dog for dead-locking the latch bolt and means carried by said operating member for retracting the dead-locking latch dog and permitting the latch bolt to be retracted.

1,569,229. SHOCK ABSORBER. FRANCIS HERBERT JONES, Cicero, Ill. Filed Mar. 5, 1925. Serial No. 13,297. 6 Claims. (Cl. 188—129.)



1. A shock absorber having, in combination, a cylinder adapted to be pivotally mounted on the underside of the body of a vehicle, a clamp adapted to be rigidly mounted on the chassis of the vehicle and loosely embracing said cylinder, said clamp having a pair of spaced arms extending beyond opposite sides of said cylinder, a movable clamp shoe loosely mounted between said arms and adapted to frictionally engage one side of said cylinder, said shoe having vertical rack teeth formed on its outer side, a cam gear pivotally mounted between said arms and meshing with said rack, said cam gear being disposed to cause a lateral pressure against said shoe as the latter is moved upwardly, to force said shoe into frictional engagement with said cylinder, and spring means tending to hold said cam gear in engagement with said shoe.

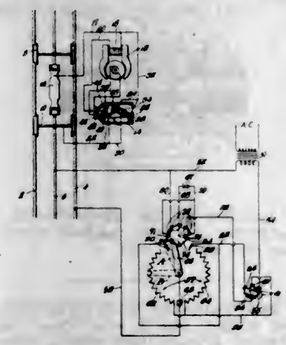
1,569,230. AUTOMATIC GRAIN SHOCKER. ALBIN P. LOFSTRAND, Chicago, Ill. Filed Feb. 9, 1924. Serial No. 691,668. 9 Claims. (Cl. 56—424.)



1. In a grain shocker, a supporting frame mounted on carrier wheels one of which is a traction wheel, guide tracks in spaced relation mounted on said frame and each including a horizontal portion and an inclined portion, a receptacle for the bundles of grain and having guide pulleys engaging said tracks, rock shafts mounted on said supporting frame, arms carried by said rock shafts, links connecting said arms to said bundle receptacle, and means for intermittently transmitting the motion of said traction wheel to said rock shafts to cause said receptacles to be moved upon said tracks into discharging position and returned to receiving position.

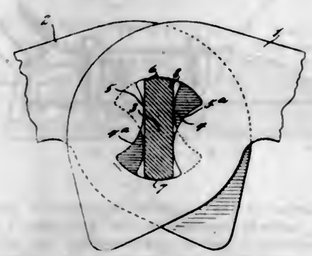
1,569,231. SHOEMAKING. BENJAMIN F. MAYO, Salem, Mass.; Etta Mayo, Salem, Mass., executrix of said Benjamin F. Mayo, deceased, assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Oct. 24, 1917, Serial No. 198,199. Renewed June 19, 1922. Serial No. 569,575. 19 Claims. (Cl. 12—142.)

1. A method of relatively positioning two parts of the upper of a shoe and securing the same together which comprises making gaging perforations in each of said parts at predetermined points, extending the parts to their proper lateral dimensions, relatively locating the parts at all points adjacent the line along which the fastenings are to be inserted, and holding the same extended to their proper lateral dimensions by inserting in said gaging perforations gaging tools located in predetermined relative positions, and inserting fastenings to secure the parts together.



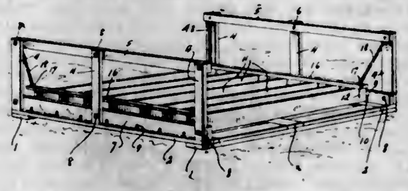
1,569,232. MACHINE FOR OPERATING ON PIECES OF SHEET MATERIAL. BENJAMIN F. MAYO, Salem, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Feb. 14, 1919. Serial No. 277,083. 55 Claims. (Cl. 112—2.)

39. In a machine of the class described the combination of a carrier, means acting to place on the carrier in predetermined relation to each other parts of a shoe upper to be stitched together, and a stitching mechanism for stitching said parts together.



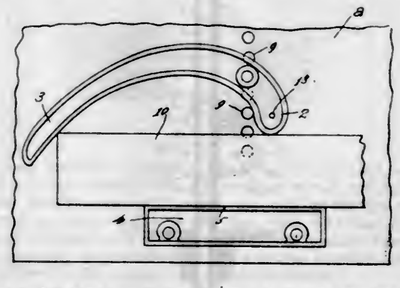
1,569,233. TOY ELECTRIC RAILWAY. HARRY E. MORTON, Hyde Park, Mass. Filed Feb. 19, 1925. Serial No. 10,239. 20 Claims. (Cl. 104—151.)

4. A toy electric railway having, in combination, a locomotive, a lead and a return conductor for the locomotive, a motor on the locomotive, a circuit adapted to be energized by alternating current connected with the conductors for operating the motor, a direct current circuit connected with the conductors, a reversing



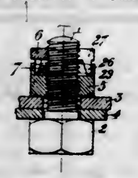
switch in the direct circuit, and means on the locomotive operated upon reversal of the direct current for reversing the direction of travel of the locomotive.

1,569,234. CHAIN AND PARTS THEREFOR. FRIEDRICH MÜLLER, Elizabeth, N. J., assignor to The Whitney Mfg. Co., Hartford, Conn., a Corporation of Connecticut. Filed Nov. 9, 1923. Serial No. 673,655. 5 Claims. (Cl. 74—32.)



1. In a chain of the silent link type, a plurality of overlapping links, elongated openings through the ends of said links, having segmental sides and ends and a flat pin with parallel sides in said openings.

1,569,235. CATTLE GUARD. WILLIS B. PLUNKETT, Clayton, N. Mex. Filed Apr. 1, 1924. Serial No. 703,455. 1 Claim. (Cl. 39—6.)

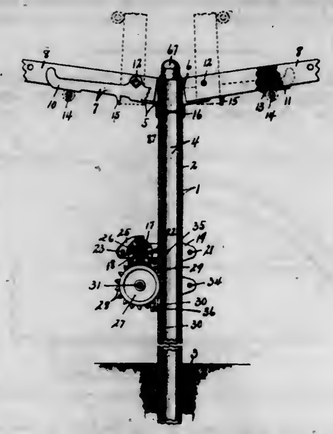


A cattle guard comprising, in combination, side sills, cross slats positioned between said sills, said slats and side sills having coacting means for supporting said slats for swinging movement in a vertical direction, bars operatively engaged with the opposite end portions of the slats to cause the same to swing in unison, an upstanding guard structure carried by each of the sills and extending therealong, and retractile members operatively engaged with the opposite end portions of the bars and with the guards, said retractile members normally maintaining the slats in their raised position but without undue tension thereon, said retractile members being placed under tension upon downward swinging movement of the slats.

1,569,236. BENCH VISE. JACK PUTERBAUGH, Cincinnati, Ohio. Filed Sept. 26, 1923. Serial No. 664,873. 1 Claim. (Cl. 144—307.)

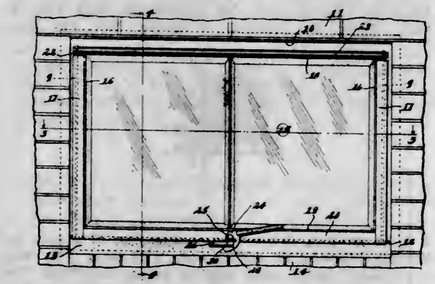
A bench vise comprising in combination, a cam shaped lever having a fulcrum stud adapted to seat in holes in the top of a work bench, a straight sided member having posts extending from the base thereof off a center line extending longitudinally of the said member, said posts adapted to seat in holes in the table top, with either longitudinal edge of the member toward the lever, said lever and straight sided member adapted to act as a vise, a long arm of the lever being adapted to be so moved as to cause the cam portion of the lever to move toward the straight sided member.

1,569,237. LOCK NUT. LEOPOLD RAVIER, Paris, France. Original application filed Dec. 15, 1920, Serial No. 430,813. Divided and this application filed Nov. 2, 1922. Serial No. 598,507. 7 Claims. (Cl. 151—19.)



1. In a nut-lock device, the combination of a nut, an extensible lock-nut in engagement with said nut, and an extensible conical ring both in engagement with the stem of a tightening member, e. g. a screw bolt, and a conical surface of said lock-nut, said ring being separate from said nut.

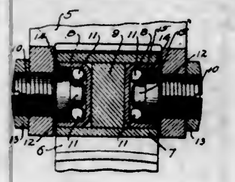
1,569,238. CLOTHESRACK. DWIGHT E. REYNOLDS, Liverpool, N. Y. Filed Aug. 30, 1923. Serial No. 660,188. 1 Claim. (Cl. 68—34.)



A clothes-rack comprising a post, a casting having a hub mounted upon the post, and a plurality of channel bars radiating from the hub, each of said channel-bars comprising spaced substantially parallel side members and an open bottom except for a pair of spaced cross-members connecting said side members, the inner one of said cross-members having a flat substantially vertically disposed surface, an arm mounted in the channel of each of said radiating bars and adapted to rest upon its respective spaced cross-members at one of its limits of movements and adapted to contact with the flat verti-

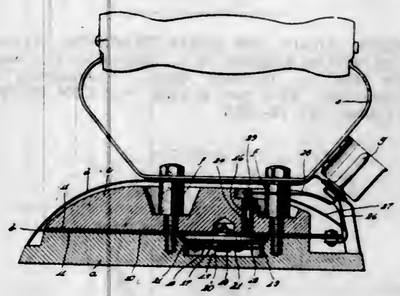
cal surface of the inner cross-bar at its other limit of movement, means for pivotally connecting each arm to its respective channel-bar each bar being provided with

a rotatable member movable through the open bottom of its channel bar and between the cross-members and adapted to be turned to a position to lock its arm to the respective channel-bar.



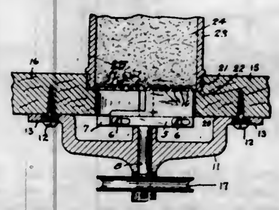
1,569,239. WINDOW STRUCTURE. EDWARD M. RUNDGREN, Chicago, Ill., assignor to Western Architectural Iron Company, Chicago, Ill. Filed Feb. 16, 1925. Serial No. 9,384. 9 Claims. (Cl. 189—69.)

1. A window structure including a frame provided with axis receiving members, a sash arranged in the frame, and an axis with turning fit in said receiving members extending along one side of the sash and forming a weatherproof strip between the frame and sash, substantially as described.



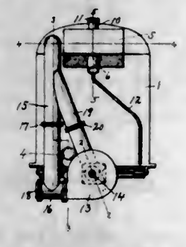
1,569,240. VEHICLE SPRING BEARING. RAYMOND R. SEARLES, New Britain, Conn., assignor to The Fafnir Bearing Company, New Britain, Conn., a Corporation of Connecticut. Filed Feb. 7, 1925. Serial No. 7,640. 9 Claims. (Cl. 267—54.)

1. In a vehicle spring bearing and in combination with a vehicle frame and spring, said frame having spaced apart portions with apertures therein, bearing pins secured in said apertures and extending toward each other, said spring having an eye thereon, means within said



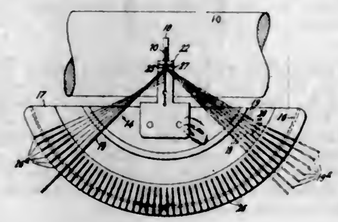
spring eye including bearing cups extending over said inwardly projecting pin ends and anti-fricton members between said cups and pin ends.

1,569,241. ELECTRICALLY-HEATED DEVICE. JOSEPH FREDERICK SMART, New Britain, Conn., assignor to Landers, Frary & Clark, New Britain, Conn., a Corporation of Connecticut. Filed Aug. 11, 1923. Serial No. 656,869. 1 Claim. (Cl. 219—25.)



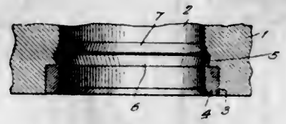
In a device of the character described, a sole plate having a centrally disposed recess, a weight, a heating element interposed between said weight and sole plate, terminals, leads from said terminals to the respective ends of said heating element, a thermal circuit breaker removably positioned in said recess, tubular connectors exending through said weight, screws for securing the lower ends of said connectors to said breaker, and screws for connecting the upper ends of said connectors in one of said leads.

1,569,242. SCORING DEVICE. JULIUS W. SMITH, Seattle, Wash. Filed Oct. 29, 1924. Serial No. 746,707. 8 Claims. (Cl. 18—5.)



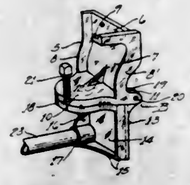
1. The method of scoring the surface of a plastic material disposed in a circular container which consists in presenting said surface of plastic material to revolving blade having projecting teeth thereon.

1,569,243. WATER-COOLING SYSTEM FOR INTERNAL-COMBUSTION ENGINES. HARRY B. STODDARD, Syracuse, N. Y., assignor of one-tenth to Frank J. Crispin, Syracuse, N. Y. Filed Feb. 25, 1925. Serial No. 11,474. 6 Claims. (Cl. 257—126.)



1. In a cooling system for internal combustion engines having a water jacket, an upright radiator shell having a water chamber communicating with the water jacket of the engine for the circulation of water therethrough, a series of upright air tubes extending vertically through the water chamber and open at the bottom to the atmosphere, an air chamber covering the upper ends of the tubes and communicating therewith, an air pump, a conduit connecting the intake side of the pump to said air chamber, and an additional pipe connecting the outlet of the pump to the atmosphere whereby the air will be positively circulated from the bottom upwardly through the air tubes of the radiator.

1,569,244. TYPEWRITING MACHINE. JOHN WALDHEIM, Elizabeth, N. J., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Feb. 16, 1923. Serial No. 619,394. 3 Claims. (Cl. 197—22.)

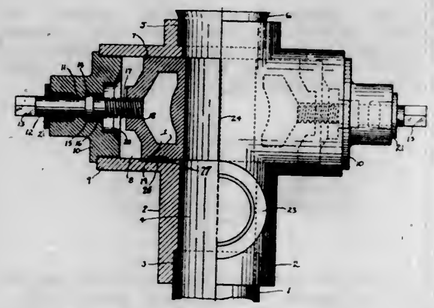


1. In a typewriting machine, the combination with a platen, of a system of about forty-six type-bars printing at a common point against said platen, a type-bar segment, and a curved wire on said segment to support said type-bars and form their pivots, said segment having equally spaced slots occupying about 120°, in which slots the type-bars are arranged, the type-bars being bent at their forward ends at increasing angular distances from their bodies, type-blocks on the ends of the type-bars, the rear ends of all of the type-bars being perpendicular to the type-bar segment, the type-bars being divided into three groups, namely, a main middle group, which comprises nearly all of the type-bars, and two side groups, each of which comprises comparatively few type-bars, the bodies of the type-bars of the middle group being straight so that the spacing of the type-bars of said middle group, at their bent ends, corresponds with their spacing at the segment, the spacing of the type-bars of each side group varying at their bent ends from the spacing at the segment, a type-bar basket, the type-bars of each side group being bent in front of the segment, so that the bodies of said last-named type-bars fan outwardly towards their bent forward ends, the extent of fanning of each extreme bar being sufficient to provide space for three type-blocks in the type-bar basket beyond the extended plane of that portion of the last-named type-bar which is perpendicular to the type-bar segment.

1,569,245. INTERNAL-COMBUSTION ENGINE. ANDREW V. D. WILLGOOS, Upper Montclair, N. J., assignor to Wright Aeronautical Corporation, a Corporation of New York. Filed Apr. 17, 1925. Serial No. 23,858. 1 Claim. (Cl. 123—188.)

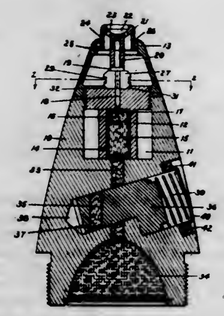
In an internal combustion engine, a cylinder head having a valve passage with an annular recess therein, a valve seat set into said recess, the wall of the passage having a groove adjacent the seat, said seat having a flange expanded into said groove, and said passage having a chamfered portion leading to said groove to avoid sharp shoulders in the passage caused by the flange.

1,569,246. SPRING MATTRESS. HARRY M. YOUNG, St. Louis, Mo., assignor to Western Wire Products Company, St. Louis, Mo., a Corporation of Missouri. Filed Dec. 14, 1923. Serial No. 680,639. 3 Claims. (Cl. 5—213.)



1. A spring-mattress body-adjusting bracket comprising a first casting including a main wall for engagement with the head rail of the mattress, a bottom wall projecting rearwardly from, and approximately at right angles to, the lower margin of said main wall, and pintle-ears projecting forwardly from and also at the lower margin of said main wall, a second casting also including a main wall for engagement with a side rail of the mattress, an upper wall projecting rearwardly from, and approximately at right angles to, the upper margin of said second main wall, and pintle-ears projecting forwardly from and at the upper margin of said second main wall, a pintle having engagement with the ears of said castings for hingedly securing the same together with said upper and lower walls in opposed relation, and a screw-member seated in one of said opposing walls and adapted for engagement with the other opposing wall for hingedly shifting the castings relatively to each other.

1,569,247. BLOW-OUT PREVENTER. JAMES S. ABERCROMBIE and HARRY S. CAMERON, Houston, Tex. Filed Apr. 14, 1922. Serial No. 552,522. 1 Claim. (Cl. 277—1.)

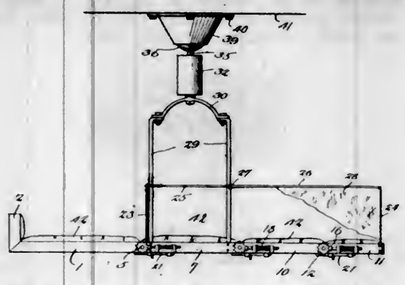


In a blow-out preventer for oil wells, a housing adapted for attachment at the upper end of the well casing, laterally extending opposite cylinders on said housing, cylindrical valves therein, nuts, closing the outer ends of said cylinders, valve stems held against axial move-

ment in said nuts and having a threaded engagement with said valves, means to prevent rotation of said valves, said valves being formed with semi-cylindrical forward

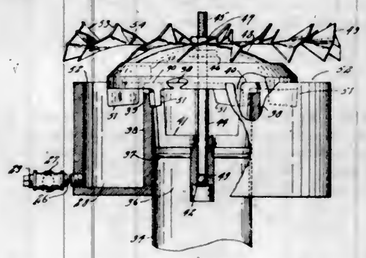
faces, to fit about the drill stem and close the passage between said drill stem and the inner walls of said housing.

1,569,248. SUPERSENSITIVE FUSE. ARTHUR ADELMAN, Chesaning, Mich. Filed Feb. 19, 1925. Serial No. 10,341. 3 Claims. (Cl. 102—39.) (Granted under the act of Mar. 3, 1883, 22 Stat. L., 625.)



2. A fuse including a body formed with a forward cavity, a hollow head marginally seated on the body, a member for maintaining the assembly and abutting against the floor of the cavity, and a firing mechanism supported by said member.

3. A fuse including a body, an interrupted powder train disposed axially of the body, a cylindrical member slidable transversely of the body, said member formed with an extension, a connecting element of the powder train in the extension and said extension being eccentric to prevent rotation and insure axial alignment of the powder train.



1,569,249. SWING CHAIR AND BED. ANTON AXEL ANTHONY, Memphis, Tenn. Filed Dec. 18, 1924. Serial No. 756,768. 6 Claims. (Cl. 114—193.)

1. In a device of the class described, a support for an occupant, means for suspending the support yieldingly, said means comprising a casing, a plunger adapted for reciprocation within said casing, a head upon said

plunger, and a spring encircling said plunger between said head and an end of said casing, and means for suspending the support for universal swinging movement.

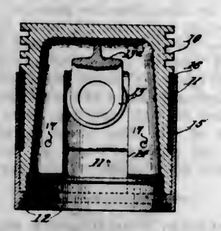
1,569,250. COMBUSTION APPARATUS. WILLIAM H. ARCHER, Toledo, Ohio, assignor to The Commercial Savings Bank & Trust Co., trustee, Toledo, Ohio, a Corporation of Ohio. Filed Apr. 7, 1924. Serial No. 704,650. 8 Claims. (Cl. 158—92.)

8. The combination with a hydro-carbon burner having an open top fuel trough and provision for the discharge of air into the upper portion of the trough, of a deflector mounted for rotary movements above the trough in spaced relation at its outer edge and having a deflecting flange portion at its under side adjacent to its outer edge, and also having vanes at its under side in the path of discharge of air into the trough, whereby the air imparts rotation to the deflector.

1,569,251. METHOD OF PREPARING CLAY OR BODY COMPOSITION FOR CERAMIC ARTICLES. ARTHUR O. AUSTIN, Barberton, Ohio, assignor, by mesne assignments, to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed Mar. 1, 1923. Serial No. 621,971. 14 Claims. (Cl. 25—156.)

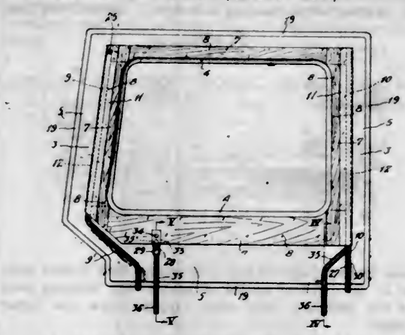
1. In the manufacture of ceramic articles the process of mixing the material therefor, wherein a portion of the material is prepared with a sufficient percentage of water to render it fluidic, and another portion is prepared in dry condition and the two portions are mixed together to provide a body mix, having a percentage of water slightly greater than that at which the ceramic articles are formed, the excess of water being removed by evaporation to condition the mix for forming articles.

1,569,252. STOPCOCK. JOHN A. BARNES, Burkburnett, Tex. Filed Feb. 26, 1925. Serial No. 11,788. 6 Claims. (Cl. 251—97.)



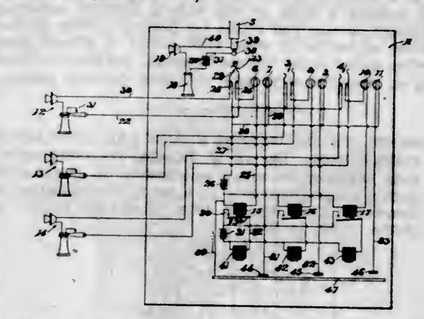
6. A stop cock comprising a tubular body having spaced internally reduced portions intermediate its length and

having oppositely extending lateral pipe connections between said internally reduced portions, a plug adapted to seat against the inner walls of said internally reduced portions and having a transverse opening located between the planes of said internally reduced portions, a stud projection integral with said plug and extending axially from the lower end of the plug, said stud projection having left hand screw threads constituting the upper section of a lower stem, a cap in threaded engagement with the lower end portion of said tubular body and having a central opening provided with right hand screw threads, the lower section of said lower stem having the intermediate portion thereof provided with



screw threads for engaging the screw threaded central opening of said cap and having the upper end portion thereof formed with a threaded socket for engaging said depending screw threaded stud projection, whereby turning of the lower section of said stem will cause axial movement of said plug, said lower end portion of the tubular body being adapted for the reception of suitable lubricant, a tubular extension at the lower end of said cap having a space within the inner end portion thereof for the reception of the lubricant and having a space in the outer end portion thereof for the reception of packing, and means at the outer end of said last named tubular member for compressing said packing against said stem.

1,569,253. PISTON. WALTER C. BAUER, Linden, N. J., assignor to Uppercu Cadillac Corporation, a Corporation of New York. Filed Mar. 30, 1925. Serial No. 19,375. 11 Claims. (Cl. 74—108.)

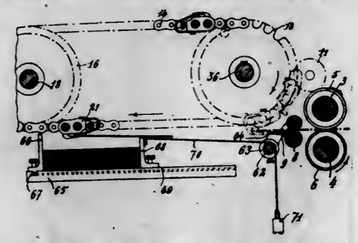


1. A piston comprising, an inner body portion, an outer sleeve portion having wrist pin bearings integral therewith, said wrist pin bearings extending through said body portion in a manner as to permit separation of the parts.

1,569,254. AUTOMOBILE INCLOSURE. GEORGE E. BISHOP, Cleveland, Ohio. Filed Apr. 18, 1922. Serial No. 554,463. 10 Claims. (Cl. 296—139.)

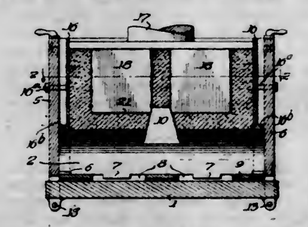
1. In automobile inclosures, the combination for an upper door-section, of a glass outlook; a wooden frame bounding said outlook; sheet metal strengthening members secured to said frame and extending exteriorly thereof and forming a lapping edge, said sheet metal members also extending interiorly of said frame to form a rest for the outside of said outlook; a bead secured interiorly of said frame and adjacent the inner face thereof for retaining said outlook; rods adapted removably to mount the inclosure upon the automobile door; and suitable fabric covering said frame and sheet metal members.

1,569,255. INDICATING DEVICE. ABRAHAM BLOCK, San Francisco, Calif., assignor to The National Cash Register Company, Dayton, Ohio, a Corporation of Ohio. Filed June 12, 1922. Serial No. 567,630. 21 Claims. (Cl. 179—72.)



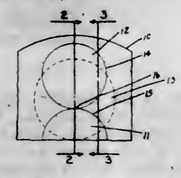
16. In a system of the character described, the combination of a plurality of sub-stations, a central station, a series of signal devices in the central station for indicating the number of calls entered and unattended to, and a second series of signal devices for indicating the order in which the calls were entered.

1,569,256. RECEIVING DEVICE FOR CUTTING MACHINES OF THE ROTARY TYPE FOR PAPER OR PASTEBOARD, AND LIKE MACHINES. HENRI BOBST, Lausanne, Switzerland, assignor to Société Anonyme Marinoni Machines et Materiel pour l'Imprimerie et les Industries Annexes, Paris, France. Filed Apr. 29, 1924. Serial No. 709,872. 5 Claims. (Cl. 271—79.)



1. A receiving device for machines for cutting paper, pasteboard, and like material, comprising endless traveling chains, supports connected with said chains, said

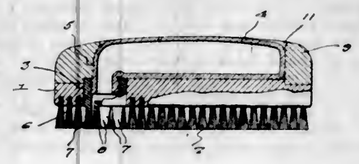
supports including two shafts, one or more sets of grippers mounted on said supports, means for rotating one of said shafts whereby said grippers are opened and closed, means for presenting a sheet of material to said



grippers during their closing movement, and means positioned in the path of travel of said sheets whereby said sheets are detached from said grippers while the latter are closed.

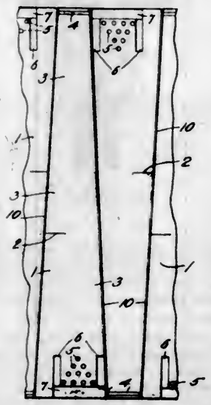
1,569,257. TILE-MAKING MACHINE. GEORGE FRANCIS BORS, La Fayette, Ind. Filed Feb. 13, 1924. Serial No. 692,467. 7 Claims. (Cl. 25—121.)

1. A machine of the class specified, comprising means for forming a block or tile with a laterally extending drainage passage and means for forming a shelf for collection of mortar or other solid matter to prevent same having access to the drainage passage, and also for forming an aperture or opening into said drainage passage.



1,569,258. TRIFOCAL LENS BLANK AND LENS MADE THEREFROM. LUCIAN W. BUGBEE, Jr., Indianapolis, Ind., assignor, by mesne assignments, to Continental Optical Corporation, New York, N. Y., a Corporation of Delaware. Filed Apr. 13, 1925. Serial No. 22,710. 6 Claims. (Cl. 88—54.)

1. A trifocal lens having a far distance area, an intermediate distance area, and a near distance area, the lines of joinder of said areas being curved in opposite directions, the upper and lower areas being so tilted relative to each other as to have a common radial axis at the point of joinder therebetween.

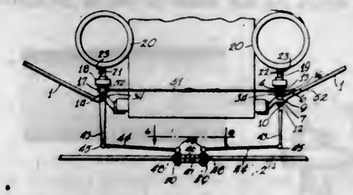


1,569,259. FOUNTAIN HAIRBRUSH. SOPHIE BURLOCK, Chicago, Ill. Filed Nov. 14, 1924. Serial No. 749,938. 2 Claims. (Cl. 15—133.)

1. A fountain hair brush comprising a brush head having an opening therein, a fluid supply receptacle supported on top of the brush head, a liquid feeding member detachably supported on the outlet end of the receptacle and disposed in the opening provided in the brush head, means for securing the receptacle against

displacement from the brush head, said means comprising a cover hingedly secured to the brush head, said cover being cut out to extend around the side of the receptacle.

1,569,260. BOWLING ALLEY AND BOWLING APPARATUS. GEORGE F. CAHILL, New York, N. Y. Filed Jan. 29, 1919, Serial No. 273,778. Renewed June 6, 1925. 43 Claims. (Cl. 273—37.)



1. An improved bowling alley, as hereinbefore described, having, in combination, (a) a playing surface that is approximately level on which a ball may be rolled from one end of the alley towards the other end of the same; the playing surface of said alley also including a runway or space for the player on which he stands or runs when throwing the ball; (b) a pin space for the pins, located beside the runway aforesaid, and at substantially the same level; (c) a ball reflecting device, at the opposite end of the alley from the pins and runway aforesaid, against which ball-reflecting device the ball strikes, when thrown by the player and by which device said ball is thrown back towards the pin space; and (d) a pit, back of the pin space aforesaid; the whole being so constructed and arranged that a ball rolled from the runway aforesaid against the ball reflecting means aforesaid will roll backwards on said alley across the pin space aforesaid into the pit aforesaid; said pit being located in proximity to the starting end of the runway aforesaid.

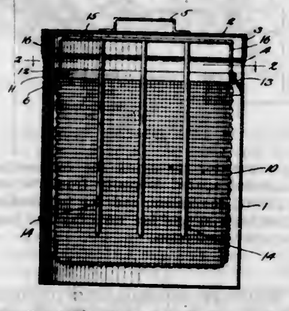
1,569,261. DIRIGIBLE HEADLIGHT FOR VEHICLES. JAMES M. CALKINS, Peoria, Ill., assignor to Scott Head Lamp Control, Miami, Fla., a Corporation of Florida. Filed Dec. 8, 1924. Serial No. 754,608. 5 Claims. (Cl. 240—62.)

1. In a dirigible headlight construction, a casing, discs carried by said casing, said discs having cam surfaces,

fingers adapted to be moved longitudinally by said discs when said fingers are swung with respect to said discs,

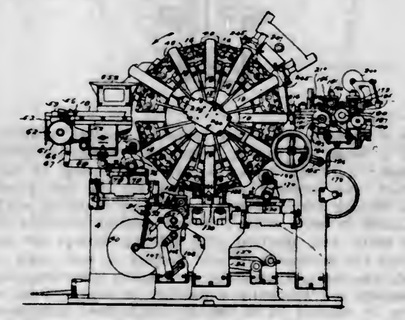
an arm for supporting a headlight, said fingers being operatively connected to said arm, whereby movement of said fingers will swing said arm.

1,569,262. ADJUSTABLE DRILLING BIT. JOHN CALAHAN, Lebanon, Ind. Filed Feb. 14, 1924. Serial No. 692,807. 11 Claims. (Cl. 255—75.)



1. An adjustable drilling bit comprising a body adapted to be carried by the lower end of an operating tube, an extensible cutter carried by said body, rotatable means carried by said body for extending said cutter and holding it extended, and extraneous self-acting means adapted to be lowered through the operating tube for rotating said cutter-extending and holding means, said self-acting means and said cutter-extending and holding means being normally disconnected entirely from each other and having co-acting means for connecting them to rotate in one direction as a single unit when said self-acting means is lowered through the operating tube.

1,569,263. LUBRICATING APPARATUS. FRED S. CARR, Newton, Mass., assignor to Carr Fastener Company, Cambridge, Mass., a Corporation of Maine. Filed Mar. 14, 1922. Serial No. 543,582. 6 Claims. (Cl. 284—17.)

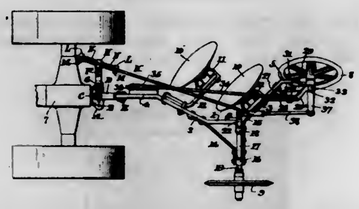


1. Lubricating apparatus comprising, in combination, a lubricant barrel, a coupling at the discharge end thereof operable by manipulation of said barrel, a valve operatively interposed between said barrel and said coupling and operable by manipulation of said barrel and positively engaging male and female locking means directly interposed between said coupling and said valve to insure a desired sequence of operation of said coupling and said valve.

1,569,264. KITCHEN UTENSIL. ERNESTINE S. CLARK, San Antonio, Tex. Filed Aug. 1, 1925. Serial No. 47,573. 2 Claims. (Cl. 91—7.)

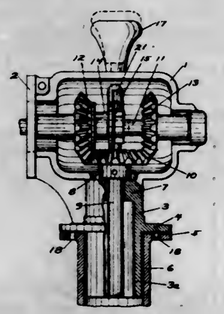
1. A utensil of the class described comprising an imperforate container, having a removable top, with an annular support located near the upper end on its inner face, a foraminous basket having a reinforcing band at its upper end provided with a laterally extending annular lip to rest on said shelf, a plurality of tines extending into said basket and secured in fixed relation thereto to operate as separators for the food to be floured.

1,569,265. BOOKBINDING MACHINE. ERNEST W. CLARK, Hartford, and CARL SCHRAMM, West Hartford, Conn., assignors to The Smyth Manufacturing Company, Hartford, Conn., a Corporation of Connecticut. Filed Dec. 9, 1924. Serial No. 754,757. 36 Claims. (Cl. 11—1.)



1. A machine for backing books, comprising an intermittently moved carrier said carrier having means for holding books, means for applying adhesive to the backs of the books in the carrier, mechanism for applying head bands to back linings and mechanisms for applying strips of fabric, and said united back linings and head bands to the adhesive-coated backs of the books.

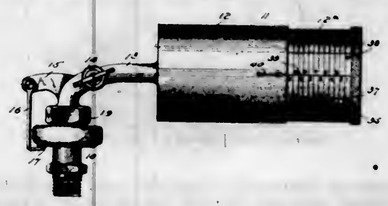
1,569,266. PLOW TRACTOR. BENJAMIN P. COLLINS, Albany, Ala. Filed July 20, 1925. Serial No. 44,878. 1 Claim. (Cl. 97—47.)



In a device of the class described, a tractor, a plow comprising a frame, a connecting device joining the plow to the tractor, a land wheel and a furrow wheel each mounted for rotation and for lateral swinging movement

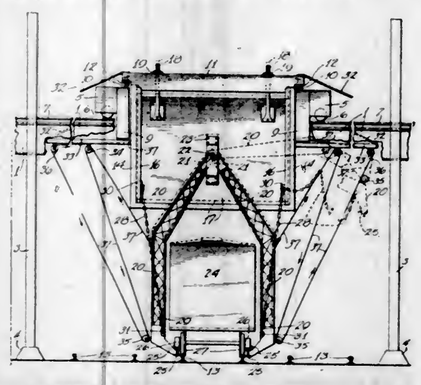
on the frame, mechanism for connecting the wheels for lateral swinging movement; and means for imparting lateral swinging movement to the wheels from the tractor, said means comprising a rigid connection pivoted to said

mechanism, means for mounting the connection on the tractor at a point spaced laterally from the connecting device, for pivotal movement and for longitudinal movement, and yieldable means for resisting the longitudinal movement of the connection.



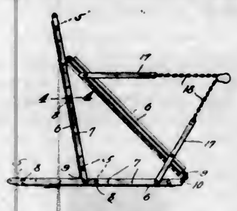
1,569,267. WRINGER-CONTROLLING DEVICE. HARRY J. CRINER, Clarinda, Iowa. Filed July 28, 1922, Serial No. 578,044. Renewed Sept. 19, 1925. 1 Claim. (Cl. 74—101.)

In a wringer controlling device, a support, provided with a series of locking means, at regular intervals thereon; a casing having a pivotal mounting on said support, and provided with means for the attachment of a wringer frame thereto; a wringer operating shaft contained in said casing; reverse gearing mounted on said shaft, and provided with shifting devices for imparting the movement of said gearing to said shaft to rotate the same, alternately, in opposite directions; an operator's rod vertically supported in said casing, so as to be capable of a limited longitudinal movement, and also rotatable therein, the end of said rod being engageable with the locking means on said support, to hold said casing in adjusted positions; means connected with said rod for engagement with said shifting devices, to actuate the same upon the rod being suitably rotated; and means for holding said rod from rotation, with said gearing out of action, when said rod is disconnected from said locking means.



1,569,268. FORCE FILLER FOR GREASE CUPS. WILLIAM HENRY DUPRÉ, Vicksburg, Miss. Filed Mar. 20, 1920. Serial No. 368,939. 11 Claims. (Cl. 221—47.4.)

1. In a force filler for grease cups, a nozzle, and means for feeding lubricant to the nozzle, said nozzle having means for seating itself upon a grease cup to be filled, said nozzle and said feeding means being movable as a unit, and other means on the nozzle for engaging with the grease cup independently of and below the said seating means, the said means for seating the said other



means being arranged at opposite sides of the extremity of the nozzle, whereby downward pressure upon the feeding means acting through the said other means will effect a tight joint between the nozzle and the grease cup.

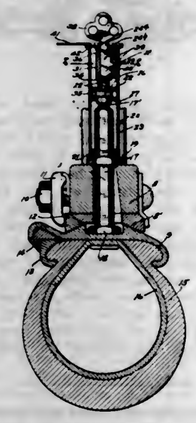
1,569,269. TRAVELING BRIDGE CRANE. FRANK W. EGGLESTON, Berkeley, Calif. Filed Jan. 1, 1923. Serial No. 610,084. 25 Claims. (Cl. 212—11.)

1. A traveling bridge crane comprising a support, a frame movably carried by said support, arms carried by said frame and arranged to engage with a load to lift the latter, and flexible means connecting said arms to said frame to steady the suspended load.

1,569,270. LEVELER. GILBERT F. ENDSLEY, Somerset, Pa. Filed July 1, 1925. Serial No. 40,941. 4 Claims. (Cl. 37—143.)

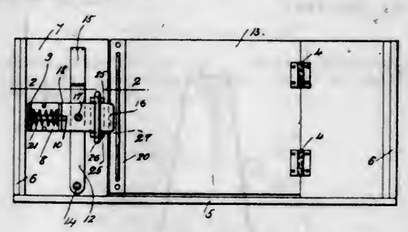
1. A road leveler comprising a plurality of scraping bars, each of said bars including a pair of angle bars secured together, said angle bars having openings arranged in spaced relation with each other and disposed throughout the length thereof, connecting pins adapted to extend through the openings to removably connect the scraping bars, and said connecting pins adapted to support one of the scraping bars at an oblique angle with respect to the ground surface.

1,569,271. PLOW. JOHN EWASEN, Moscow, Idaho. Filed Feb. 24, 1923. Serial No. 625,662. 2 Claims. (Cl. 97—113.)



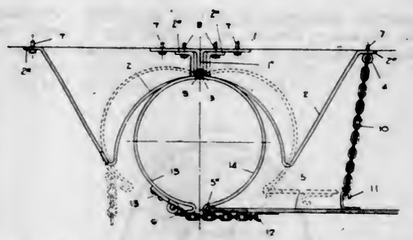
1. In a plow having a beam with a downwardly projecting shank, a detachable shoe secured to said shank by suitable bolts, and comprising an upright portion or stem having a longitudinal and approximately vertical slot through its rear for the reception of said shank, and terminating at its lower end in a substantially horizontal and triangular base portion or frog sloping downwardly therefrom both forwardly and laterally, and terminating in a ridge at its front, a diamond shaped plowpoint saddled on said ridge and removably secured thereto, and a pair of rectangular shares similarly secured to the sloping sides of said frog and to the rearwardly extending wings thereof, and having their forward ends abutting against said plowpoint.

1,569,272. MANUFACTURE OF ARTIFICIAL WOOD. ADOLF FÖRSTER, Kullebund, near Christiania, Norway. Filed Oct. 17, 1923. Serial No. 669,186. 4 Claims. (Cl. 18—47.5.)



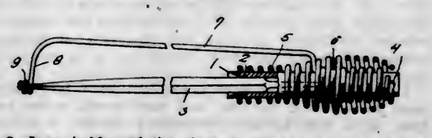
1. Method of manufacturing artificial wood comprising the steps of moistening a mixture containing saw dust and a soft mineral filler with a dilute solution of chromate-glue in which the percentage of glue is considerably less than 10 per cent thoroughly working the moistened mixture, moulding the resulting mass under a high pressure, maintaining the pressure for a considerable time and subjecting the moulded articles to drying.

1,569,273. LOCKED DUST CAP FOR TIRE VALVES. JOHN M. GALBRAITH, Minneapolis, and LOUIS N. JENSEN, St. Paul, Minn.; said Galbraith assignor of one-fourth to Mrs. Karen Jensen, St. Paul, Minn. Filed Jan. 12, 1925. Serial No. 1,750. 14 Claims. (Cl. 70—122.)



1. A dust cap applicable to a tire valve stem and having a key-actuated nut-acting member arranged for threaded engagement with said valve stem, said member being arranged to be rotated by a key inserted into the outer end of the dust cap.

1,569,274. END GATE. GARFIELD A. GARRETT, Dorrance, Kans. Filed Mar. 25, 1925. Serial No. 18,142. 3 Claims. (Cl. 296—50.)

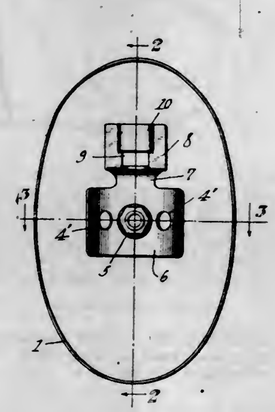


1. A wagon body provided with an upright at one side, an end gate hinged to the other side of the wagon body, a plate secured to the said upright and provided with a lug at one end and having a pin which projects from the said lug and is arranged parallel to the said plate, an operating lever having one end portion pivoted to the upright and projecting crosswise of the said plate, a latch carried by the said lever and having a perforated lug which is slidable over the said pin, and a spring encircling the said pin and arranged between the lugs of the said plate and latch and operating to hold the latch projected so as to engage with the end gate.

1,569,275. CLAMP FOR CYLINDRICAL CONTAINERS. JACK GREEN, Norfolk, Va. Filed Apr. 24, 1924. Serial No. 708,812. 6 Claims. (Cl. 81—19.)

2. A clamp for cylindrical containers, comprising a bracket, a pair of braces fixed to and extending upon opposite sides of said bracket, said bracket and braces adapted to be secured to a wall or other support, a pair of semicircular clamping bands pivoted at one end to said bracket, and means secured to the other ends of said bands for tightening them about a container.

1,569,276. FILE HOLDER. LLOYD DELNO GREENLAND, Des Moines, Iowa. Filed Apr. 25, 1925. Serial No. 25,852. 2 Claims. (Cl. 29—80.)

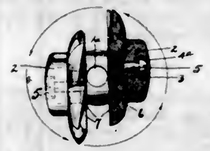


2. In a holder of the class described, a bar having a socket at one end, a coil member disposed about the bar, a second coil member rotatably disposed about the bar and having its convolutions disposed in threaded relation between the convolutions of the first member, a rod extending from the second member and terminating in a socket axially aligned with the socket in the bar, one end of the first member being extended through the bar to fix it against rotation thereon.

1,569,277. CARD SHUFFLER. CHARLES A. GUNSELMAN and WILLIAM J. GUNSELMAN, Abilene, Kans. Filed June 22, 1925. Serial No. 38,870. 3 Claims. (Cl. 273—149.)

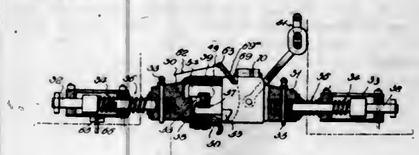
1. A card shuffling device comprising a casing adapted to receive a deck of cards, and means disposed in said casing for shuffling the deck of cards, said means being actuated by the movement of the cards.

1,569,278. ELECTRIC-FIXTURE SUPPORT. CLIFFORD M. HICKMAN, Newark, N. J. Filed May 1, 1925. Serial No. 27,230. 3 Claims. (Cl. 240—85.)



1. The combination with a resilient hook for attachment to a wall or the like, said hook having a flat portion, of a wall bracket including a canopy, a slotted resilient tongue within and secured to the canopy for the reception of the hook when the canopy is slid relative thereto in one direction, and an extension upon the tongue having a channel for the reception of the hook, said tongue and extension being resilient, the extension, tongue and hook cooperating, when brought into engagement, to place the tongue and hook under tension and to hold the canopy against rotation abont its point of connection with the hook.

1,569,279. PIPE-SUPPORTING ATTACHMENT. WILLIAM R. HOFFMANN, Oregon, Mo. Filed Apr. 9, 1925. Serial No. 21,904. 4 Claims. (Cl. 131—51.)

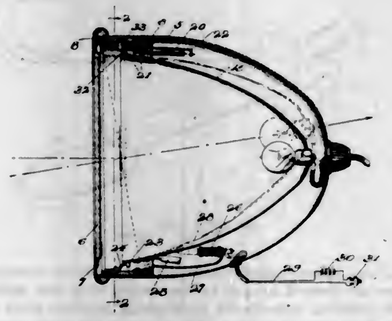


1. A pipe support of the character described comprising a strip of resilient material bent to form a flat base, and a resiliently contractible pipe stem embracing ring disposed in the same plane with the base, the base extending transversely of the axis of the ring.

1,569,280. DISK BIT. WILLIAM S. HOLDAWAY, Los Angeles, Calif. Filed Apr. 23, 1924. Serial No. 708,533. 6 Claims. (Cl. 255—71.)

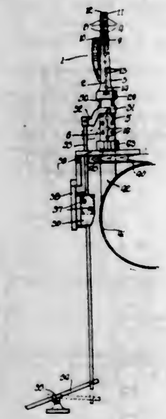
1. A disk bit and shank including a shank body with two spaced legs, said legs having integral bearing trunnions on their inner faces, cutter disks rotatably mounted on said trunnions between said legs, whereby said legs push said disks in front of them as they rotate, and means holding said disks on said bearing trunnions.

1,569,281. CAR COUPLER. THOMAS HOTCHKISS, Gillespie, Ill. Filed Feb. 21, 1925. Serial No. 10,898. 6 Claims. (Cl. 213—176.)



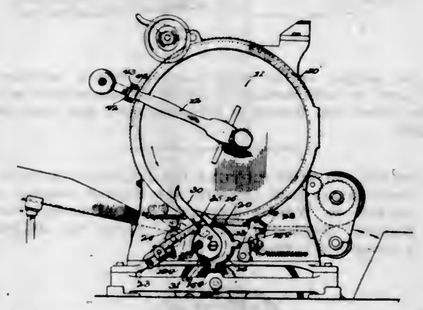
1. In a car coupler, a coupler head having a cavity in its end, a main shaft rotatably mounted transversely of the coupler head in the said cavity, the said coupled head having a camming surface, a latch carried by the said shaft, a coacting coupler head having a projection adapted to enter the cavity of the first mentioned coupler head, the said projection having a construction for engaging the camming surface of the shaft for imparting rotary motion to the said shaft and oscillating the latch, a surface for engaging the camming surface of the shaft for turning the said shaft in an opposite direction when the coupler heads are together for moving the latch in an opposite direction, and coacting elements on the second mentioned coupler head engaged by the latch for locking the coupler heads together.

1,569,282. HEADLIGHT. EDWARD EVERETT HUGHES, Wallace, Idaho. Filed Nov. 1, 1924. Serial No. 747,359. 1 Claim. (Cl. 240—41.)



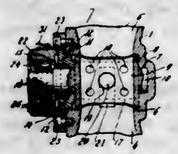
In a headlight, a casing terminating at its forward end in a cylindrical portion, angular guides mounted within and secured to the cylindrical portion of the casing, a ring carrier fitted for rotary adjustment in

between the guides, means for holding the ring carrier in adjusted position including a clamping device mounted on the casing and cooperable with the ring carrier, said ring carrier having a slot accommodating



the clamping device, a reflector within the casing and pivotally mounted on the ring carrier, stop means mounted on the ring carrier for limiting the movements of the reflector and means for moving the reflector on its pivots.

1,569,283. MEANS FOR SHAPING AND DRYING FABRIC ARTICLES. ARTHUR W. JOHNSON, Milwaukee, Wis., assignor to Bradley Knitting Co., Delevan, Wis., a Corporation of Wisconsin. Original application filed Apr. 28, 1920, Serial No. 377,289, Patent No. 1,425,969. Divided and this application filed Dec. 16, 1921. Serial No. 522,830. 12 Claims. (Cl. 223—17.)

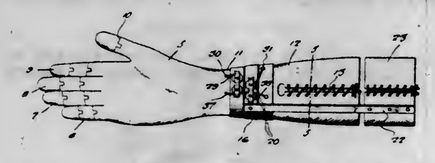


1. In combination, a form section having a portion simulating the palm of a hand and semi-circular extending portion, a supplemental form section having a portion simulating the back of a hand and a semicircular extending portion supplementing the semi-circular extending portion of said first form section to form a conduit for conveying a drying fluid into an internal chamber formed by said form section, the walls of the form sections having outlet openings for discharging the drying fluid from said internal chamber therethrough, a mounting base adapted to receive the cooperating semi-circular extending portions of the form, said mounting base permitting a flow of drying fluid along the outside of the form to dry the adjacent portions of the article.

1,569,284. PLATEN RETURN. WILLIAM KASTLER, St. Louis, Mo. Filed Aug. 31, 1923. Serial No. 660,370. 5 Claims. (Cl. 101—233.)

1. In combination, a printing drum, a platen, means supporting the platen to permit the same to take a printing or non-printing position, a platen release, and means for returning the platen to printing position and for resetting the platen release comprising an arm connected to the platen release and to the platen, and a pin moving in synchronism with the printing drum and cooperable with the arm.

1,569,285. SHUT-OFF VALVE. LOUIS F. KATONA, Los Angeles, Calif. Filed July 9, 1923. Serial No. 650,412. 6 Claims. (Cl. 251—102.)

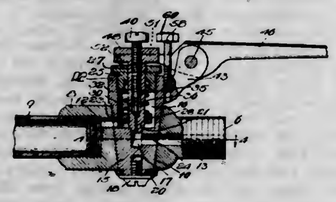


1. A shut-off valve of the nature disclosed comprising a body provided with means for attachment to a hose or pipe line having an inlet and an outlet axially aligned and a transverse intermediate valve chamber closed at one end having a valve receiving opening at its opposite end, a freely rotatable valve insertable through said opening, a closure for said opening, the valve having an operating shaft extending through said closure, valve operating gear mechanism associated with the outer end of said shaft, a housing entirely enclosing said gear mechanism and said closure, and a shaft packing carried by the closure and preventing leakage from the valve chamber into said housing, the housing being detachably secured in place on the body to permit its removal independent of the closure and the subsequent removal of the closure whereupon the valve may be withdrawn through the valve chamber opening.

1,569,286. ARTIFICIAL HAND. EDWARD LAHERTY, Nenana, Territory of Alaska. Filed Dec. 8, 1923. Serial No. 678,237. 6 Claims. (Cl. 3—12.)

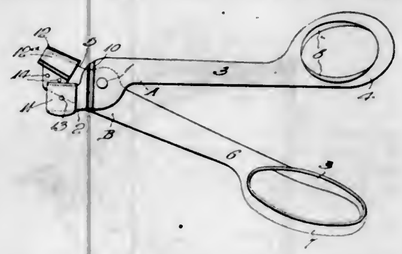
1. In an artificial hand, comprising a body terminating in a wrist portion and having a thumb and fingers articulated thereon, means for securing the wrist portion to the end portion only of the forearm of the wearer, and means carried by the wrist portion of the hand body

relatively rotatable thereon adapted to be connected to the forearm only of the wearer rearwardly of the connection of the hand body, a rotative movement of the



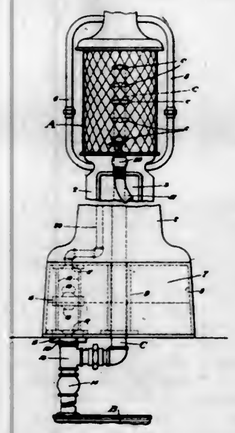
wrist portion of the hand body effecting a movement relative to said means for operating connections with the thumb and fingers to positively open and close the same.

1,569,287. MOTION-PICTURE-PROJECTING MACHINE. JOHN DALLAS LAW, Dunedin, New Zealand, assignor of one-half to William Francis James, Dunedin, New Zealand. Filed Aug. 31, 1921. Serial No. 497,296. 9 Claims. (Cl. 88—17.)



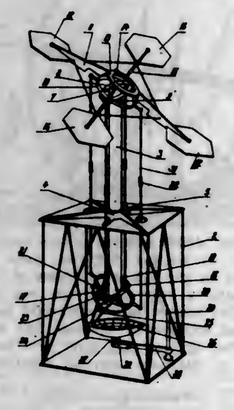
1. In a motion picture projecting machine, a shutter mounted so as to be capable of dropping between the condensers and the gate; an electromagnet having an armature provided with a catch for keeping the shutter raised; contacts controlled by the film and the machine driving belt for closing the electromagnet circuit; and contacts closed and allowed to open by the raising and dropping respectively of said shutter, for closing and breaking the motor and the electro-magnet circuits.

1,569,288. FLASH IGNITER. OSCAR J. LEINS, Milwaukee, Wis., assignor to Milwaukee Gas Specialty Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Nov. 24, 1924. Serial No. 751,799. 6 Claims. (Cl. 158—115.)



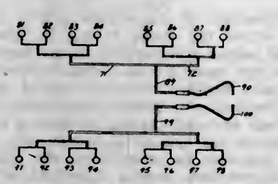
6. In a device of the class described, the combination of a valve casing having means for connection with a source of fuel supply, an outlet tube carried by and communicating with the interior of the casing, a rotatable shut-off valve mounted in the casing and provided with inlet and outlet port means for movement into and out of register with inlet and outlet ducts in the casing by rotation of the valve, a valve seat in the shut-off plug between the inlet and outlet ports, a plunger flash valve mounted in said plug and seating inwardly upon said seat, said plunger valve having means affording a restricted supply of fuel from the inlet to the outlet and means for unseating said valve outwardly to provide an increased flash supply.

1,569,289. CAN OPENER. JOHN A. LINN, Sioux City, Iowa. Filed Sept. 11, 1924. Serial No. 737,140. 1 Claim. (Cl. 30—3.)



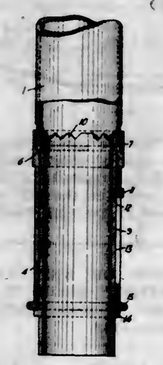
A can opener comprising a pair of pivotally connected members formed at one of their ends with flat parallel jaw portions movable in overlapping relation when the opener is used in cutting open a can, a flat blade secured flat against one of said jaw portions, and a U-shaped blade straddling such jaw portion and said flat blade and having one side secured flat against the other jaw portion, said side of said U-shaped blade also overlapping the first mentioned jaw portion when the opener is used in cutting open a can and being adapted to bear flatly against such jaw portion to prevent separation of the jaw portions and said blades, the other side of said U-shaped blade being formed with a cutting edge.

1,569,290. LIQUID-MEASURING APPARATUS. GEORGE W. MACKENZIE, Beaver, Pa., assignor to Guarantee Liquid Measure Company, Rochester, Pa., a Corporation of Delaware. Filed Nov. 4, 1920. Serial No. 421,668. 7 Claims. (Cl. 221—100.)



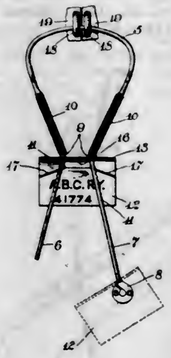
7. A liquid measuring apparatus comprising a measuring vessel, a main supply tank, an overflow vessel interposed between the main supply tank and measuring apparatus for receiving the overflow from the latter, a conduit for transferring liquid from the supply tank to the measuring vessel, and means for returning the overflow contents of said overflow vessel directly to said conduit to utilize said contents when filling the measuring vessel.

1,569,291. DIRECTION FINDER. ANDRÉ JULES MARCHLIN, Paris, France. Filed May 28, 1923. Serial No. 642,098. 5 Claims. (Cl. 187—2.6.)



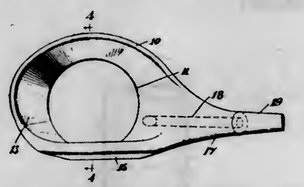
1. A telesitemeter of the filed type, which is transportable upon a trailer comprising a hollow column, an horizontal axle at upper part of said column, a gimbal ring pivoting round said axle, a second axle borne by said ring and perpendicular to said horizontal axle, a second larger gimbal ring pivoting round said second axle, two arms crossed at right angles fixed on the larger ring, an acoustic receiver at both ends of each of said arms; two like gimbal rings at the lower end of the said column, the axles of which being parallel with the preceding axles and jointed rods connecting together the larger gimbal rings of the upper and lower pair.

1,569,292. DETERMINATION OF WAVE-ENERGY DIRECTION. MAX MASON, New London, Conn., assignor to Submarine Signal Company, Portland, Me., a Corporation of Maine. Filed June 25, 1919. Serial No. 306,682½. 16 Claims. (Cl. 181—0.5.)



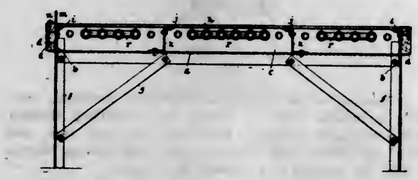
16. A device for receiving substantially in phase at a single indicating instrument sound waves coming to a plurality of receivers comprising such plurality of receivers, said indicating instrument and connections between said receivers and said instrument adapted to transmit to said instrument in phase such selection of said receivers as are caused by compressional waves coming from a given direction and to cause the interference of vibrations caused by other compressional waves.

1,569,293. DEVICE FOR INTRODUCING CEMENT IN WELLS. CARLTON E. MILLER, San Francisco, Calif. Filed Jan. 23, 1923. Serial No. 614,405. 8 Claims. (Cl. 166—19.)



1. A device for depositing cementitious material, comprising a tubular body, a hollow foot attached thereto, a plate clamped between the body and the foot and closing the lower end of the body, and means within said foot to engage and release said plate.

1,569,294. FREIGHT-CAR SEAL. WILLIAM J. MILLER, Columbus, Ohio. Filed Dec. 26, 1924. Serial No. 758,163. 7 Claims. (Cl. 292—315.)

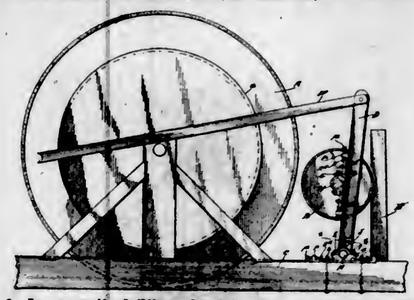


1. A seal comprising, in combination, a wire portion forming a loop and legs, a readily fusible portion connecting said legs, said fusible portion provided with a perforation and a notch, one of said legs being extended through said perforation and being bendable in one direction into said notch to engage said fusible portion and said leg being frangible when bent in the opposite direction to remove it from said notch.

1,569,295. GOLF-CLUB HEAD. EDMUND L. MUNSON, Mount Kisco, N. Y. Filed Dec. 24, 1924. Serial No. 757,843. 2 Claims. (Cl. 273—77.)

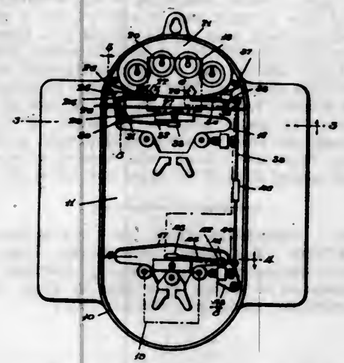
2. A golf club head of general ring shape having a flattened face, a wall of substantially uniform thickness, said wall being tapered to make the opening through the club larger at the top, and a rigid shank rising from one side of the club head.

1,569,296. METHOD OF AND APPAPATUS FOR USE IN PRINTING. HORACE P. ODELL, Passaic, N. J. Filed Mar. 9, 1925. Serial No. 13,975. 4 Claims. (Cl. 101—416.)



1. The method of printing a porous sheet which consists in supporting the sheet on a composite refractory body, imparting heat through said body to the sheet, and during the heating of the sheet applying the printing color thereto.

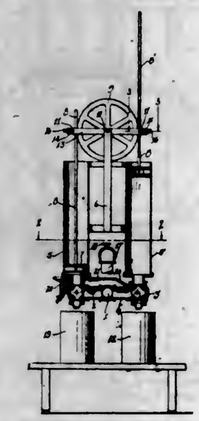
1,569,297. CATTLE YOKE. TED H. PHILLIPS, Gould, Okla. Filed Oct. 25, 1922. Serial No. 596,915. 4 Claims. (Cl. 119—140.)



1. A device of the character described comprising an animal receiving yoke, spaced oppositely extending horizontally disposed angular extensions carried by the upper end thereof, an angle bar pivoted to the upper end of the yoke and having a hook element formed at each end thereof, the legs of such angle bar being adapted to engage the adjacent angular extension when moved towards the latter and thereby limit the pivotal movement of the angle bar.

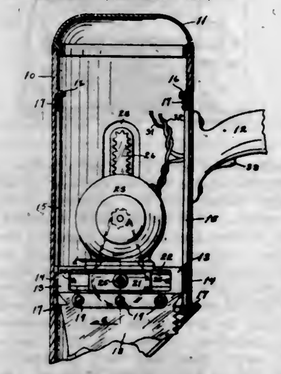
1,569,298. WELL-DRILLING DERRICK. SAMUEL P. POWERS, Wooster, Ohio. Filed May 9, 1922. Serial No. 559,606. 3 Claims. (Cl. 192—4.)

1. In a well drilling derrick, the combination with a swing-lever, a bearing for the lower end of said lever mounted on the sill or platform of the derrick, a sand reel shaft, a bearing for one end of said shaft mounted on the arm of said lever, said bearing capable of longitudinal adjustment thereon, and means for actuating the free end of said lever arm back and forth on said sill or platform bearing, substantially as set forth.



1,569,299. OPEN-POTENTIAL-CIRCUIT DETECTOR. ELIAS F. PRESTON, Mason City, Iowa. Filed Jan. 13, 1922. Serial No. 529,054. 1 Claim. (Cl. 177—311.)

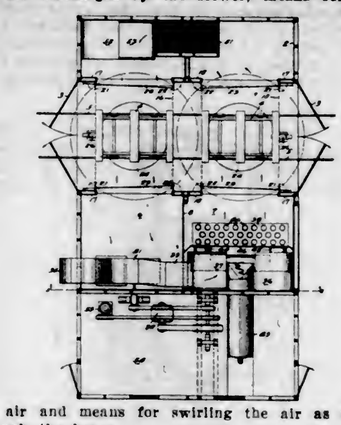
In combination, in an electric meter, a casing, a partition within the casing having an opening, a potential coil behind said partition in the casing, a register within the casing having a face exposed to view in front of said partition, bearings secured to said partition at the front side thereof, rock shafts journaled in said bearings and each having an arm, a signal member carried by one arm to be moved to a position in front of said face for observation, the other arm extending through said opening in rear of said partition, an armature carried by the last-named arm and arranged adjacent to said coil to be moved toward and away from the coil when the coil is energized and de-energized, respectively, and an operative connection between said shafts.



1,569,300. FILLING MACHINE. JOHN PURVIS, Jr., Chicago, Ill. Filed Feb. 11, 1924. Serial No. 692,070. 5 Claims. (Cl. 226—107.)

1. The combination of a pair of cylinders, a piston for each cylinder, a three-way valve associated with each cylinder, a supply pipe communicating with each of said valves, one of said valves being open when the other is shut, a rack secured to each piston, a pinion disposed between and engaging both racks, whereby the movement of one piston will cause the downward movement of the other piston, and spring pressed means

for holding said racks in engagement with said pinion, said racks being movable against the spring tension to bring them out of engagement with said pinion at will.

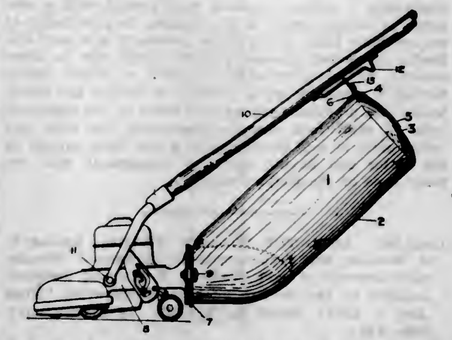


1,569,301. POWER HANDSAW. LEONARD M. REED, Dexter, Iowa. Filed Mar. 30, 1925. Serial No. 19,239. 6 Claims. (Cl. 143—68.)

6. A power-driven hand saw, comprising a casing, an endless rack of substantially elliptical form arranged longitudinally of the wall of the casing, a carriage arranged for travel longitudinally of said casing, a boxing arranged for limited reciprocation on said carriage transversely of the casing, means for cushioning said boxing at the ends of its range of movement, a motor carried by said boxing, a countershaft journaled in said boxing, gearing operatively connecting the motor shaft to said countershaft, a pinion on said countershaft meshing with and adapted for travel on said elliptical rack, and a saw blade secured to said carriage.

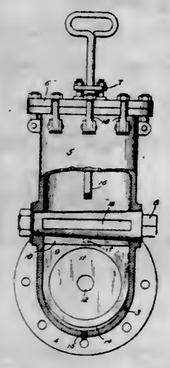
1,569,302. DRYING APPARATUS. CLAUDE REES and CHARLES F. HINE, San Francisco, Calif. Filed Oct. 22, 1924. Serial No. 745,148. 28 Claims. (Cl. 34—19.)

1. A drying apparatus comprising a house adapted to receive the material to be dried, a blower for circulating air through the house, means for swirling the air discharged by the blower, means for heating



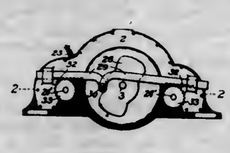
the air and means for swirling the air as it passes through the house.

1,569,303. TOWROPE. ALBERT LEE REGAN, Xenia, Ohio, assignor to The Hooven & Allison Company, Xenia, Ohio, a Corporation of Ohio. Filed Feb. 24, 1921. Serial No. 447,472. 1 Claim. (Cl. 24—129.)



In combination with a rope, a cleat comprising a C shaped member having inwardly facing bearing surfaces intermediate its ends and an eye formed integral therewith, the lower bearing surface of said eye being offset above the bearing surfaces between said ends, all of said bearings surfaces being relatively broad and arranged to permit sliding engagement with a rope when not under tension.

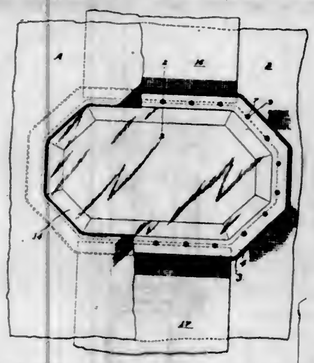
1,569,304. DUST-BAG SUPPORT. MAX C. RICHARDSON, Canton, Ohio, assignor, by mesne assignments, to The Hoover Company, North Canton, Ohio, a Corporation of Ohio. Filed May 27, 1922. Serial No. 564,125. 4 Claims. (Cl. 183—44.)



1. In a dust-collecting bag having a head, a slider strap secured to the bag head, the ends of the strap being secured in spaced relation substantially diametrically of the bag head, the central portion of the strap being free.

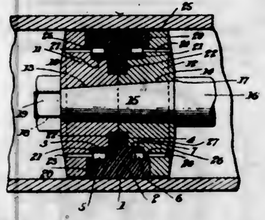
1,569,305. ORIFICE FITTING. ANSON ROBINSON, Los Angeles, Calif. Filed May 19, 1924. Serial No. 714,344. 5 Claims. (Cl. 137—75.)

1. An orifice fitting comprising; a body member having a transversely bisected bore therethrough and an accessible lateral chamber opposite said bisection; a rotatable plugcock, intermediate said bore and said chamber, having an elongated longitudinal slot therethrough and its axis in the plane of said bisection; a plate having a flow-measuring orifice therethrough, removably inserted in said bisection; and means for withdrawing said plate into said chamber through said slot when said fitting is under internal pressure.



1,569,306. ROTARY EXPLOSION ENGINE. MAX G. ROSENTHAL, Chicago, Ill. Filed Aug. 29, 1923. Serial No. 659,924. 14 Claims. (Cl. 123—16.)

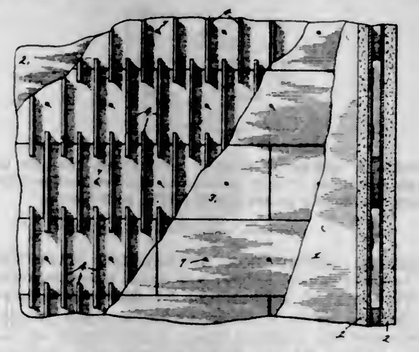
9. In a rotary motor of the type described, a rotor comprising a hollow revoluble head formed with a plurality of oblique guide slots extending longitudinally of the revoluble head, piston blades moving in said slots and fixedly connected together at their inner ends in offset relation by an intermediate member, a stator casing having a segmental work chamber to receive the piston blades and provided with inclined walls at the respective ends of said work chamber containing the inlet and outlet ports of said chamber, and a cam block carried by the stator and having operative engagement with the inner ends of the piston blades.



1,569,307. AUTO TOP WINDOW FRAME. LESLIE G. S. SLOCUM, San Francisco, Calif.; Francis J. Knauss, administrator of said Leslie G. S. Slocum, deceased, assignor to The Brewer Titchener Corporation. Filed Aug. 7, 1918. Serial No. 248,667. 16 Claims. (Cl. 296—145.)

1. A window frame of the character described including in combination, a two-ply curtain with an opening adapted to receive a window frame, said frame comprising a pair of endless frames, each frame having an angularly disposed flange about the outer edge thereof, and said frames adapted to telescope one within the other, a ply of the curtain being turned upon the inner face of each frame so that said frames are concealed

between the plies, a pane having its marginal edge between the inturned plies of the curtain, and means for clamping the frames together.

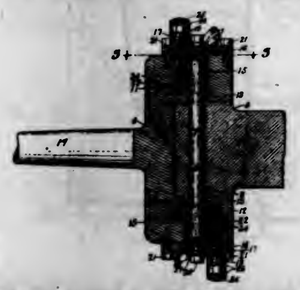


1,569,308. PISTON FOR PUMPS. LOUIS J. SMITH, Torrance, Calif. Filed Feb. 9, 1925. Serial No. 7,869. 3 Claims. (Cl. 74—109.)

1. In combination with a piston, a piston rod formed with a shoulder, and a nut on the end of said rod, the piston being formed in two members through which the rod extends with its shoulder engaging the outer end of one member and said nut engaging the outer end of the other member for drawing said members together, the inner faces of said members being each provided with three annular rabbets of progressively decreasing depth and diameters the outermost rabbets extending inwardly from the peripheries of the members, the members being provided respectively with ports extending from their outer ends into their intermediate rabbets, a resilient ring packing formed with an annular body, an internal intermediate flange of less width than said body extending from said body, an inner flange of less width than said intermediate flange extending inwardly from the latter flange, the intermediate flange being provided with annular grooves in its sides, said packing fitting between said members with its body fitting in said outermost rabbets with a snug fit, said intermediate flange fitting in said intermediate rabbets with a snug fit with said grooves coinciding with said ports, and said innermost flange fitting in said innermost rabbets with the side walls of said rabbets engaging the side walls of said innermost flange with a clamp fit.

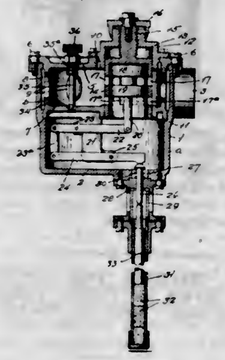
1,569,309. CEMENT WALL CONSTRUCTION. HENRY M. STEARNS, Richmond, Calif. Filed Oct. 20, 1924. Serial No. 744,656. 2 Claims. (Cl. 72—47.)

1. A hollow core for a cement wall consisting of a plurality of core sections each having a pair of walls formed from light wall-board and provided with a plurality of spacing elements secured between said walls to hold the same in spaced parallel relation, the ends of said spacing elements extending outwardly past the



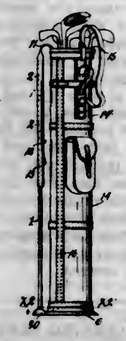
edges of the walls to be engaged between the walls of adjacent sections whereby said sections may be assembled and held with the edges of each section matching with the adjacent sections.

1,569,310. TIRE LEVER. JOHN FRANCIS TREVORROW, South Melbourne, Victoria, Australia. Filed Nov. 14, 1922. Serial No. 600,961. 1 Claim. (Cl. 157—6.)



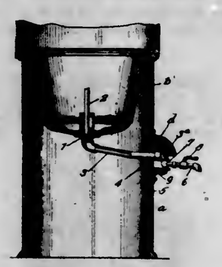
Means for removing a tire from a wheel rim, comprising, in combination, a lever, a block member having a gripping portion on the lower end thereof for engaging the beading of a wheel rim, the upper end of said block member having a handle thereon, a filleted surface on the block, and a member on the lever arranged to move upon the filleted surface, as described.

1,569,311. ADJUSTABLE STUB AXLE JOINT. LAWRENCE M. BARSTOW, Index, Wash. Filed Mar. 23, 1925. Serial No. 17,655. 3 Claims. (Cl. 280—96.1.)



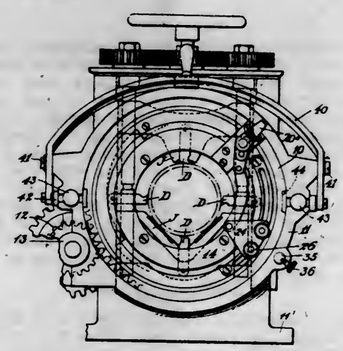
3. The structure defined by claim 1, said means including a plate covering each of said cavities, each of these plates having an adjusting screw threaded therein and operable to push the wedges inwardly of the cavities, each of said plates having an oil inlet therethrough in communication with the respective cavities, a pair of caps having non-cylindrical cavities conforming to the heads of the adjusting screws, and enclosing the latter respectively, each of said caps being provided with an apertured flange, and a plug for each flange, each of these plugs extending through its flange of the respective cap and engaging with the oil inlets for closing the latter while securing the respective caps in position for locking and protecting the respective adjusting screw.

1,569,312. THERMOSTATIC CONTROL DEVICE. CHARLES F. H. BOHNHARDT, Baltimore, Md., assignor to Harry D. Harvey, Baltimore, Md. Filed July 7, 1923. Serial No. 650,118. 4 Claims. (Cl. 236—33.)



1. A thermostatic control device comprising an outer casing, closed at one end and open at the other end and having upper and lower gas openings, a drum removably secured within the upper part of said casing and communicating with one of said openings, a valve casing within the drum and opening into the lower part of said outer casing, said valve casing having a port within the drum, a piston valve, fitting within the valve casing, for opening and closing said port, said valve having a port extending through it, a bracket depending from the lower wall of the drum, a system of movement multiplying levers supported by said bracket and connected to the valve, and an expansion device for moving said levers.

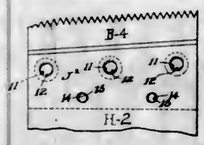
1,569,313. CADDY-BAG DISPLAY RACK AND STAND. LOUIS BREER, Los Angeles, Calif. Filed Dec. 27, 1923. Serial No. 682,950. 11 Claims. (Cl. 150—1.5.)



9. The appliance set forth comprising a rod; means for supporting said rod in a vertical position; a tube resiliently supported on said rod; and means connected with said tube for holding a caddy bag.

1,569,314. MELTING FURNACE. WILLIAM H. CHENOWITH and GEORGE C. SCHIMPF, Baltimore, Md., assignors to Harry D. Harvey, Baltimore, Md. Filed June 22, 1925. Serial No. 38,741. 5 Claims. (Cl. 263—14.)

1. A melting furnace comprising an upright casing, a melting pot within the casing, a discharge-pipe leading from the pot through the wall of the casing, a spout on the outer end of said pipe, movable horizontally into and out of pouring position, and a burner adapted to heat the spout in the latter position.

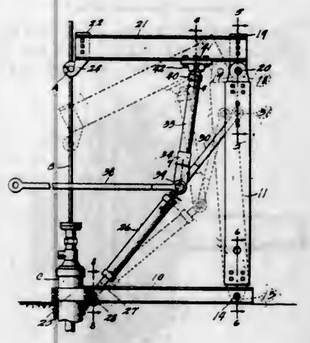


1,569,315. MACHINE FOR CUTTING SCREW THREADS. LEWIS B. CURTIS, Bridgeport, Conn. Filed Dec. 8, 1924. Serial No. 754,583. 3 Claims. (Cl. 10—96.)

1. A machine of the character described, comprising a stationary shell, a rotary die carrier circumferentially journaled within said shell and capable of lengthwise movement therein, threading dies positioned within said carrier, a cam supported by said carrier and capable of independent rotary movements for radially moving said dies simultaneously, a lever pivoted on the die carrier and connected with said cam, a rotary hub journaled to the outer face of said carrier near the periphery thereof, connections between said hub and lever whereby the rotary movements of the hub will effect the operation of said lever to open the dies, and adjustable pin located within said shell and projecting from the outer face thereof, and a member extending from said hub and adapted to strike said pin at a predetermined time during the inward movement of said carrier, whereby said hub will be independently rotated.

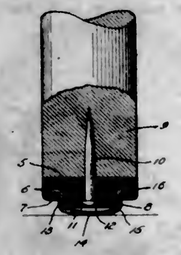
1,569,316. THREAD-CUTTING DIES. LEWIS B. CURTIS, Bridgeport, Conn. Filed Dec. 30, 1924. Serial No. 758,797. 3 Claims. (Cl. 29—105.)

3. A set of dies and die holders for use in pipe threading machines, said set comprising four similar die holders having integral open jaws at their outer ends, and four threading dies whose initial cutting bits are differently formed, each die having a shank which is firmly seated within the jaws of its holder and is laterally removed



therefrom, differently located perforations through the jaws and shank of each member of said set, and securing bolts and dowels passed through said perforations.

1,569,317. SOUND BOX OF TALKING MACHINES. JOSEPH DURHAM, Sydney, New South Wales, Australia. Filed Apr. 17, 1923. Serial No. 632,646. 2 Claims. (Cl. 274—35.)

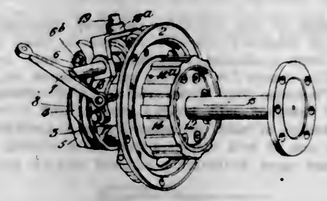


1. A sound box for talking machines, comprising a clamping ring having an inclined inner surface, a diaphragm carrying casing fitted within said clamping ring and having an inclined outer surface, a packing ring of sound insulating and non-resonant material fitted between the inclined surfaces of the casing and ring, a stylus bar, a stylus holder and a retaining cap plate substantially as described.

1,569,318. PUMP JACK. FRANK GARDNER, Dallas, Tex. Filed Oct. 9, 1924. Serial No. 742,558. 10 Claims. (Cl. 74—5.)

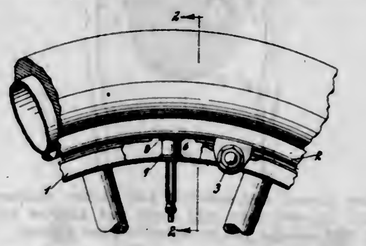
1. In a pump jack, a base, a Samson post pivoted on the base, a beam fulcrumed on the post, a three element toggle lever and pitman bracing and actuating connection between the base, post and lever, two of which elements are normally alined and extend across the angle between the base and post, and means movable in a horizontal plane for moving said normally alined elements into and out of alinement.

1,569,319. FURNITURE SUPPORT. CARL GEBHARD, Los Angeles, Calif. Filed Jan. 26, 1925. Serial No. 4,746. 5 Claims. (Cl. 76—42.)



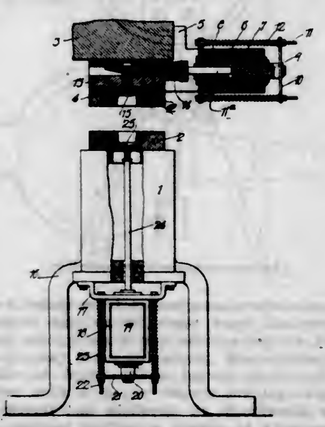
1. A furniture support comprising; a base having a peripheral flange; a cushioning pad of resilient material above the base having a cupped periphery stretched over said flange; and means independent of the base for attaching the pad to furniture.

1,569,320. TRUNK. MAURICE F. GRIFFIN, Los Angeles, Calif. Filed Feb. 20, 1925. Serial No. 10,491. 4 Claims. (Cl. 190—28.)



1. In a trunk comprising a body and lid members, and having a joint between said body and lid, a covering for the trunk members, and a resilient strip interposed in said joint, said covering extending over said strip.

1,569,321. APPARATUS FOR THE ENGAGEMENT AND DISENGAGEMENT OF MULTIPLE-DISK CLUTCHES OF MOTOR VEHICLES. JOSEPH ANDREW GYGAR, Brisbane, Queensland, Australia. Filed May 22, 1923. Serial No. 640,776. 2 Claims. (Cl. 192—53.)

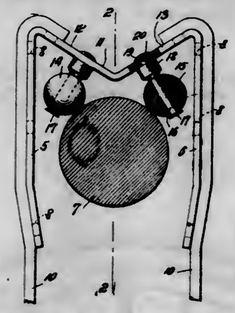


1. In improvements in apparatus for the engagement and disengagement of multiple disk clutches of motor vehicles, the combination of a driving shaft, a driving plate carried thereby, a chair cast integrally with said plate, an abutment flanged piece secured to said chair, a shift ring connected to the driving plate, a transmission shaft, a male clutch member and a female clutch member keyed to said transmission shaft, a metal ring fitting into the male member, a ring nut holding said metal ring in position, pins passed through the driving plate and fitted to the metal ring, a forked piece provided with a tapped boss, a stem for operating same, shoes hung on the fork piece and a clutch lever and shaft for controlling the rotation of the driving shaft.

1,569,322. VALVE-STEM PACKING WASHER. FREDERICK A. HOBERECHT, Oakland, Calif. Filed July 7, 1924. Serial No. 724,588. 1 Claim. (Cl. 301—10.)

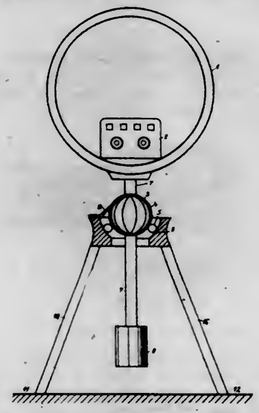
In combination with a pneumatic tire, a valve stem thereon, a rim upon which said tire is mounted, and a wheel felloe upon which said rim is mounted, said valve stem being adapted to extend through said rim and felloe, a packing washer substantially cylindrical in form and having a longitudinal opening therein for the reception of the valve stem, annular projecting rings formed on the ends thereof and adapted to bear against the rim and the felloe.

1,569,323. PRESS AND SIMILAR MACHINE. LE ROY H. HOFFER, Brooklyn, N. Y., assignor to Thomas E. Murray, Brooklyn, N. Y. Filed June 18, 1924. Serial No. 720,743. 9 Claims. (Cl. 219—4.)



5. A machine of the class described having a stationary die and a movable die and having separate knock-outs carried by said dies and a separate electric motor for actuating each knock-out.

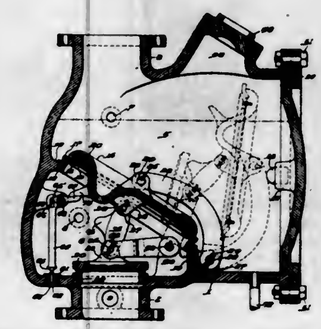
1,569,324. SUPPORT FOR CURTAINS. CLEMENT E. HORTON, Waterbury, Conn., assignor to Berbecker & Rowland Manufacturing Company, Waterville, Conn., a Corporation of Connecticut. Filed Apr. 23, 1923. Serial No. 638,827. 2 Claims. (Cl. 156—22.)



1. Means for supporting draperies from a traverse rod, comprising a frame adapted to straddle the traverse

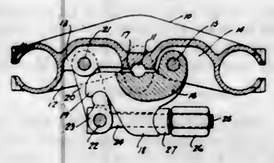
rod and having its upper portion of V-shape, a pair of studs secured rigidly to and depending from the frame and arranged at right angles to the V-shaped

portion thereof, and spherical anti-friction members rotatably engaged upon said studs and adapted to bear upon the traverse rod at opposite sides thereof.



1,569,325. RADIO DIRECTION FINDER. AUGUST LEIB, Berlin, Germany, assignor to Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany, a Corporation of Germany. Filed Aug. 8, 1922. Serial No. 580,515. 7 Claims. (Cl. 250—11.)

1. A radio device comprising a frame-shaped antenna, a rotatable axis upon which the antenna is mounted, a support for the antenna having an opening for said axis of substantially greater diameter than the axis, and a spherically curved member fixed to said axis and seated upon the support so as to allow said axis to swing laterally in all directions and thereby cause it automatically to assume a vertical position regardless of inclination of the support.



1,569,326. DRY-PIPE VALVE. LEROY M. LEWIS, Merion, Pa. Filed Nov. 12, 1921. Serial No. 514,440. 7 Claims. (Cl. 169—22.)

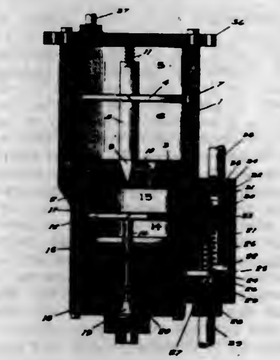
1. A dry pipe valve comprising a casing having a water inlet and a water outlet thereabove and in substantial alignment therewith, said casing being provided with upper and lower chambers, a water valve seat disposed adjacent the mouth of said inlet, an air valve seat disposed above said water valve seat and in oblique relation therewith, an air valve cooperative with said air valve seat, an arm rigid with and carrying said air valve and pivoted in said upper chamber, a water valve cooperative with said water valve seat, a link connecting said air and water valves and relatively movable with respect to both, and an arm pivot-

ed in said lower chamber and pivotally connected with the link operative to cause said water valve to follow a predetermined path substantially normal to said water valve seat when the air valve is forced against its seat.

1,569,327. POLISH-ROD CLAMP. OWEN C. LINTHWAITE, Los Angeles, Calif. Filed Mar. 7, 1925. Serial No. 13,935. 9 Claims. (Cl. 24—248.)

1. A clamp of the character described comprising a plurality of members hingedly secured to each other so as to form a divided work embracing unit, articulated locking means for drawing said members together extending between the latter, means to effectively expand and contract said locking means, and a rocker at the knuckle of said articulated means arranged to bear upon one of said members and exert closing pressure thereon upon contraction of said locking means.

1,569,328. MUSICAL SIGNATURE INDICATOR FOR TUITION PURPOSES. CHARLES LOGAN, Rockdale, near Sydney, New South Wales, Australia. Filed Jan. 31, 1922. Serial No. 533,100. 1 Claim. (Cl. 84—474.)

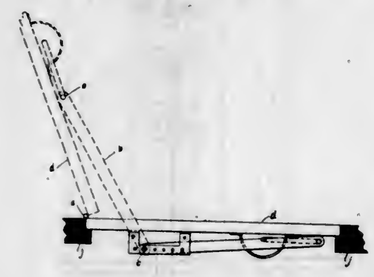


A pocket instrument for facilitating tuition in music key signatures and in harmonic relation, comprising a dial face having a staff ruled marginally about the periphery a plurality of radial lines disposed on the dial face to form segments in which are displayed the

respective major and minor key notations corresponding to the keys indicated on the bars of said staff, the corelation between the major and minor key being in-

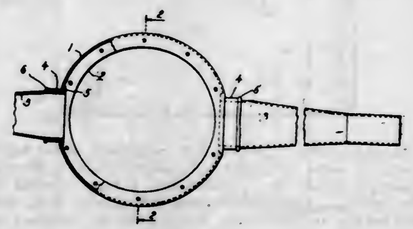
dicated by placing the major and minor key signatures and enharmonic relations in parallel groups in the same column in each case.

1,569,329. AUTOMATIC RETAINING VALVE. JOHN E. LONG, Marysville, Calif., assignor of one-third to I. H. Caplan and one-third to Samuel Caplan, both of Fresno, Calif. Filed July 23, 1923. Serial No. 653,153. 10 Claims. (Cl. 303—77.)



1. A retaining valve for air brake equipment comprising a means for retaining the brake pressure in the brake cylinder, means controllable by the train line pressure for releasing the retained pressure, and means controlled by the retained pressure for causing the train line pressure to operate said releasing means.

1,569,330. LETTER BELT. JOHN E. MCMULLEN, Council Bluffs, Iowa. Filed June 9, 1924. Serial No. 718,996. Renewed June 27, 1925. 1 Claim. (Cl. 24—191.)

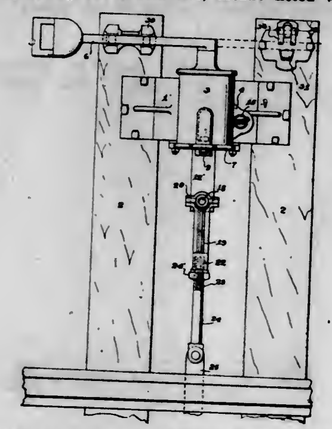


A buckle having a tapered portion and a ferrule on the same adapted to move upon said tapered portion; a raised portion of the said buckle formed therein; a flattened pawl at the end of said buckle and adapted to press the said band against a flattened end portion thereof; and a detachable flexible belt adapted to be held tightly beneath said ferrule on said buckle at one end and to freely pass underneath said pawl at the other end over the raised portion of said buckle.

1,569,331. DOOR LATCH. JOHN E. MCMULLEN, Council Bluffs, Iowa. Filed Aug. 7, 1924. Serial No. 730,780. 3 Claims. (Cl. 292—265.)

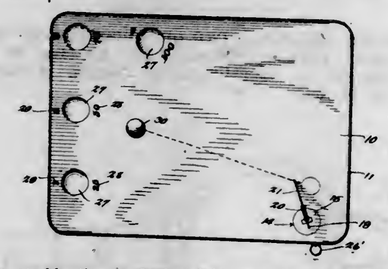
1. In a door latch a locking brace pinioned at a point remote from the door hinge on the door frame, a latch rod hinged on the door adapted to rotate through half a circle, a lever portion thereon adapted to serve as a handle, and a second lever portion thereon engaging the free end of said brace.

1,569,332. MANUFACTURE OF HOUSINGS AND THE LIKE. THOMAS E. MURRAY, Jr., Brooklyn, N. Y. Filed Oct. 17, 1921. Serial No. 508,232. 2 Claims. (Cl. 74—56.)



1. A housing for automobile rear axles comprising an annular wall 1 with inward flanges 2 at its edges and with diametrically opposite openings, the portion of the annular wall surrounding said openings being flattened, tapered tubes 3 having flanges 5 on their inner edges bearing against the inner faces of the wall to prevent outward movement of the tubes and having flanges 6 formed on an outer portion of the tubes to prevent inward movement of the latter through said openings, the flange 5 having side edges bearing against the flanges 2 of the annular wall so as to prevent rotation of the tubes on their axes.

1,569,333. SWITCH STAND FOR OPERATING SWITCHES AND SIGNALS. HARRY C. OBENKIRK, Cleveland, Ohio. Filed Apr. 25, 1925. Serial No. 25,782. 11 Claims. (Cl. 246—406.)

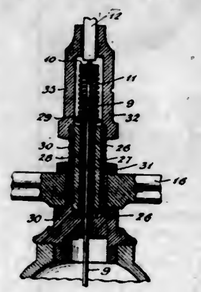


2. A combined switch stand and signal for railways, comprising a casting formed with a casing, an oscillating cam journalled within the casing, said cam being

formed with two separate and spirally disposed grooves therein, means fitted within and actuated by one groove for operating the switch bar, means fitted within and

actuated by the other cam groove for operating the signal, said means being entirely enclosed within the casing, and means for oscillating said cam.

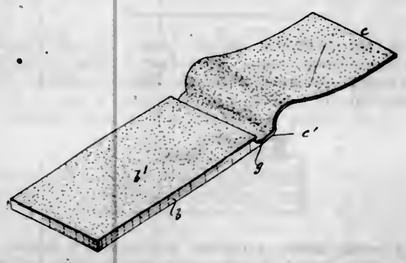
1,569,334. TOY GOLF GAME. HENRY E. PLACK, Towson, Md. Filed Oct. 29, 1925 Serial No. 65,562. 1 Claim. (Cl. 273—87.)



In combination a playing field comprising a flat board having a series of pockets at one end and a circular opening adjacent the opposite end, a disk mounted in said circular opening flush with said playing field, said field having an upstanding rim around its periphery, a figure mounted on said disk concentrically thereof, a ball propelling implement carried by said figure and positioned to sweep over an arc on said field in contact with the field to engage a ball positioned on the arc, a spring tending to rotate said disk in one direction, and manually controlled means to rotate the disk against the action of said spring and releasable to permit the spring to actuate the disk.

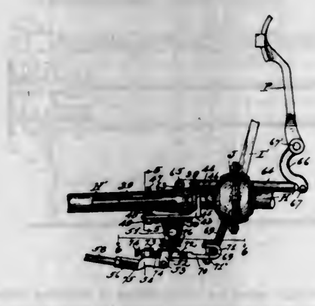
1,569,335. COVER FOR CRIBS. FRANK S. RECE, Dallas, Tex. Filed Apr. 7, 1924. Serial No. 704,815. 2 Claims. (Cl. 5—97.)

1. A crib provided with trunnions mounted at the upper rear corners thereof and extending outwardly, a screened cover extending from the front to the rear wall of the crib and mounted to slide thereon, metal keepers closed at one end and extending along the outer face of the ends for receiving the trunnions and having inwardly directed flanges parallel with the under face of the cover, and a stop pin extending through one of said flanges into the cover to engage the trunnion and fulcrum thereon.



1,569,336. STUFFING BOX FOR AUTOMATIC REGULATORS AND THE LIKE. ALFRED ROESCH, deceased, late of Brooklyn, N. Y., by Emma Roesch, executrix, Brooklyn, N. Y., assignor to Charles J. Tagliabue Mfg. Co., Brooklyn, N. Y., a Corporation of New York. Original application filed Aug. 9, 1921, Serial No. 491,048. Divided and this application filed June 6, 1924. Serial No. 718,238. 5 Claims. (Cl. 251—137.)

1. The combination of a valve casing, a tubular extension thereon, a valve in said casing, a valve stem carrying said valve and extending lengthwise of and beyond said extension, a plurality of packings within said extension for said stem, means partly within and partly outside of said extension engaging one of said packings and a spring located exteriorly of said extension whereby a pressure is exerted on said means and transmitted to said packings to compress same.



5. The combination of a reciprocating member a projection adjustably carried thereby, a plurality of packings for said member spaced apart in the direction of its axis, a tubular follower upon said member between said packings, an outer follower on said member and a spring having its one end in engagement with said outer follower and its other end in contact with the projection on said reciprocating member whereby pressure is exerted upon the said outer follower and transmitted thereby to said packings and tubular follower to maintain said packings in engagement with said member.

1,569,337. INK PAD FOR RUBBER STAMPS, ETC. EDWARD F. ROLLE, Forest Hills, N. Y., assignor to Rolle Rubber Company, Inc., New York, N. Y. Filed July 10, 1925. Serial No. 42,687. 2 Claims. (Cl. 91—54.5.)

2. An ink pad comprising a slab of rubber sponge formed to provide a pad portion and a cover flap connected by a hinge in an integral structure.

1,569,338. BRAKE MECHANISM. GEORGE W. ROSS, Huntington Park, Calif., assignor to F. L. Hetzel and A. H. Hetzel, both of Los Angeles, Calif. Filed Jan. 27, 1923. Serial No. 615,367. 5 Claims. (Cl. 188—18.)

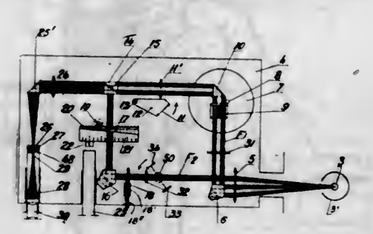
1. A brake mechanism including a plurality of brakes, an equalizer bar transversely disposed forwardly of said brakes, separate connections between said equalizer bar and said brakes connected at points equi-distant from the longitudinal axis of the vehicle, adjustable devices connected with said equalizer bar disposed in the plane of the longitudinal axis of the vehicle, and separate hand and foot levers independently and adjustably connected therewith for selectively operating said brakes by either of said levers at will.

1,569,339. PROCESS OF MANUFACTURE OF ALDEHYDES, OILS, AND ORGANIC ACIDS FROM CACTI. WILLIAM MALCOLM SINCLAIR, Strathfield, near Sydney, New South Wales, Australia. Filed Feb. 25, 1925. Serial No. 11,406. 8 Claims. (Cl. 260—138.)

1. A process for the obtaining of aldehydes from cacti which consists in mashing the same without adding water in conditions favorable to fermentation by its indigenous fungus, hydrolizing the fully fermented pulp, distilling the fermented hydrolysed pulp, condensing the aldehyde, and separating essential oil from the aldehyde.

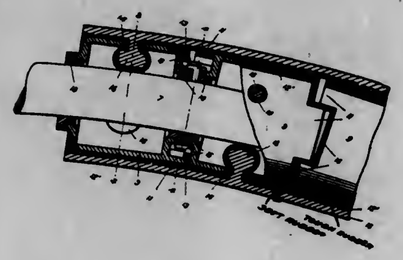
1,569,340. FERRULE FOR GOLF CLUBS. PEMBROKE A. VAILE, Chicago, Ill., assignor of one-half to William E. Swift, Chicago, Ill. Filed Apr. 17, 1925. Serial No. 23,856. 2 Claims. (Cl. 273—77.)

1. A device of the class described including a shaft and having a stop adjustable along the grip part of the shaft for the purpose described.



1,569,341. STAKE. ANNA D. VARELL, New York, N. Y. Filed Oct. 28, 1922. Serial No. 597,440. 1 Claim. (Cl. 47—44.)

A stake comprising a rod bent at one end and at an intermediate point into eyelets lying in a common plane and in line with each other, a flattened diverging section at the other end of said rod, the planes of the major surfaces of said section being transverse to the axis of said eyelets, a double bevelled cutting edge at the free

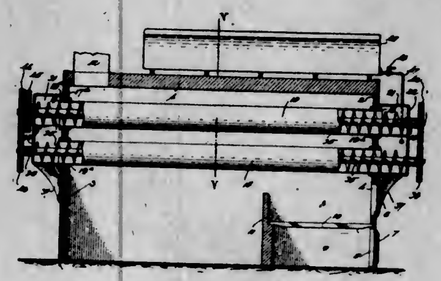


end of said section diagonal to the major axis of the stake and conterminous to the width of said flattened section at said free end and forming an entering point.

1,569,342. ABSORPTION AND DIFFUSION PHOTOMETER. ARTHUR VERNES, ROBERT BRICQ, MARIE LOUIS AMÉDÉE JOBIN, and GUSTAVE GEORGES JOSEPH YVON, Paris, France. Filed Sept. 25, 1923. Serial No. 664,787. 4 Claims. (Cl. 88—23.)

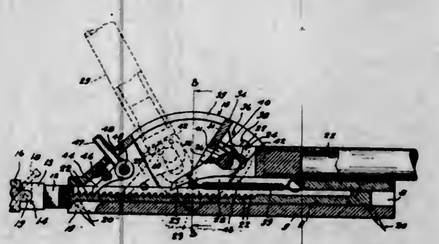
1. A device for general photometry and chiefly for absorption and diffusion measurements by means of a limited number of suitably combined elements, comprising in combination an illuminant, optical means for obtaining a beam of light from said illuminant, separating means for dividing said beam into two secondary beams, an optical comparison device having a reflecting portion, and a transparent portion, means for directing both secondary beams along separate paths to the comparison device, means for observing the luminous spots formed by the two secondary beams in the comparison device, a body to be tested, means for placing the said body on the path of one of the secondary beams, a movable optical condensing device, means for placing the said condensing device on the path of the same abovementioned secondary beam so that the body to be tested, when on the path of the beam, is at the focus of said device and an optical compensator on the path of the secondary beam which does not pass through the body to be tested.

1,569,343. CLOTH EXPANDER. FREDERICK BENEDICT VORGELI, Easton, Pa. Filed Nov. 20, 1924. Serial No. 751,135. 7 Claims. (Cl. 26—63.)



3. A cloth expander comprising rotatable mounted roller members to be disposed along a curved line and having apertures in their peripheries, and a rubber cover molded on said members having portions anchored in said apertures.

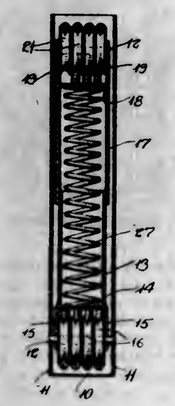
1,569,344. SPEEDOMETER DRIVE. FRANK WILLIAM WEST, New Rochelle, N. Y., assignor, by mesne assignments, to Stewart-Warner Speedometer Corporation. Filed Mar. 8, 1923. Serial No. 623,820. 6 Claims. (Cl. 74—7.)



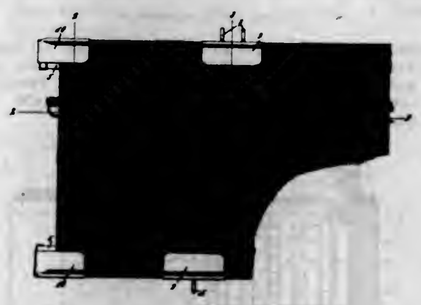
1. In a speedometer drive, the combination with a road wheel, an axle therefor having a steering knuckle including an upstanding spindle member and a gear coaxially positioned on the road wheel outside of the knuckle, of a speedometer driving attachment including a clamp for engaging the spindle and including a forwardly extending supporting rod, an upstanding post horizontally adjustable on the rod, means for securing the post to the rod in adjusted position and a speedometer driving unit including a bearing member, a pair of intergeared shafts journalled in the bearing member with their axes fixed therein, one of said shafts provided with a pinion adapted to mesh with the wheel gear and means for securing the bearing member in adjusted position on the post thereby to set the pinion in meshing relation with the gear.

1,569,345. PEAT-DRYING MACHINE. CHARLES A. WILLMARTH, Tecumseh, Mich. Filed Nov. 16, 1923. Serial No. 675,200. 4 Claims. (Cl. 34—7.)

4. A peat drying machine comprising a heating apparatus, having walls, compartment heads on said walls, an upper series of horizontal drums having open ends protruding through said walls into said heads, a lower series of horizontal drums having open ends extending through said walls into said compartment heads, said heads establishing communication between said drums, one of the upper and lower series of heads having a discharge opening and the other head an inlet opening, and conveyors in said drums.



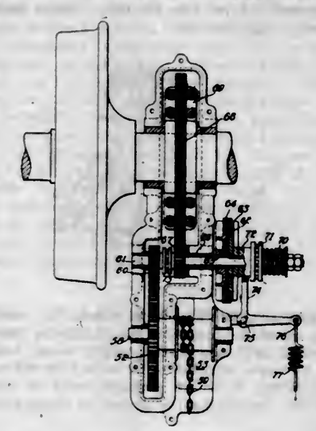
1,569,346. FLOORING JACK. MARY L. WILSON and ROBERT L. ROCKWELL, Seattle, Wash.; said Rockwell assignor of one-sixth of the entire right to said Mary L. Wilson. Filed Mar. 22, 1923. Serial No. 626,786. 4 Claims. (Cl. 254—16.)



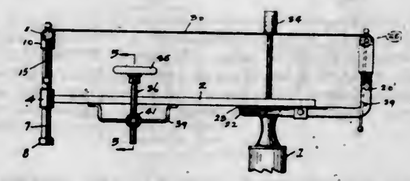
1. A device of the class described embodying a housing, a rack bar guided for movement lengthwise within said housing, a two part lever mounted for oscillation in said housing, said lever being formed of an inner fulcrum member and an outer handle member that is connected with the fulcrum member by means which permit said handle to be folded downwardly at an angle to said fulcrum member and parallel with said housing, or to be moved into alignment with and rigidly connected to said fulcrum member, and a pawl on said lever arm for engaging with and moving said rack bar.

1,569,347. SASH BALANCE. ARTHUR E. ANAKIN, Long Beach, Calif. Filed Apr. 28, 1925. Serial No. 26,491. 2 Claims. (Cl. 16—198.)

1. In a sash balance, a pair of telescopically arranged tubular members, sheave supports each carried by the outer end of a respective member, sets of sheaves each supported on a respective sheave support, a flexible strand led around said sheaves outside of said members and having one end fixed and the other end free for attachment to part of a window, and a compression spring housed in said tubular members and urging the same apart.



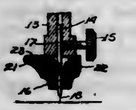
1,569,348. HARNESS DEVICE. ISAAC ANDREWS, Spartanburg, S. C. Filed Aug. 31, 1923. Serial No. 660,407. 1 Claim. (Cl. 139—91.)



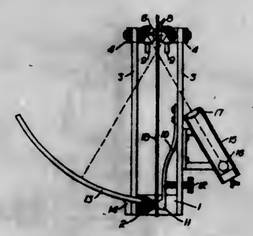
A loom harness comprising spaced supporting bars, heddles supported by the bars, screw eyes secured to the bars, members formed of fabric material positioned on the bars adjacent to the screw eyes, fabric members positioned over the heddles at points adjacent to the screw eyes, and fabric members positioned over the ends of the bars and over the heddles arranged adjacent thereto.

1,569,349. AXLE-POWER BRAKE. LOUIS M. ASPINWALL, Pittsburgh, and KARL A. SIMMON, Edgewood Park, Pa., assignors to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 23, 1920. Serial No. 353,537. 4 Claims. (Cl. 188—146.)

1. A braking apparatus comprising a box frame, a brake-applying device and an axle-receiving member located at opposite ends of said frame, an axle-power transmitting member enclosed by an intermediate portion of said frame, a clutch mechanism having its engaging elements located on one side of said frame, one of said elements being connected to said transmitting member, and connecting means for the other element and said brake-applying device located on the other side of said frame.

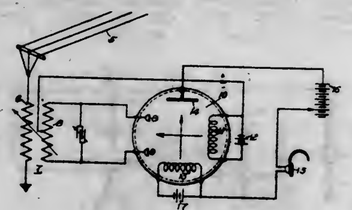


1,569,350. OPERATING TABLE. WILLIAM L. BELL, Oakland, Calif. Filed Oct. 27, 1923. Serial No. 671,226. 2 Claims. (Cl. 45—50.)



1. An operating table including a support having a planar surface; a flexible strip adapted to be suspended above said surface and to support a body in a substantially horizontal position; means for stretching said strip to raise or lower it relative to said surface; and vertical means on said surface extending through said strip for locating a body in a predetermined position on said strip.

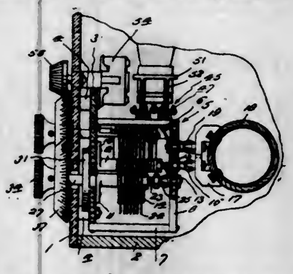
1,569,351. TALKING-MACHINE NEEDLE. MABEL BLACKMAN, New York, N. Y., assignor of one-half to Estelle McKee and one-half to Lillian K. Hosier, both of New York, N. Y. Filed Oct. 21, 1921. Serial No. 509,281. 1 Claim. (Cl. 274—37.)



A talking machine needle comprising an integral metallic stylus member adapted to be held firmly in the stylus chuck of said machine, a sound insulating member embracing said stylus member near its free end, said insulating member being composed of a resilient material laterally extended and having an inverted frusto cone-shaped, the base whereof is adapted to bear against the chuck for holding said needle for absorbing a certain proportion of the vibration of said needle.

1,569,352. WIRE-TESTING EXTENSOMETER. PORTER H. BRACE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 12, 1919. Serial No. 296,572. 6 Claims. (Cl. 39—147.)

1. An extensometer comprising means for detecting the elongation of a test piece and for indicating the amount of elongation, said means including a scale, and a plurality of reflectors adapted to be moved by the test piece and co-operating to reflect a single beam of light upon the scale for magnifying the degree of elongation of the test piece.

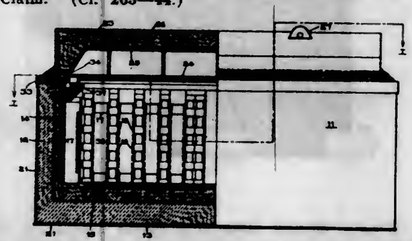


1,569,353. WIRELESS RECEIVING SYSTEM. QUINCY A. BRACKETT, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 5, 1919. Serial No. 315,393. 1 Claim. (Cl. 250—20.)

In a wireless receiving circuit, the combination with an antenna having a coupled transformer associated therewith, of an evacuated bulb provided with anodes and an electron emitting cathode, said anodes being connected, respectively, to terminal points of the secondary winding of said transformer, and said cathode being connected to an intermediate point therein, whereby said electrodes tend to rectify an electromotive force produced in said winding and, consequently, to produce unidirectional electrode flow from said cathode to said anodes, an additional electron-emitting electrode and a cold anode also mounted within said container and so disposed that an electron path therebetween intercepts the aforementioned electron stream, and an electrical receiving circuit connecting said last-named electrodes and embodying a source of electromotive force and a receiving device, whereby an electromotive force supplied through said coupled transformer to said anodes produces interaction between the two electron streams and, consequently, modifies the current in said local receiving circuit because of modifications of the number of electrons traversing the same.

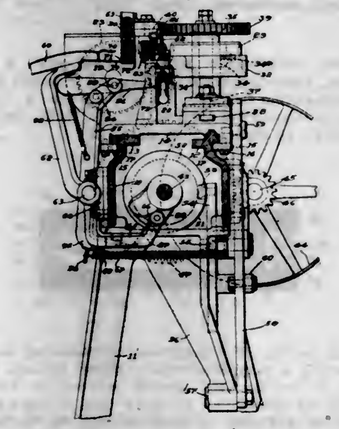
1,569,354. RADIO RECEIVING SET. LOUIS T. CARL and ALBERT S. CARL, Winona, Miss. Filed Jan. 21, 1924. Serial No. 687,541. 4 Claims. (Cl. 250—40.)

1. A tuning unit mounting including a panel having a horizontally extending slot in the central portion, a pair of bracket members mounted on the rear side of the panel at opposite sides of the slotted portion and having tubular extensions thereon, a rod mounted in and extending from the tubular extension of the upper bracket, said rod being adapted to receive a plurality of stationary condenser plates for mounting in spaced relation thereon, the end of the rod being adapted to receive



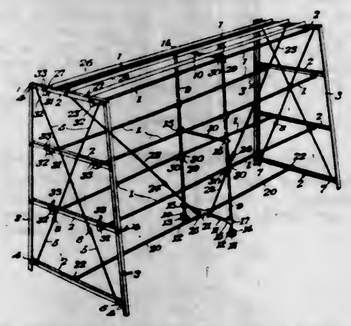
a circuit connection, a shaft rotatable in the sleeve extension and bracket on the lower side of the slot, said shaft being adapted to mount a plurality of movable condenser plates in spaced relation between the stationary plates, a contact member mounted on the inner end of said shaft having relatively rotatable sections, one of the sections being free from the shaft, and an operating disc on the outer end of the shaft in front of the panel.

1,569,355. METHOD OF ANNEALING SHEET STEEL. GUERNEY H. COLE, Forest Hills Borough, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 21, 1920. Serial No. 432,336. 7 Claims. (Cl. 148—13.)



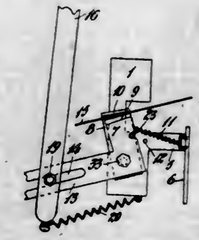
2. The process of heat treating sheets of magnetic silicon alloy steel which consists in heating said sheets to a temperature not exceeding 700° C. in an atmosphere containing oxygen in approximately the same ratio to nitrogen as exists in air and then cooling.

1,569,356. ANNEALING FURNACE. GUERNEY H. COLE, Forest Hills, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 8, 1922. Serial No. 580,400. 1 Claim. (Cl. 263—44.)



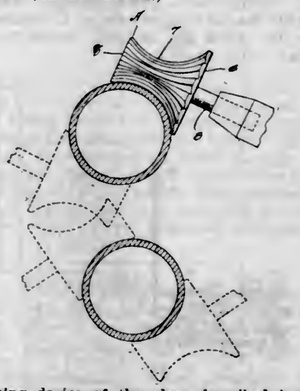
In an annealing furnace, in combination, a plurality of refractory heat-insulating walls enclosing an open-top furnace chamber, a member of substantially channel section located at the top of said walls adjacent the inner edge thereof, an inner cover, of relatively low thermal resistance, for said furnace chamber having its edges engaging said member of channel section, means in said member of channel section for co-operating with said cover member to seal said furnace chamber substantially airtight, a second member of substantially channel section located at the top of said walls adjacent the outer edge thereof, an outer cover member of relatively high thermal resistance and having its edges operatively engaging said second member channel section, and sealing means in said second member of channel section for co-operating with said outer cover member to seal said furnace chamber substantially airtight.

1,569,357. WOODWORKING MACHINE. HENRY E. COWDERY, Fitchburg, Mass. Filed Nov. 3, 1924. Serial No. 747,441. 14 Claims. (Cl. 142—44.)



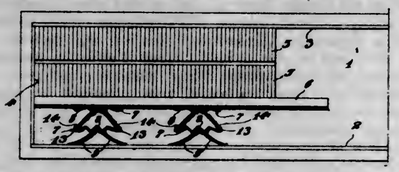
1. A wood working machine, comprising in combination, work supporting and rotating means, a cutter, means for advancing the cutter along the work, a pivotally mounted carrier supported to travel with the cutter and to engage the completed portion of the rotating work to support the work upon completion of the cutting operation, and means for tilting the carrier to eject the work from the carrier.

1,569,358. GARMENT RACK. CHARLES C. CROSS, Brooklyn, N. Y., assignor to Universal Fixture Corporation, New York, N. Y., a Corporation of New York. Filed Mar. 24, 1923. Serial No. 627,475. 8 Claims. (Cl. 211—14.)



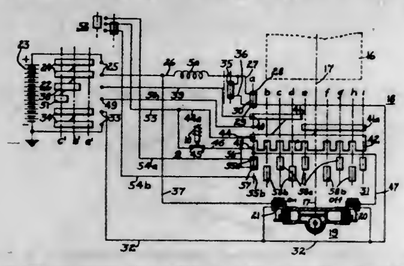
1. A knock-down article-supporting rack comprising a pair of upstanding end frame sections, an upstanding intermediate frame section, a pair of longitudinally aligned and horizontally disposed rigid frame-section connecting member located substantially midway between the side edges of the frame sections, means detachably connecting each of said aligned members at its inner end with the intermediate frame section adjacent the bottom of said section, means detachably connecting each of said aligned members at its outer end with the adjacent end frame section near the bottom of said section, a plurality of rigid connecting members each extending longitudinally of the rack from end to end of the rack at the top of the frame sections, means detachably holding each of said last-mentioned connecting members to the three frame sections, a pair of oppositely inclined tie-rods at opposite sides of the intermediate frame section, means detachably connecting each of the tie-rods at its outer end to the adjacent end frame section near the top of said section and substantially midway between the side edges of the section, means detachably connecting each of the tie-rods at its inner end to one of said aligned connecting members adjacent the intermediate frame sections, a plurality of independent article-suspension rods arranged in superposed horizontal rows between each end frame section and the intermediate frame section and extending longitudinally of the rack, means on the intermediate frame section for detachably connecting the ends of the suspension rods arranged at opposite faces of said frame section with said section, and means on each end frame section for detachably connecting with said section the outer ends of the suspension rods arranged between said end frame section and the intermediate frame section.

1,569,359. BOX-HOOP-STRAPPING MECHANISM. SAMUEL JAMES DUNN, Windsor, Victoria, Australia. Filed June 5, 1924. Serial No. 718,153. 2 Claims. (Cl., 254—80.)



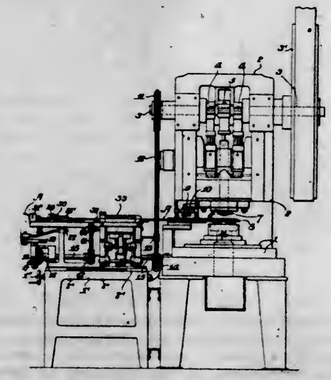
1. A hoopiron straining apparatus comprising a stationary element, a lever mounted on a pivot thereon, and formed at its end with a jaw, a gripper mounted on said pivot and formed at its outer end with a jaw coacting with the jaw on said lever and a spring connected at one end to said gripper and at the other end to said stationary element.

1,569,360. PIPE CLEANER. ZANZIE EDWARDS, Clarksville, Tenn. Filed Feb. 19, 1925. Serial No. 10,245. 1 Claim. (Cl. 15—104.04.)



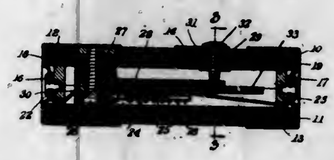
A cleaning device of the class described including a body having circular ends, one smaller in diameter than the other and a plurality of concave teeth on the surface extending longitudinall between the ends the body being smaller at an intermediate portion than at either end, and a stud shaft extending from the larger end axially of the body.

1,569,361. GALLEY SIDE LOCK. JOHN FARNSWORTH, Philadelphia, Pa. Filed Jan. 27, 1925. Serial No. 5,011. 10 Claims. (Cl. 276—42.)



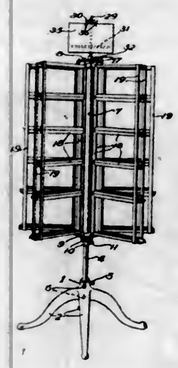
1. A galley lock comprising a body bent back and forth to produce a notch, and a spring projecting from the notch and adapted to be stressed when in type holding position.

1,569,362. CONTROL SYSTEM. ALEXANDER DALGETY FERGUSON, Oldham, England, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 12, 1922. Serial No. 674,228. 7 Claims. (Cl. 172—179.)



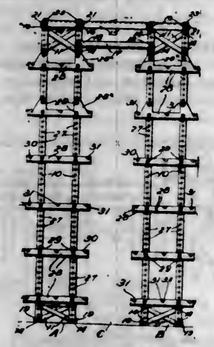
1. The combination with a main controller for starting electric motor, of a current-limit device for causing a step-by-step advance of the main controller, said current-limiting device being actuated upon changes in the current flowing in the motor circuit, and a plural-position switch co-operative to effect a step-by-step operation of the controller as it is moved from position to position independently of said current-limit device.

1,569,363. PRINTING ATTACHMENT FOR CAP-FORMING MACHINES. CHARLES A. GARRETT, Philadelphia, Pa. Filed Aug. 23, 1921. Serial No. 494,469. 7 Claims. (Cl. 93—1.)



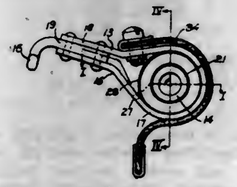
1. A machine for forming and printing closures comprising dieing mechanism, printing mechanism, and feeding mechanism comprising means for advancing a sheet of material to said printing and dieing mechanism in sequence and means for holding said sheet against movement during the operation thereon of said printing and dieing mechanism.

1,569,364. ELECTRIC RELAY. BENJAMIN E. GETCHELL, Plainville, Conn., assignor to Trumbull Electric Manufacturing Company, Plainville, Conn., a Corporation of Connecticut. Filed Oct. 18, 1923. Serial No. 669,304. 10 Claims. (Cl. 200—122.)



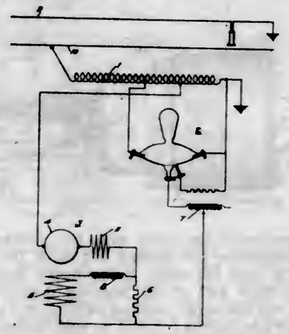
1. An electric relay comprising an insulating body portion having a channelled face, a heater element secured thereto, a thermostatic element secured to the body between the heater and the body face, a contact screw secured to said body to cooperate with the thermostatic element, an insulating cover cooperating with the body to enclose said elements, and end caps to hold the body and cover together.

1,569,365. DISPLAY FIXTURE. SAMUEL GOLDBERG, New York, N. Y., assignor to Universal Fixture Corporation, New York, N. Y., a Corporation of New York. Filed Aug. 16, 1923. Serial No. 657,723. 2 Claims. (Cl. 211—20.)



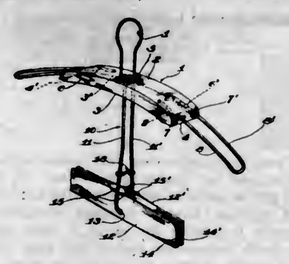
1. A display fixture comprising a spool-like carrier, means supporting the carrier to rotate about a vertical axis, a series of swinging panels extending outwardly from the carrier and pivoted at their inner ends between the upper and lower heads of the carrier, each panel being formed with a series of superposed article-holding pockets open at their sides and at their outer ends, a stop carried by the lower end of each panel and riding upon the lower carrier head, and a series of spaced abutments carried by the lower carrier head and arranged in pairs with one abutment at either side of each of said stop members to limit the swing of the panels relatively to the carrier by contact with the stop members, the stop members spacing the panels above the abutments and being of materially less width than the transverse width of the panels to increase the swinging scope of the panels.

1,569,366. DISPLAY RACK. SAMUEL GOLDBERG, New York, N. Y., assignor to Universal Fixture Corporation, New York, N. Y., a Corporation of New York. Filed Sept. 18, 1923. Serial No. 663,405. 1 Claim. (Cl. 211—18.)



A rack for fabrics in the roll, comprising two spaced upright frame sections each section being rectangular in horizontal section and formed of four vertically arranged corner angle-irons each of said angle-irons being formed with a vertical series of bolt apertures in its vertical end members, transverse rods rigidly and detachably connecting together the vertical angle bars of each frame section at the upper and lower ends thereof, detachable truss means connecting the top and bottom of each section, means detachably connecting together the upper ends of the two frame sections to stabilize them and hold them rigidly spaced apart to form an arched passageway therebetween, and a series of saddle-bars adjustably and detachably bolted through said bolt apertures to each adjacent pair of corner-irons of each frame section, these saddle bars lying in planes at right angles to the passageway between the frames and each having its ends projecting beyond the frame section and provided with bearings for the fabric roll shafts at said projecting ends and midway the ends, whereby the fabric rolls may be displayed at the center of each section and upon the inner and outer sides thereof and will project between the aforesaid corner-irons.

1,569,367. BRUSHHOLDER CONTACT FINGER. HARRY F. HARTMAN, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 2, 1925. Serial No. 20,072. 4 Claims. (Cl. 171—324.)

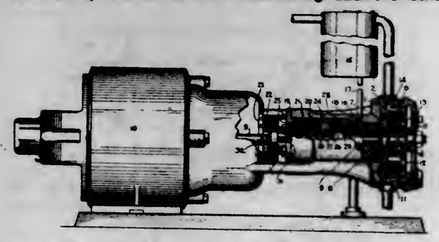


3. A brushholder for electrical machines comprising a finger-supporting shaft and characterized by a finger having a hub portion on said shaft and adapted to yieldably press a brush into operative engagement with a co-operating current-collecting device, said finger comprising an arm extending from said hub portion, and a separate T-shaped tip for contacting with the brush, and means for securing the leg of the tip to said arm, the material of said tip being more resistant to sparking at the brush contact than the material of said arm.

1,569,368. RECTIFIED-CURRENT COMMUTATOR MOTOR. RUDOLF E. HELLMUND, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 5, 1921. Serial No. 435,207. 7 Claims. (Cl. 172—276.)

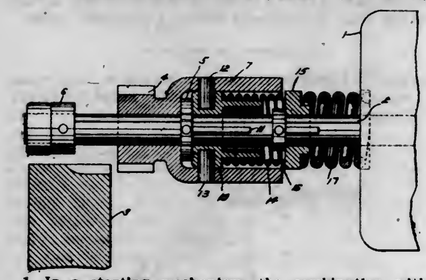
6. The method of translating power between an alternating-current device having a generated electromotive force of substantially sinusoidal wave-form and a direct-current device having a substantially constant unidirectional generated electromotive force, which comprises introducing an alternating electromotive force in the direct-current circuit to cause the direct current to vary cyclically from substantially zero to a maximum value.

1,569,369. CLOTHES HANGER. HENRY T. HETTINGER, Pittsburgh, Pa. Filed Apr. 10, 1925. Serial No. 22,221. 6 Claims. (Cl. 211—13.)



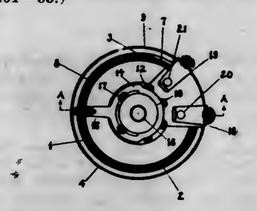
1. A foldable suit hanger comprising a cross bar having a body provided with a recess in its bottom face and depending flanges bordering said recess, said flanges being provided with apertures extending therethrough, a pair of oppositely disposed resilient slides slidingly mounted in the cross bar, the inner ends of the slides projecting within the said recess and having offset portions adapted to lockingly engage with said apertures for resiliently holding the slides against movement relatively to the cross bar.

1,569,370. ROTARY COMPRESSOR. EBENEZER HILL, South Norwalk, Conn., assignor to The Hill Compressor & Pump Company, New York, N. Y., a Corporation of Delaware. Filed May 13, 1925. Serial No. 29,907. 9 Claims. (Cl. 230—30.)



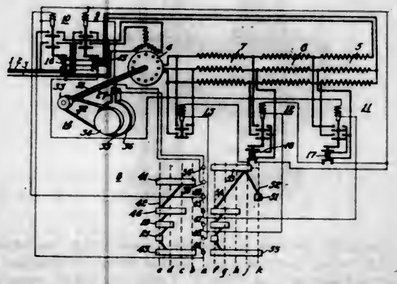
1. The combination in a rotary compressor having a casing with a pumping chamber and recess communicating with the back of the pumping chamber, said pumping chamber containing internal and external coacting pumping members, of a driving shaft connected with the pumping members and extending through said recess, means for admitting discharge pressure to the recess back of the pumping members whereby said pressure tends

to force the pumping members against the front wall of the pumping chamber, a floating stuffing box surrounding the shaft and extending into the recess, a flexible metallic packing surrounding the stuffing box and having one end hermetically connected with the casing and the other



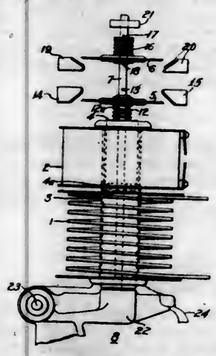
end hermetically connected with the stuffing box, and means connecting the stuffing box with the shaft and adapted to pull the shaft and pumping members away from the front wall of the pumping chamber under the force of the discharge pressure exerted in the recess on the end of the stuffing box and on said flexible packing.

1,569,371. STARTING MECHANISM FOR AUTOMOBILES. CHARLES H. HODGKINS, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 21, 1920. Serial No. 432,361. 9 Claims. (Cl. 74—7.)



1. In a starting mechanism, the combination with a motor pinion and an engine gear wheel, of means for moving the pinion axially into mesh with the engine gear wheel, and springs having different strengths one of which operates to absorb the shock in case the ends of the pinion teeth engage the end of the gear wheel teeth and both of which operate to absorb the shock of initial actuation of the engine.

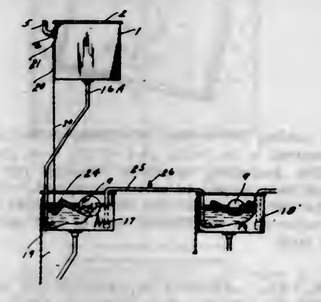
1,569,372. CURRENT-CONTROLLING MEANS. LAWRENCE C. F. HORLE, Newark, N. J., assignor, by mesne assignments, to Federal Telephone Manufacturing Corporation, Buffalo, N. Y., a Corporation of New York. Filed July 17, 1924. Serial No. 726,642. 2 Claims. (Cl. 201—55.)



1. In a rheostat, base member carrying a resistance element comprising in series a comparatively heavy wire coil and a comparatively fine wire coil, a rotatable sleeve journaled in said base and adapted to be fastened to an actuating shaft and carrying a contact finger in slidable engagement with said resistance element, and means associated with said base and independent of said shaft for holding said sleeve and attached finger in alignment with respect to said base and said resistance element.

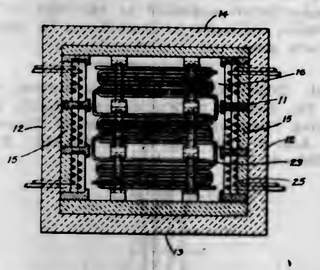
1,569,373. CONTROL SYSTEM. HENRY D. JAMES, Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 20, 1920. Serial No. 425,457. 8 Claims. (Cl. 172—152.)

1. In a motor-control system, the combination with a motor, a load and a controller, of means comprising a differential gear mechanism responsive to said load for insuring said motor against operation in the reverse direction when said controller occupies a position corresponding to reversed motor operation.



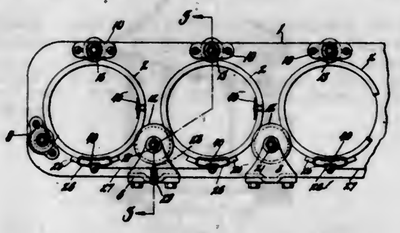
1,569,374. CONTROL APPARATUS. HOWARD H. JOHNSTON, Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Original application filed May 23, 1919, Serial No. 299,183. Divided and this application filed Sept. 2, 1922. Serial No. 585,872. 10 Claims. (Cl. 200—87.)

1. In a switch, in combination, a plurality of contact members for controlling electric circuits, a movable contact carrier, said contact members being movably mounted on the carrier, electromagnetic means adapted to effect the movement of a contact member independently of the carrier, and means operated by said electromagnetic means disposed to actuate the carrier.



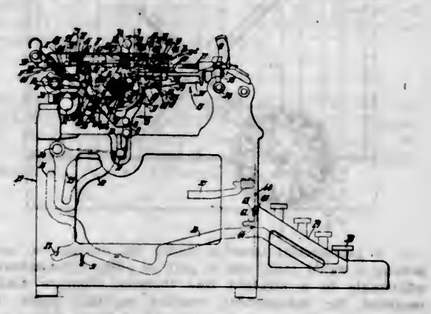
1,569,375. AUTOMATIC LIQUID CONTROL. EDWIN E. JOSLIN, Portland, Oreg. Filed May 25, 1925. Serial No. 32,704. 1 Claim. (Cl. 4—42.)

An automatic liquid control, comprising a master control box having an inlet compartment and a discharging compartment formed by a transverse partition disposed thereacross, the upper surface of which is disposed substantially below the upper, outer surfaces of the outer walls of the box, the receiving compartment of said master control box being connected to a source of liquid under pressure, a float controlled valve admitting liquid from said source when the level of said liquid is lowered in the inlet compartment of said box, an inlet pipe having its inner end disposed below the inlet valve and being curved upwardly and so disposed as to impinge the discharging liquids upon the float contained therein to impart an upward movement thereto, a yoke siphon disposed over the transverse



partition and adapted to pass liquids from the inlet compartment within the box to the outlet compartment of said box, said siphon adapted to be oscillated about a fixed bearing within the box and to actuate the float controlled valve to admit liquid within the inlet compartment within the box, a series of one or more secondary flushing tanks disposed below the master control box and a communicating flushing pipe disposed between the master control box and the first of the series of flushing tanks disposed therebelow, and float control means adapted to manipulate the outlet means disposed within the outlet compartment of the master control box.

1,569,376. FURNACE RESISTOR MOUNTING. ALVIN D. KEENE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 20, 1923. Serial No. 675,863. 5 Claims. (Cl. 204—64.)

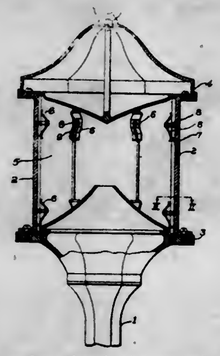


1. In an electric furnace, in combination, a plurality of spaced sets of fixed, alined and spaced members, of substantially T-shape, pairs of superposed coextensive substantially vertically-extending, relatively narrow, supporting bars having laterally-extending grooves in one surface thereof supported by said members of T-shape, and pairs of relatively heavy preformed resistor members extending through said lateral grooves in the alined supporting-bars and therebetween, said resistor members being located in adjacent parallel planes.

1,569,377. TWISTER RING. WILHO A. KOSKEN, New York, N. Y., assignor, by mesne assignments, to Benjamin Farnham Smith, Concord, Mass. Filed Dec. 28, 1922. Serial No. 609,480. 12 Claims. (Cl. 118—56.)

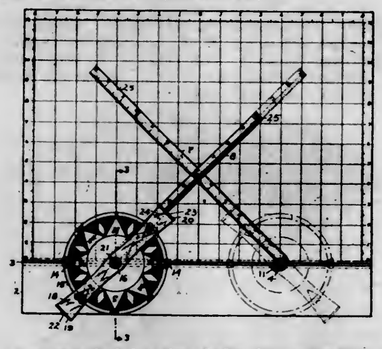
1. In combination, a rail, a plurality of twister rings arranged in series on said rail, and a plurality of rollers journaled on said rail with their peripheries engaging the peripheries of said rings, certain of said rollers being positioned between a pair of rings and in engagement with both rings, and each of the remaining rollers engaging one ring only, the rollers engaging a pair of rings being of larger diameter than those engaging one ring only.

1,569,378. TYPEWRITING MACHINE. ALFRED G. F. KUBOWSKI, Brooklyn, N. Y., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Mar. 8, 1923. Serial No. 623,622. 11 Claims. (Cl. 197—186.)



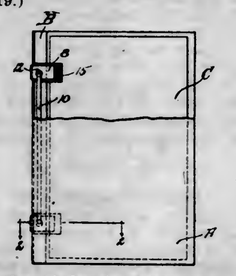
1. In a typewriting machine, a platen, a frame for the platen, a support for the platen-frame, means for shifting the platen-frame between case positions on its support, and a spring-seat for the platen-frame on its support to cushion and sound-deaden the impact of the platen-frame against the support when the platen-frame is arrested in the movement thereof from one to another case position; the spring-seat comprising a folded leaf-spring secured to the platen-frame, and an abutment on the support for engagement with the free end of the leaf-spring, one reach of the leaf-spring having an ear thereon and a pin on the ear for engagement with the other reach of the leaf-spring to hold the spring partially compressed and to determine the normal setting of the platen-frame on its support.

1,569,379. HOLDING CLIP FOR LANTERNS. ERNEST M. LARKIN, South Bend, Ind., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 20, 1923. Serial No. 681,747. 3 Claims. (Cl. 240—25.)



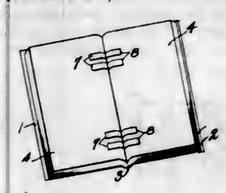
1. In a lighting fixture, a plurality of panels, retaining members therefor and means for securing said

panels to said members, said means comprising resilient clips, each of said clips having an elongated slot and



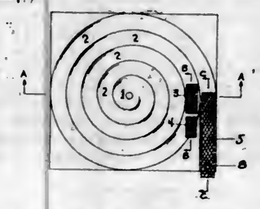
an up-struck portion therein in central alignment for the purpose of securing and aligning said clip.

1,569,380. GEOMETRICAL LOCATION FINDER FOR NAVIGATORS. SAMUEL E. LEONARD, Jr., East Cleveland, Ohio. Filed Apr. 11, 1921. Serial No. 460,249. 9 Claims. (Cl. 33—67.)



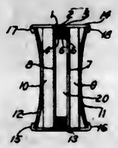
1. A geometrical location finder for navigators, comprising a ruled table and a pair of posts independently adjustable in a straight line thereon, separate blades mounted for independent rotation on said posts, respectively, and a compass card and sighting device and means mounting said card and sighting device whereby they may be detachably mounted for independent rotational movement upon either post.

1,569,381. BINDER. LEO R. LEWIS, Somerville, Mass. Filed Mar. 16, 1923. Serial No. 625,520. 14 Claims. (Cl. 129—19.)



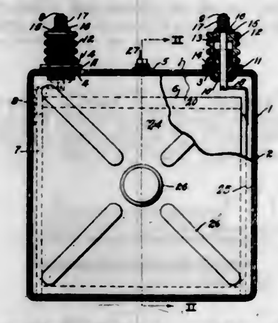
1. A protective binder for books and the like comprising a flexible cover sheet folded to provide cover portions and a back, a filler between the cover portions of the sheet at a point adjacent to the back, means including a flexible part detachably connecting the filler to the back portion of the cover sheet, and flexible means for securing a book interposed between the cover portions of the cover sheet, to the filler.

1,569,382. BOOKBINDING. LEO R. LEWIS, Somerville, Mass. Filed Jan. 29, 1924. Serial No. 689,253. 24 Claims. (Cl. 281—21.)



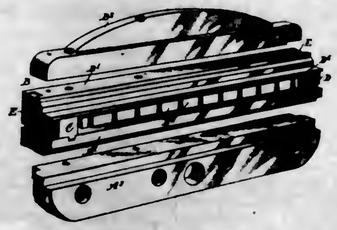
1. A binding for a book comprising a flexible anchor strip secured to an inside part of the book and having a portion projecting outwardly through the back of the book, said projecting portion comprising a plurality of parts, and covers for the book, the covers being secured respectively to different ones of said parts of the anchor strip.

1,569,383. AUTOMATIC DOUGHNUT COOKER. ERNEST E. LINDSEY, San Francisco, Calif., assignor of one-half to John H. Herring, Piedmont, Calif. Filed Oct. 7, 1919. Serial No. 328,989. 8 Claims. (Cl. 53—7.)



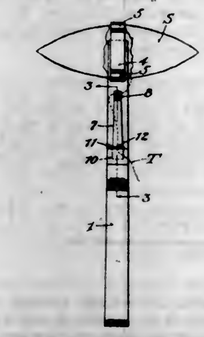
7. In a cooking apparatus of the type described, the combination of heating means having a plurality of heating elements, a channel, means for circulating a fluid in said channel and for causing the circulation of fluid to transport the articles of food along the channel and cook the food and means in the path of travel of the articles under propulsion by the fluid for turning them over in the course of their travel to insure cooking on both sides.

1,569,384. CONDENSER. RALPH E. MARBURY, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 3, 1921. Serial No. 489,540. 2 Claims. (Cl. 250—41.)



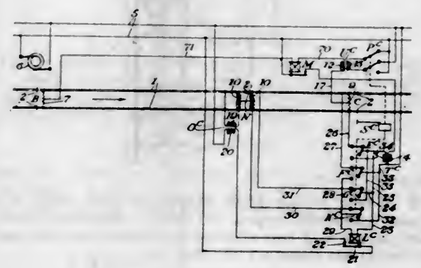
1. An electrical apparatus comprising a stack of superimposed layers, end plates therefor, a bowed leaf spring disposed against at least one of said end plates, said spring having its central portion in engagement with said end plate and its end portions spaced therefrom, and clip members having inwardly disposed retaining shoulders for engaging said end portions to hold said stack together under the yielding pressure of said spring.

1,569,385. CONDENSER CASING. RALPH E. MARBURY, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 18, 1921. Serial No. 493,282. 3 Claims. (Cl. 250—41.)



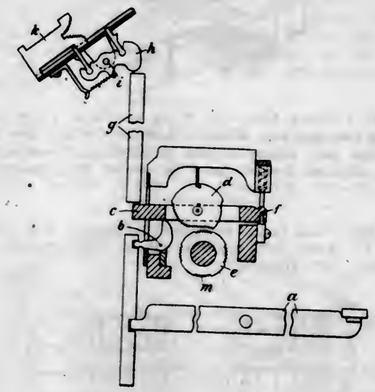
1. An electrical apparatus comprising a stack of superimposed layers, and a casing therefor having parts with telescoping sides, said telescoping sides being welded to hold said stack under compression.

1,569,386. SLUG-CASTING MOLD. RICHARD R. MEAD, Brooklyn, N. Y., assignor to Mergenthaler Linotype Company, a Corporation of New York. Filed Apr. 9, 1925. Serial No. 21,760. 8 Claims. (Cl. 199—55.)



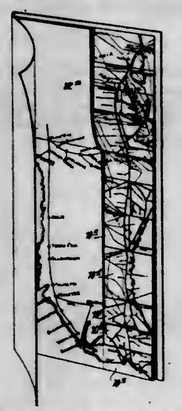
1. In or for a slug-casting machine, a composite mold having hardened steel side walls, and reinforcing members applied to the side walls and serving to resist warping or distortion thereof.

1,569,387. SHUTTLE WINDER. ERNEST J. MEUZ, Cranston, R. I. Filed Mar. 18, 1925. Serial No. 16,550. 1 Claim. (Cl. 242—52.)



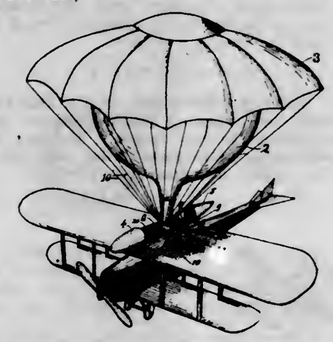
In a shuttle winder, a handle, shuttle rotating means carried thereby, the handle having an abutment and a slot extending thereinto, a flexible arm having one end bent to form a flexible thread-receiving eye, the opposite end of the arm being doubled upon itself and received in the slot and having its extremity turned at an angle to engage the abutment and notched to receive the thread.

1,569,388. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. FRANK H. NICHOLSON, Lewistown, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Apr. 10, 1923. Serial No. 631,119. 19 Claims. (Cl. 246—37.)



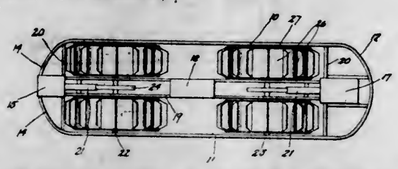
8. In combination, a railway track, means for supplying local current to the two rails of said track in multiple, and means dependent upon the presence of said local current for connecting a source of track circuit current across the rails of said track.

1,569,389. MATRIX-COMPOSING AND LINE-CASTING MACHINE. OTTO PAERSCH, Berlin, Germany, assignor to Mergenthaler Linotype Company, Brooklyn, N. Y., a Corporation of New York. Filed May 22, 1925. Serial No. 32,011. 6 Claims. (Cl. 199—25.)



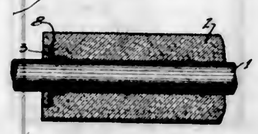
2. In a matrix composing and line casting machine, a roller according to claim 1, characterized by the fact that the corrugated peripheral portions alternate with smooth portions.

1,569,390. BOOK INDEX. RALPH EGBERT PARKER, Birmingham, Ala. Filed Aug. 7, 1925. Serial No. 48,809. 3 Claims. (Cl. 283—42.)



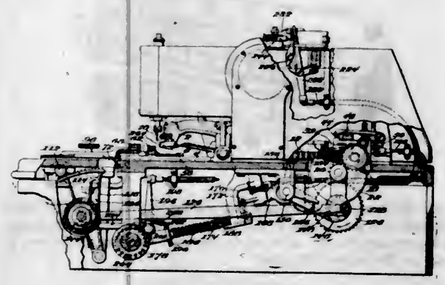
1. A book having pages shaped to form index tabs which collectively expose to view a complete lay-out, each page of said book showing in greater detail the part of the lay-out shown on its index tab.

1,569,391. SAFETY DEVICE FOR FLYING MACHINES. RUBIN PEARL and JOSEPH SUSSNA, Philadelphia, Pa. Filed Oct. 5, 1925. Serial No. 60,657. 12 Claims. (Cl. 244—21.)



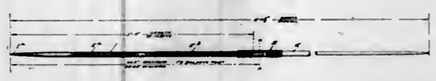
1. In a safety device for flying machines, a gas bag, a supply of gas and means to connect the said gas bag with the said supply of gas automatically, when the flying machine departs from its normal flying position.

1,569,392. SEA CAR. FERRUCCIO RAFFAELLI, New York, N. Y. Filed Nov. 6, 1924. Serial No. 748,020. 1 Claim. (Cl. 115—19.)



A sea car comprising a longitudinal body having side frames and a semi-circular bow and sterm, a rudder pivoted beneath the stern, paddle wheels mounted between the side frames of said body, the paddle wheels being mounted in units of two on a single shaft and mutually spaced-apart, said paddle wheels comprising hollow drums having flat side faces, blades radiating from the peripheries of said drums, the blades extending entirely across the width of said drums, the longitudinal sides of said blades converging toward each other, the blades being narrowest at the extreme edge, said drums being hermetically sealed to aid the car as a buoyancy agent.

1,569,393. RUBBER ROLL. JOHN J. RATHERS, Erie, Pa., assignor to Lovell Manufacturing Company, Erie, Pa., a Corporation of Pennsylvania. Filed Nov. 3, 1923. Serial No. 672,521. 6 Claims. (Cl. 68—33.)

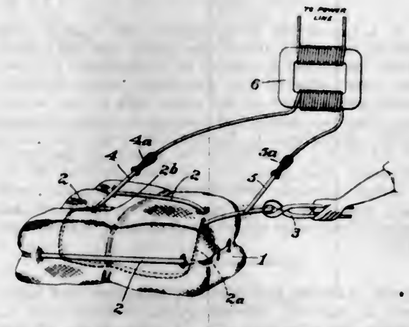


1. A rubber roll comprising a metal rod; a roll body of comparatively soft rubber bonded to the rod; and a washer of comparatively hard rubber at the end of the roll.

1,569,394. BUTTONHOLE-SEWING MACHINE. EUGENE J. RAY, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed June 28, 1920, Serial No. 392,208. Renewed Oct. 20, 1923. 36 Claims. (Cl. 112—65.)

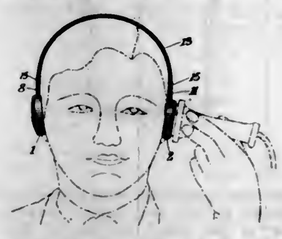
1. A buttonhole sewing machine, having, in combination, stitch-forming mechanism, mechanism for relatively feeding and moving the work to sew a series of buttonholes, and means rendered active upon the breaking of the thread to stop the machine with the parts in predetermined relative position.

1,569,395. JAVELIN. WILLIAM F. REACH, Springfield, Mass., assignor to A. G. Spalding & Bros., New York, N. Y., a Corporation of New Jersey. Filed June 24, 1925. Serial No. 39,261. 3 Claims. (Cl. 272—59.)



2. A javelin having a metallic tubular head and a wooden shaft, the head being of a length not less than one-third the length of the shaft, the portion of the shaft within the head having an elongated annular reduced portion providing spaced contact portions engaging the inner wall of the head.

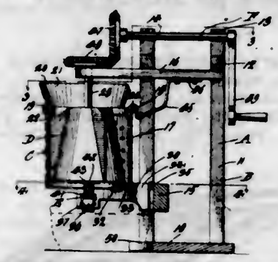
1,569,396. PROCESS OF PRODUCING ARTIFICIAL SNOW. JOHN A. RICE, Berkeley, Calif. Filed Dec. 31, 1923. Serial No. 683,826. 10 Claims. (Cl. 252—1.)



1. The method of producing artificial snow which consists in mixing a protein soaked in water in the presence of rennet with a foaming agent, in agitating the resulting product into a froth and adding a soluble calcium salt.

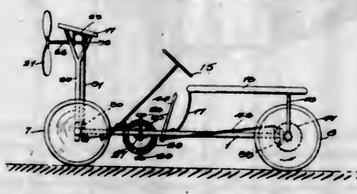
1,569,397. METHOD OF REMOVING METALLIC STRAPS FROM BALES. ISAAC W. ROBERTSON, Akron, Ohio, assignor to The Miller Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Mar. 9, 1925. Serial No. 14,313. 4 Claims. (Cl. 219—1.)

1. The hereindescribed method of removing metal baling bands from bales of non-conducting and tenacious materials, which consists in heating the bands sufficiently to break the adhesive bond between the bands and bale material, and thereafter removing the band.



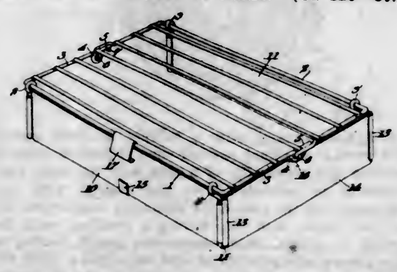
1,569,398. TELEPHONIC RECEPTION APPARATUS. LOUIS S. SCHEB, New York, N. Y., assignor to Telephone Auxiliary Co., Inc., New York, N. Y., a Corporation of New York. Filed June 9, 1925. Serial No. 35,859. 6 Claims. (Cl. 179—182.)

2. In telephone reception apparatus, the combination of a pair of ear pieces, one of the same having its opposite surfaces adapted to fit the ear, and to form a seat against which the end of a telephone receiver may be pressed, respectively, said ear pieces having short rigid cylindrical tubes extending therefrom and opening into the interiors thereof, and a sound-conducting tube having rigid cylindrical end portions adapted to engage telescopically with a frictional fit, with said short tubes.



1,569,399. GRATING OR SLICING MACHINE. JOSEPH SCHINDLER, Burney, Calif. Filed Mar. 20, 1925. Serial No. 17,038. 6 Claims. (Cl. 145—1.)

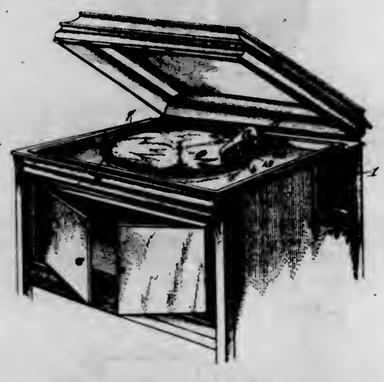
2. A vegetable grater comprising a frame, a cylindrical shell for receiving the vegetable to be grated, a plurality of radially extending cutting and grating points formed on the shell, a rotatable frusto-conical shell disposed axially within the shell, radially extending blades carried by the periphery of the drum for moving the vegetables to be grated past said grating and cutting points,



a hopper for the upper end of the shell, releasable means for detachably engaging the shell for holding the same in position against movement, and means disposed at one side of the frame for rotating said drum.

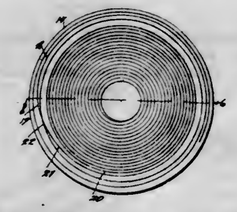
1,569,400. CHILD'S RIDING TOY. FRANZ JOSEPH SCHUBERT, Nashville, Tenn. Filed Apr. 19, 1924. Serial No. 707,752. 3 Claims. (Cl. 208—42.)

1. In a device of the character described, a motion transmission means including a counter shaft, a gear secured on said counter shaft, a freely rotatable axle, a gear supported on said axle and in mesh with said first named gear, said last named gear having a central opening receiving said axle, said central opening including a plurality of spaced cut-outs, each having a radial wall and a curved wall, said curved wall being merged at one end into the outer end of one of said radial walls and being merged at its other end into the adjacent radial wall at the inner end of the latter, said axle having a diametrical slot located in the plane of said second named gear, and a clutch pin slidable in said slot and having a length greater than that of said slot and less than the combined length of said slot and one of said radial walls.



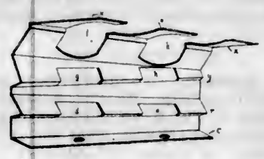
1,569,401. COLLAPSIBLE STOVE. LOWELL M. SIMS, Eugene, Oreg. Refile of application Ser. No. 634,238, filed Apr. 24, 1923. This application filed Mar. 21, 1925. Ser. No. 17,423. 2 Claims. (Cl. 126—30.)

1. In a collapsible stove, a grid provided with frame members, hinge members carried by said frame members and supporting side panels, one of the hinge members of



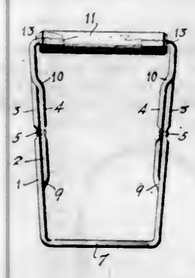
each side panel being provided with an upright, and an end panel provided at its ends with sockets adapted for separable connection with said uprights for maintaining said side panels in grid supporting position.

1,569,402. STYLUS-SHARPENING DEVICE. JOHN QUEEN SLYE, Washington, D. C., assignor to Standard Appliance and Souvenir Company, Washington, D. C., a Corporation of the District of Columbia. Filed May 27, 1922. Serial No. 564,161. 11 Claims. (Cl. 274—1.)



7. A stylus sharpening device consisting of a member for operative mounting on a record supporting turntable, said member having a grinding groove with which the beveled end of a stylus may engage, whereby said beveled end may be sharpened, and means at the terminal of the grinding groove and movable to different positions over the record for making the transfer of the needle from the grinding groove to the record groove, and means for holding the transfer means in such different positions, whereby the stylus may accommodate itself to records of different diameters.

1,569,403. FIBER-NEEDLE SHARPENER FOR TALKING MACHINE RECORDS. JOHN QUEEN SLYE, Washington, D. C., assignor to Standard Appliance and Souvenir Company, Washington, D. C., a Corporation of the District of Columbia. Filed June 3, 1922. Serial No. 565,758. 11 Claims. (Cl. 274—42.)

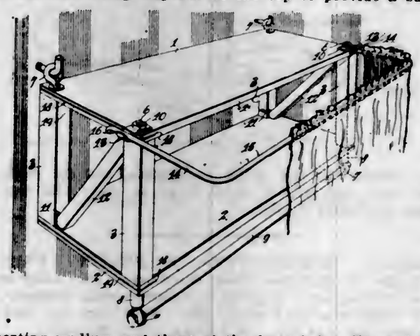


10. The combination with a talking machine record provided with a marginal beveled edge extending slightly downwardly and outwardly, of a ring with its inner edge under-beveled to correspond to and engage with the beveled margin of the record for separably supporting the ring on the record, said ring having a grinding track for sharpening a needle, said sharpening track having a transfer groove abruptly spiral and connecting with the sharpening groove and the sound wave groove to permit the needle to automatically transfer from one to the other.

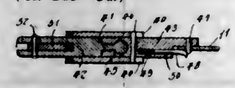
1,569,404. OIL REGULATOR FOR GAS ENGINES. CLAIR SMITH, Council Bluffs, Iowa. Filed Feb. 9, 1923, Serial No. 618,154. Renewed Aug. 17, 1925. 3 Claims. (Cl. 184—11.)

1. In a gas engine of the splash oiler type, a plate located at the splash side of the crank case and extending from the bottom to the top of the same and provided at the lower edge with a horizontal flange extending inwardly and secured to the crank case at the bottom thereof, the top portion of the plate being extended inwardly approximately horizontally over the crank shaft and having openings for the passage of the cranks of the same, said plate being provided between its top and bottom portions with longitudinal angular bends forming shoulders at the inner side of the plate and a groove at the outer side thereof adapted to receive an oil pipe.

1,569,405. LIFTER FOR FRUIT JARS AND THE LIKE. JOHN L. SOMMER, Newark, N. J., assignor to J. L. Sommer Manufacturing Co., a Corporation of New Jersey. Filed Oct. 17, 1922. Serial No. 595,105. 1 Claim. (Cl. 294—28.)



A lifter for jars, comprising rectangular members each having a handle at one end and an outwardly curved gripping jaw at the other end, one of said members having substantially parallel arms and the arms of the other member being offset toward each other for their middle portions intermediate the ends of the member and pivoted between the arms of the other member flatwise thereagainst, whereby the jaw and the handle of one member may be duplicates of those of the other member to secure uniformity in manufacture and use.



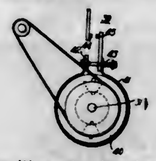
1,569,406. PORTABLE AND COLLAPSIBLE WARDROBE. EDWIN C. SONNTAG, Bartlett, Tex. Filed May 7, 1924. Serial No. 711,711. 13 Claims. (Cl. 45—37.)

1. In a device of the class described, shelves for supporting articles of apparel, corner posts for spacing the shelves one above the other, securing bolts passing through the corner posts and the shelves for securing the shelves in cooperative relation while permitting ready disassembly of the parts, the securing bolts each

being threaded at one end to receive a securing nut and having an open eye at the opposite end, the open eyes at the rear being disposed at the top to provide a supporting medium and those at the front being disposed at the bottom, and a garment hanger supporting rod carried by said front eyes.

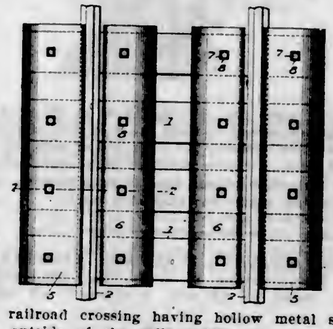
1,569,407. HACK SAW. WILLIAM SPARTIVENTO, Buffalo, N. Y. Filed July 12, 1924. Serial No. 725,561. 4 Claims. (Cl. 145—34.)

1. In combination, a frame provided with a barrel, a stem section journaled and slidable in the barrel, securing means for a tool carried by said section, a second tool stem section slidable and journaled in said barrel, means connecting said sections together to permit turning of one of them with respect to the other and about their longitudinal axis, interengaging fastening means between one of said sections and said barrel, and a lever to coact with the barrel to fasten the parts in operative position.



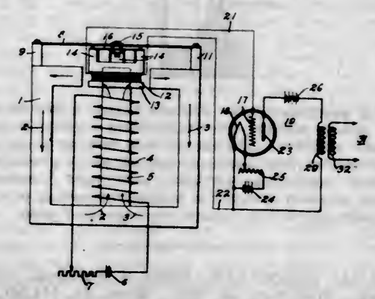
1,569,408. HACK SAW. WILLIAM SPARTIVENTO, Buffalo, N. Y. Filed Feb. 7, 1925. Serial No. 7,631. 3 Claims. (Cl. 145—34.)

3. A hack saw comprising a frame, a sleeve carried by the frame and provided with a scalloped outer end, a stem slidably and rotatably mounted in the sleeve and provided at its outer end with a head, a washer mounted on the stem and having a scalloped inner side for engagement with the scalloped end of the sleeve, a cam mounted on the stem between the head and sleeve for rockable, rotary and sliding movements with respect thereto, a second sleeve carried by the frame, a second stem carried by the second sleeve, and saw blade engaging elements carried by the stems.



1,569,409. SYSTEM OF CONTROL. STEPHEN A. STAEGE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 15, 1919. Serial No. 297,297. 5 Claims. (Cl. 172—239.)

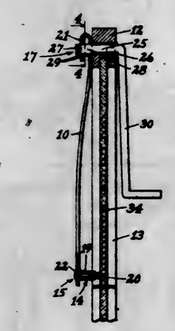
2. In a control system for a plurality of rolls, the combination with a supply circuit, a main motor adapted to operate said rolls, two switches for connecting the motor to the supply circuit and for controlling the direction of motor current to provide reversel thereof, and a master switch for selectively energizing said switches, of an auxiliary motor, a differential gear having members thereof respectively rotated by said main motor and said auxiliary motor, and means controlled by the planetary members of the differential gear for



opening the controlling circuit of said master switch in case the speed of said rolls upon a reversal of current falls below a predetermined value, corresponding to the speed of the auxiliary motor.

1,569,410. SHEET-METAL RAILROAD CROSSING. DAN THOMAS, England, Ark. Filed Dec. 10, 1924. Serial No. 754,997. 2 Claims. (Cl. 238—8.)

1. A railroad crossing having hollow metal sections located outside of the rails, said sections each being provided with an exposed, sloping upper surface leading upwardly from its outer edge to the rail and provided at its innermost part with a wall or flange of a shape similar to the entire outermost side of the rail and bearing against the side and underside of the head and the web of the rail and having a widened base resting on the base of the rail, and fastenings connecting the said sections to the ties at points between the innermost and outermost parts thereof.



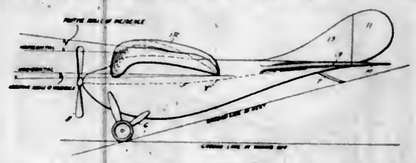
1,569,411. DYNAMIC TRANSMITTER. PHILLIPS THOMAS, Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 18, 1922. Serial No. 555,273. 4 Claims. (Cl. 179—114.)

1. A translating device comprising means capable of being set into periodic motion by vibratory energy arriving from without the device, and vibratory means for

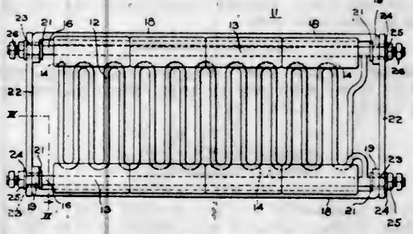
converting said periodic motion into another form of energy, said vibratory means having a natural period of vibration differing from the frequency of said external energy.

1,569,412. WINDSHIELD WIPER. LAWRENCE W. WATERS, Los Angeles, Calif. Filed Dec. 3, 1924. Serial No. 753,586. 2 Claims. (Cl. 15—251.)

1. In a wiper for a windshield, a swinging arm, means to operatively connect the free end of said arm with the wiper element, the other end of said arm being provided with a return bend, a stub shaft extending through both sides of said bend in fixed relation thereto, and operating means for said stub shaft.



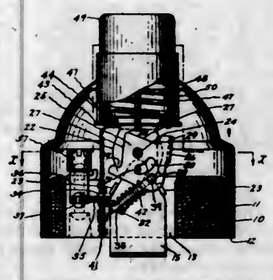
1,569,413. WEATHER STRIP FOR WINDOWS. ALBERT WEINGARTNER, St. Louis, Mo. Filed Sept. 11, 1922. Serial No. 587,422. 5 Claims. (Cl. 20—69.)



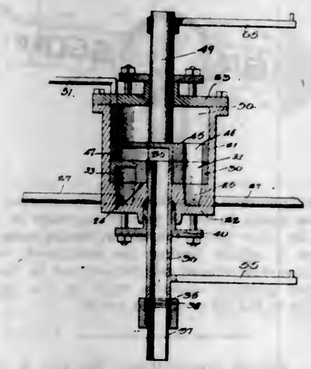
1. A weather-strip for windows having a pair of window sashes, comprising a single member adapted to be secured to one of said sashes, said member being provided with a rigid contacting portion and a plurality of resilient contacting portions, said rigid contacting portion and said plurality of resilient contacting portions being adapted to bear against the associated sash.

1,569,414. MONOPLANE. EDWIN S. WOODFORD, Salem, Oreg. Filed Nov. 19, 1921. Serial No. 516,351. 2 Claims. (Cl. 244—12.)

1. In an airplane, the combination with a tapering elliptical fuselage flattened out in its tail portion, and concave wings springing upwardly from the sides of the upper half of said fuselage and then becoming horizontal, the thickness and width of said wings diminishing towards the tips, which are flexible, and the thickness also diminishing from front to rear, the rear edges also being flexible.

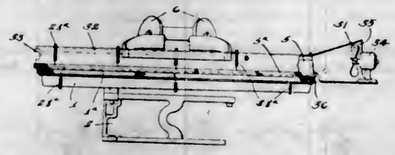


1,569,415. ELECTRIC-FURNACE HEATING UNIT. JAMES C. WOODSON, East Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 25, 1924. Serial No. 688,377. 10 Claims. (Cl. 201—69.)



4. In an electric heating unit, in combination, a relatively heavy resistor member, preformed to comprise a plurality of substantially parallel-extending, return-bent, straight portions, a plurality of spaced sets of refractory members, of electric-insulating material, each having a plurality of spaced pockets in one face thereof for receiving the return-bent parts of said resistor member and having an opening extending longitudinally therethrough, a rod extending through the openings in the refractory members of each set for supporting them in proper operative positions, and a skeleton metal frame having side members operatively engaging said refractory members and the ends of said rods for holding them in proper operative positions.

1,569,416. SWITCH. ALBERT H. BATES, Elgin, Ill., assignor, by mesne assignments, to The Hoover Company, North Canton, Ohio, a Corporation of Ohio. Filed Aug. 5, 1922. Serial No. 579,803. 4 Claims. (Cl. 200—68.)

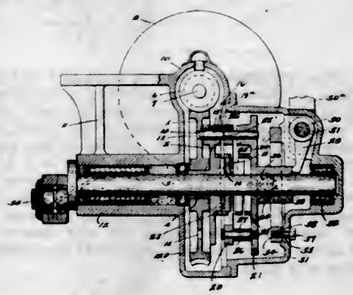


1. In a device of the character described, an actuating mechanism comprising a guide member, a plunger guided by said guide member and a coil of resilient material normally tending to force said plunger in one direction and having an extension normally coaxial with said plunger.

1,569,417. VALVE. GEORGE TINEL BOLLINGER, Lockport, La. Filed Aug. 9, 1921. Serial No. 490,937. 2 Claims. (Cl. 121—41.)

1. A valve comprising a valve casing having a bottom wall provided with a valve seat and arcuate steam pockets, a rotary valve operating on said valve seat and having steam inlet ports extending therethrough, exhaust ports extending therethrough and exhaust passages communicating with said exhaust ports and extending around the under side of the valve and communicating with the arcuate pockets, a hollow valve stem extending through said valve and constituting an exhaust conduit, a second valve superposed on said first mentioned valve and having steam inlet ports extending therethrough and adapted to be alternately registered with the steam inlet ports of the first mentioned valve and having exhaust passages communicating with each other and with the hollow valve stem and adapted to communicate with the exhaust ports of the first mentioned valve, a top wall for said valve casing defining with said valve a steam cavity and a steam inlet to said steam cavity.

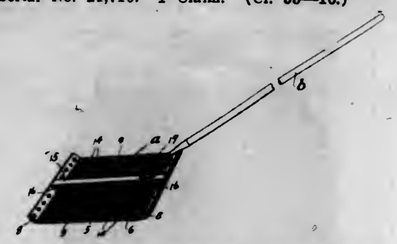
1,569,418. PRESSING MACHINE. AQUILA R. BRAUN, Syracuse, N. Y., assignor, by mesne assignments, to Liberty National Bank, trustee, Syracuse, N. Y. Filed Feb. 20, 1924. Serial No. 693,960. 18 Claims. (Cl. 68—9.)



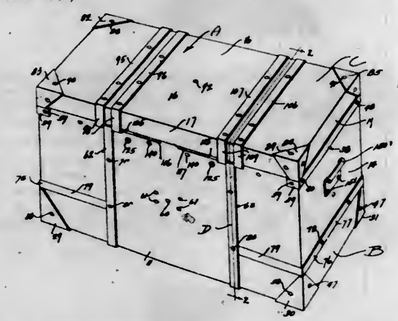
1. In a pressing machine, a heated lower buck, a press head movable toward and from the lower buck and means for supporting and operating the press head; said press head being formed with ventilating passages opening through its upper and lower faces for permitting the escape of vapor during the pressing operation, means for removing the moisture laden air from above the upper ends of said passages and supplying comparatively dry air above the upper ends of said passages.

1,569,419. FISHWAY. NEWTON DOUGLAS CHASE, Hornbrook, Calif., assignor of one-third to R. S. Stryker, Hornbrook, Calif. Filed June 4, 1924. Serial No. 717,755. 2 Claims. (Cl. 61—21.)

1. A fishway for a stream of water having an obstruction thereacross comprising a closed conduit opening at one end through the obstruction below the level of the water in the stream and extending upstream from the obstruction beyond the limit of the backwater which is caused by the obstruction in the stream and then opening into the stream.

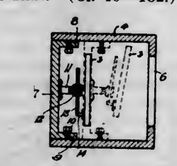


1,569,420. CLUTCH MECHANISM. ALBERT B. CLISSON, Geddes, N. Y., assignor, by mesne assignments, to Liberty National Bank, trustee, Syracuse, N. Y. Filed Feb. 26, 1924. Serial No. 695,247. 4 Claims. (Cl. 192—33.)



1. In a clutch, a constantly rotating driving element formed with sockets, a driven element mounted concentric with the driving element, and having a face opposed and contiguous to the driving element, the driven element being fixed from axial movement, teeth in the form of pins slidably mounted in the driven element substantially parallel to the axis of said element, and arranged to be projected beyond the face of the driven element into said sockets, means for shifting said pins into and out of the sockets, comprising a pressure ring carried by the pins, a shifting member mounted concentric with the driving and driven elements, the pins being slidable in said member, the pressure ring being normally spaced-apart from the shifting member, spring means interposed between the pressure ring and said shifting member and normally holding the same spaced-apart, and mechanism for shifting the shifting member against the action of the spring means and taking up the lost motion between the pressure ring and the shifting member.

1,569,421. LAWN-DRESSING IMPLEMENT. MANUEL T. COELHO, Redwood City, Calif. Filed Apr. 8, 1925. Serial No. 21,710. 1 Claim. (Cl. 55—10.)

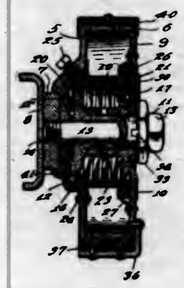


A dressing tool for lawns and the like comprising a body of foraminous material having a ground engaging surface and upturned opposite end portions and a handle connected to the said body.

1,569,422. CHEST. EARCLE DICKSON, Kittanning, Pa. Filed Jan. 5, 1925. Serial No. 642. 16 Claims. (Cl. 217—66.)

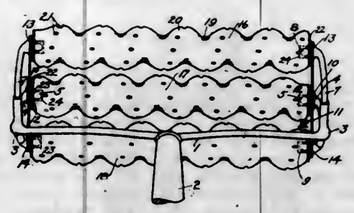
1. A chest comprising a bottom, front and rear walls, end walls, a closure, hinges pivotally connecting the closure to the rear wall, corner clips for said closure, corner clips for the lower corners of the chest, diagonal braces secured at the inside surfaces of the walls of the chest to said walls and at their lower ends to said corner clips of the chest, diagonal braces interiorly secured to the closure and to the closure corner clips, transverse bands enveloping the front, bottom and rear walls of said chest, transverse bands for said closure, and locking means cooperating with said bands in securing the closure on said chest.

1,569,423. ILLUMINATED SIGN. GEORGE A. GRIFFIN, Oakland Calif. Filed Dec. 29, 1924. Serial No. 738,728. 5 Claims. (Cl. 40—132.)



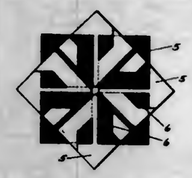
1. An illuminated sign comprising a receptacle having a front wall provided with character defining openings, a closure panel adjustably connected to said receptacle, an illuminating element in said receptacle, a series of reflectors arranged on said closure panel and means for adjusting said reflectors with respect to the character openings and illuminating element.

1,569,424. TEE MARKER. GEORGE R. JACOBUS, Hawthorne, N. J. Filed Sept. 2, 1924. Serial No. 735,249. 2 Claims. (Cl. 40—125.)



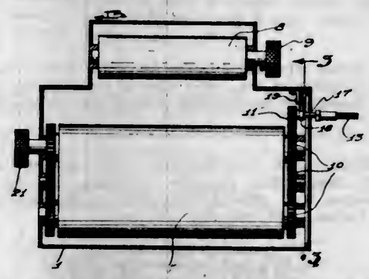
1. A golf marker consisting of two wooden blocks, one of said blocks having a transverse recess in the side adjacent the other block, the united blocks being shaped to produce a sphere having the mentioned recess at its axis, an arrow shaped pointer secured in the recess, and sharply pointed supports fixed in the sphere at right angles to the plane of said arrow.

1,569,425. SHOCK ABSORBER. NORMAN R. KRAUSE, Racine, Wis., assignor of one-half to James A. Walsh, Indianapolis, Ind. Filed Oct. 31, 1924. Serial No. 746,929. 8 Claims. (Cl. 267—10.)



1. A shock absorber comprising a drum, a shaft in said drum, a trunnion mounted on said shaft, a collar surrounding said trunnion, a coiled spring connected at one end to said trunnion and at its opposite end to said collar, and means for adjusting said trunnion to increase and decrease the tension of said spring.

1,569,426. MASSAGING DEVICE. CHARLES R. KRAUTHOFF, Washington, D. C. Filed May 23, 1925. Serial No. 32,497. 8 Claims. (Cl. 128—57.)

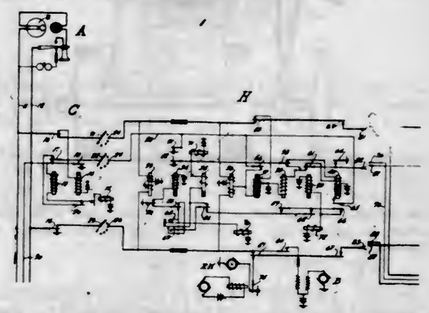


1. A massaging device comprising a plurality of normally parallel rollers having spirally formed surfaces, the spirals of the respective rollers being inversely arranged, a mounting journalling the extremities of the rollers and means in connection with such mounting to permit relative angular movement of the rollers so that they will conform to the contour of the surface over which they are caused to travel.

1,569,427. DEVICE FOR SECTIONAL CONSTRUCTION. RAYMOND L. KURTZ, Denver, Colo. Filed Sept. 2, 1924. Serial No. 735,385. 12 Claims. (Cl. 85—12.)

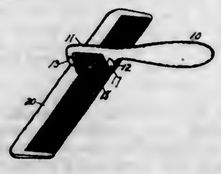
1. A device for sectional construction comprising normally loose and separated pieces of pliable material slitted at and obliquely to their perimetric edges, for their interlocking connection.

1,569,428. STREET SIGNAL DEVICE. EDWARD J. LARABEE, Chicago, Ill. Filed Jan. 30, 1924. Serial No. 689,510. 1 Claim. (Cl. 40—42.)



In a device of the character described a casing having a plurality of sight openings in its front wall, a pair of rollers, a train of gears connected to said rollers, for unitary movement an apron passing around the rollers and viewed thru certain of said sight openings, a sleeve mounted in said casing, a pivoted arm for supporting said sleeve, a stub shaft extending thru said sleeve and supported thereby, a gear on one end of the stub shaft cooperating with the train of gears, a flexible shaft connected to the other end of the stub shaft, drive mechanism mounted on one axle of a car and connected to said shaft for imparting movement to the rollers, yielding means for normally retaining the gear on the stub shaft in engagement with the train of gears and a hand wheel connected to one of said rollers for manually operating the same when said gear is thrown into inoperative position.

1,569,429. ROTARY ENGINE. SAMUEL LIPPERT, Garfield Heights, Ohio, assignor to The Outlook Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 14, 1923. Serial No. 638,835. 6 Claims. (Cl. 121—97.)

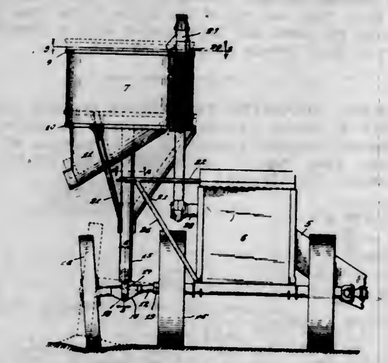


1. In a motor of the character set forth comprising a casing, a shaft supported transversely of the casing adjacent a wall thereof, a piston extending from the shaft and dividing the casing into two compartments, valve mechanism through which, in alternation, one of the compartments is placed in communication with a source of motive fluid and the other compartment is exhausted, and packing material carried by and extending about the shaft from one side of the piston to the other and between the shaft and the aforesaid wall to effectively close the joint between the shaft and wall.

1,569,430. AUTOMATIC TELEPHONE SYSTEM. CLARENCE E. LOMAX, Chicago, Ill., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 7, 1923. Serial No. 661,343. 8 Claims. (Cl. 179—18.)

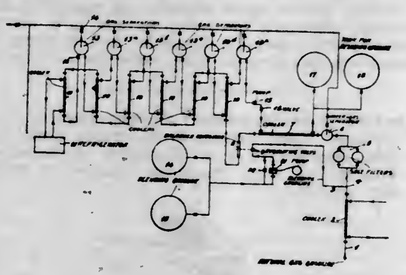
1. In a telephone system, a calling station, a plurality of called stations, automatic switching equipment controlled from said calling station for connecting with any of said called stations individually and for signalling the subscribers thereat, group apparatus co-operating with said switching equipment to enable the party at said calling station to set up a conference connection including all said called stations, and means for automatically signalling the called stations in a different characteristic manner in the latter case to notify the subscribers that they are being called for a conference.

1,569,431. COMB-CLEANING BRUSH. LOUIS V. LUCIA, Hartford, Conn., assignor to The Fuller Brush Company, Hartford, Conn., a Corporation of Connecticut. Filed Jan. 3, 1922. Serial No. 526,690. 2 Claims. (Cl. 132—27.)



1. A comb cleaning brush comprising a handle and a head supported thereby, branches extending from said head and having recesses in their outer ends, bands extending around the ends of the branches to close the recesses at said ends, said bands being secured to the side of the branches, and a brush comprising radially arranged bristles, said brush being mounted to rotate freely in said head to mesh said bristles with the teeth of a comb as the brush is passed to-and-fro on said teeth.

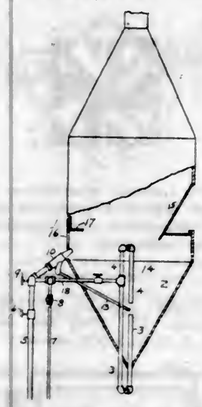
1,569,432. COMBINATION HARVESTER THRASHER. WALLACE F. MACGREGOR, Racine, Wis., assignor to J. I. Case Threshing Machine Company, Racine, Wis., a Corporation of Wisconsin. Filed Sept. 12, 1924. Serial No. 737,421. 14 Claims. (Cl. 214—65.)



1. The combination, with the frame of a thrashing machine, of a bin adjacent thereto, means connected to

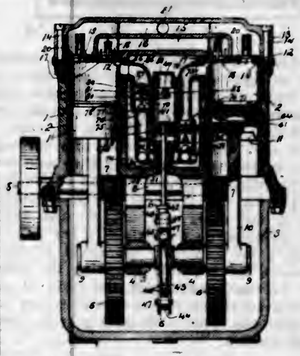
said frame for supporting said bin, a prop connected to said supporting means and to said bin for supporting

the latter, and means connecting said prop with said frame to permit the independent vertical movement of the latter.



1,569,433. PROCESS OF OBTAINING COMMERCIAL GASOLINE FROM NATURAL-GAS GASOLINE. HERMAN JAN MACKENZIE and ALEXANDER WILHELMUS STEENBERGH, Tjepoe, Java, Dutch East Indies, assignors to De Bataafsche Petroleum Maatschappij, The Hague, Netherlands. Filed Sept. 26, 1923. Serial No. 665,018. 3 Claims. (Cl. 196—12.)

1. A process for obtaining commercial gasoline from gasoline-containing gas, comprising, compressing such gas, cooling the compressed gas to normal temperature while maintaining the compression pressure and separating out the resulting natural gas gasoline under pressure, then mixing the natural gas gasoline with blending gasoline, cooling the mixture to a relatively low temperature while maintaining it compressed, then releasing the pressure on the mixture to atmospheric pressure, then separating out the resulting gas from the liquid, the mixture being gradually brought to atmospheric temperature after the pressure has reached atmospheric, the separating out of the gas from the liquid being progressive and occurring over the entire period during which the mixture is coming to atmospheric temperature.

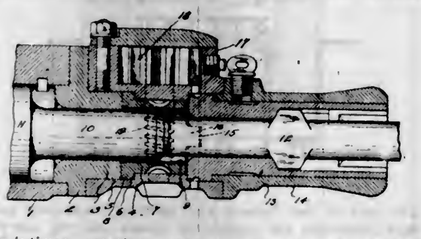


1,569,434. FILE-CLEANING MACHINE. JOHN B. MURRAY, Lansing, Mich. Filed June 12, 1922. Serial No. 567,594. 5 Claims. (Cl. 51—40.)

1. In cleaning apparatus of the type described, a receptacle containing a cleaning medium, agitating means for the cleaning medium embedded in the cleaning medium and adapted upon operation to hold the cleaning medium in the vicinity thereof in suspension

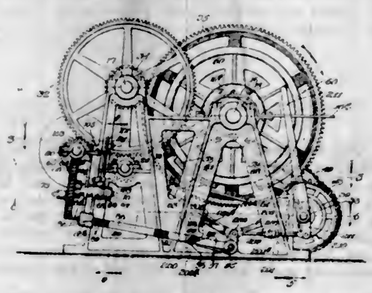
and means extending into the receptacle and terminating at the center of the active zone of the agitating means for drawing-off the cleaning medium held in suspension.

1,569,435. AIR COMPRESSOR. WILLIAM M. MYERS, St. Joseph, Mo., assignor to Thomas H. Gill, Milwaukee, Wis. Filed Apr. 16, 1923. Serial No. 632,420. 8 Claims. (Cl. 230—6.)



1. In an air compressor, a crank case adapted to contain water, two cylinders each in open communication at one end with said crank case, two pistons respectively reciprocative in said cylinders, the pistons being arranged to move simultaneously in opposite directions, and means by which, when the pistons are reciprocated air and water will be pumped into and out of said cylinders, substantially as set forth.

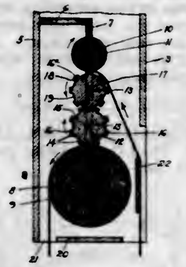
1,569,436. ROTATIVE DEVICE FOR ROCK DRILLS. GUSTAVE M. NELL, Cleveland, Ohio, assignor to The Cleveland Rock Drill Company, Cleveland, Ohio. Filed Apr. 26, 1923. Serial No. 634,839. 1 Claim. (Cl. 121—7.)



In a rock drill, the combination with a cylinder, of a spacer head connected with the cylinder and provided with an annular extension, a hammer reciprocable in the cylinder, a sleeve connected with the spacer head and having a drill steel rotating motor carried thereby, an annular shoulder formed within the sleeve and

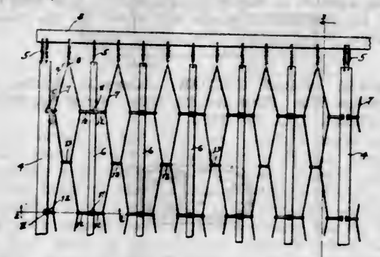
spaced from the annular extension, a worm wheel located in the sleeve and having its outside diameter intimately engaged with the interior wall thereof, said worm wheel having an annular flange upon its rear end, the opposite faces thereof being engaged with the opposed faces of the annular extension and shoulder

for intimate rotative engagement therewith, said hammer having an extension of less diameter than the bore of the worm wheel and movable therein, a drill steel rotating chuck interlocked with the worm wheel, and a worm shaft co-operative with the worm wheel and driven by said motor.



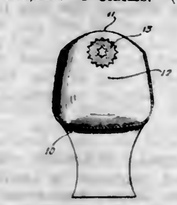
1,569,437. HOISTING MECHANISM. BARTON S. SNOW, Batavia, Ill., assignor to T. W. Snow Construction Company. Filed Apr. 12, 1924. Serial No. 706,057. 30 Claims. (Cl. 74—50.)

1. The combination of a driving member, mechanism driven thereby and including a second member adapted to be moved in opposite directions and means adapted to drive said second member from said driving member in opposite directions and movable to neutral position, and means operating automatically upon said first named means to cause the latter to operate said second member automatically in a reverse direction including a device for automatically operating on said first named means to cause the latter to be in neutral position in which said driving member is out of driving engagement with said second member and a tension device having an element formed of relatively movable parts with interposed springs, one of which latter, in the movement of said first-named means to neutral position, is caused to become tensioned, and mechanism controlled by said element in said tensioned condition and operating, when actuated, to cause the other of said springs to become tensioned and exert a force on said first named means for moving the latter out of neutral position.



1,569,438. TOWEL CABINET. GEORGE A. STEINER, Salt Lake City, Utah, assignor to Steiner Sales Company, Salt Lake City, Utah, a Corporation of Utah. Filed Feb. 20, 1922. Serial No. 538,102. 3 Claims. (Cl. 45—52.)

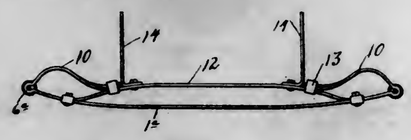
1. A towel cabinet comprising a casing, clean and soiled towel rolls mounted therein, feed rolls between said clean and soiled towel rolls and having cooperating peripheral ribs for driving one feed roll from the other,



the ribs contacting with the soiled towel roll being out of contact with the surfaces of the ribs which contact with the clean towel roll.

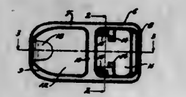
1,569,439. SPRING BED BOTTOM. OSCAR H. STUEWE and REINHOLD G. MARQUARDT, Milwaukee, Wis. Filed Apr. 23, 1921. Serial No. 463,952. 1 Claim. (Cl. 5—186.)

In a spring bed bottom, the combination with a frame, of sets of alternately positioned band units and cable units each cable unit comprising a pair of alternately converging and diverging cables and said band units comprising flexible ribbons normally substantially in a common plane and provided at intervals throughout their length with apertures, tension springs connecting each of said units at its end with said frames, links connecting the converging portions of the cables of each cable unit with each other, and links connecting the diverging portions of the respective cables of each cable unit with apertured portions of adjacent ribbons, said last mentioned links being provided with end portions extending through the apertures of said ribbon and bent back upon themselves in gripping relation to said ribbon, whereby to tend to maintain said ribbons normally in the plane of said bed bottom while permitting yielding relative vertical movement between said units.



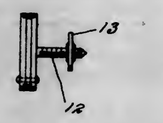
1,569,440. ATTACHMENT FOR SHOES. KATHERINE B. SUNDERLAND, Danbury, Conn. Filed Nov. 15, 1924. Serial No. 750,044. 3 Claims. (Cl. 36—58.5.)

1. A device of the class described comprising a member of yielding felt in the shape of a flat ring, said member being adapted to be interposed between the foot



and the shoe to hold a portion of the foot away from contact with the shoe, the inner and outer edges of said ring shaped member having projecting serrations adapted to distribute beyond the main body portion of the ring the pressure of the shoe therethrough to the foot, and adhesive means upon one of the flat sides of said member for securing the same in position.

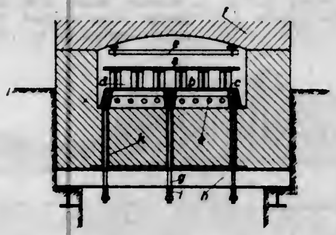
1,569,441. AUTOMOBILE BUMPER. SERGIUS VERNET, Brooklyn, N. Y. Filed Dec. 8, 1924. Serial No. 754,463. 14 Claims. (Cl. 293—55.)



1. In a bumper construction, the combination of two bars disposed so that one end of the bar is adjacent one end of the other bar, a tubular member having slot means adapted to receive the aforesaid ends of said bars, and to frictionally retain the same in the tubular member.

1,569,442. STRAP HOLDER. JAMES M. WALSH, Milwaukee, Wis. Filed Apr. 21, 1924. Serial No. 707,978. 5 Claims. (Cl. 24—187.)

1. In a strap holder, the combination of a frame divided into separate spaces or loops by a transverse medial member, one of said loops being provided with inwardly extending lugs, and webs extending inwardly between the lugs and the transverse member diminishing the width of a portion of one of said loops.

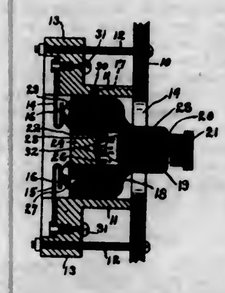


1,569,443. BADGE. EDWARD L. WEED, Providence, R. I., assignor to Potter & Buffinton Company, Providence, R. I., a Corporation of Rhode Island. Filed July 31, 1924. Serial No. 729,392. 1 Claim. (Cl. 40—1.5.)

A badge comprising a base plate, garment attaching means secured to the rear of said plate, a pivot pin carried by said plate adjacent one edge thereof, and a plurality of blades mounted on said pin, to swing relatively to each other and relatively to said plate whereby the front face of each may be exposed, the pivot pin being riveted sufficiently snug so that the blades and plate are frictionally retained in different desired positions.

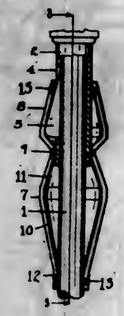
1,569,444. ANNEALING FURNACE. ERNST WIRZ, Baden, Switzerland, assignor to Aktiengesellschaft Brown Boveri & Cie., Baden, Switzerland. Filed Sept. 17, 1925. Serial No. 56,961. 11 Claims. (Cl. 266—5.)

1. An annealing furnace having supporting means with a level surface for a plate to be annealed located within the furnace chamber and formed of fireproof non-oxidizable metal, a carrying structure disposed without the



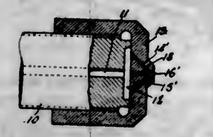
hot zone of the furnace and yielding connecting members connecting the supporting means and the carrying structure.

1,569,445. COFFEPOT. ROSS O. WORKMAN, Chewelah, Wash. Filed Apr. 2, 1925. Serial No. 20,169. 2 Claims. (Cl. 53—3.)



1. The combination with a utensil having an inner pot forming annular chamber and having a pouring spout, of a casing between said pot and utensil and having ports communicating with said pot, chamber and spout, of a slide valve comprising spaced ported plates and adapted to normally close the ports to said chamber and adapted for use to selectively establish communication between said spout and either the pot or the chamber.

1,569,446. RADIO RECEPTION APPARATUS. THOMAS E. ARUNDEL, Omaha, Nebr., assignor of thirty-seven and one-half per cent to Guy D. Shipherd and twenty-five per cent to William H. Metcalfe, both of Omaha, Nebr. Filed Mar. 12, 1925. Serial No. 14,922. 2 Claims. (Cl. 250—31.)

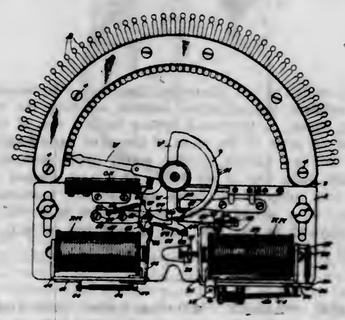


1. A detector for radio reception comprising a pair of relatively movable electrodes, and abrasive particles interposed between the electrodes for roughening the contact surfaces of the same.

1,569,447. AUTOMATIC MEANS FOR MANIPULATING AND CONTROLLING THE CATCHES OF UMBRELLAS. ANDRUS D. AYERS, Kalamazoo, Mich. Filed Dec. 16, 1921. Serial No. 522,812. 1 Claim. (Cl. 135—41.)

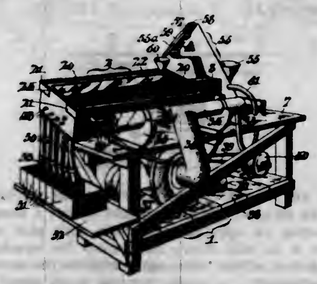
The combination with the runner and stick and catches of an umbrella, of a control sleeve composed of opposed longitudinal symmetrical halves, having a contracted central portion adapted to fit and slide upon the lower portion of said runner, and a lower portion contracted to fit and slide upon the stick of the umbrella, and enlarged portions to accommodate the catches of the umbrella, with abruptly inclined portions at the center to automatically actuate the said catches when the control sleeve is pushed up or pulled down, locating lug means at the contracted central portion, and dovetail engaging means toward each end, as specified.

1,569,448. FUEL-INJECTION NOZZLE FOR OIL ENGINES. OTTO A. BANNER, Milwaukee, Wis., assignor to The Falk Corporation, Milwaukee, Wis., a Corporation of Wisconsin. Filed May 19, 1924. Serial No. 714,266. 3 Claims. (Cl. 299—153.)



1. In a fuel injection nozzle for oil engines the combination of a member having a plurality of convergent fuel ducts therein lying in a common plane, means for delivering liquid fuel to said ducts, and a substantially flat cavity in the exposed end face of said member and lying in a plane substantially normal to the plane of said ducts, said cavity communicating with said ducts and having a laterally confining edge wall intersecting said end face to form a fuel spray of definite form.

1,569,449. CARRIER FOR BRAIDING MACHINES. SIDNEY B. BLAISDELL, Providence, R. I. Filed Nov. 18, 1922. Serial No. 601,783. 10 Claims. (Cl. 96—15.)

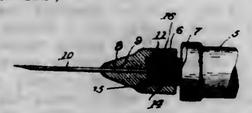


3. A carrier for braiding machines having a weight standard, a yarn package suport, a yarn package on said support, a pawl and ratchet mechanism for controlling the yarn let-off from said package, a member on which said pawl is pivotally mounted, said member being free to be removed in the absence of said package and having a portion engaging said standard to assist in maintaining it in operative position.

1,569,450. AUTOMATIC SWITCH. ERNEST A. BOHLMAN, Chicago, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 3, 1922. Serial No. 526,532. 14 Claims. (Cl. 179—27.5.)

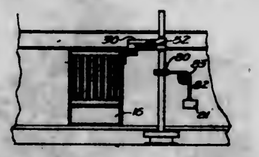
1. A switch of the character described comprising a rotary shaft, a motor magnet and a driving pawl for advancing said rotary shaft, a release magnet, an adjustable plate, a releasing dog pivotally secured to said adjustable plate, a retaining pawl pivotally secured to said plate independently of said releasing dog for holding said shaft in an advanced position when moved thereto, means associated with said release magnet for controlling the releasing movement of said pawl and said dog, said adjustable plate adapted to be removed from said switch as a unit, and said release magnet as another unit.

1,569,451. CONCENTRATOR. CHARLES E. BONINE, Melrose Park, Pa. Filed May 10, 1923. Serial No. 637,989. 8 Claims. (Cl. 209—472.)



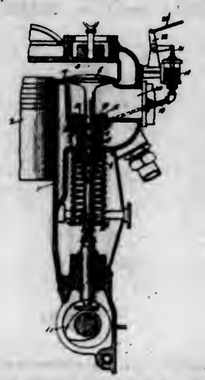
1. A concentrating apparatus comprising a longitudinally vibratory enclosed table having convergent and gradually declining riffles for maintaining isolation of, and for guiding different extracted concentrates toward the discharge end of the table, a series of non-return outlets therefor, a complemental series of hoppers arranged along the table end to individually receive the different concentrates, and means for evacuating air transversely over the upper surface of said table.

1,569,452. HAIR-CUTTING GUIDE. WILLIAM T. BRADLEY, Linn, Mo. Filed May 28, 1924. Serial No. 716,848. 1 Claim. (Cl. 132—45.)



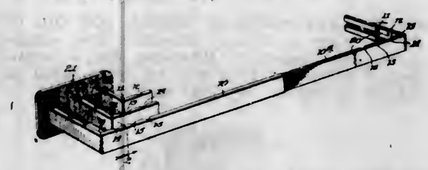
In a device of the character described, the combination of a resilient band-member beveled on both its top and bottom edges; a U-shaped spring having one of its ends secured to each of the ends of the said band-member; of a rod or bar having a thin metal plate secured to or mounted upon one of its ends; of a pad secured to said plate and adapted to press against the forehead of a wearer; of a coiled spring placed over said rod, and a knob secured to the free end of said rod or bar, as and for the purpose set forth.

1,569,453. NEEDLE. WILLIAM BRODY, New York, N. Y. Filed Apr. 4, 1924. Serial No. 704,233. 7 Claims. (Cl. 128—221.)



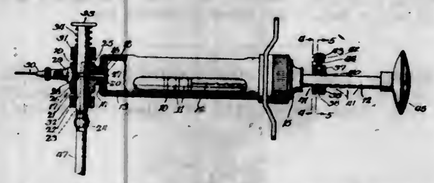
1. In a device of the character described, a needle adapted to be clamped against a syringe, and a head carried by said needle and spaced from its end, said head having a portion of its top depressed to form a ridge adapted to form a small area of contact with the syringe.

1,569,454. INTERLOCK SYSTEM FOR ELEVATOR DOORS. FREDERICK F. BRUSH, Los Angeles, Calif., assignor to Elevator Safety Appliance Company, a Corporation of California. Filed Apr. 11, 1923. Serial No. 631,381. 6 Claims. (Cl. 187—31.)



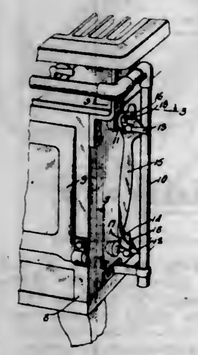
3. In an elevator: a structure having a plurality of floors; an elevator car serving said floors; a door at each floor closing an opening registering with said car when said car is at said floor; mechanism for operating said car; a device which when open inhibits the operation of said mechanism; a single vertical main shaft in said structure so connected to said device that a positive rotation of said shaft from its normal position will open said device; automatic means for returning said shaft to its normal position when said shaft is free from external restraint; a crank shaft at each door; a crank on each of said crank shafts; an arm on said main shaft at each door, each of said arms co-operating with one of said cranks to positively rotate said main shaft and to hold it against the action of said automatic means when so rotated; and means by which each door so operates its crank shaft.

1,569,455. VALVE. JAMES B. BURWELL, Canton, Ohio. Filed Dec. 29, 1924. Serial No. 758,625. 2 Claims. (Cl. 123—188.)



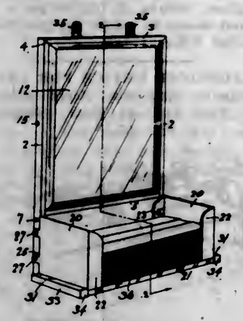
1. A valve of the character described including a stem upon the valve, a guide for the valve stem, a wiper of asbestos at the upper end of the guide and having a sliding fit around the valve stem to prevent carbon from entering the guide, and a cap enclosing said asbestos wiper and detachably connected to the upper end of the guide.

1,569,456. CURTAIN ROD. THOMAS F. BYRON, Chicago, Ill. Filed Sept. 29, 1924. Serial No. 740,537. 2 Claims. (Cl. 156—19.)



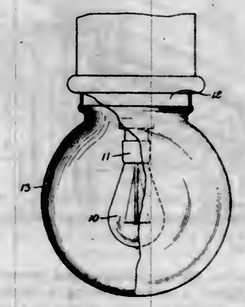
1. A metallic curtain rod of flat C-shaped cross-section having a plurality of spaced notches formed near one end of said rod in the open sides of the C to facilitate the bending of said rod whereby said rod can readily be selectively bent at any one of a plurality of points to provide an angular extension.

1,569,457. SYRINGE. HENRY M. CARSTENS, Oak Park, Ill. Filed Mar. 24, 1924. Serial No. 701,802. 3 Claims. (Cl. 128—218.)



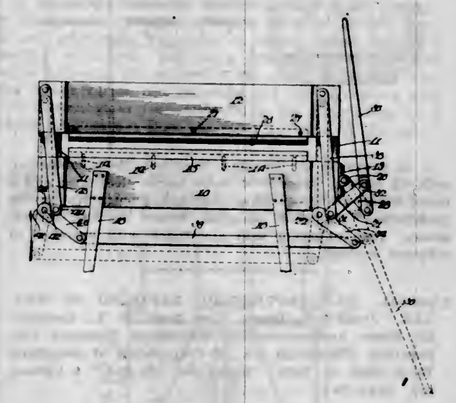
1. A syringe filling and discharge control device for syringes, comprising, in combination, a body portion having a main bore therein, a combined inlet and outlet passage and a discharge passage, opposite thereto and opening to said bore, a push plug slidably mounted in said bore and having a discharge passage normally registering with said combined inlet and outlet passage and with said discharge passage of the body portion, and having an intake passage opening from a filler tube and terminating in a port normally out of register with either passage of the body portion but adapted to register with the combined inlet and outlet passage of said body portion when depressed to a second position, and means for automatically restoring said push plug to normal position when released.

1,569,458. GAS-COCK-LOCKING DEVICE. EGBERT H. CASTLE, Quincy, Ill., assignor to Comstock-Castle Stove Company, Quincy, Ill., a Corporation of Illinois. Filed Mar. 21, 1925. Serial No. 17,362. 7 Claims. (Cl. 126—42.)



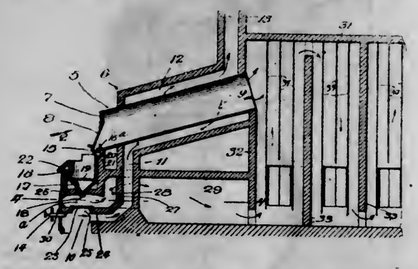
1. The combination with a gas range having two burners, of a valve, valve handle, and valve handle stem for each burner, and a bar member loosely carried and supported only by one of said valve handles and one valve handle stem and movable longitudinally with respect thereto to either of two operative positions, one of said valve handles being directly engaged and locked against substantial movement by said bar when it is in one operative position, and the other handle locked when the bar is in reverse position.

1,569,459. COMBINED MIRROR AND TOWEL HOLDER. GEORGE F. COLBERT and WILLIAM H. COLBERT, Pittsburgh, Pa. Filed Dec. 16, 1922. Serial No. 607,397. 2 Claims. (Cl. 45—18.)



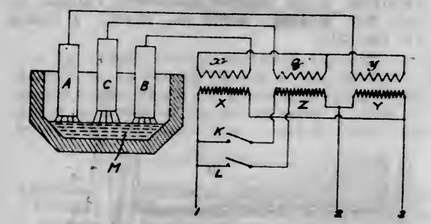
1. A structure comprising a mirror, a frame of inverted U-shaped surrounding and supporting said mirror and having its leg portions extending beyond said mirror, and a bar connecting said legs above their lower ends and serving as a support for the mirror.

1,569,460. ELECTRIC-LAMP INDICATOR. RUSSELL B. CARSMAN, Philadelphia, Pa. Filed July 2, 1923. Serial No. 649,099. 2 Claims. (Cl. 176—16.)



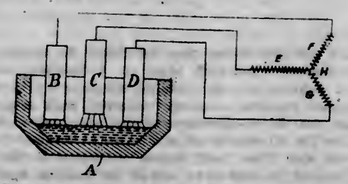
1. The combination with an electric lamp having a substantially predetermined period of illuminating efficiency, of a combined globe and indicator therefor having a color component of a quality and depth sufficient to serve to emit substantially white light from the lamp during such period aforesaid and then to show a distinctly different character of light at the end of such period.

1,569,461. SHEET-METAL BENDING AND FORMING MACHINE. CARL GUSTAV CRONWALL, Chicago, Ill. Filed Mar. 7, 1925. Serial No. 13,720. 4 Claims. (Cl. 153—21.)



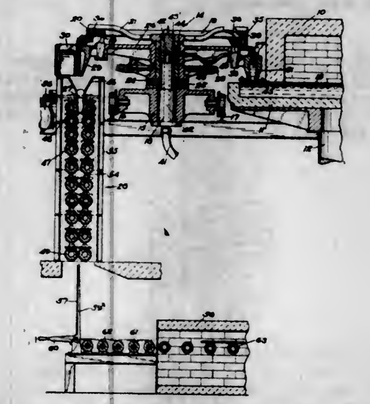
1. In a machine of the class described, the combination with a suitably mounted base, of a forming element mounted thereon, another forming element and a carrying member therefor movably mounted with respect to said base for the co-operation of their forming elements, means for the movement of said movable member toward and from said base, said means including a link pivoted at one of its ends to an end of the base, an operating lever pivoted at one of its ends to the other end of said link, and leverage compounding means having pivotal connection with said operating lever above its pivot and with the ends of the base and the ends of the said movable member.

1,569,462. APPARATUS FOR AND PROCESS OF RECLAIMING AND CONVERTING ASPHALTUM AND OTHER MATERIALS FROM WASTE MATERIAL. RICHARD D. DIVINE, Chicago, Ill. Filed Jan. 18, 1924. Serial No. 687,128. 7 Claims. (Cl. 134—60.)



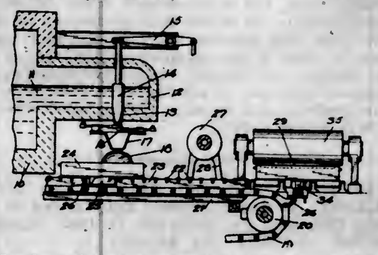
1. An apparatus for reclaiming and converting waste material comprising a retort having a liquid discharge end and a gas discharge end, means for heating said retort, a chamber into which the liquid is discharged, a hot plate in said chamber, upon which the liquid drops and a lamp black collection chamber communicating with the gas discharge end of the retort and with said chamber into which the liquid drops.

1,569,463. ELECTRIC-ARC FURNACE. JOSEPH L. DIXON, New York, N. Y., assignor, by mesne assignments, to Pittsburgh Research Corporation, Pittsburgh, Pa., a Corporation of Delaware. Filed Sept. 5, 1919. Serial No. 321,803. 5 Claims. (Cl. 204—64.)



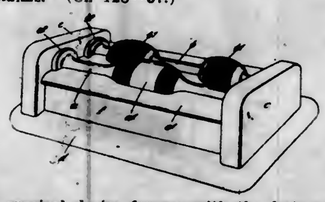
1. In a system of the kind described, the combination with an electric furnace of three upper electrodes and a transformer of three phase alternating currents having transformer ratios of unequal values in the several phases, and supplying said electrodes with currents of different voltage.

1,569,464. ELECTROTHERMIC REFINING OF METALS. JOSEPH L. DIXON, New York, N. Y., assignor, by mesne assignments, to Pittsburgh Research Corporation, Pittsburgh, Pa., a Corporation of Delaware. Filed Sept. 5, 1919. Serial No. 321,804. 4 Claims. (Cl. 204—64.)



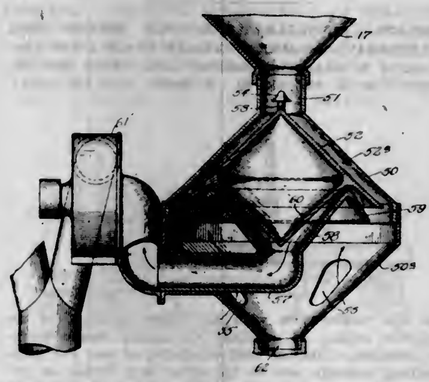
1. The process of refining steel by means of an electric arc furnace having a plurality of electrodes which consists in supplying between one electrode and another current of low voltage and between other of said electrodes current of relatively high voltage.

1,569,465. SHEET-GLASS APPARATUS. JOHN L. DRAKE, Toledo, Ohio, assignor to The Libbey-Owens Sheet Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed Apr. 30, 1925. Serial No. 26,944. 18 Claims. (Cl. 49—3.)



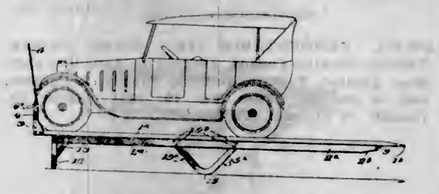
1. In sheet glass apparatus, a tank containing a mass of molten glass, means for picking up a charge of glass, and means for reducing the charge of glass through successive stages to sheet form.

1,569,466. SHEET-GLASS-ROLLING APPARATUS. JOHN L. DRAKE, Toledo, Ohio, assignor to The Libbey-Owens Sheet Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed Apr. 30, 1925. Serial No. 26,945. 21 Claims. (Cl. 49—3.)



1. In sheet glass apparatus, a tank containing a mass of molten glass, means to discharge a gob of glass therefrom, and means to reduce the gob to sheet form by rolling it along different axes.

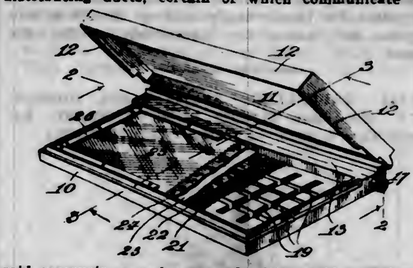
1,569,467. SURGICAL DEVICE FOR USE WITH THE FEET. HENRY EDWARDS, North Finchley, London, England. Filed July 24, 1922. Serial No. 577,107. 10 Claims. (Cl. 128—57.)



1. A surgical device for use with the feet comprising a support fitted with rotatable members having enlarged rounded portions positioned in parallelism, the parts of maximum diameter of the said portions being disposed in approximately parallel transverse planes, spaced from each other.

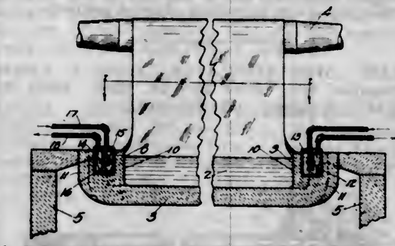
1,569,468. CHAFF REMOVER. BERNARD M. ELY, Marshall, Mich., assignor to Lambert Machine Co., Marshall, Mich., a Corporation of Michigan. Filed May 20, 1925. Serial No. 31,570. 10 Claims. (Cl. 130—17.)

1. A device of the character described comprising; a casing having a material receiving inlet; an upright conical material dispersing plate within said casing lying below said inlet; an air suction pipe entering said casing and having an enlarged mouth lying beneath the conical material dispeersing plate; a frusto-conical air baffle plate surrounding the mouth of the air suction pipe and lying below and adjacent to the circular lower edge of the material dispersing plate; said casing being closed adjacent the edges of the material dispersing plate and the air baffle plate, and having an air inlet a substantial distance below said edges; an air exhausting means attached to the outer end of the air suction pipe.



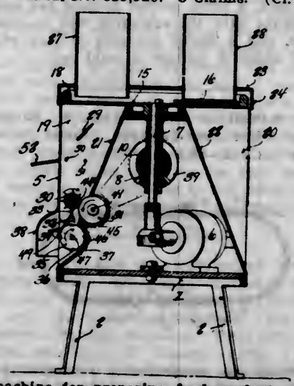
1,569,469. MOTOR-CAR-ELEVATING CRADLE OR SKID. EDGAR P. ELSEY, Parkersburg, W. Va. Filed Mar. 12, 1923. Serial No. 624,433. 6 Claims. (Cl. 254—88.)

1. A tilting cradle for elevating motor vehicles, comprising a longitudinally-elongated centrally-open frame vertically tiltable to and from tilted and horizontal positions and embodying wheel-track-forming longitudinal channels, and supports therefor to uphold the same in horizontal elevated position and in tilted position, in combination with a jack stand adapted to traverse said center opening, said stand being applicable to and removable from said frame and adjustable longitudinally thereof, and formed to fit down between said channels and having end hangers to hook over the longitudinal inner side flanges of the channels.



1,569,470. INKING PAD. SIMON N. FALDER, Los Angeles, Calif. Filed Mar. 13, 1924. Serial No. 699,089. 3 Claims. (Cl. 91—54.5.)

1. In a device of the character described, a one-piece receptacle having an ink reservoir, the upper surface of the bottom of said receptacle being provided with ink distributing ducts, certain of which communicate with



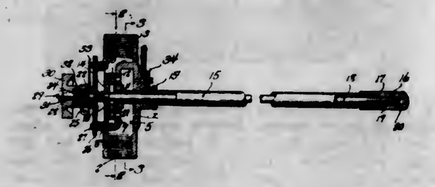
said reservoir, a pad arranged within said container on the bottom thereof, and retaining strips positioned on the edges of said pad and secured to said container.

1,569,471. SHEET-GLASS-DRAWING APPARATUS. ARTHUR E. FOWLE, Toledo, Ohio, assignor to The Libbey-Owens Sheet Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed Dec. 18, 1920. Serial No. 431,534. 8 Claims. (Cl. 49—17.)

1. In an apparatus for producing sheet glass, wherein a sheet is drawn upward from a mass of molten glass, a pot containing the bath of molten glass, said pot having projections extending inwardly from the side walls adjacent the sources of the sheet edges, and cooling means within the pot walls and out of contact with the molten glass for maintaining the projections at a lower temperature than the other portions of the pot.

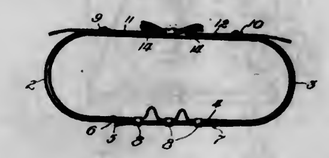
1,569,472. MACHINE FOR PREPARING FOOD PRODUCTS. MAYNARD A. FRONEY, Racine, Wis. Filed Feb. 1, 1924. Serial No. 689,920. 3 Claims. (Cl. 146—78.)

2. A machine for preparing food products comprising a pair of hoppers, a pair of chutes located below said hoppers, a slicing disk located between said hoppers and said chutes, one chute adapted to deliver the mate-



rial as it comes from the slicing disk, a series of circular cutters adapted to operate upon the material in the other chute for longitudinally slitting the slices into stringers, and means for transversely cutting the stringers.

1,569,473. PROPELLER. ANDRÉS GARCIA, Brooklyn, N. Y. Filed Mar. 27, 1924, Serial No. 702,291. Renewed Dec. 7, 1925. 2 Claims. (Cl. 170—160.)



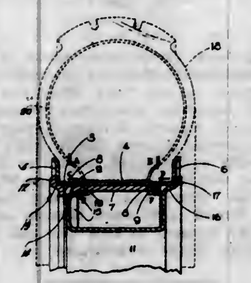
1. A propeller comprising a hub, and blades, radially adjustable leaves in said blades, a shaft on which said propeller is mounted, and cam elements on said shaft for retaining said leaves in radially adjusted positions.

1,569,474. OVEN REGULATOR. FRANK A. GAUGER, Milwaukee, Wis. Filed May 24, 1924. Serial No. 715,542. 5 Claims. (Cl. 236—102.)

1. A thermostatic regulator for gas ovens comprising a hollow body portion having a transverse apertured web, a tube screwed into said body portion and extending through said web, a rod carried within said tube and secured to the outer end thereof, said rod extending through said body portion and provided with a shouldered part, a valve carried by said rod and adapted to cooperate with the apertured web to control the flow of gas, and a spring normally holding said valve against the shoulder portion of said rod.

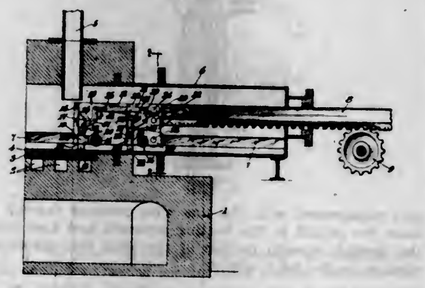
1,569,475. BATHING CAP. JAMES H. GILSON, Chicago, Ill. Filed June 21, 1923. Serial No. 646,937. 5 Claims. (Cl. 2—68.)

1. A bathing cap comprising a permanently formed substantially dome-shaped body having an endless edge at its open mouth, tightening members secured at their ends adjacent the edge of the open mouth of the body and overlapping each other so that a pull thereon will cause the body portion to be tightened around the head, said members being formed of non-elastic material and provided at their free ends with elastic extensions, adjustably connected to the non-elastic portions.



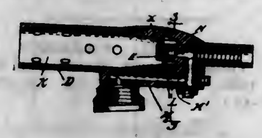
1,569,476. AUXILIARY-AIR-SUPPLY MEANS FOR EXPLOSIVE ENGINES. ANDREW GLEASON and CORNELIUS E. GLEASON, Hamilton, Ohio. Filed Dec. 26, 1922. Serial No. 608,949. 4 Claims. (Cl. 137—111.)

1. The combination with an intake manifold of an explosive engine, of auxiliary air supply means therefor including a divided head consisting of two flat discs abutting laterally one on the other and having an air passage therethrough, one member of the divided head having a threaded nipple through which the passage extends, for engagement with the manifold, the other member of the divided head having a regulating valve connected with the passage therethrough for controlling the flow of air, a wire screen diaphragm clamped between the members of the divided head and studs extending transversely thru the discs forming the members of the divided head by which they are connected one with the other the passage way being enlarged on either side of the wire screen.



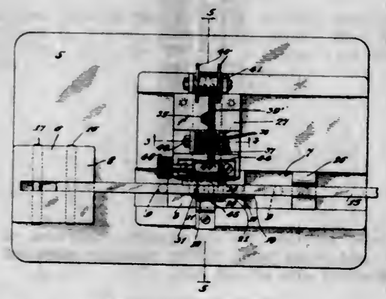
4. An auxiliary air intake for explosive engines comprising two discs having flat faces abutting one upon the other, a filter screen clamped between the abutting flat faces of the discs, registering central passages thru the respective discs, the passage of one disc being for communication with the intake manifold of an explosive engine, the passage of the other disc communicating with atmosphere, a valve controlling the last mentioned passage.

1,569,477. DEMOUNTABLE RIM. ROBERT GRAHAM, Toronto, Ontario, Canada, assignor to Auto Rim Company Limited, Toronto, Ontario, Canada, a Corporation of Ontario. Filed May 19, 1924. Serial No. 714,399. 6 Claims. (Cl. 301—11.)



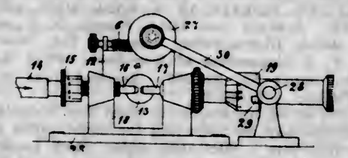
1. In a wheel structure, the combination with a felloe, of a rim in sections; a locking ring positioned about the inner periphery of said rim sections; means on said locking ring abutting the side of one of said rim sections; wedging means on said locking ring abutting said felloe; and means on said felloe abutting the side of the other said rim section.

1,569,478. COMBINED SPREADING AND SCRAPING MECHANISM FOR DISTILLATION APPARATUS. WHEADON M. GRANT, Birmingham, Ala., assignor to Illinois Anthracite Corporation, New York, N. Y., a Corporation of Delaware. Filed Nov. 8, 1923. Serial No. 673,424. 20 Claims. (Cl. 214—30.)



1. In combination with a retort or oven, a combined feeding and scraping mechanism, including a feeding hopper adapted to receive a charge of material and to feed the same along the bottom heating surface of the retort or oven, means for moving said hopper from one end of the retort or oven to the other and return, and means associated with the hopper for leveling and smoothing the charge of material as it is fed in the form of an even layer during the feeding movement of the hopper.

1,569,479. BURNER CONSTRUCTION. OTTO J. GROEHN, Detroit, Mich., assignor to Clayton & Lambert Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Jan. 16, 1922. Serial No. 529,510. 2 Claims. (Cl. 158—33.)



1. In a blow torch or the like, the combination with a tank, of a burner therefor, said burner having a longitudinally extending combustion chamber, a discharge nozzle at the rear thereof, said nozzle having its forward extremity projecting into the rear of the combustion chamber, said burner having a bottom portion forming a fuel conducting passage to said nozzle, and a top lug integrally connecting the rear of the combustion chamber at a point intermediate the length of the nozzle and the rear portion of the nozzle, said lug being spaced from said nozzle and extending diametrically opposite the said bottom fuel conducting portion of the burner to form therewith longitudinally extending air ports around a portion of the said forwardly projecting extremities, said lug extending longitudinally of the combustion chamber and being of a reinforcing character to form an integral reinforcement for the burner and also for conducting heat from the walls of the combustion chamber to the nozzle.

1,569,480. DEVICE FOR APPLYING EYELASHES TO DOLL EYES. LEO J. GRUBMAN, Belle Harbor, Long Island, N. Y., assignor to Grubman Engineering & Manufacturing Co. Inc., Long Island City, N. Y., a Corporation of New York. Filed May 6, 1925. Serial No. 28,324. 24 Claims. (Cl. 41—1.)

1. In combination, an eye shell support, means for cutting a slit in the wall of the eye shell, means for feeding a plurality of eyelash forming strands to position one of their ends over said slit, and means for forcing said strand ends through said slit.

1,569,481. HIGH-FREQUENCY-GENERATING SYSTEM. WILHELM EDUARD ERICH HABANN, Berlin, Germany, assignor to the Firm of Deutsche Telephonwerke Gesellschaft mit beschränkter Haftung, Berlin, Germany. Filed Nov. 17, 1921. Serial No. 515,896. 10 Claims. (Cl. 179—171.)

1. High frequency generating system consisting of an acoustic device, which produces air-waves of a frequency over 4000 p. sec., a vibratory device acted upon by the said air-waves and being capable to vibrate in conformity therewith, an interrupter contact combined with the said vibratory device, an electric circuit controlled by the said contact and adapted to produce electric oscillations of high frequency, this circuit being coupled with an outgoing line and a transmitting device which leads signal or speech currents into the said circuit in such a manner that these currents are divided into impulses by the said interrupter-contact and thereby made capable to put into operation the oscillatory circuit which then on its part sends high frequency currents corresponding to the signal or speech currents into the line, substantially as described.

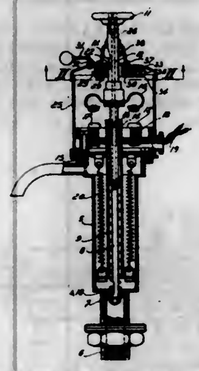
1,569,482. BOBBIN FOR TRANSFORMER WINDINGS AND THE LIKE. FRIEDRICH HÄBERLE, Fischeren, near Dresden, Germany, assignor to Sachsenwerk, Licht- und Kraft-Aktiengesellschaft, Niedersedlitz, near Dresden, Saxony, Germany. Filed July 5, 1921. Serial No. 482,551. 10 Claims. (Cl. 175—356.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. In a winding for transformers or the like, the combination with a plurality of separate coils located one above the other, of a set of supporting bands, a

band being associated with each separate coil so as to form a solid body therewith and having an axial width

at least equal to the corresponding dimension of its coil, said bands being located so as to surround the longitudinal axis of said coils.

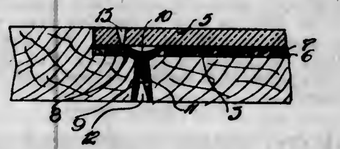
1,569,483. PROCESS FOR THE TREATMENT OF OXIDIC RAW MATERIALS. TURE ROBERT HAGLUND, Stockholm, Sweden. Filed Aug. 5, 1922. Serial No. 579,964. 42 Claims. (Cl. 204—64.)



13. The process of purifying bauxite comprising removing oxides of iron, silicon and titanium and dissolving aluminum oxide in a sulfide containing slag by fusing the bauxite with a sulfide yielding material and a reducing agent and separating the sulfide-aluminum-oxide slag from the reduced alloy.

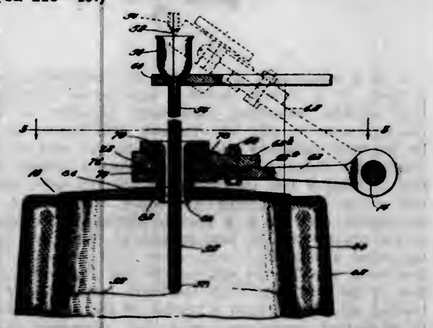
1,569,484. PROCESS AND METHOD OF DISINTEGRATING METALS IN A BALL MILL OR THE LIKE. EVERETT JOEL HALL, Passaic, N. J., assignor to Metals Disintegrating Company, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 25, 1919, Serial No. 285,055. Renewed June 3, 1925. 8 Claims. (Cl. 82—9.)

1. The art of manufacturing metal dust which consists in mechanically disintegrating the metal, while keeping it covered with a lubricating liquid which protects the metal against the effects of atmosphere and is inert to the metal, and which has a boiling point high enough to prevent excessive loss by vaporization during the disintegration, but not so high that there will be difficulty in its separation later from the metal by vaporization; and thereafter freeing the disintegrated material from the liquid by evaporation of the liquid, to produce a dry metallic powder.



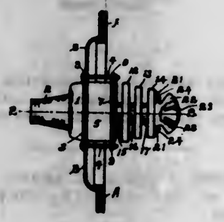
1,569,485. COCK PROVIDED WITH ELECTRIC LIQUID-HEATING MEANS. ANTON FRANS EDUARD HANSON, Amsterdam, Netherlands, assignor to N. V. Fabriek van Instrumenten en Electrische Apparaten Inventum, Bilthoven, Netherlands. Filed Mar. 13, 1925. Serial No. 15,419. 5 Claims. (Cl. 219—39.)

2. A fluid cock of the class described including a fluid inlet opening and a discharge port, a reciprocatory valve stem slidably mounted in the casing of the cock, a spring for maintaining the valve stem in its normal position, a valve head carried by the stem adapted to normally close said inlet opening and the said stem having a beveled recessed portion adjacent the head, switch contacts carried by the stem, line wire terminal contacts located in the path of movement of the switch contacts on the stem, electrical heating elements in circuit with the line wire terminals, and means for holding said stem partially depressed against the tension of the spring to move the valve head from the inlet opening and permit the flow of fluid therethrough without bringing the switch contacts into engagement with the line wire contacts, said means also being adapted to hold the stem down against the tension of the spring at a further point of its movement to bring the switch contacts



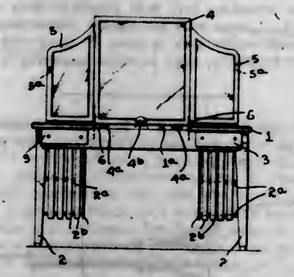
into engagement with the line wire contacts thereby to close the circuit to the heating elements and also bring the beveled recessed portion of the stem into throttling relation to the inlet opening.

1,569,486. DESK ATTACHMENT. GLENN S. HARDIN, Spokane, Wash., assignor of one-half to Charles E. Johnson, Spokane, Wash. Filed Apr. 11, 1925. Serial No. 22,326. 5 Claims. (Cl. 45—90.)



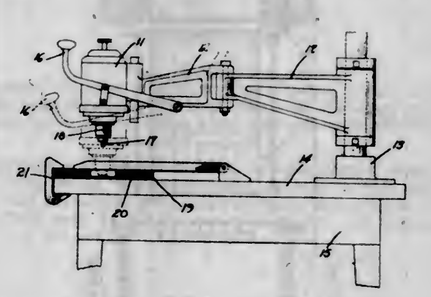
1. The combination with a recessed panel and a transparent plate fitted therein, of retaining means for the plate comprising a vacuum cup and means for retaining the cup in the panel in engagement with the plate, and means for venting the cup for release of the plate.

1,569,487. ARTIFICIAL FILAMENT SPINNING FRAME. THOMAS HARRIS, Woonsocket, R. I. Filed Aug. 27, 1925. Serial No. 52,765. 19 Claims. (Cl. (Cl. 118—49.)



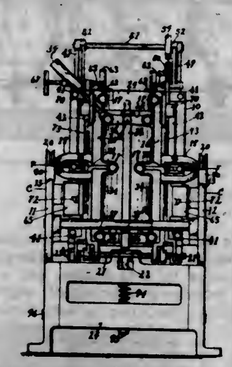
1. In a machine for producing a yarn from a strand of artificial fibre, filament or the like, the combination of a rotating spindle, a spinning box revolved thereby, means to positively engage said spinning box with said spindle to secure a positive drive thereof and means attached to said machine independently of said spindle to center and support the upper end of said rotating spinning box.

1,569,488. FURNACE CARBURETOR. LLOYD E. HARTER, Richmond, Ind. Filed June 17, 1925. Serial No. 37,878. 3 Claims. (Cl. 110—175.)



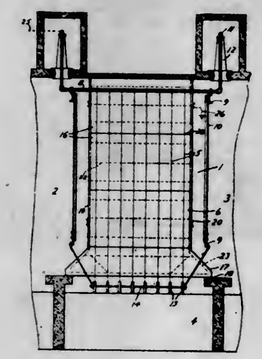
1. A furnace carburetor comprising in combination with the door, having an aperture formed therethrough, an air receiver located on the outer face of the door and around said aperture, an extension collar located on the inner face of the door and around said aperture, a radiator forming the main body extending inward from said collar, bolts connecting said air receiver, the collar, and the main body in connection with the door, and a detachable nozzle member retained by gravity in connection with the inner end of the said body, said nozzle being provided with a horizontal fan-shaped slot adapted to spray outside air as it comes from the body where it is heated, and deliver it over the interior of the combustion chamber of the furnace.

1,569,489. COMBINATION LIBRARY TABLE AND VANITY TABLE. IRVING T. HEADLEY, Washington, D. C. Filed Feb. 25, 1925. Serial No. 11,452. 2 Claims. (Cl. 45—70.)



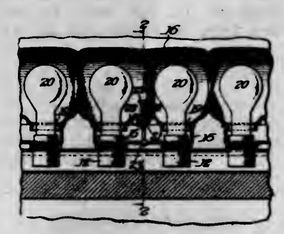
1. In a convertible table of the class described a continuous table portion, supporting legs therefor, a plurality of shelves mounted upon said supporting legs, a plurality of drawers slidably mounted within said table portion, a cut away portion of less width than the top of the table portion and centrally located therein, a compartment directly beneath said cutaway portion, a mirror hingedly connected to the rear of said cut away portion, auxiliary mirrors hingedly mounted upon the sides of said first mentioned mirror adapted to underlie said mirror and to extend within the compartment when in closed position, means for holding said auxiliary mirrors locked when in closed position, and means mounted upon the central mirror for securely holding all mirrors in open position substantially as described.

1,569,490. MEANS FOR GUIDING RADIAL ROUTERS. JOSEPH H. HISCOCK, Minneapolis, Minn. Filed June 20, 1924. Serial No. 721,265. 6 Claims. (Cl. 144—309.)



1. The combination with a routing machine and a cutting tool or bit therefor, and a pattern having an opening adapted to receive said bit, of a guide collar to enter the opening in said pattern and bear on the wall thereof and guide the bit in cutting a recess or depression in the work, and a second guide collar of less diameter than said first-named collar for guiding the bit to cut a patch to fit said opening or depression, the difference in diameter between said collars being equal to twice the diameter of said bit whereby the patch will be cut the proper size to fit the opening.

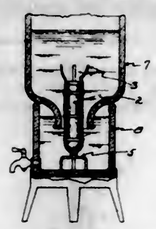
1,569,491. STEREOTYPE APPARATUS. CHARLES E. HOPKINS, Plainfield, N. J.; The Plainfield Trust Company administrator of said Charles E. Hopkins, deceased. Filed May 17, 1922, Serial No. 561,663. Renewed July 2, 1925. 51 Claims. (Cl. 22—2.)



1. In a curved stereotype plate casting apparatus, the combination with a back supported in fixed position, and a core movable in front of the back, of fingers mounted on the back for engaging and holding a matrix against the core, and automatic means for sliding said fingers in and out as the core moves.

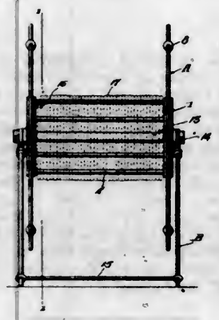
1,569,492. APPARATUS FOR ELECTRICAL PRECIPITATION OF SUSPENDED MATERIAL FROM GASES. GEORGE H. HOANE, Glendale, Calif., assignor to International precipitation Company, Los Angeles, Calif., a Corporation of California. Filed Apr. 13, 1925. Serial No. 22,847. 6 Claims. (Cl. 183—7.)

1. In an electrical precipitator a collecting electrode formed of semi-conducting material and provided with metallic members embedded therein and extending horizontally, and discharge electrode means adjacent said collecting electrode means and comprising a plurality of vertically extending members of relatively small cross-section.



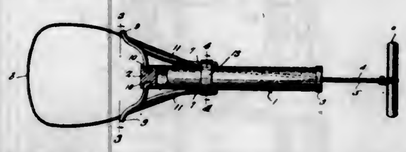
1,569,493. COVE REFLECTOR AND HOLDER THEREFOR. PAUL M. HOTCHKIN, Chicago, Ill. Filed Aug. 29, 1921. Serial No. 496,214. 10 Claims. (Cl. 240—8.)

1. A lighting fixture of the class described, comprising a wiring element, a holder mounted thereon, a reflector detachably received by said holder, and a locking stud carried by the reflector and detachably engaged with said holder for retaining the latter on said holder.



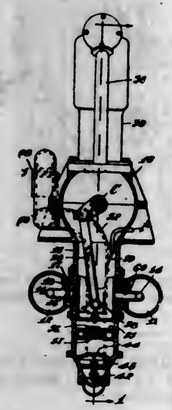
1,569,494. CONTAINER USED FOR CHARGING FLUIDS OR GASES WITH THE EMANATIONS EVOLVED FROM RADIOACTIVE SUBSTANCES. BENJAMIN W. HURD, San Francisco, Calif. Filed June 29, 1925. Serial No. 40,468. 4 Claims. (Cl. 167—7.)

1. The combination of a tube filled with radioactive material, a holder supporting said tube, flexible means at the top of said holder to allow same to be inserted into a small opening and capable of springing out radially after



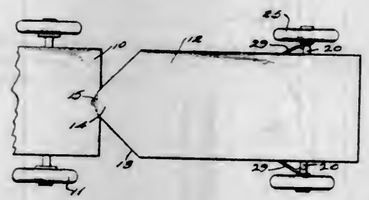
passing through said opening, supporting means on the bottom of said holder so that said holder may stand upright without falling, substantially as described.

1,569,495. REEL. GEORGE F. IMMEL, Willard, Ohio. Filed Dec. 29, 1924. Serial No. 758,614. 2 Claims. (Cl. 242—86.)



1. A garden hose reel comprising upright reel supports, a transverse axle carried thereby and a reel mounted on said axle, said reel comprising inner hubs consisting, each, of a pair of flat metal plates formed in their outer edges with radially disposed alternating longer and shorter sockets, outer rings, radial spokes connected at their outer ends to said rings and arranged with their inner ends extending into said longer sockets and a circular series of cross rods for rigidly connecting the hubs together, said cross rods formed at their opposite ends with right angularly bent portions engaging the shorter sockets.

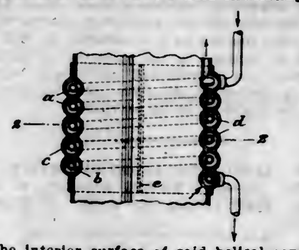
1,569,496. HOG HOLDER. EDWARD C. JOHNSON, Ireton, Iowa. Filed June 18, 1925. Serial No. 38,012 2 Claims. (Cl. 119—153.)



2. In a device of the class described, a tubular body portion, a plug closing one end of the tubular body portion, a guide including a rod bent around the body portion and having its ends positioned within the plug, said guide comprising eyes formed intermediate the ends of the rod, a loop member extending through the eyes and extending through the body portion, and means for moving the loop member towards one end of the body portion.

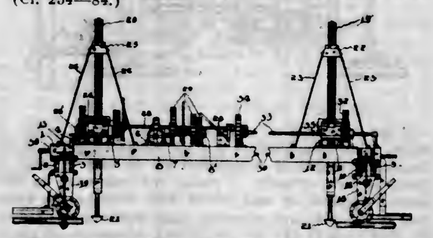
1,569,497. MARINE PROPULSION. JOHN A. JOHNSON, Los Angeles, Calif. Filed May 27, 1925. Serial No. 33,258. 7 Claims. (Cl. 115—13.)

1. In a device of the character disclosed, pistons, each having a combustion chamber therewithin, means for actuating the pistons, and propulsion tubes for receiving exploded gases from the combustion chambers.



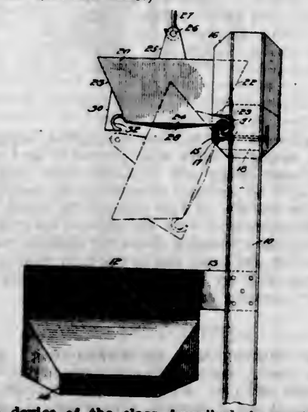
1,569,498. TRAILER TRUCK. ALBERT D. JOUSSET and HARRY D. MALONE, Paterson, N. J. Filed Jan. 3, 1924. Serial No. 684,122. 4 Claims. (Cl. 280—33.4.)

1. A trailer vehicle of the character described comprising a body having its front end tapered, a pair of stub shafts composed of a vertical rod and a pair of oppositely extending horizontal shafts, a chain secured to the lower portions of the stub shafts for strengthening same, a pair of brace rods adapted to brace the stub axles, means for fastening the brace rods to the trailer body, means for fastening the brace rods to the lower portions of the stub axles, a roller secured to the front end of the body, and means for retaining the wheels in an inverted position.



1,569,499. CONDENSER FOR USE WITH REFRIGERATORS. EMIL KIOI, Winterthur, Switzerland, assignor to Sulzer Frères Société Anonyme, Winterthur, Switzerland, a Corporation of Switzerland. Filed Aug. 7, 1923. Serial No. 656,191. 3 Claims. (Cl. 257—229.)

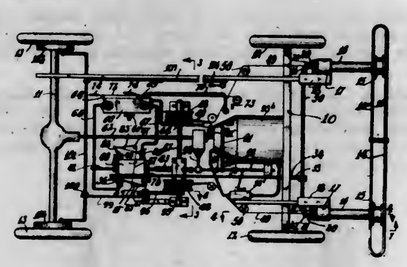
1. A condenser especially adapted for use with refrigerators comprising a coiled tube, and a cylindrical double wall casing enclosing said tube, the walls of said casing forming a helical conduit in which said coiled tube is disposed, so as to leave a fluid circulating passage



between the interior surface of said helical conduit and the exterior surface of said tube, and the inner and outer walls of said casing being separable from the coil.

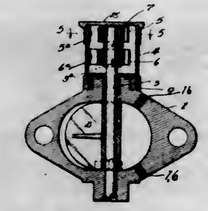
1,569,500. STOPLOG WINCH. JAMES JOSEPH KEON, Owen Sound, Ontario, Canada, assignor to The William Kennedy & Sons, Limited, Owen Sound, Canada. Filed Sept. 18, 1925. Serial No. 57,127. 10 Claims. (Cl. 254—84.)

1. In a stoplog winch, the combination of a frame; a pair of rams mounted on said frame; and common means for actuating said rams simultaneously, said frame comprising a pair of sections movable longitudinally relative to one another and each section having a ram mounted thereon, said means for actuating the rams being adapted to permit relative movement of the frame sections.



1,569,501. BUCKET-DUMPING APPARATUS. JAMES A. KINNEY, Lebanon, Pa., assignor to Bethlehem Steel Company, Bethlehem, Pa., a Corporation of Pennsylvania. Filed Aug. 23, 1921. Serial No. 494,586. 9 Claims. (Cl. 214—116.)

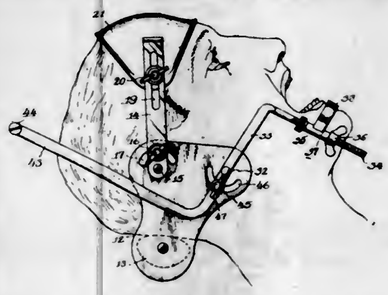
1. In a device of the class described, in combination, a dump bucket adapted to be suspended for vertical movement from a traveling crane and having one or more



downwardly extending projections at one side of its center of gravity, and a dumping stand having a substantially horizontal stationary cross piece and means rigidly supported on the stand for guiding the bucket into dumping position as it is lowered, so that the cross piece will be engaged by the projection extending downwardly from the bucket and the bucket will be constrained to tilt about the cross piece as it is lowered, to effect the discharge of its contents.

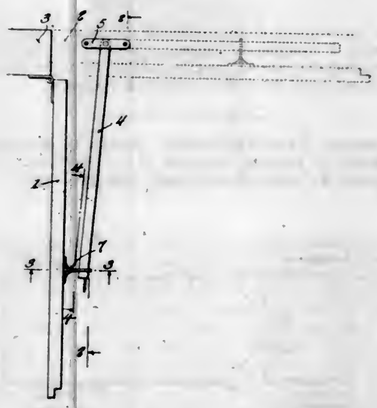
1,569,502. AUTOMATIC BRAKING DEVICE FOR VEHICLES. ANGELOS KURTIS, Brooklyn, N. Y. Filed Feb. 12, 1925. Serial No. 8,642. 9 Claims. (Cl. 180—83.)

1. In a vehicle, a movable bumper bar, a brake, a clutch, and transmission control elements, a cylinder, means for supplying compressed air to said cylinder, a piston in said cylinder, a piston rod connected to said piston, elements on said piston rods whereby the above mentioned parts are operated, and means connected to the said bumper bar for controlling admission of air to one end of the said cylinder.



1,569,503. GOVERNOR. SAMUEL E. KURTZ, Sac City, Iowa. Filed Sept. 22, 1921. Serial No. 502,382. 7 Claims. (Cl. 137—152.)

1. A governor for internal combustion engines comprising a casing, a valve stem pivoted in said casing, a valve in said casing and connected with said pivoted stem so as to be pivotally mounted in the casing and responsive to the flow of fluid through the casing so as to change its position to vary the effective opening through the casing, and a resisting device for resisting the pivotal movement of said valve due to the fluid flowing through the casing, and an auxiliary opposing device for opposing the resisting device.

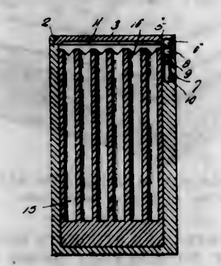


1,569,504. MOUTH GAG OR RETRACTOR. BURDETTE D. LA FORCE, Ottumwa, Iowa. Filed Dec. 1, 1922. Serial No. 604,197. 9 Claims. (Cl. 128—20.)

1. A mouth-gag comprising a head rest having lateral side plates, a forehead clamp coacting with the side plates of said head rest, arms pivotally mounted intermediate their ends upon the side plates of the head rest, a cross-bar connecting said arms at one end and

adapted to engage the patient's lower jaw, and a handle element rigidly connecting the opposite ends of said arms.

1,569,505. DOOR FIXTURE. HARRY LANGER, Milwaukee, Wis. Filed July 18, 1923. Serial No. 652,314. 1 Claim. (Cl. 292—278.)

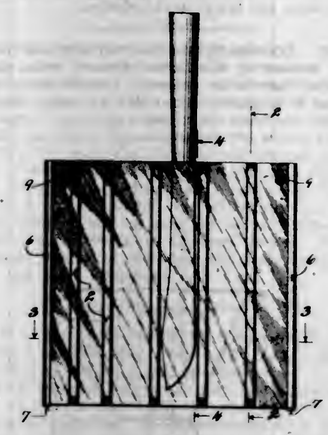


The combination of a casing, a door pivotally carried thereby, a bar having its inner end pivoted to said casing and having a notch formed in its outer end, a bracket rigidly carried by said door for slidably receiving said bar and cooperating with said notch to latch said door in open position, and a manually operable lever pivoted to said bar adjacent the outer end thereof for raising said bar from said bracket to disengage said bracket from said notch, said lever being adapted to bear against said bracket when elevating said bar.

1,569,506. RECEPTACLE FOR EXPLOSIVES. JAMES LAWRENCE LAW, Punxsutawney, Pa. Filed Mar. 6, 1925. Serial No. 13,542. 1 Claim. (Cl. 206—3.)

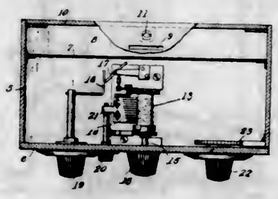
A device of the class described comprising an open top receptacle, a cover therefor adapted for slidable movement with respect to the receptacle, said cover having an opening formed in one end thereof, and provided with a longitudinally extending groove in the bottom, one end of the groove communicating with said opening, a block having a series of explosive receiving cells formed therein removably supported within the receptacle, and means for locking the cover in a closed

position comprising a spring actuated latch arranged in one of the sides of the receptacle adjacent the upper edge thereof, said latch cooperating with the opening



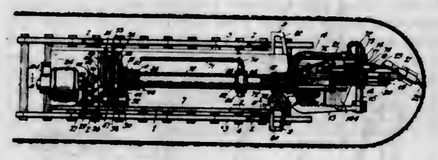
formed in the cover, said latch being adapted for cooperation with the opposite end of the groove formed in the bottom of the cover for limiting the outward movement thereof.

1,569,507. BUCKLE. IRVING R. LEDERER, Providence, R. I. Filed Mar. 4, 1924. Serial No. 696,877. 4 Claims. (Cl. 24—178.)



1. A bail-member having arm portions with bearings in their ends, a tubular cross-bar with bearings in its ends, a spindle extending through the bearings of said arms and cross bar, a finger-piece on said spindle, and yielding means for holding said cross-bar in said bearings, said spindle being mounted to be partially withdrawn by manually moving said finger-piece whereby said cross-bar may be removed from said frame.

1,569,508. KNIFE CASE. FRANK W. LEE, Janesville, Wis. Filed Jan. 24, 1924. Serial No. 688,240. 5 Claims. (Cl. 211—17.)

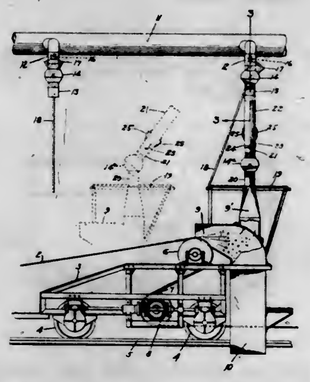


1. A knife case comprising a sheet metal back plate having integrally formed, forwardly projecting spaced vertical ribs, and having rearwardly turned spaced flanges adjacent its upper and lower edges, and a glass front plate contacting with the said front ribs and forming there-with a plurality of open ended pockets, said back plate having inwardly turned vertical end flanges for holding said glass plate in position and having integrally formed clips at its lower corner for holding the glass plate against downward motion.

1,569,509. RADIO TOY. ESTELLE MOSS LEEDY, Bronx, N. Y. Filed Apr. 16, 1924. Serial No. 706,828. 3 Claims. (Cl. 46—46.)

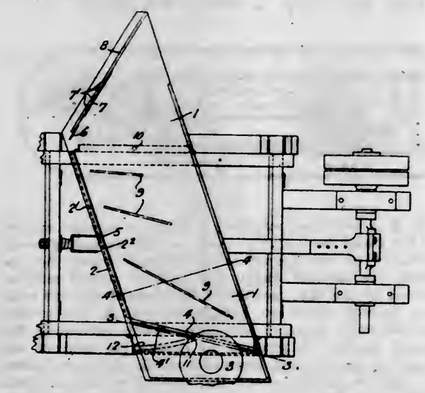
1. A radio toy comprising a toy radio cabinet having a front panel in simulation of a radio set, toy radio controls rotatably mounted at said front panel, music box mechanism mounted within the cabinet having a winding stem connected with one of the rotatable radio controls and stop and start means connected with another of the radio controls at the front of the panel whereby the operation of said music box within the cabinet may be governed by the radio controls at the front of the panel.

1,569,510. TUNNELING MACHINE. FREDERICK CHARLES LIDKE, New York, N. Y. Filed Oct. 7, 1922. Serial No. 592,936. 2 Claims. (Cl. 262—6.)



1. In a tunneling machine, a frame, a member carried by the frame for rotation about an axis extending longitudinally of the tunnel to be formed, means for rotating the member about said axis, a second member carried by the first member at its forward end for rotation thereon about an axis transverse to the tunnel, pneumatically actuated excavating means carried by the second member in position to engage the wall of the tunnel to be removed, means by which the second member will be rotated about the transverse axis concomitantly with its rotation with the head about the longitudinal axis, a compressed fluid supply conduit rotating with the first member and having a connection axially to the second member, and pneumatic connections between the second member and excavating means whereby the latter will be continuously supplied with a compressed actuating fluid in all rotative positions.

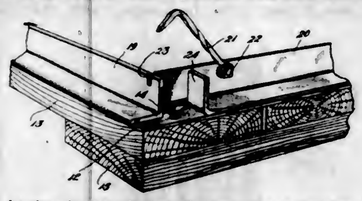
1,569,511. CONVEYER-BELT TRIPPER. PHILIP LITTLE, Jr., Minneapolis, Minn., assignor to Strong-Scott Manufacturing Company, Minneapolis, Minn., a Corporation of Minnesota. Filed Feb. 11, 1924. Serial No. 692,076. 7 Claims. (Cl. 302—27.)



1. In combination a suction air trunk having a rigid metallic intake, a rigid metallic pipe joint supported

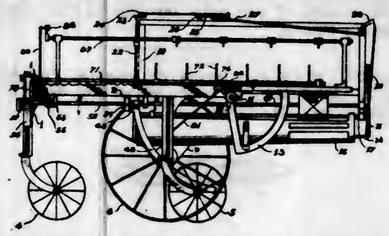
for movement over a floor, connecting means between the pipe joint and the intake, said connecting means permitting the movement of said pipe joint transversely

of said intake to automatically separate the pipe joint from the intake when the pipe joint and support are moved transversely of the intake.



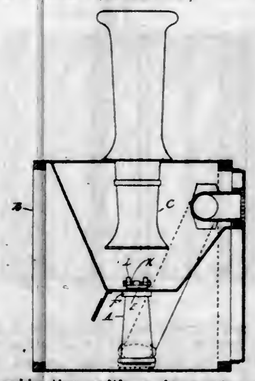
1,569,512. CONCENTRATION OR SEPARATION OF MINERALS. ALFRED ARTHUR LOCKWOOD, London, England. Filed Mar. 26, 1925. Serial No. 18,422. 6 Claims. (Cl. 209—472.)

1. A process of treating material which comprises supporting the same on a smooth surface, subjecting the same to an agitation adapted to cause travel of the material in two directions, and subjecting the material to an air blast substantially parallel to the supporting surface and opposed to one direction of travel of the material, thereby separating the material into different classes.



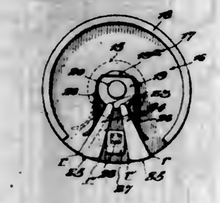
1,569,513. MOLD FOR CONCRETE BURIAL VAULTS. HARRY A. MCCLAIN and WAITE MCCLAIN, Canton, Ohio. Filed Mar. 30, 1925. Serial No. 19,316. 2 Claims. (Cl. 25—130.)

1. A mold comprising a bottom plate, angle irons permanently connected to two adjoining edge portions of the plate, angle irons detachably mounted at the other two edge portions of the plate, certain of said angle



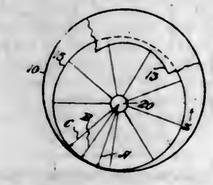
irons having hooks pivoted thereon, the adjoining angle irons having notches to receive said hooks.

1,569,514. SHOCKING AND STOOKING MACHINE FOR ATTACHMENT TO BINDERS. GEORGE MCCLELLAN, Toronto, Ontario, Canada. Filed Oct. 12, 1923. Serial No. 668,155. 15 Claims. (Cl. 56—409.)



1. In a device of the class described, a frame having suitable running gear, a carriage tiltably mounted therein and having an opening on the binder deck side to receive sheaves; gate sections disposed in the front end and bottom of said carriage, means to automatically open such gate sections when said carriage approaches a vertical position in tilting, and means to close such gate sections as the carriage reverts back to a normal position again; a knotter and a needle oppositely disposed in said carriage; manually operable means connected to said running gear adapted to actuate said knotter and needle to effect the tying of the sheaves, and means actuated by such running gear to effect the tilting of said carriage upon the tying of the sheaves.

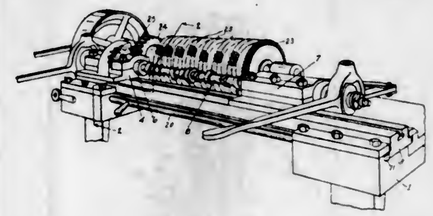
1,569,515. LOCOMOTIVE-EXHAUST-NOZZLE COVERING. ANDREW G. MACHESNEY, Detroit, Mich., assignor to Detroit Lubricator Company, Detroit, Mich., a Corporation of Michigan. Filed Mar. 13, 1922. Serial No. 543,535. 3 Claims. (Cl. 162—4.)



1. The combination with a locomotive exhaust discharge nozzle, of a cover plate adapted to seat on the discharge end of said nozzle, a hinged connection between said cover plate and nozzle permitting the opening of the same by the discharge of steam, and a stop for limiting the opening movement of said cover to a position from which it will automatically close.

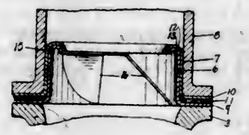
1,569,516. TRANSMISSION MECHANISM. JOHN F. MANGHAM, El Paso, Tex. Filed Dec. 11, 1923. Serial No. 679,995. 2 Claims. (Cl. 192—43.)

1. A transmission mechanism comprising a clutch member having an internal annular bearing surface, another clutch member rotatable inside of said bearing surface, a boss on said latter member, and two adjacently-positioned dogs bearing against said boss and one of them being arranged to engage frictionally against said bearing surface when relative effort of said clutch members is in one direction and the other dog being arranged to have like engagement when relative effort is in the opposite direction, said dogs being swingable away from each other out of such engagement.



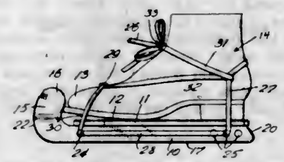
1,569,517. SELF-RAILING WHEEL. GEORGE MATZ, New York, N. Y. Filed Mar. 24, 1924. Serial No. 701,425. 1 Claim. (Cl. 305—7.)

A driving wheel structure comprising an outer ring forming a rim for engagement with the surface on which the wheel structure is used, a rigid wheel mounted to roll in said outer rim and to transmit the drive thereto, said wheel comprising a hub, a rim and means connecting the hub and wheel rim, said wheel rim having a diameter less than the outer rim diameter and flanges, the radial width of which is greater than the difference between the outer rim and wheel diameters, on said outer rim for retaining the wheel within the outer rim, one of said flanges being formed on said rim and the other of said flanges being removably attached thereto, the outer peripheral surface of the wheel and inner surface of the outer rim being roughened.



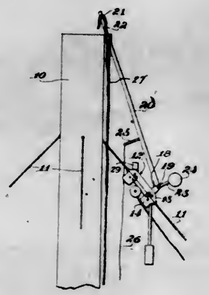
1,569,518. MILLING MACHINE. HERMAN W. MELLING, Jackson, Mich. Filed Sept. 28, 1928. Serial No. 665,347. 8 Claims. (Cl. 90—20.)

1. In a machine for milling cam shafts having a plurality of cams disposed thereon with adjacent cams in non-aligning relation, the combination of a work carriage mounted for adjustment laterally of the plane of its feed travel and provided with work supporting and driving means including a five spindle, feed means for said work carriage, means for laterally adjusting said carriage, a cutter shaft disposed parallel to said live spindle, means for driving said cutter shaft and spindle at the same speed and in opposite directions, and a plurality of milling cutters having non-circular peripheral contours complementary to that of the cams to be ma-



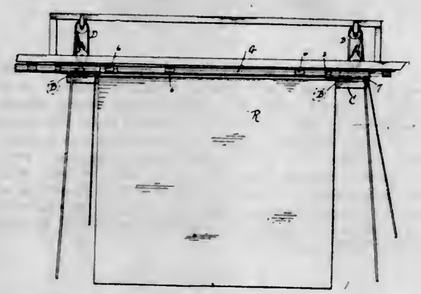
chined and a diameter substantially greater than that of such cams, said cutters being positioned on the cutter shaft in a relation corresponding to that of the cams on the cam shaft.

1,569,519. FUEL MIXER FOR INTERNAL-COMBUSTION ENGINES. ELMER H. MIDDAUGH, Kalamazoo, Mich. Filed Jan. 15, 1924. Serial No. 686,256. 2 Claims. (Cl. 48—180.)



1. A device of the class described, comprising telescoped inner and outer tubular members adapted to fit within the intake pipe of a manifold and having attaching flanges at their lower ends adapted to be interposed between the coupling flanges of a manifold and a carburetor, the flanges of said tubular members having a packing gasket between them, the inner ends of said members terminating in inwardly curved flanges providing an annular integral channel, the inner member having integral downwardly deflected segmental blade-like spirally twisted baffle members.

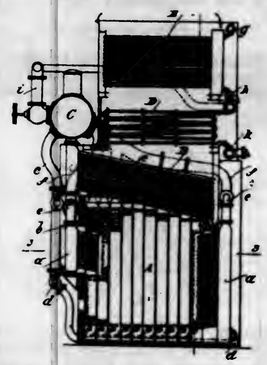
1,569,520. SNOW SKATE. JOHN C. MILLER and ROBERT H. FAYFIELD, Buffalo, N. Y., assignors to Fayfield Knoll Company, Buffalo, N. Y. Filed May 16, 1924. Serial No. 713,715. 3 Claims. (Cl. 208—167.)



1. In a snow skate, a body portion comprising a runner holding portion and a foot support, said runner holding portion having a prow extending upwardly therefrom to a point above said foot support, said prow having a part adjacent said foot support providing a stop for engaging the toe of the shoe of the user to limit the extent to which the shoe may be moved forwardly on said foot support, and means for securing said skate to the shoe of the user.

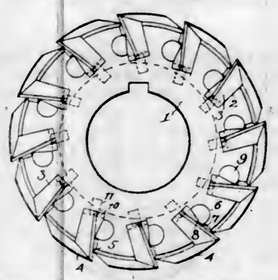
1,569,521. STACK POLING AND GUY-PAINTING DEVICE. THOMAS W. MILTON, East St. Louis, Ill. Filed Jan. 12. 1925. Serial No. 2,051. 4 Claims. (Cl. 304—1.)

3. A device for placing a suspending hook on the upper end of a stack comprising a track extending from the ground to a point adjacent the top of the stack, a self-propelled vehicle arranged to run on the track, and means on the vehicle for supporting a suspending hook and positioning said hook on the stack.



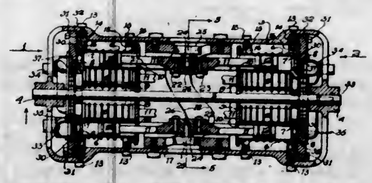
1,569,522. RUG-HANDLING MACHINE. EDGAR J. MYERS, Salt Lake City, Utah. Filed Nov. 4, 1924. Serial No. 747,798. 3 Claims. (Cl. 211—14.)

1. A rug handling machine comprising a rug supporting pole; spaced apart wheels secured near the ends of said pole; tracks on which said wheels are operated; socket members adapted to engage the ends of said pole when raising and lowering the rugs; guide members within which said socket members are carried when they are on the plane of said tracks; and an inclined portion of each of said guide members to move said socket members longitudinally against the end of said track.



1,569,523. BOILER. ELIE PIERRE JULES NICLAUSSE and ALBERT LOUIS NICLAUSSE, Paris, France. Filed Apr. 20, 1923. Serial No. 633,387. 1 Claim. (Cl. 122—235.)

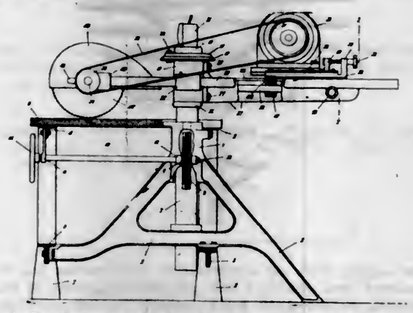
The combination with a tubulous boiler, of a water and steam drum, of a combustion chamber whose walls comprise headers divided into two chambers, compound coaxial tubes carried by the internal sides of such headers, each of said compound tubes having a closed end and leading into one of said compartments, while the internal tubes of each of said compound tubes are open ended and lead into the other of said compartments, water collectors in communication with said drum and connecting together the bottoms of those compartments of the headers in communication with the said internal



tubes, and steam collectors in communication with said drum and connecting together the tops of those compartments in communication with the said external tubes.

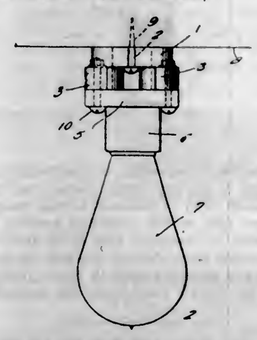
1,569,524. CHANNEL-MILLING CUTTER. EDWARD A. NOLL, Lakewood, Ohio. Filed Jan. 7, 1924. Serial No. 684,732. 1 Claim. (Cl. 29—105.)

In a device of the character described the combination with a supporting member having a cutter receiving notch, of a cutter having a base portion fitting in the notch, of a wedge member engaging the supporting member and cutter along one side of the notch and exerting an inward wedging action on the cutter, a projection carried by the supporting member at the bottom of the notch and a transverse groove in the inner edge of the cutter adapted to receive said projection.



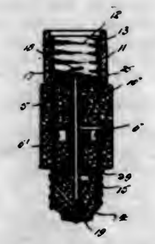
1,569,525. ROTARY ENGINE. IVAN L. OWENS, Wytheville, Va. Filed Apr. 26, 1922. Serial No. 556,807. 5 Claims. (Cl. 123—43.)

1. A rotary engine of the character described, comprising a stationary exterior frame extending throughout the length of the engine, a hollow cam cylinder fixedly secured to said frame within the frame, said cam cylinder being formed with a cam slot forming a sinuous abut-



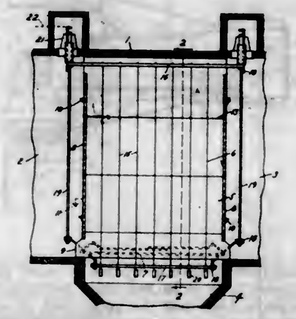
ment, a solid centrally disposed driving shaft mounted at each end of the frame, a series of cylinders disposed at each side of said cam cylinder and rotatable with said shaft within said frame, pistons for said cylinders, a disk secured to the inner end of each series of cylinders, a series of slideways rigidly secured to each disk, a series of H-shaped slide-blocks mounted on said slideways, and a roller removably mounted on each slide-block for slidably operating said pistons.

1,569,526. WOODWORKING MACHINE. RICHARD G. PARK, Jr., Washington, D. C., assignor to Hutchinson Manufacturing Co., Norristown, Pa., a Corporation of Pennsylvania. Filed Feb. 28, 1925. Serial No. 12,314. 4 Claims. (Cl. 143—6.)



4. In a woodworking machine the combination of a main frame; a standard mounted therein; a second frame supported by and adapted to rotate about said standard, provided with bearings fore and aft; a fixed rod contained in said second frame and positioned beneath the plane of said bearings; a carriage comprising two parallel rods slidably supported by said bearings; a depending bearing attached to said carriage and slidable upon said fixed rod, adapted to hold said carriage in fixed relation thereto; a cross-head abutting said parallel rods; an operating handle positioned upon said cross-head and in the same plane as said parallel rods; a tool shaft mounted in said cross-head; and a motor mounted on said carriage and adapted to drive said shaft.

1,569,527. BULB MOUNTING. ROBERT LEE PATTERSON, Long Beach, Calif. Filed Feb. 25, 1925. Serial No. 11,621. 2 Claims. (Cl. 240—90.)

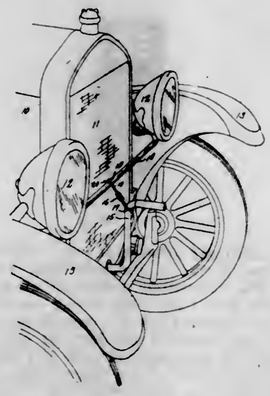


1. As a new article of manufacture, a combined mounting and shock absorber for an electric light bulb socket, comprising a single body of comparatively resilient material shaped to provide attaching portions and portions for connection of the socket, the last named portions bridging the ends of the first named portions to provide spaces between said ends.

1,569,528. ATTACHMENT PLUG. LESLIE D. YAGER, Fort Wayne, Ind. Filed Nov. 9, 1923. Serial No. 673,747. 2 Claims. (Cl. 173—334.)

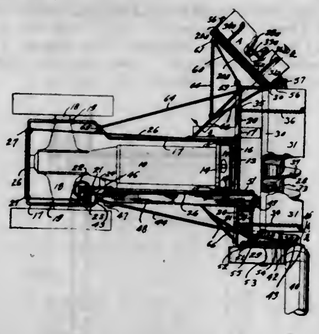
1. In a multi-way attachment plug, a body of insulating material having a threaded lamp socket and a threaded plug respectively positioned at opposite ends thereof, said socket and plug having central and outer contacts, two crossed pairs of receptacle terminals within the body, the receptacle terminals of each pair being double-ended for engagement of jacks of a cooperating attaching plug at either of two opposed sides of the body, a pair of conducting strips extending through the body and each attached to one receptacle terminal of each of said pairs, a bolt extending through the body and electrically connecting the central contacts of the socket and plug, and additional conducting strips extending into the body and electrically connecting said central contacts with the remaining receptacle terminal of each pair, said first named conducting strips affording the electrical connection between the outer contact of the plug and socket respectively.

1,569,529. APPARATUS FOR ELECTRICAL SEPARATION OF SUSPENDED MATERIAL FROM GASES. EVALD ANDERSON, Alhambra, Calif., assignor to International Precipitation Company, Los Angeles, Calif., a Corporation of California. Filed Apr. 13, 1925. Serial No. 22,846. 4 Claims. (Cl. 183—7.)



1. A collecting electrode for electrical precipitators comprising a body of high resistance material and grounded metallic supporting and grounding frame means in contact with but wholly outside of said body, the construction being such that a continuous electrical connection is established from every part of the collecting electrode to the said supporting and grounding means through the high resistance material of said electrodes.

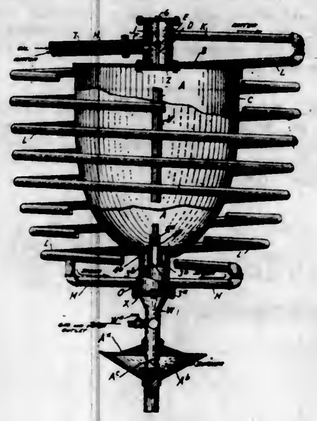
1,569,530. AUTOMOBILE CRANK HOLDER. NATHANIEL C. BARNES, Des Moines, Iowa. Filed Dec. 5, 1925. Serial No. 73,506. 5 Claims. (Cl. 74—33.)



1. In combination with an automobile having a pair of spaced fenders, a connecting member between the

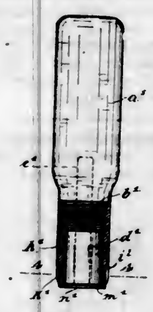
fender and a crank, of a holder for the crank comprising a single piece of wire bent to form a coil spring, a hook

formed from the end of the wire engageable with the crank and a portion of said wire being connected with the connecting member between the fenders.



1,569,531. SNOWPLOW. JOHN BARRY, Marcus, Iowa. Filed Mar. 10, 1925. Serial No. 14,458. 6 Claims. (Cl. 37—42.)

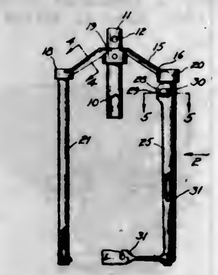
1. In combination with a tractor, a snow plow comprising a frame, a blade backed auger rotatably mounted on said frame, a hood over the upper part of said auger and extending forward therefrom, means for resiliently holding said hood in its forward position but allowing it to be pushed back by snow, and means for operatively connecting said auger to the engine of said tractor.



1,569,532. HEAT TREATMENT OF HYDROCARBONS. HAROLD R. BERRY, Brooklyn, N. Y., assignor to The Dynamics Corporation of America, New York, N. Y., a Corporation of Delaware. Filed Dec. 6, 1924. Serial No. 754,284. 14 Claims. (Cl. 196—63.)

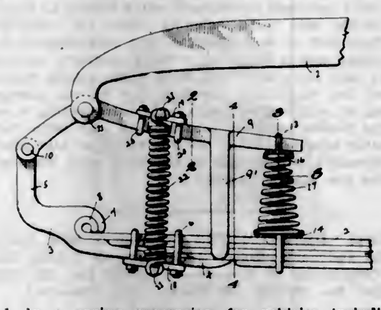
1. A process of cracking and converting hydrocarbon oil, which consists in continuously introducing hydrocarbon oil into an enlarged zone, and continuously and separately introducing into said zone substantially undiluted steam of such volume and at such temperature that such carbon as is released by the cracking of the hydrocarbon oil is converted into carbon oxides by union

with oxygen from the steam before such carbon can be deposited upon the zone wall, the specific gravity of the resulting hydrocarbons being lowered by the reactions.



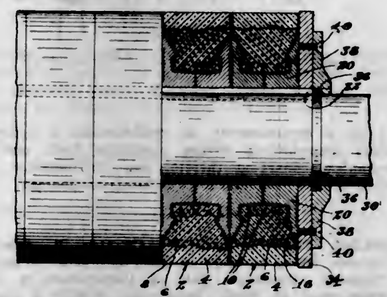
1,569,533. WOODEN TOOL HANDLE. CONSTANTIN BILGERY and ALEXANDER REUTLINGER, Frankfort-on-the-Main, Germany. Filed Apr. 30, 1923. Serial No. 635,624. 2 Claims. (Cl. 279—102.)

1. A tool handle, comprising, in combination, a handle proper of wood, a threaded front portion on the wooden handle, a smooth stud of reduced section projecting beyond the front end of the threaded portion, a central bore in the stud to receive a tool fiting tightly, and an internally threaded metal ferrule screwed on the threaded front portion and having a smooth bore guided upon the smooth stud, the ferrule reinforcing the central bore.



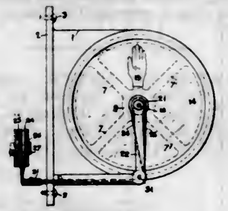
1,569,534. FLIER. HJALMAR G. CARLSON, Worcester, Mass., assignor to Rockwood Sprinkler Company of Massachusetts, Worcester, Mass., a Corporation of Massachusetts. Filed Sept. 27, 1923. Serial No. 665,210. 9 Claims. (Cl. 118—57.)

1. As an article of manufacture, a flier comprising a crown formed of a single piece of pressed solid metal having two diverging arms having a substantially stream line section and each terminating in an integral hollow



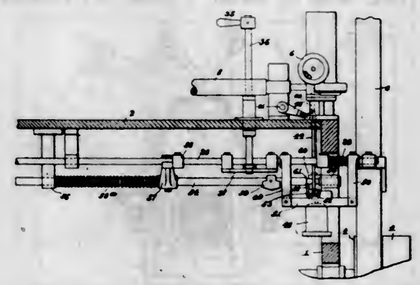
hub, one having secured therein a hollow pressed sheet metal roving guide and the other a balancing arm parallel with said guide.

1,569,535. SHOCK ABSORBER. WILLIAM P. COLE, Coalinga, Calif. Filed Aug. 8, 1922. Serial No. 580,413. 8 Claims. (Cl. 267—17.)



1. In a spring suspension for vehicles including a main leaf spring and a chassis frame, a shock lever being fulcrumed upon the chassis frame and pivotally connected at one end to the main leaf spring, a contractile spring having connection with said shock lever and said main leaf spring, and a compression spring having connection with said lever and the main leaf spring.

1,569,536. SECTIONAL ROLL FOR WRINGING MACHINES. H STANLEY CRYSLER, Lowell, Mass., assignor of fifty one-hundredths to Robert J. Wilkie, Newton, Mass. Filed Jan. 23, 1925. Serial No. 4,198. 7 Claims. (Cl. 68½—33.)

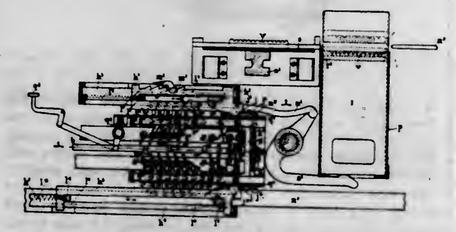


1. A roll of the class described having, in combination, a group of ring-like rubber sections, a central shaft upon which said sections are mounted, said sections having their exterior peripheral surfaces composed of rubber of less density than the rubber in the base portions of the same, a series of metallic members interposed between each of said sections and the shaft and locked in turn with said shaft, said sections being held by and compressed between adjacent flanges by pressure oppositely applied to and maintained against the respective ends of said group, the harder base of the sections being formed to withstand the major part of the compression.

1,569,537. SIGNALING DEVICE FOR MOTOR ROAD VEHICLES. GEORGE DADSWELL, Ulverston, England. Filed Jan. 15, 1925. Serial No. 2,628. 1 Claim. (Cl. 116—51.)

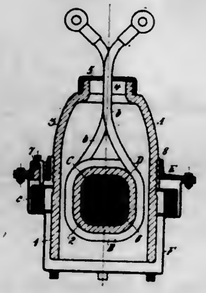
A signaling device of the class described comprising a base plate, a casing thereon, a bracket secured to the base plate and spaced from the front side of the casing, a parallel frame mounted for rotation in the casing and provided with openings, a glass carried by said parallel frame and displaying an indicator before one of said openings, a source of light in said casing and arranged to send light rays throughout the openings of said frame and through said glass, a shaft mounted for rotation in said casing and fixed to said frame and glass, and means to turn said shaft.

1,569,538. KNOCK-OFF MOTION FOR TWISTING MACHINES. SERGE DANILOFF and CHARLES FRANKLIN DUPEE, Lowell, Mass., assignors to Saco-Lowell Shops, Lowell, Mass., a Corporation of Massachusetts. Filed June 23, 1922. Serial No. 570,413. 21 Claims. (Cl 192—139.)



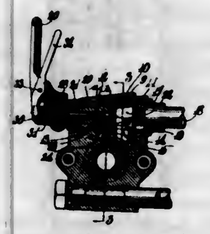
8. In a knock-off mechanism for machines of the character described, a disk having a slot and a recess adjacent said slot, a spring pressed dog pivoted in said recess, the top face of said dog having a raised portion projecting above the circumference of the disk, a depression and a boss, as and for the purpose described.

1,569,539. RADIO ADJUSTMENT DIAL. GREGORY DESJARDINS, Cincinnati, Ohio, assignor to Bosworth Electric Manufacturing Company (a Firm composed of C. J. Iredell, Ira Holden, E. P. Bosworth, and George Desjardins), Norwood, Ohio. Filed Oct. 13, 1925. Serial No. 62,297. 3 Claims. (Cl. 74—33.)



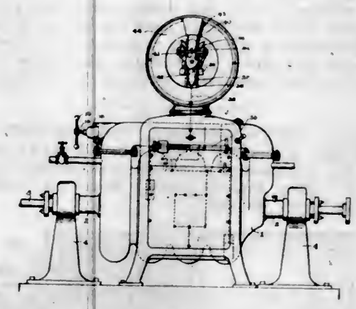
1. A radio adjustment knob or dial formed of a piece of material having a central body of large area, with a surrounding dependent rim of concave nature, said rim having indexing means thereon, and interspaced finger tip cavities arranged peripherally thereof, for the purpose described.

1,569,540. CANCELING DEVICE. ARNOLD AUGUST EGLI, Bern, Switzerland, assignor, by mesne assignments, to Chocolat Tobler Holding Co., Aktiengesellschaft, Schaffhausen, Switzerland. Filed Jan. 13, 1923. Serial No. 612,368. 17 Claims. (Cl. 101—93.)



1. In a machine for producing a line of characters, typebars, a plurality of members equipped with settable engaging devices and adapted for determining the positions of the typebars, means for actuating the settable engaging devices, means for operating a set engaging device, and means for restoring an actuated engaging device before it is operated.

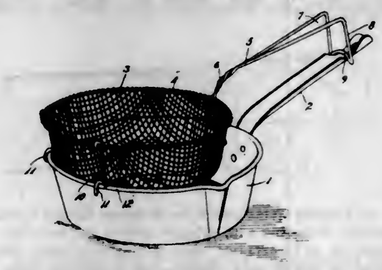
1,569,541. CURRENT-CONVERTING MEANS. FRANZ JOSEF FISCHER, Dresden, Germany. Filed Apr. 20, 1922. Serial No. 555,754. 2 Claims. (Cl. 175—361.)



1. In a device for converting electric currents in combination an annular horizontal core, comprising a shell and a diametrical transverse bar, a hollow body comprising a transverse tube adapted to receive said transverse bar, and a tank adapted to receive a dielectric surrounding said body and said core and extending beyond the level of said transverse bar.

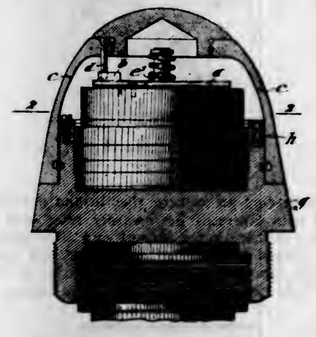
1,569,542. ROCK-DRILLING MECHANISM. ELMER G. GARTIN, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed July 1, 1921. Serial No. 481,974. 19 Claims. (Cl. 121—9.)

1. A controlling valve mechanism for a rock drilling motor and feeding means therefor comprising a casing having fluid passages formed therein leading respectively to said motor and said feeding means, a main controlling valve arranged within said casing having an operating handle, said valve including means for controlling the fluid flow in said passages, and supplemental feed controlling means including a valve arranged coaxially within said main valve and reciprocable axially relative thereof for controlling the fluid flow in the passages leading to said feeding means, said valve having a controlling handle pivotally connected to said main valve operating handle to swing towards and from said handle and operating to close said supplemental valve when said handles are brought together.



1,569,543. DYNAMOMETER. HALVOR O. HEM, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed Feb. 25, 1920. Serial No. 361,255. 3 Claims. (Cl. 265—24.)

1. In a dynamometer, in combination, a hydraulic torque transmitting device, pendulum force resisting mechanism connected thereto, and an indicator connected to said pendulum force resisting mechanism.

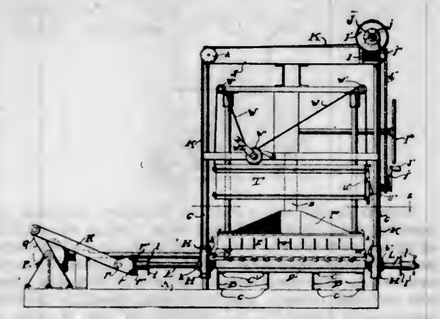


1,569,544. FRYING BASKET. CHARLES R. JAMISON, Canton, Ohio, assignor to The Enterprise Aluminum Company, Massillon, Ohio, a Corporation of Ohio. Filed Aug. 18, 1925. Serial No. 50,963. 6 Claims. (Cl. 53—7.)

1. In combination with a receptacle having a handle, a perforate basket arranged to fit within the receptacle, a handle upon the basket, and means upon the basket and basket handle for supporting the basket above the

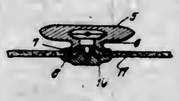
bottom of the receptacle upon the edge of the receptacle and the handle of the receptacle respectively.

1,569,545. MECHANICAL TIME FUSE. OSKAR JUNGHANS, Schramberg, Germany. Filed June 27, 1925. Serial No. 40,053. 10 Claims. (Cl. 102—36.)



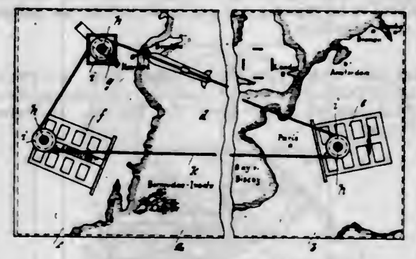
10. A mechanical time fuse for projectiles comprising a fuse body provided with a clockwork; a setting disk for said clockwork and having a saw-tooth periphery; locking means engageable with said saw-teeth of said disk in order to prevent the rotation of the disk in the opposite direction to that in which it is adapted to be set; a cap for said fuse body; and a plurality of spring-pressed rollers in a recess in said fuse body, said rollers being engageable with said cap for preventing rotation of the cap in the direction in which the inertal is effective when the projectile is fired.

1,569,546. TYPEWRITER. WALTER KAHLE, Erfurt, Germany, assignor to A E G Deutsche Werke Aktien-Gesellschaft, Berlin, Germany. Filed July 18, 1924. Serial No. 726,765. 6 Claims. (Cl. 197—60.)



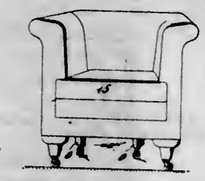
1. A typewriter comprising a main track to support the carriage and lateral extensions adapted to be temporarily secured to the end of said track so as to form a continuation thereof.

1,569,547. HOP-PACKAGE CUTTER. JOHN W. KAUFFMANN, Chicago, Ill. Filed Jan. 18, 1923. Serial No. 613,416. 10 Claims. (Cl. 100—57.)



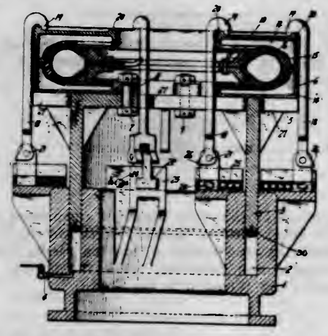
1. Longitudinally movable saw frames mounted in different horizontal planes, means to reciprocate and means to vertically move said frames, saws mounted in said frames, in combination with presser boards respectively provided with slits corresponding with and adapted to receive said saws.

1,569,548. BUTTON. GEORGE KELLOG, New York, N. Y. Filed Mar. 19, 1925. Serial No. 16,807. 5 Claims. (Cl. 24—105.)



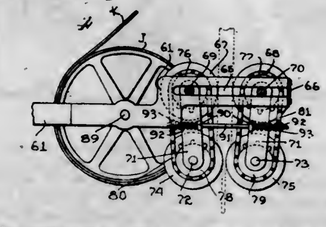
1. A button of the class described comprising a head having a shank and a central recess therethrough, a pointed piercing stud seated within the recess, said stud being threaded and extending below the bottom of the shank and a cap threaded to the stud.

1,569,549. AERIAL-NAVIGATION TOY. ERNST KEPPNER, Nuremberg, Germany, assignor to the Firm Blechspiel-Warenfabrik Johann Distler, Nuremberg, Germany. Filed Jan. 17, 1925. Serial No. 3,140. 3 Claims. (Cl. 35—12.)



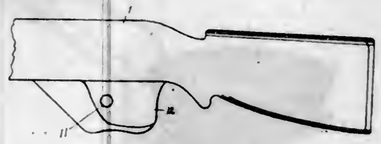
1. Aerial navigation toy for the purpose described comprising in combination a ground plate representing in a flat manner a geographical map, a number of objects on said map each representing a locality receiving in supports upwardly projecting shafts provided on the upper ends with guide rollers, a spring mechanism driving one of the said guide roller shafts, a cord running continuously around the said rollers and carrying an airship or the like.

1,569,550. FURNITURE STRUCTURE. EMIL C. KRAHL, Fairview Village, Ohio. Filed Apr. 25, 1925. Serial No. 25,803. 1 Claim. (Cl. 155—184.)



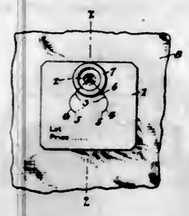
A chair or the like article of furniture including upstanding legs, certain of said legs having horizontally alined recesses in their inner faces, upper and lower frame members interconnecting the legs, intermediate frame members on said legs horizontally alined with the upper ends of said recesses and projecting inwardly to form a continuous pocket for the reception of edge portions of a seat cushion.

1,569,551. VULCANIZER. OTTO J. KUHLKE, Akron, Ohio, assignor to The Kuhlke Machine Company, Akron, Ohio, a Corporation of Ohio. Filed Aug. 31, 1925. Serial No. 53,489. 6 Claims. (Cl. 18—17.)



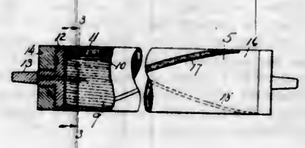
1. In an apparatus of the character set forth, a bed, a ring-shaped ram upon the bed, a table carried by the ram, a circular mold secured to the table above and in register with the ram, said mold comprising two sections hingedly secured together, and a plurality of clamps pivotally and adjustably secured upon the bed and adapted to be brought over the mold to hold the sections in closed position.

1,569,552. TAKE-UP MECHANISM FOR KNITTING MACHINES. EVERETT P. LEONARD, Chattanooga, Tenn. Filed July 20, 1922. Serial No. 576,193. 18 Claims. (Cl. 66—19.)



1. In combination with a knitting machine, two laterally yielding supporting means, and a pair of drawing rolls on each of said supporting means, said rolls forming a throat for the fabric, substantially as described.

1,569,553. SAFETY ATTACHMENT FOR FIREARMS. FRED E. LEWIS and THOMAS J. WILLIAMS, Utica, N. Y. Filed June 10, 1925. Serial No. 36,251. 6 Claims. (Cl. 42—70.)



1 In a safety attachment for firearms having a trigger, a member enclosing said trigger, means for securing said member to a firearm, an arm mounted in said member adapted to engage said trigger, and a movable plate permitting said arm to be actuated, whereby to discharge the firearm.

1,569,554. TAG FOR CLOTHING. HERMAN LISSNER, New York, N. Y. Filed Feb. 12, 1925. Serial No. 8,723. 3 Claims. (Cl. 40—26.)

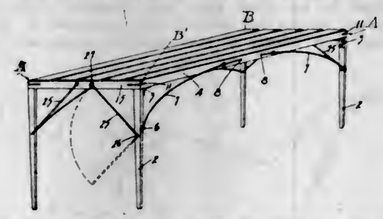
1. A tag having an opening therein and provided with a pair of slits diverging downwardly from said opening to provide a tab, the lower ends of said slits being curved inwardly toward one another to prevent the tearing of said slits to the outside edges when the tab is displaced from the body to receive the shank of a button in said opening.

1,569,555. UNDER CLEARER ROLL. NOAH E. LUCAS, Norwich, Conn. Filed Dec. 12, 1923. Serial No. 680,081. 9 Claims. (Cl. 19—140.)

9. An underclearer roll having a smooth polished surface with a spiral groove therein, and a catcher comprising material having an affinity for lint, threads, etc., located in said groove with the outer surface of the catcher substantially flush with the outer surface of said roll.

1,569,556. COMBINED TABLE, BED, AND BACK REST. CHARLES D. MCDONALD, Los Angeles, Calif. Filed Oct. 26, 1922. Serial No. 597,094. 2 Claims. (Cl. 5—114.)

1. In a combined table bed and back rest, a pair of side rails, legs pivotally connected to the under face of said side rails, adjacent their ends, adapted to be folded into abutment with the side rails and into perpendicular positions, brace means for holding the legs in perpendicular positions, cross bars connected to the opposite side rails at the opposite ends of the bed, said connection comprising a horizontal slot in the side rails, a hinge plate secured to the one end of the cross bars, there being also a vertical pin and a slot connection between the hinge



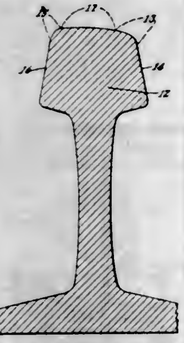


plate and the side rail to allow the cross bars to hinge into longitudinal alinement with the side rails, the other end of each side rail being connected to the other end of each cross bar by means of a disconnectible joint.

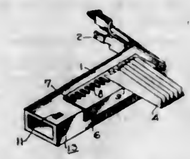
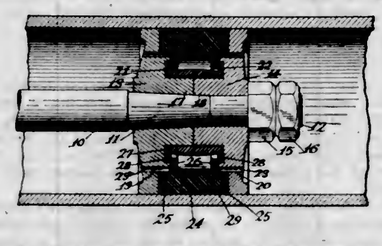
1,569,557. RAILROAD-TRACK CURVE. JOHN W. MCMANAMA, Waltham, Mass., assignor of one-third to Samuel W. Simonds, Brookline, Mass., and one-third to Francis A. Barbey, Cambridge, Mass. Filed May 20, 1925. Serial No. 31,513. 3 Claims. (Cl. 238—15.)



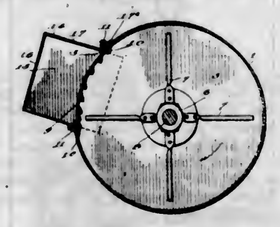
1. An inner rail of a railroad track curve having its tread face reduced in width from the standard size to minimize resistance to side slip of heels thereon, the cross section of the tread face being crowning and including marginal salient tractrix curve, merging into a side face of the rail head, a marginal salient curve merging into the opposite side of the head, and an intermediate salient curve merging into said marginal curves.

1,569,558. DISTRIBUTING DEVICE FOR MOVING FLUIDS AND GASES. GEORGE JAMES MANSON, Hawkesbury, Ontario, Canada. Filed Dec. 12, 1924. Serial No. 755,582. 18 Claims. (Cl. 34—48.)



18. A device of the character described comprising a channel having converging walls, one of said walls having a plurality of spaced ports therein, a plurality of cross channels communicating with said ports, a discharge nozzle communicating with the cross channels.

1,569,559. AXMINSTER TUBE FRAME. HOWARD MASON, Amsterdam, N. Y., assignor to Shawmut Engineering Company, Boston, Mass., a Corporation of Massachusetts. Filed July 19, 1922. Serial No. 575,973. 10 Claims. (Cl. 139—10.)



10. In an Axminster tube frame, the combination with a longitudinal carrier-bar, of a longitudinal tube-attaching strip provided with inwardly turned bar-penetrating hooks arranged to hook into corresponding apertures formed in the bar, and fastening means applied to the exterior of the bar to prevent said hooks from withdrawal from said apertures, substantially as described.

1,569,560. EXPANSIBLE PACKING FOR PLUNGERS. ERWIN E. MILLER, Fullerton, Calif. Filed June 23, 1925. Serial No. 39,058. 14 Claims. (Cl. 74—109.)

1. A plunger for pumps and the like comprising a plunger rod, means providing heads upon the rods, a sealing ring disposed between the heads having outwardly extending flanges, an expansible packing disposed between the heads having inwardly extending flanges engaging the flanges on the sealing ring, and means providing passages through the heads opposite one of said sets of flanges for the purpose described.

1,569,561. MACHINE FOR GRINDING GRAIN. GUSTAF E. MILLER, Stratton, Nebr. Filed Nov. 25, 1924. Serial No. 752,172. 4 Claims. (Cl. 83—11.)

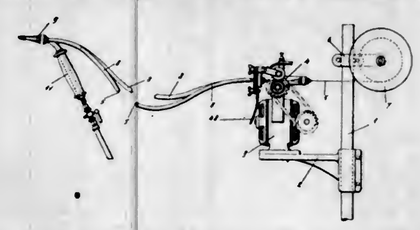
1. A device of the character described comprising a casing having a substantially cylindrical body and end members at the ends of the body, one of said end members having a central inlet opening, said cylindrical body being formed with an outlet opening, a fan mounted to rotate within said casing in concentric relation to said cylindrical body, the ends of the blades of the fan passing in proximity to the inner wall of the cylindrical body but being spaced from the latter, and a grating covering said outlet opening, said grating comprising a plate

having portions struck inwardly therefrom at intervals throughout its area to provide perforations and inwardly extending guard lips for the perforations, each of said guard lips having the free end thereof facing the outer end portion of each blade of the fan as that blade is moved close to the outlet opening of the casing during the rotation of the fan.

1,569,562. APPARATUS AND PROCESS FOR THE PRODUCTION OF COLORED DESIGNS ON LEATHER. WILLY MOOG, Arzheim, near Landau, Germany. Filed May 21, 1925. Serial No. 31,965. 9 Claims. (Cl. 8—5.)

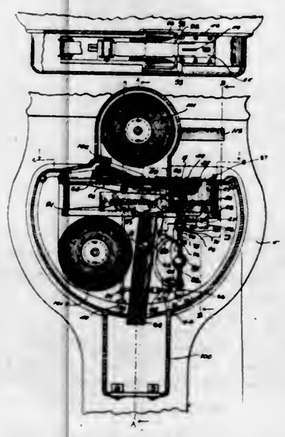
2. A process for the production of colored designs on leather which comprises the steps of pressing a stencil tightly against the leather to be decorated; applying an excess of dyestuff on the exposed portions of the leather; removing the excess dyestuff from the leather; and then relieving the pressure and removing the leather from the stencil.

3. A device for producing colored designs on leather comprising a trough; a pneumatic pad in said trough and upon which the leather to be decorated is placed, said leather being adapted to have a stencil conforming to the design placed thereon; means for forcing the stencil tightly on said leather; and means for rocking the trough in order that the color shall flow over the entire surface of the stencil and into the openings therein to thus color the exposed portions of the leather.



1,569,563. EYE FOR PLUSH TOY FIGURES. HEINRICH MÜLLER, Nuremberg, Germany. Filed Jan. 20, 1925. Serial No. 3,639. 4 Claims. (Cl. 46—40.)

1. An eye for plush toy figures comprising in combination a convex hollow shell with a central aperture, a glass body cut in the manner of a diamond mounted within the aperture said shell and glass body constituting the eye ball and pupil respectively, means for securing the eye to the plush toy figure said means being integral with said shell, and means for mounting the glass body within said aperture secured against movement relative to the shell.

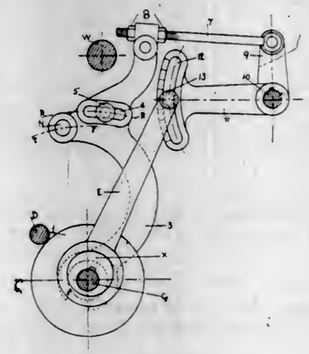


1,569,564. APPARATUS FOR THE PULVERIZATION AND PROJECTION OF MOLTEN METAL. WILHELM MÜLLER, Flix, Spain, assignor to Sociedad Electro-Quimica de Flix, Tarragona, Flix Province, Spain. Filed Jan. 26, 1924. Serial No. 688,750. 2 Claims. (Cl. 91—12.2.)

1. Apparatus for metallization through the pulverization and projection of molten metal comprising in combination a support, wire supplying and feeding means mounted thereon, flexible current conducting and wire guiding tubes connected with the wire feeding means, a cross piece of insulating material, nozzles rigidly mounted on the cross piece and connected with the tubes and having the delivery ends arranged in close relation with respect to each other, a compressed air

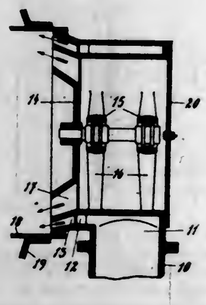
delivering nozzle rigidly connected to the cross piece and situated between the wire delivering nozzles, a handle rigidly connected with the compressed air nozzle adjacent the cross piece and a flexible supply pipe for compressed air connected with the compressed air delivering nozzle.

1,569,565. COIN-CONTROLLED MECHANISM FOR WEIGHING SCALES. HUBERT A. MYERS, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed Oct. 1, 1919. Serial No. 327,773. 15 Claims. (Cl. 194—56.)



8. In a device of the character described, coin-operated controlling means comprising a slidable member for receiving a coin, a rack carried by said member, a timing device set in operation upon the sliding movement of said member, including a pinion meshing with said rack, a spring connected with said pinion, and a rotatable fly-ball device actuated by said spring.

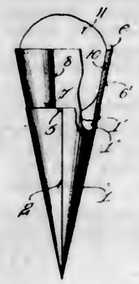
1,569,566. COMBING MACHINE. JOHN WILLIAM NASMITH, Manchester, England, assignor to Nasmith's Patents Limited, Manchester, England. Filed Feb. 25, 1925. Serial No. 11,535. 2 Claims. (Cl. 19—120.)



1. In a combing machine wherein the pivot of the nipper in said machine is moved along an arc having a common centre with the combing cylinder for the purpose of adjusting the relation of the nipper to the detaching roller of the combing machine, means for

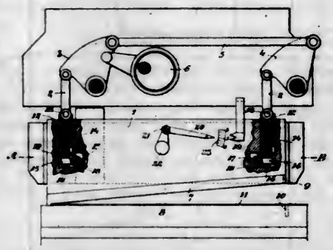
giving the said pivot a slight oscillatory motion at each stroke of the apparatus, such means comprising, a lever carrying the pivot, an arcuate sliding bearing for the

said lever formed on an arc struck from the centre of the combing cylinder, and means for imparting from the cylinder shaft an oscillatory motion to the lever at each revolution of the said shaft.



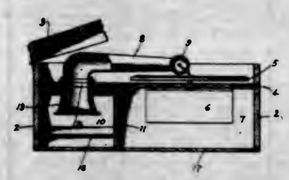
1,569,567. BURNER FOR GAS FURNACES. EMIL OPDERBECK, Gelsenkirchen, Germany, assignor to Heinrich Koppers, Essen-Ruhr, Germany. Filed Aug. 24, 1921. Serial No. 494,954. 13 Claims. (Cl. 158—99.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. In a burner for industrial gas furnaces in combination, an air duct and a gas duct, rotary means in the path of the gas traversing said gas duct arranged to be set revolving by the gas and means associated with said rotary means for transmitting the energy of flow of the gas onto the air in said air duct.



1,569,568. CONFECTION CONE. HAYES N. PEDERSON, Racine, Wis. Filed Mar. 16, 1925. Serial No. 15,894. 1 Claim. (Cl. 229—1.5.)

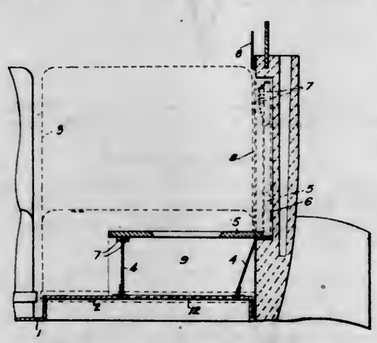
A confection cone comprising a conical paper body portion of double thickness throughout its lower and major portion, and of single thickness at its upper portion, the upper portion being formed as a continuation of the inner layer of the paper cone, and a confection shell of truncated conical form lined and secured to the inner side of the upper portion of the cone, and having its lower portion overlapped by the upper edge of the double thickness lower portion, and a tab free



from the layers of the cone and formed integrally as a lateral continuation of the single thickness upper portion.

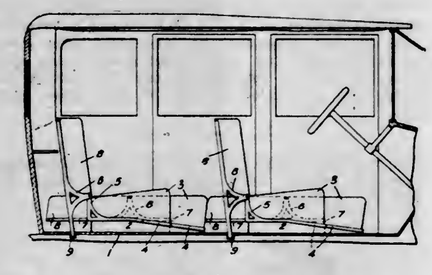
1,569,569. METAL-CUTTING MACHINE. HENRY PELS, Berlin-Charlottenburg, Germany. Filed Nov. 8, 1924. Serial No. 748,789. 4 Claims. (Cl. 164—57.)

1. A sheet shearing machine of the type described comprising in combination a stationary lower knife, an upper knife holder movable along a straight line, two rockers, a pressure rod for each rocker designed to act upon said upper knife holder, screw bolts rotatably mounted in said upper knife holder, internally threaded sleeves on said pressure rods into which said screw bolts are screwed, and worm wheel gears acting upon said screw bolts for rotating the same for raising and lowering the corresponding rods of said upper knife holder.



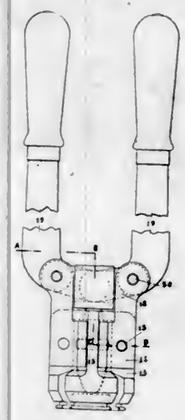
1,569,570. PHONOGRAPH CABINET. JOHN PETERSON, Faribault, Minn. Filed July 22, 1922. Serial No. 576,746. 4 Claims. (Cl. 274—2.)

1. An apparatus of the class described comprising a casing having a compartment therein provided with a compdratively thin flat floor plate supported only at its edges and side walls forming a resonance chamber, a top for said chamber having an opening therein and



a tone arm fitting over said opening, an extension of said tone arm depending below said top and opening to a point near said plate, said top also having a sound wave discharge opening, the sound waves from said tone arm being directed downwardly by said extension and striking said plate undiminished substantially in volume and at right angles to said plate to cause it to vibrate and increase the volume of such waves and direct them backwardly through said wave discharge opening.

1,569,571. TOILET CONVENIENCE FOR AUTOMOBILES. FRANKLIN JONES PEW, St. Catharines, Ontario, Canada. Filed Oct. 20, 1924, Serial No. 744,828. Renewed Aug. 8, 1925. 2 Claims. (Cl. 4—114.)



1. In an automobile body, the combination with the floor and one side wall, of a toilet seat hinged to the side wall and adapted to be swung down over an orifice in the floor, double hinged doors normally closing the orifice in the floor, the free edge of one upturned door supporting the turned down toilet seat.

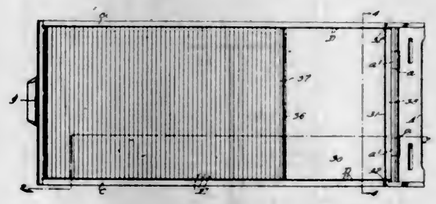
1,569,572. AUTOMOBILE BODY. FRANKLIN JONES PEW, St. Catharines, Ontario, Canada. Filed Oct. 20, 1924. Serial No. 744,829. Renewed Aug. 8, 1925. 4 Claims. (Cl. 296—63.)

1. In an automobile body, a seat base having an upper surface with a substantially horizontal rear portion and a forward portion inclined upwardly from its forward edge to the junction with the rear portion, a seat having a substantially horizontal rear portion and an inclined front portion on its lower surface, the inclination of the forward portion of the lower portion of the seat corresponding with the inclination of the forward portion of the upper surface of the base, a back portion hinged to the seat portion, and means for supporting the back portion in its normal position.

1,569,573. APPARATUS FOR FITTING CAPS TO VESSELS. ANGELO PICCALUGA, Leghorn, Italy. Filed Sept. 24, 1923. Serial No. 664,379. 3 Claims. (Cl. 113—18.)

1. A tool for closing vessels with a flanged and dished cap comprising an expanding mandrel, a wedge member having conical end portions within the expanding mandrel and of such length that it does not contact with the stopper on the cap when moved downwardly, and means for moving the said wedge member relatively to the mandrel.

1,569,574. INDEX DEVICE. JAMES H. RAND, North Tonawanda, N. Y., assignor to Rand Kardex Company, Inc., North Tonawanda, N. Y., a Corporation of Delaware. Filed Dec. 26, 1923. Serial No. 682,641. 10 Claims. (Cl. 129—16.)

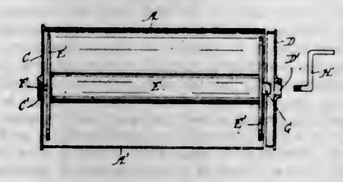


1. An index having a frame provided with a substantially flat back, and means for supporting an index card in the frame comprising a sheath having upwardly diverging front and rear walls united at their lower edges to form a pocket for the reception of the lower marginal portions of the card, the rear wall of the sheath normally disposed parallel to and in substantial contact with the front face of the back of the frame, the card in such pocket being adapted to assume a forwardly inclined position relatively to the back of the frame, the sheath being provided with means for supporting a superposed similar sheath.

1,569,575. RECORD TRAY OR CONTAINER. JAMES H. RAND, Jr., Tonawanda, and LOUIS C. BROECKER, Buffalo, N. Y.; said Broecker assignor to said Rand, jr. Filed Feb. 2, 1924. Serial No. 690,283. 25 Claims. (Cl. 129—16.)

1. In a record device adapted to support a series of record-bearing members in predetermined arrangement, the combination of a part providing a support for said record-bearing members, means for engaging one end

of said series of record-bearing members for limiting movement of said record-bearing members in one direction on said support, said means being removably



mounted on said support, and movable means for applying pressure to the opposite end of said series of record-bearing members.

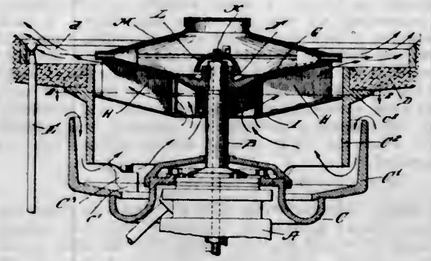
1,569,576. SHOE. RALPH L. RAYMOND, Auburn, Me. Filed June 14, 1920. Serial No. 388,886. 2 Claims. (Cl. 36—25.)

1. A shoe sole the ball portion of which is provided with intersecting oblique lines of pricked holes, whereby it is rendered flexible in all directions.

1,569,577. HOLDER FOR WOOL AND LIKE THREAD MATERIALS. ALFRED PETER ROBINSON, Auckland, New Zealand. Filed June 17, 1925. Serial No. 37,815. 2 Claims. (Cl. 232—4.)

1. A holder for wool and other thread materials, comprising in combination, a cylindrical casing having a longitudinal slot in its wall, and a base or pedestal to support it horizontally, and made with a closed end having a bearing formed upon its inside, and with an open end, a cover to fit on such open end having a bearing made therein, and a reel adapted to fit within the casing and constructed with a bearing pin on each end adapted to fit respectively into the bearings on the closed end of the casing and upon its cover end.

1,569,578. MANUFACTURE OF TANNING SUBSTANCES. OTTO RÖHM, Darmstadt, Germany. Filed Mar. 5, 1924. Serial No. 697,155. 7 Claims. (Cl. 149—4.)

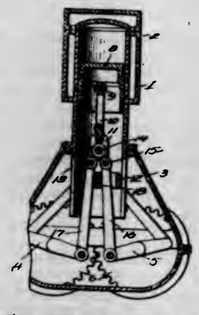


1. The method of manufacturing a tanning substance, consisting in mixing together an iron salt, an alkali metal silicate and sulfite cellulose liquor, substantially as described.

1,569,579. FRICTION LINING. THOMAS M. RUSSELL, Middletown, Conn., assignor to The Russell Mfg. Co., Middletown, Conn., a Corporation. Filed Jan. 2, 1924. Serial No. 683,850. 1 Claim. (Cl. 139—409.)

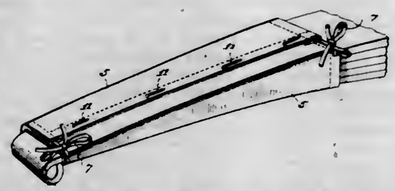
A thick, narrow ribbon having selvage edges for use in oil-immersed brakes and transmissions, the said ribbon consisting of a facing of cotton threads and a backing of woolen threads, such woolen and cotton thread being interwoven between the two faces of the fabric, whereby the woolen threads, with their relatively-greater, lubricant-diffusing ability, carry the lubricant forward into the cotton threads, which are thus kept lubricated and prevented from undue wear and charring, the matting and hardening of the friction cotton threads being also reduced.

1,569,580. OIL-DISTRIBUTING HEAD FOR ROTARY OIL BURNERS. JOHN SCHEMINGER, Jr., Providence, R. I., assignor to Aetna Automatic Oil Burner, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 17, 1924. Serial No. 707,266. 9 Claims. (Cl. 158—77.)



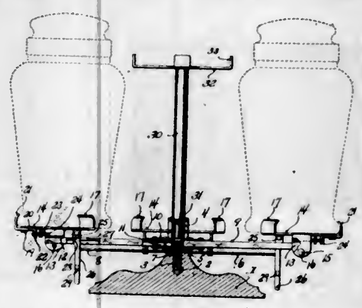
1. In combination with a cylindrical burner member depending into and spaced from a subjacent annular member constructed to provide an air passage between it and said cylindrical member leading downwardly into the latter member, an oil distributing head revolubly mounted within the upper part of said cylindrical member; said head comprising upper and lower rotary plates of substantially dish-shaped form secured together with the concave surfaces thereof confronting so as to provide an unobstructed annular space therebetween and converging toward the peripheral portions which are spaced apart so as to provide a restricted peripheral passage for oil; said lower plate having fan blades on its under side extending at an angle to the radius of the plate and arranged within said cylindrical member so as to draw air upwardly and force it out between said blades underneath and up into a film of oil discharged at the periphery of said rotary plates; said plates and fan blades being supported on a vertical shaft, and a feed pipe for discharging oil into said space.

1,569,581. PLIERS. CHARLIE W. SCOTT, Lincolnton, Ga. Filed Jan. 6, 1925. Serial No. 919. 5 Claims. (Cl. 294—36.)



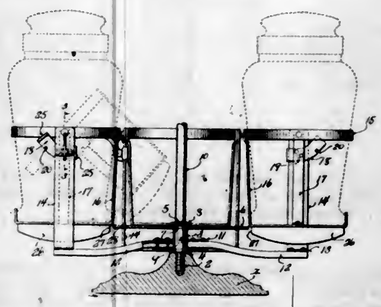
1. A tool comprising a shank having a jaw and a handle, a second jaw movably carried by the shank, and a second handle slidable into and out of operative engagement with the said second jaw.

1,569,582. INTERNAL-COMBUSTION ENGINE. CHARLIE W. SCOTT, Lincolnton, Ga. Filed Feb. 14, 1925. Serial No. 9,210. 2 Claims. (Cl. 74—14.)



1. In an engine structure of the type specified, an elongated cylinder the wall of which is provided at its lower end with diametrically opposite slots opening through the bottom, a piston slidable in said cylinder, a connecting rod pin carried by said piston, a stem connected to said pin, spaced arms depending from said stem and provided at their lower ends with substantially arcuate shoes in slidable contact with the opposed walls of the cylinder, a triangular connector connected with said arms, connecting rods connected with said connector, and intergeared simultaneously operated crank shafts with which the lower ends of said connecting rods are connected.

1,569,583. LEAF-SPRING OILER. HIRAM H. SHELTERS and HARLEY A. BASHAW, Burlington, Vt.; said Bashaw assignor to said Shelters. Filed Nov. 23, 1921, Serial No. 517,264. Renewed May 22, 1924. 4 Claims. (Cl. 267—37.)

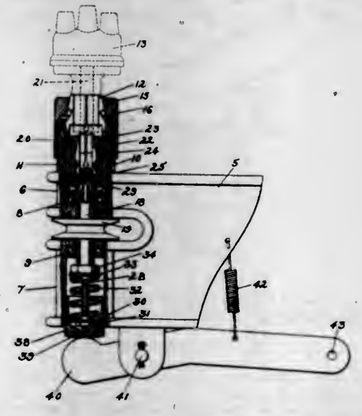


1. An oiling envelope for springs consisting of a main water-proof fabric having a draw-string attached to each end and having also a stiffening member attached to one of its longitudinal edges, an oil-pad attached to the inner face of said fabric, and a flap attached to the inner face thereof and carrying fastening devices adapted to engage the stiffened edge of said main fabric, for the purpose set forth.

1,569,584. DISPLAY JAR STAND. LAMAR H. SHOVER, Milwaukee, Wis. Filed Dec. 22, 1924. Serial No. 757,463. 3 Claims. (Cl. 211—20.)

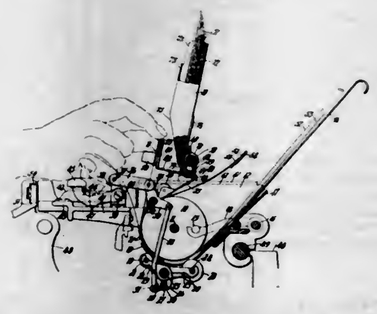
2. A jar display stand comprising a base, a spindle carried thereby, a revoluble member pivotally supported by said spindle and having outwardly projecting arms, a tilting plate pivotally carried at the outer ends of each of said arms, and having jar retaining means thereon, a latch for locking said plate temporarily in horizontal position, and means carried by said display stand for permitting unlatching of said latches at a predetermined point only.

1,569,585. DISPLAY JAR STAND. LAMAR H. SHOVER, Milwaukee, Wis. Filed Dec. 22, 1924. Serial No. 757,464. 1 Claim. (Cl. 211—20.)



A display stand for jars comprising a base, a revoluble member carried thereby, a plurality of upwardly extending spaced arms secured to said revoluble member, jar receiving baskets pivoted between said arms, latches for locking said baskets in vertical or tilting positions, a fin carried by the lower end of each of said baskets, and a circular plate rigidly locked with reference to said base and having its peripheral portion in proximity to said fins to prevent unauthorized tilting of said baskets, said plate having a notch through one portion of its periphery adapted to receive a fin and permit tilting of a basket when said basket occupies a predetermined position.

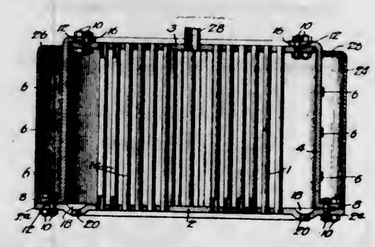
1,569,586. IGNITER-TESTING DEVICE. ERNEST H. SIPPEL and HAROLD A. HANCOX, Toledo, Ohio, assignors, by mesne assignments, to The Electric Auto-Lite Company, Toledo, Ohio, a Corporation of Ohio. Filed Aug. 27, 1920. Serial No. 406,467. 9 Claims. (Cl. 73—51.)



1. In an igniter testing device, the combination of a frame, a clutch carried thereby adapted to engage and hold the frame or casing of an igniter, a shaft rotably

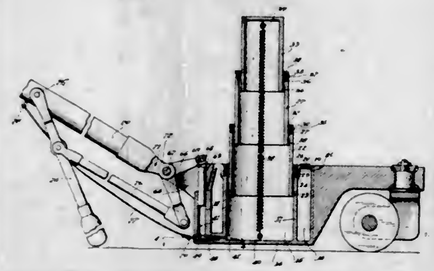
mounted in said frame, a clutch at one end of said shaft adapted normally to engage the shaft of said igniter,

means for rotating said first-mentioned shaft and manually controlled means for releasing said clutch during the rotation thereof.



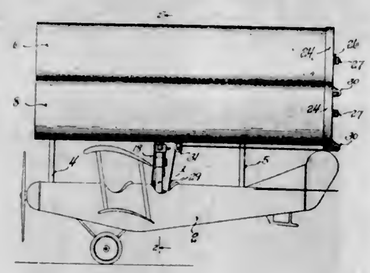
1,569,587. TYPEWRITING MACHINE. JESSE A. B. SMITH, Stamford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 30, 1923. Serial No. 671,631. 13 Claims. (Cl. 197—138.)

1. In a typewriting machine, a platen, a platen-frame, a carriage for the platen-frame having side pieces and a front cross-piece, feed-rolls to co-operate with the platen, and means to release the feed-rolls, comprising a bar extending lengthwise of the carriage, arms for supporting the bar, a shaft for pivotally supporting the arms, and bearing pieces for the shaft, one on one of the carriage side pieces and one on the carriage front piece.



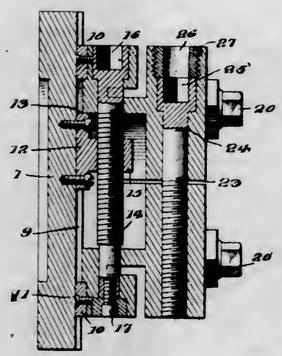
1,569,588. STEAM BOILER. JAMES M. SPAINKEL, Aurora, Ill. Filed Aug. 23, 1920. Serial No. 405,374. 1 Claim. (Cl. 122—114.)

In a device of the class described, a lower head, an upper head of less diameter than the lower head, tubes having their ends mounted in the heads, an inner shell surrounding the upper head and provided at its upper end with an inwardly extended annular flange overlapped on the outer surface of the upper head, the shell being provided at its lower end with an outstanding annular flange resting on the lower head, the periphery of the said flange being spaced from the periphery of the lower head to form a shoulder, securing devices connecting the first specified flange of the shell with the upper head, securing devices connecting the last specified flange of the shell with the lower head, an outer shell resting on



the shoulder and engaged with the periphery of the last specified flange, the outer surface of the outer shell being substantially flush with the outer edge of the lower head, the outer shell being provided at its upper end with an inwardly extended flange engaging the inner shell in a plane substantially coincident with the upper head, the lower head being provided with an annular depression located closely adjacent to the inner shell, and means for draining the depression.

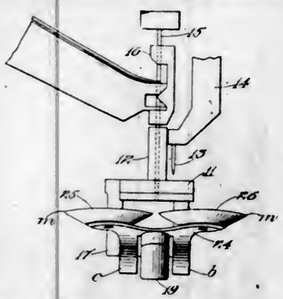
1,569,589. HYDRAULIC JACK. CHARLES S. STOCKER, Los Angeles, Calif., assignor to J. M. Brennan, Los Angeles, Calif. Filed July 9, 1924. Serial No. 724,970. 1 Claim. (Cl. 138—9.)



A hydraulic jack comprising a main frame mounted on casters and having a central housing forming a central chamber open at the top and an annular enclosed chamber around the central chamber, a tongue pivotally connected to the frame, a bell crank lever mounted upon the pivot, a pump cylinder, a piston in the pump cylinder and connected to the bell crank lever, a hand lever mounted upon the free end of the tongue, a link connecting the hand lever to the bell crank lever, means forming connections between the central chamber, the annular chamber and the pump cylinder so as to pump a liquid from the annular chamber to the central chamber, a plurality of telescoping cylinders mounted in the central chamber and adapted to be raised by the fluid pumped into the central chamber, and there being means for allowing the fluid to flow back from the central chamber to the annular chamber and allow the cylinders to descend.

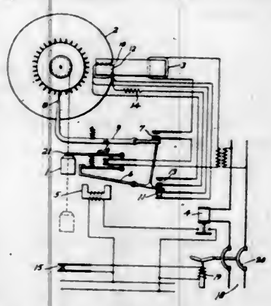
1,569,590. SAFETY DEVICE FOR AEROPLANES. JOHN B. THELEN and PETER L. BOULICAULT, Milwaukee, Wis. Filed Sept. 26, 1925. Serial No. 58,808. 4 Claims. (Cl. 244—21.)

1. The combination of an aeroplane, a frame extending therefrom, a safety appliance carried by said frame and consisting of a tube open at both ends to normally permit the passage of air therethrough, a parachute normally folded within said tube, and means to render said passage of air effective to project the parachute from the tube.



1,569,591. CHUCK. BERNARD G. TULLGREN, Brooklyn, N. Y. Filed June 19, 1923. Serial No. 646,424. 2 Claims. (Cl. 279—6.)

1. A device of the character described comprising a base plate having a groove formed in one side thereof, a chuck arranged on the side of said base plate having said groove, guide blocks carried by said chuck and received in said groove, a screw block arranged in said groove and attached to said base plate, means carried by said chuck and operable through said screw block for adjusting the chuck to an eccentric position with relation to said base plate, said screw block arranged for engaging said chuck to stop the adjustment thereof past a concentric position with relation to said base plate.

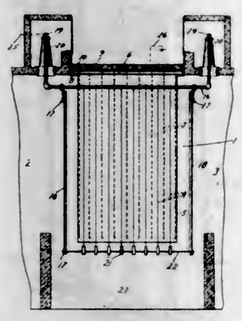


1,569,592. GAUGE FOR BOOT AND SHOE MACHINES. GERALD E. TURNER, Lynn, Mass., assignor to A. E. Little Company, Lynn, Mass., a Corporation of Massachusetts. Filed Feb. 14, 1921. Serial No. 444,714. 3 Claims. (Cl. 1—19.)

3. The improved gauge for boot and shoe machines comprising a support, two freely rotatable disks mounted on said support, a mounting for said support on which the support is pivoted to swing in a plane at right angles

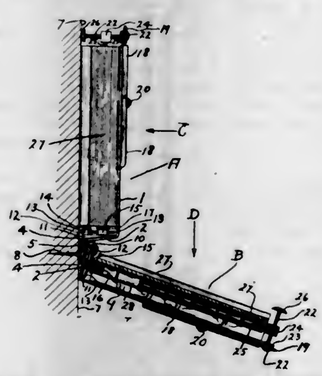
to the axes of rotation of the disks and means for limiting the movement of the support on said pivot.

1,569,593. RELAY. PETRUS KLAAS VAN DER STERR, Frankfort-on-the-Main, Germany, assignor, by mesne assignments, to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 29, 1921. Serial No. 496,673. 6 Claims. (Cl. 175—294.)



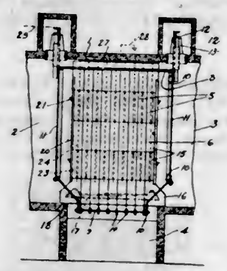
6. A relay comprising contacts, a rotatable disc for actuating the same, mechanical means for driving the disc to operate said contacts, and means including a magnetizable core member having a winding thereon for restraining the contact operating movement of said disc and for resetting the disc to normal.

1,569,594. FOUNTAIN DRAWING PEN. ANTHONIUS MARINUS VAN DOORN, Utrecht, Netherlands. Filed Oct. 15, 1924. Serial No. 743,764. 4 Claims. (Cl. 120—43.)



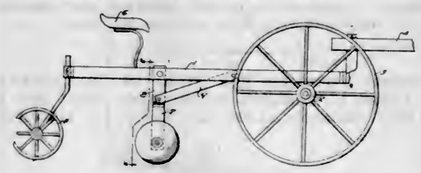
1. In a fountain drawing pen of the class described, an ink reservoir, a feed pipe fitted into the end of said reservoir and having a central bore, a pair of pen members carried by the feed pipe, and said feed pipe having the discharge end thereof partly cut away on opposite sides to correspond to the form of the pointed portions of the pen members, and a stylus member arranged in the hollow bore of the feed pipe and having the point thereof projecting through the cut away portions at the end of the feed pipe and lying between the tips of said pen members.

1,569,595. APPARATUS FOR ELECTRICAL PRECIPITATION OF SUSPENDED MATERIAL FROM GASES. FLOYD H. VIETS, Alhambra, Calif., assignor to International Precipitation Company, Los Angeles, Calif., a Corporation of California. Filed Apr. 13, 1925. Serial No. 22,848. 9 Claims. (Cl. 183—7.)



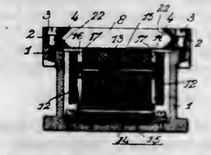
1. A collecting electrode plate for use in electrical precipitators comprising an integral plate of semi-conducting material, a metallic supporting member extending along the upper edge of said plate, and metallic re-enforcing and conducting members extending vertically within said plate and secured at their upper ends to said metallic supporting member and extending substantially throughout the height of said plate.

1,569,596. BOOKREST. WILLIAM JAMES WALSH, Hamilton, Ontario, Canada. Filed Feb. 27, 1925. Serial No. 12,141. 2 Claims. (Cl. 45—82.)



1. A book rest comprising a flat plate, an angularly disposed flange along one edge thereof, a hinge carried by said flange along the edge thereof remote from said plate for attaching the rest to a supporting wall, a spring operatively associated with said hinge, opposed, aligned journals supported respectively adjacent to the aforesaid flange and the edge of the plate remote from said flange, said journals disposed intermediately of the width of the rest and in spaced relation above the plate, screw means for adjusting the journals perpendicularly to the plate, means permitting adjustment of one of the journals axially, a rigid member rotatably supported between said journals, and spaced apart screws projecting through said rigid member from one side thereof and adapted to engage the back of a book to be carried by the rest.

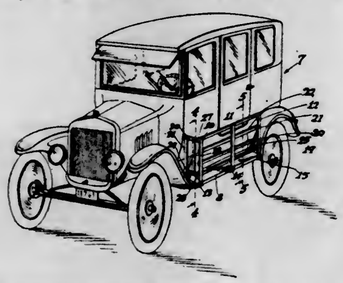
1,569,597. APPARATUS FOR ELECTRICAL PRECIPITATION OF SUSPENDED MATERIAL FROM GASES. CHARLES H. WEISKOPF, Hawthorne, Calif., assignor to International Precipitation Company, Los Angeles, Calif., a Corporation of California. Filed Apr. 13, 1925. Serial No. 22,849. 5 Claims. (Cl. 183—7.)



1. An apparatus for electrical precipitation of suspended material from gases containing the same comprising discharge electrode means and collecting electrode means, said discharge electrode means comprising members of relatively small cross-section extending parallel to one another, and said collecting electrode means comprising a plurality of plate sections of semi-conducting material, metallic re-enforcing and conducting members embedded in said semi-conducting material in each of said sections and extending parallel to said discharge electrode means, and said conducting and reenforcing members in adjacent sections engaging one another at their ends so as to provide continuous conducting and re-enforcing means for said collecting electrode.

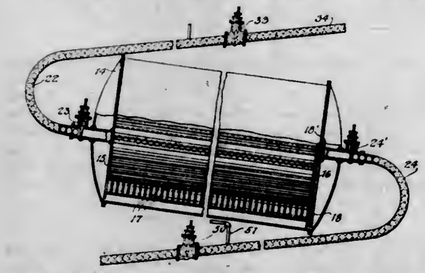
1,569,598. ATTACHMENT FOR LISTERS. JAMES W. WESLEY, Happy, Tex. Filed May 22, 1923. Serial No. 640,773. 1 Claim. (Cl. 97—129.)

A lister attachment comprising a U-shaped frame provided at its end with outstanding extremities, disks journaled upon the extremities and having their cutting edges disposed in planes which are anti-clined with relation to each other, brackets mounted upon the intermediate portions of the frame at points spaced from the ends thereof and upwardly and forwardly inclined braces connected with the intermediate portions of the bracket.



1,569,599. ELECTROMAGNETIC CHUCK. WALTER ZEHNDER, Granichen, Switzerland. Filed Oct. 5, 1921. Serial No. 505,677. 2 Claims. (Cl. 175—367.)

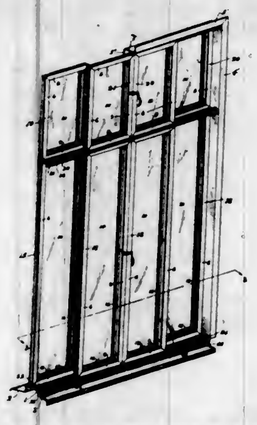
1. In an electromagnetic chuck, a flat, composite plate composed of sets of laminations of dynamo sheet alternating with non-magnetic material, said laminations ar-



ranged transversely of the flat plate, said plate having opposite wedge-shaped edges, means at the ends of the plate to hold the composite plate compressed with a force sufficient to prevent the passage of water between the laminations under all conditions of expansion and contraction incident to the use of the chuck, and longitudinal bars having V-shaped recesses in which the wedge-shaped edges of the plate fit and are held watertight.

1,569,600. COMBINATION CAMP TABLE, LUGGAGE CARRIER, AND CHILD'S BED. CHARLES H. ALLBRIGHT, Santa Margarita, Calif., assignor of one-half to Paul A. Barlow, Santa Margarita, Calif. Filed May 29, 1924. Serial No. 716,769. 2 Claims. (Cl. 5—119.)

1. A combined luggage holder, table and bed adapted to be hingedly secured to the running board of an automobile, comprising a main frame, including bars arranged at right angles to each other, a brace provided with a hinge and having one end permanently attached to the upper face of said main frame and the other end detachably secured to the running board when the said main frame is in vertical position and an auxiliary frame hingedly secured to said main frame and adapted to fold at right angles to said main frame, and an extension on said auxiliary frame having a hinge adapted to be detachably secured to said running board.



1,569,601. COOKER FOR FOOD IN CONTAINERS. ALFRED L. ANDERSON, Seattle, Wash. Filed May 1, 1925. Serial No. 27,205. 20 Claims. (Cl. 126—272.)

1. In a cooker for food in containers, a boiler, a chute for containers, a valve controlling communication between the boiler and one end of the chute, a valve adapted to close the other end of the chute, positive means for opening said valves in timed relation to each other, and non-positive means for closing said valves.

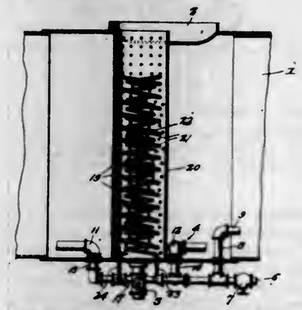
1,569,602. WINDOW. AMELIA E. ANDERSON, Cincinnati, Ohio. Filed Dec. 23, 1922. Serial No. 608,627. 4 Claims. (Cl. 189—64.)

2. In a window, a steel frame comprising a head, jambs and sill, U-shaped tracks having lateral flanges and mounted on said head and sill, respectively, and a channeled sidewise slidable sash having rollers in its channel to engage the track, stationary sashes mounted

in said frame parallel with said sidewise slidable sashes and weather-strips mounted on said sashes to form tight joints therebetween.

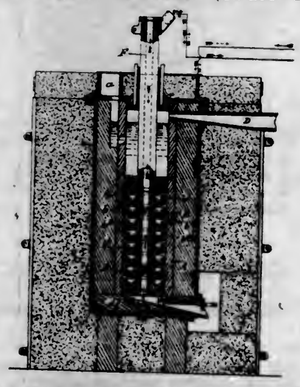
1,569,603. SMOKER'S STAND. WALKER G. ANDERSON, Seattle, Wash., assignor of one-half to Charles D. C. Huestis, Seattle, Wash. Filed July 1, 1924. Serial No. 723,461. 4 Claims. (Cl. 131—51.)

1. A smoker's stand comprising a base member, a hollow column extending upwardly therefrom, a bowl member mounted upon said column, an ash receptacle provided within said column, a spring located in said base below the receptacle, a hopper adapted to extend into said bowl member, and means for retachably connecting said hopper to the bowl member for securing the receptacle in the column between the hopper and said spring.



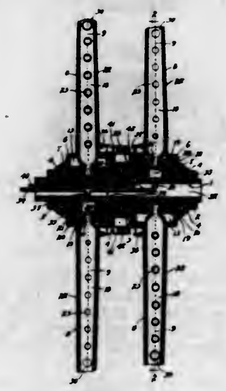
1,569,604. INDUCTANCE. EDWARD F. ANDREWS, Chicago, Ill. Filed Dec. 31, 1924. Serial No. 758,986. 2 Claims. (Cl. 175—359.)

1. A supporting device for an electrical inductance comprising a disc, the periphery of which is provided with a plurality of substantially radial slots, a plurality of dielectric plates adapted to fit snugly in the said radial slots of said disc, each plate being also slotted so



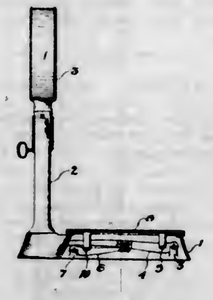
as to mortice over the said disc, and wires of an electrical inductance supported by the external edges of said plates.

1,569,605. TANK-CAR HEATER. HORACE W. ASH, Winchester, Mass. Filed June 15, 1923. Serial No. 645,619. 8 Claims. (Cl. 257—207.)



1. In combination, a tank adapted to contain a substance which is normally solid and which becomes fluid under heat treatment, means for heating the lower portion of said tank to render the substance in the tank fluid, an upwardly extending discharge tube arranged in said tank and of a height sufficient to direct discharge material from various levels in said tank, means arranged in the tube for permitting the passage of material at various levels from the tank into the tube, and means for maintaining the interior of said tube in heated condition, so that the material may readily pass through the same.

1,569,606. APPARATUS FOR ELECTROLYZING FUSED SALTS OF METALS AND RECOVERING THE METALS AND ACID RADICLES. EDGAR ARTHUR ASHCROFT, London, England. Filed Feb. 6, 1924. Serial No. 690,969. 15 Claims. (Cl. 204—19.)

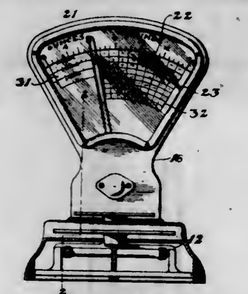


1. The method of effecting electrolysis of a light metal which comprises alloying the same with a heavy metal, decomposing the fused alloy simultaneously at electrolytic couples in electrical series below the surface of the fused electrolyte, and removing the light metal at the top of the melt.

1,569,607. COMBINED EXPLOSIVE MOTOR AND PROPELLER. MICHAEL BECK, Minneapolis, Minn. Filed Oct. 13, 1920. Serial No. 416,744. 12 Claims. (Cl. 60—41.)

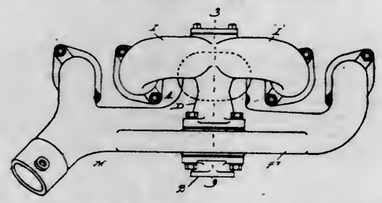
2. An explosive motor comprising a rotary abutment arm, said arm having a plurality of open-ended chambers formed therein increasing in size progressively from the axis of rotation, means for supplying an explosive mixture at one end of said chambers and means for firing said chambers in succession to rotate said arm.

1,569,608. PIVOT BEARING. HARRY S. BERGEN, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed Mar. 22, 1920. Serial No. 367,608. 9 Claims. (Cl. 265—71.)



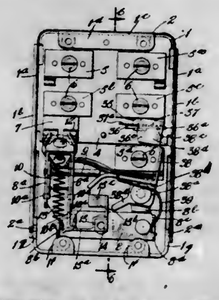
1. In a device of the class described, in combination, a bearing member having a V-shaped central portion and substantially horizontally-extending end portions, and link members having inwardly convexly curved portions engaging said end portions.

1,569,609. WEIGHING SCALE. HARRY S. BERGEN, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed July 22, 1920. Serial No. 398,049. 10 Claims. (Cl. 265—36.)



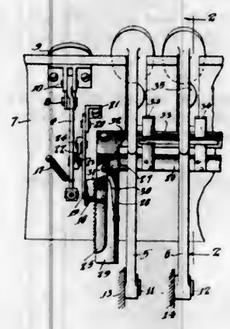
1. In a weighing scale, in combination, automatic load-offsetting mechanism, an indicator connected thereof, a

pair of commodity-receivers located before said indicator, and means unequally and oppositely connecting said



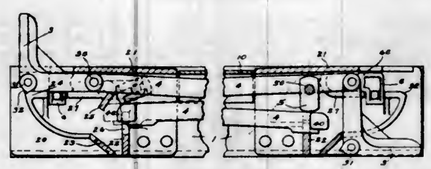
commodity-receivers to said automatic load-offsetting mechanism whereby loads on said platform move said indicator in opposite directions.

1,569,610. METHOD AND APPARATUS FOR EQUALIZING EXPLOSIVE CHARGES IN THE DIFFERENT CYLINDERS OF MULTICYLINDER ENGINES. ALANSON P. BAUSH, Detroit, Mich. Filed Mar. 5, 1920. Serial No. 363,490. 6 Claims. (Cl. 123—52.)



1. The combination with a multi-cylinder internal combustion engine provided with more than two cylinders, of an intake conduit symmetrically sub-divided into separate branches leading to the respective cylinders, and means for symmetrizing a stream of explosive mixture passing through said conduit in advance of the subdivision thereof said means including a restriction in said conduit.

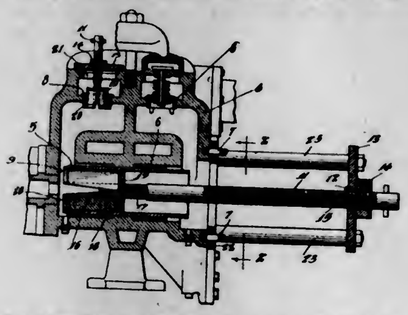
1,569,611. ELECTRIC CONTROLLER. FREDERIC HENRY BULLINGER, Yonkers, N. Y., assignor to Ward Leonard Electric Company, a Corporation of New York. Filed July 29, 1921. Serial No. 488,285. 5 Claims. (Cl. 290—35.)



1. The combination of a dynamo, battery, gas engine, and an electric controller therefor, comprising a base plate, terminals carried thereby, a manually operated main switch carried by said base plate for closing and opening a circuit including the dynamo and battery, a manually operated ignition switch carried by said base plate, a cover plate, an electric magnetic device carried by said cover plate for automatically closing and opening the circuit between the dynamo and battery.

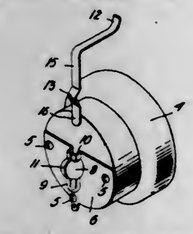
1,569,612. TROTTLE CONTROL FOR AUTOMOBILES. ALLEN BURROWS, Los Angeles, Calif. Filed Dec. 13, 1924. Serial No. 755,665. 10 Claims. (Cl. 74—89.)

1. A throttle control for automobiles comprising, a throttle operating member shiftable in different planes, means to releasably hold the throttle operating member in different positions when in one of said planes, movement of the operating member from the first mentioned plane releasing it from the holding means, a pedal, means operated by depression of the pedal to release the operating member holding means when the operating member is in the first mentioned plane, and a spring to retract the throttle operating member when said member is released.



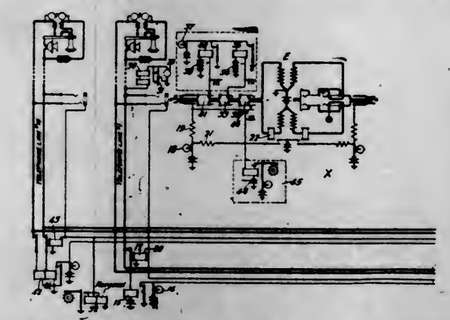
1,569,613. FILLER FOR LOG BUNKS. FREDERICK W. CHRISWELL, Seattle, Wash., assignor to Pacific Car and Foundry Company, Seattle, Wash., a Corporation of Washington. Filed Jan. 27, 1925. Serial No. 5,056. 10 Claims. (Cl. 105—384.)

1. A stake holding frame for use in log bunks comprising side walls and connecting tie members, flanges extending horizontally inward from the side walls and lengthwise of the frame to form stake pivot guides, said flanges being notched outwardly of the stake-pivoting point for the reception of a pivot stop, and a notched transverse member adapted for holding the stake controlling bar.



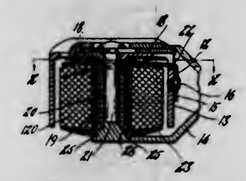
1,569,614. PULLER FOR PUMP LINERS AND VALVE SEATS. WILLIAM H. CLARK, Whittier, Calif. Filed Aug. 27, 1924. Serial No. 734,422. 2 Claims. (Cl. 29—88.2.)

1. A puller of the character described comprising an expansible unit formed from a number of separate jaws, said jaws having threaded portions substantially forming a circle at one end of the expansible unit, the jaws being reduced toward the other end of the unit, a screw engaging the screw threads, a support, a nut on the screw engaging the support, the smaller ends of the jaws



having shoulders to engage the member that is to be pulled, and means to hold the jaws assembled on the screw.

1,569,615. TELEPHONE APPARATUS. HARRY B. CLARKE, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 9, 1924. Serial No. 685,163. 3 Claims. (Cl. 179—156.)

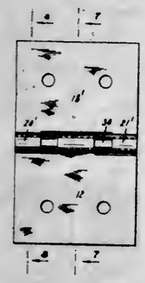


1. In combination, a telephone receiver, a plate attached to the back of said receiver, said plate having a split boss extending to one edge thereof, and a head band provided with a hump cooperating with said boss whereby it is rotatably and detachably secured between said plate and the back of said receiver.

1,569,616. ELECTRIC SIGNALING SYSTEM. ROY D. CONWAY, Basking Ridge, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 7, 1921, Serial No. 506,085. Renewed June 20, 1925. 19 Claims. (Cl. 179—50.)

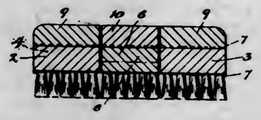
2. In a signaling system, a plurality of lines, a station wherein said lines terminate, a second station, a trunk circuit interconnecting said stations, means for connecting one of said lines to said trunk, signaling devices at the second station, one for each of said lines, and a circuit arrangement involving a Wheatstone bridge adapted to cause the operation of the signaling device corresponding to the line connected to the trunk circuit.

1,569,617. SEWING-MACHINE SHUTTLE. ROBERT N. CORTHELL, Auburn, Me. Filed Feb. 27, 1925. Serial No. 11,985. 1 Claim. (Cl. 112—233.)



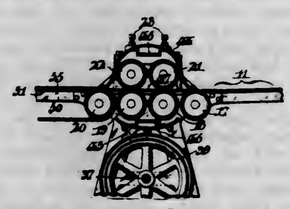
A rotary sewing machine shuttle which includes a body having an end thrust bearing, a bobbin case engaged with the body and provided with a center post on which a bobbin inserted in the case is rotatable, the free end of said post being adjacent the thrust bearing on the body, a substantially T-shaped member having its head portion conforming to the curvature of and secured against the outer face of the side wall of the bobbin case, one arm of said head constituting a thread tensioning means, and the stem of said member extending through an opening in the wall of the bobbin case in position to bear on the inner end face of a bobbin therein and press the bobbin against the thrust bearing on the body.

1,569,618. BOBBIN-CONTROLLING ADJUNCT FOR SEWING-MACHINE-BOBBIN CASES. ROBERT N. CORTHELL, Auburn, Me. Filed Mar. 17, 1925. Serial No. 16,198. 1 Claim. (Cl. 112—233.)



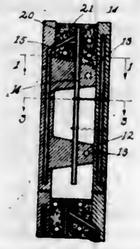
A bobbin-controlling adjunct for a sewing-machine bobbin case, having openings in its head at one end, and a thrust bearing at the other end, said adjunct comprising a flat disk formed to enter the bobbin-receiving cavity of the bobbin case and bear on substantially the entire inner end face of a bobbin in said cavity, the disk having a central orifice adapted to receive a center post of the bobbin case, a continuous periphery concentric with the orifice and maintaining the flat form of the disk, and inclined spring tongues integral with the disk, extending inward from points at opposite marginal portions of the disk and within the periphery of the latter, said tongues having free end portions offset from the disk and from the central orifice, and arranged to bear on the central portion of the head at points between the center post of the bobbin case and the openings in the head, the tongues being adapted to move on the head without interference with the margins of said openings, and to press the disk against the bobbin, and the bobbin against said end thrust bearing at the outer end of the cavity, the tongues being wholly within the periphery of the disk, so that said periphery is uninterrupted and the inner side of the disk has a flat, substantially continuous surface adapted to bear on the inner end face of the bobbin.

1,569,619. HINGE. JACOB CRANZLER, New York, N. Y. Filed Apr. 22, 1924. Serial No. 708,166. 1 Claim. (Cl. 16—191.)



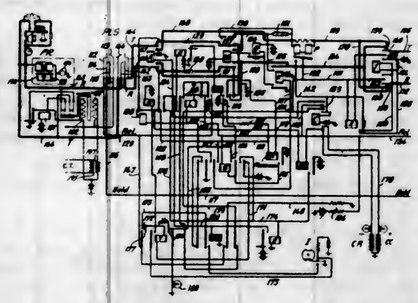
A hinge comprising two leaves, a single knuckle centrally located on one of said leaves, a pair of knuckles on the other one of said leaves between which said single knuckle is disposed, said second-mentioned leaf bein provided with a transverse slot in rear of its knuckles, thereby providing a pintle between the knuckles thereof, the knuckle of said first-mentioned leaf being extended through said slot and around said pintle, two shoulders on said central knuckle, and a shoulder on each of said pair of knuckles for co-operation with a shoulder on said central knuckle, said shoulders being spaced when said hinge is closed and adapted to abut against each other in the opening movement of said hinge so as to limit the opening of the hinge.

1,569,620. BRUSH. HENRY JAMES STEWART CROSS, Toronto, Ontario, Canada. Filed Jan. 15, 1925. Serial No. 2,627. 2 Claims. (Cl. 15—159.)



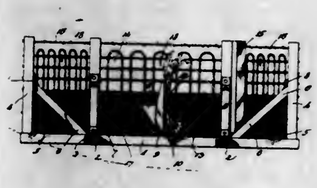
1. A polishing device comprising two weighted brushes laterally spaced apart; a movable weighted brush located in the space between said first-mentioned brushes, means holding said first-mentioned brushes in fixed spaced relationship and bridging the space therebetween at each end thereof, and means carried by said holding means and co-acting with the ends of said movable brush to permit of the free limited vertical movement thereof, for the purpose specified.

1,569,621. PRESSING AND FINISHING MACHINE. THOMAS H. DE LACY, Trenton, N. J. Filed Jan. 29, 1923. Serial No. 615,496. 10 Claims. (Cl. 68—9.)



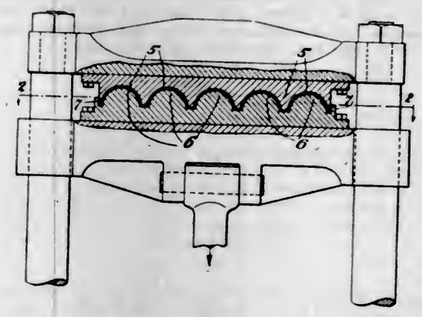
1. A pressing and finishing machine for knitted wear, including successively operable pressing elements, each comprising co-active rollers adapted to exert relative heavy pressure upon articles introduced therebetween, in cooperation with means actuating the pressing elements to slowly progress the articles, heat retaining enclosures positioned above and below the pressing elements, and heating means within said enclosures to warm the rollers by radiation.

1,569,622. CONCRETE CONSTRUCTION. ALBERT ORLAN DOLSON, Imperial, Calif. Filed Feb. 19, 1923. Serial No. 620,103. 8 Claims. (Cl. 72—30.)



1. A building wall comprising inner and outer walls formed of concrete slabs, horizontal ribs formed integral with said slabs some distance below their upper edges and extending completely across the opening between the inner and outer walls, said horizontal ribs constituting beam soffits whereby a continuous beam may be poured thereon between the portions of the inner and outer walls thereabove.

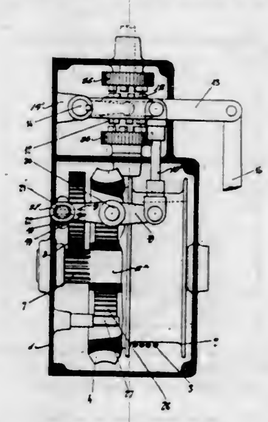
1,569,623. PAY-STATION TELEPHONE SYSTEM. BERT G. DUNHAM, Hawthorne, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 1, 1923. Serial No. 655,028. 9 Claims. (Cl. 179—6.3.)



1. In a telephone system, telephone lines, check controlled devices associated therewith, an operator's position, automatic switches and trunks for extending connections from said lines to said position, means controlled from said position for rendering an established connection metallically continuous between a calling line and said operator's position, mean controlled by said operator for governing the operation of said device of the calling line over said connection, and means for automatically operating said device in case the operator fails to do so.

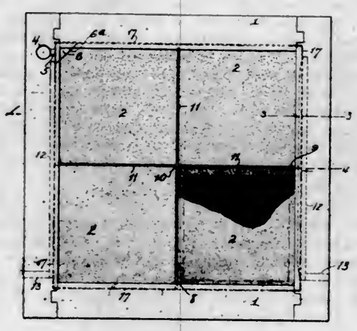
1,569,624. POISONED-FOOD CORRAL. PETER ERICKSON, Ogema, Saskatchewan, Canada. Filed Mar. 11, 1925. Serial No. 14,833. 5 Claims. (Cl. 43—107.)

1. A device of the type described comprising a frame, a fence supported by said frame and providing an inclosure, and a bait holder centrally of said frame, said bait holder including a foldable upright and a container carried thereby.



1,569,625. METHOD OF MOLDING PLASTIC MATERIALS. WILLIAM J. GAVEN, Wilkes-Barre, Pa., and MICHAEL FRIED, Mount Vernon, N. Y.; Mary E. Gaven administratrix of said William J. Gaven, deceased. Filed Aug. 15, 1923. Serial No. 657,555. 3 Claims. (Cl. 18—55.)

1. A method of molding composition materials usually made porous at its outer surface by the prolonged application of heat to form a commercial article having a wall provided with a smooth non-porous exterior surface which consists in first applying the plastic composition material upon the male die member of a molding apparatus, and then subjecting the material to momentary pressure between the wall of said male die member and a complementary female member whereby the outer surface of the molded article formed by the latter die member is in contact with the wall thereof for a relatively short period of time.

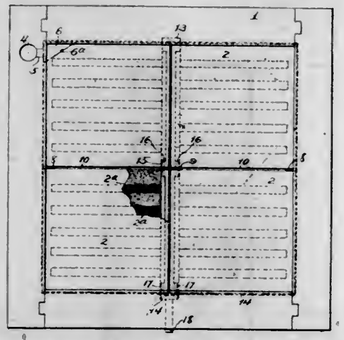


1,569,626. AUTOMATIC LIFTING WINDLASS. PAUL GAUTHIER, Courbevoie, France. Filed June 21, 1924. Serial No. 721,538. 7 Claims. (Cl. 254—173.)

4. A windlass, comprising a winding drum, a drive shaft, a worm gear for rotating said drum slidable axially on said shaft and rotating therewith, means for limiting the sliding movement of the worm in both directions, a clutch device for controlling the direction of rotation of the drive shaft and including a movable clutch sleeve, an operating element for shifting said sleeve in either direction, a worm wheel fixed to said drum to rotate therewith and immediately engaged by the worm, a spring engaged with said drum to return the same and the worm wheel to normal position and to hold the worm in its upper position, a fixed element

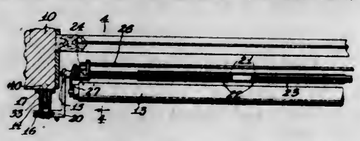
with which the worm is engaged at a predetermined point in its movement on the shaft, and a spring for moving said worm in one direction.

1,569,627. FILTER. DALTON M. GOETSCHIUS, Canonsburg, and LOUIS F. VOGT, Washington, Pa., assignors to Standard Chemical Company, Pittsburgh, Pa. Filed Aug. 25, 1922. Serial No. 584,378. 13 Claims. (Cl. 210—188.)



5. In a filter of the character described, the combination of two filter stones forming a filter chamber between them, each of said filter stones comprising a fine-grain body having an interior chamber closed at one end and open at the other, and means forming a discharge for filtrate escaping from the open end of said interior chamber.

1,569,628. FILTER. DALTON M. GOETSCHIUS, Canonsburg, and LOUIS F. VOGT, Washington, Pa., assignors to Standard Chemical Company, Pittsburgh, Pa. Filed Aug. 25, 1922. Serial No. 584,379. 8 Claims. (Cl. 210—188.)



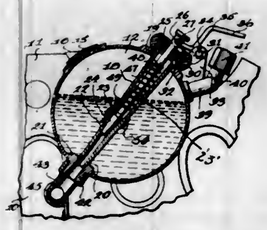
1. In a filter of the character described, the combination of a plurality of units each comprising a frame and a plurality of filter stones disposed in the plane of the frame and edge to edge, the filter stones of adja-

cent units forming a filter chamber between their opposed side faces, means for feeding mixed liquids and solids to said filter chamber, and intermediate filtrate

discharge passages between the inner opposed edges of adjacent filter stones and into which the stones discharge through their inner edge portions.

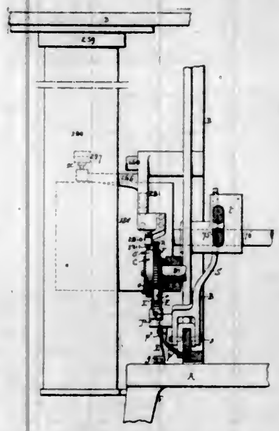
1,569,629. ADJUSTABLE SHADE-ROLLER SUPPORT. JOHN D. GOOD, Hoboken, N. J. Filed Sept. 29, 1924. Serial No. 740,475. 6 Claims. (Cl. 156—27.)

1. A device for adjustably supporting shade rollers comprising spaced guide rails, a substantially U-shaped frame, the side members of which are provided with bearings movable longitudinally of said guide rails and the crosshead of which is composed of telescoping parts to compensate said frame for the size of the shade roller, shade roller supporting members adjustable on the crosshead of said frame and keyed against rotation thereon, a rod in threaded engagement with said members and adapted to couple the same together and to adjust said members toward and from each other.



1,569,630. ELECTRON-DISCHARGE DEVICE. THOMAS R. GRIFFITH, Dover, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 12, 1923. Serial No. 680,169. 5 Claims. (Cl. 250—27.)

1. In an electron discharge device, an apertured member, a groove adjacent said aperture, a supporting rod having a projection positioned in said groove, and a cement enclosing said projection of said supporting rod in said groove.

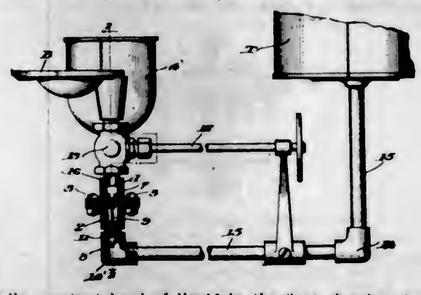


1,569,631. LUBRICATOR FOR SAW BLADES. MICHAEL GROGAN, Savannah, Ga. Filed Apr. 24, 1925. Serial No. 25,703. 5 Claims. (Cl. 145—35.)

5. A lubricating device for saws, comprising a pair of oil reservoirs one arranged upon each side of the saw, a pair of tapered tubes one arranged in each of said reservoirs and having one end thereof threadedly attached to the reservoir, means attached to said reservoirs and communicating with the threaded ends of said tubes for supplying oil to the blade of a saw, said tubes having apertures in the side walls thereof, a sliding valve arranged in each of said tubes for opening or closing communication through the apertures in said

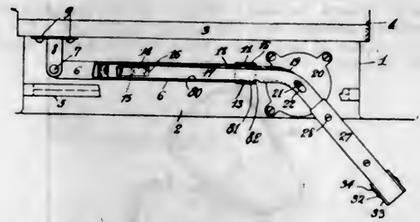
tubes, spring means attached to said valves and said tubes for yieldably holding one against rotation with relation to the other, a rod connecting the upper ends of said valves together to cause the same to operate simultaneously and to also hold said valves against rotation, and a hand lever attached to said rod for operating said valves.

1,569,632. STITCH-REGULATING MEANS FOR KNITTING MACHINES. ROBERT W. SCOTT, Babylon, and ALBERT E. PAGE, Brooklyn, N. Y., assignors to Scott & Williams, Inc., New York, N. Y., a Corporation of Massachusetts. Filed Dec. 21, 1922. Serial No. 608,196. 4 Claims. (Cl. 66—24.)



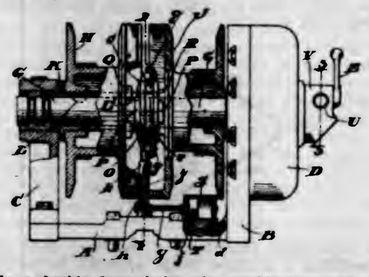
1. A circular knitting machine, having a frame and vertically adjustable supporting means for the knitting head to vary stitch length, in combination with a cam and devices whereby the latter acts upon said adjustable means, a pawl and ratchet feed in connection with said cam, a pattern cam shaft upon which said cam and ratchet are mounted to turn, the ratchet having idling means and devices by which said shaft may bring the ratchet feed into action again.

1,569,633. OIL CONTROL FOR BURNERS. HENRY M. SHERR, Quincy, Ill. Filed June 13, 1925. Serial No. 36,912. 15 Claims. (Cl. 158—36.6.)



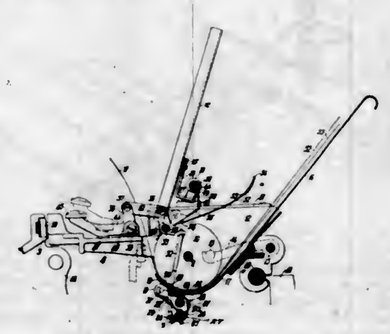
1. A device of the character described including a float chamber, a plurality of floats therein, a valve for controlling the supply of liquid to the float chamber

and means flexibly connecting the floats together, and connected with said valve for maintaining a substan-



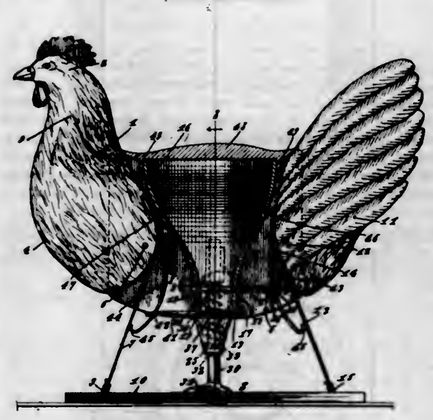
tially constant level of liquid in the float chamber, both when said float chamber is in its normal position and in substantial deviations in any direction therefrom.

1,569,634. CASEMENT-WINDOW FRICTION ADJUSTER. EDWIN J. SIBLEY, Westbury, N. Y. Filed Oct. 18, 1924. Serial No. 744,388. 22 Claims. (Cl. 292—275.)



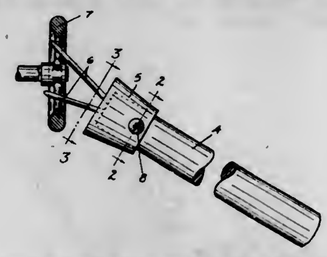
1. A casement window adjuster comprising a support, a pair of levers mounted thereon, a barrel slidably mounted on said levers, friction elements carried by the levers within the barrel and means for operating one of said levers to actuate the said friction elements to frictionally lock the levers within the barrel.

1,569,635. DOUBLE-DRUM HOIST. FRED M. SLATER, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed July 31, 1925. Serial No. 47,269. 3 Claims. (Cl. 254—185.)



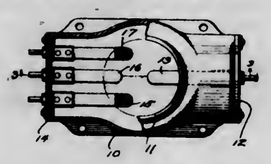
1. In a double drum hoist, the combination of a drum shaft, two drums rotatable relatively thereto, a reversible motor operatively connected to drive said shaft, a main driver rotated by the drum shaft and slidable into engagement with one drum or the other, a hand operated controlling device for the motor, and means controlled by said hand operated controlling device for automatically actuating said main driver into engagement with one drum or the other in accordance with the direction of rotation of the motor.

1,569,636. TYPEWRITING MACHINE. JESSE A. B. SMITH, Stamford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Nov. 12, 1923. Serial No. 674,188. 12 Claims. (Cl. 197—128.)



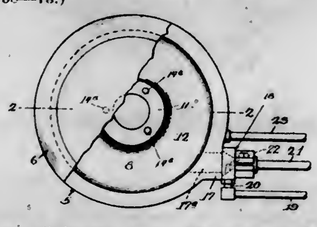
1. In a front-strike typewriting machine, a platen, spring-clips, below the printing line, effective upon a record-sheet on the platen, but ineffective upon an overlying statement-sheet, for retaining the record-sheet against disarrangement on the platen, and a rock-shaft on which the spring-clips are mounted for movement between effective and ineffective positions.

1,569,637. DISPENSING DEVICE. BLAINE E. SNYDER, Watkins, N. Y. Filed Feb. 7, 1925. Serial No. 7,570. 9 Claims. (Cl. 211—8.)



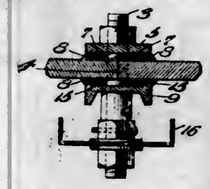
1. A dispensing device comprising a vertically movable spring controlled container section shiftable in one direction on the application of pressure thereto, normally sustained gravity movable front and back sections pivotally supported from and releasable from sustained position on shift in one direction of said container section, a pair of spaced superposed article dispensing control slides mounted in said container section, and a pair of curved operating elements carried by the front and back section and extending through said slides for operating these latter alternately in opposite directions on the vertical movement of the container section whereby an article is dispensed from and positioned for dispensing within the latter.

1,569,638. VALVE-OPERATING TOOL. THOMAS F. STEELE, Minneapolis, Minn. Filed Oct. 13, 1924. Serial No. 743,313. 3 Claims. (Cl. 137—139.)



1. A tool adapted to be supoprted and manipulated by hand for operating valves having apertured handles, comprising an elongated handle and a plurality of prongs mounted on the outer end of said handle in spaced diverging arrangement, extending substantially longitudinally thereof and adapted to engage the apertured portions of a valve handle to rotate the same.

1,569,639. VACUUM-TUBE SOCKET. GEORGE H. STEVENSON, Rye, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 6, 1920. Serial No. 428,541. 2 Claims. (Cl. 173—328.)

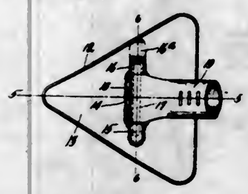


1. A vacuum tube socket comprising an inverted U-shaped metal base having a tubular portion arising therefrom, a strip of insulating material attached to and closing each end of said base, three contact members supported by one of said insulating strips, two of said contact members being longer than the other, and a single contact member supported by the other insulating strip, said contact members projecting beneath said tubular portion.

1,569,640. OIL BURNER. PAUL B. STREICH, Joliet, Ill. Filed May 9, 1925. Serial No. 29,024. 7 Claims. (Cl. 158—73.)

7. In an oil burner, a cup like burner body formed with a centrally located upstanding boss, an imperforate top member covering said cup like member and spaced therefrom to leave a gas discharge slot at its outer side, said top member having a centrally located downwardly projecting boss, spaced away from the upstanding boss of the body to leave a passage therebetween, an oil atomizing nozzle discharging tangentially into the annular chamber formed between the body and top member, and there being a separate air inlet, opening through said upstanding boss of the body.

1,569,641. ROOFING JOINT. JOHN FRANKLIN STUCKERT, Philadelphia, Pa. Filed Sept. 14, 1925. Serial No. 56,134. 2 Claims. (Cl. 108—16.)



1. A roofing structure comprising in combination, roofing boards arranged side by side with their side and end edges adjacent, a flat strip arranged above each seam between two parallel boards, flat cross strips arranged above meeting end edges of boards, bolts for securing said boards and strips in place, strands of pliable material as rope of circular cross section arranged beneath each strip, said strands being spaced apart and a pair of said strands paralleling each of said strips for at least a part of their extent, and cementitious material in which said rope is embedded.

1,569,642. METHOD OF MAKING JEWELRY CASES. JOHN RALPH SUNDER, Buffalo, N. Y., assignor to Warner Jewelry Case Company, Buffalo, N. Y., a Corporation of New York. Filed Nov. 16, 1923. Serial No. 675,213. 2 Claims. (Cl. 220—63.)
